READERS of ADVERTISEMENTS in these pages will greatly oblige and assist us by mentioning MARK LANE EXPRESS when writing to our Advertisers.

WILLIAM COOK & SONS,

Established 1880.

Originators of the Orpington Fowls and Ducks, and reliable breeders of every class of Poultry for exhibition and utility purposes, can always supply Fowls, Ducks, Turkeys, and Geese at reasonable prices.

We have at present some very fine 1901 early-hatched Cockerels and Pullets for sale, including all varieties of Orpingtons, all Leghorns, Minorcas, Barred and Buff Rocks, all Wyandottes, &c., &c. Cockerels from 6s. 6d. each for crossing, from 10s. each for pure breeding, and 21s. upwards for exhibition purposes. Pullets at same prices. Over 3,000 Cups and Prizes won by our Firm. All birds sent on approval. INSPECTION INVITED.

Advice given gratis. For full Price List of Stock Birds, Eggs, Foods, Appliances, Medicines, &c. (with "Hints on Poultry Keeping"), apply to our ONLY English address:—

WILLIAM COOK & SONS,

Orpington House, St. Mary Cray, Kent.

Also at DURBAN, S. Africa.

S. P. & S. "SAFE & SURE" VETERINARY SPECIALITIES.

PATENT DUPLEX LAMBING AND FARROWING FORCEPS.

No breeder of Sheep or Pigs can afford to be without them, as they repay trifling cost tenfold first time used.

To Masters of Hounds, &c., will be found equally invaluable for Bitches, and *this size of dog generally*. Approved of by eminent veterinary authorities; hundreds were sold last season, and gave great satisfaction.

"INVICTA BLACK MIXTURE."

For exhaustion and after-pains in foaling, calving, and lambing. A powerful Anodyne and Anti-spasmodic for Gripes, Fret or Colic in Horses; Tonic, Alterative, and Astringent in Scour or Diarrhœa, Dysentery, and Debility in Horses, Cattle, and Sheep. 1s. 9d. per bottle; 1 doz. case, £1.

"VIRIDOLIN" (Regd.).

A powerful Antiseptic for dressing in lambing and calving. Extensively used as a general healing agent for wounds of every description in all animals. Invaluable for Humours in Cows' and Ewes' Udders, &c. 2s. and 5s. per bottle; or ½-dozen 2s. bottles in case, 10s. Ointment may also be had, 2s. 6d. and 3s. 6d. per pot.

"RED ANODYNE EXTRACT."

For Inflamed Udders in Cows and Ewes it is invaluable. For Cows and Ewes in difficult parturition, it stops Heaving and prevents Gangrene or Mortification. Used both for external use as a lotion, and for internal administration. 2s. and 5s. per bottle. Special instructions for use in lambing and calving on 5s. bottle.

"YELLOW DRENCH" (for Sheep).

For Chills, Colds, Fevers, Red Water, Costiveness, Cleansing after Lambing, Swollen Udder, &c. In packages, 1 dozen, 3s.; 6 dozen, 17s.; and 12 dozen, 33s.

"FLOCKMASTERS' FRIEND" LAMBING CHESTS.

Complete, **£1 11s.** and **£3 2s.**

BIBBY'S
"CREAM EQUIVALENT"
for CALVES.

An Ounce of Fact is worth a Ton of Theory.

A STRIKING FACT.

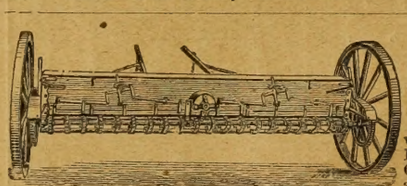
In our Spring number of "Bibby's Quarterly" we reproduced the photographs of two groups of Calves which are now being reared at the Hornby House Farm, Bedale, Yorks, by his Grace the Duke of Leeds.

One of the groups is being fed on New Milk and the other on Separated Milk and "Cream Equivalent."

We asked our readers to tell us which of these groups were fed on New Milk, and 707 Farmers, Farmers' wives, their sons and daughters competed for a small prize which we offered to those who guessed correctly.

445 selected the "Cream Equivalent"-fed Calves as having been fed on New Milk.

We think the above striking FACT speaks volumes for "Cream Equivalent."



The "Cream Equivalent" can be had at 15s. per cwt., carriage paid to nearest station.

SOLE MANUFACTURERS:—

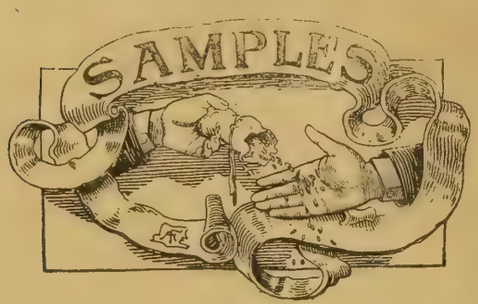
MEASURES TO ENSURE MILK PURITY.

A very important circular to local authorities, has just been issued by the Board of Agriculture, calling their attention to the regulations to prevent milk adulteration, and to set up a legal standard of purity for that necessary article of diet, which came into operation on the 1st of September last. The very fact that the Board sees it necessary to issue this circular shows that all local authorities have not taken the necessary steps to bring them into effectual operation, yet any neglect of duty in this particular seems even more reprehensible than ignoring the provisions of the Margarine Act, considering how necessary an article of diet pure milk is for young children, how great must be the privation of those of the working classes when it is retailed in a badly adulterated state. The circular points out what everybody must admit, and producers are rejoiced to know that the standard is a most reasonable one, and as it actually does not demand so large a proportion of milk-fat and solids in milk as the genuine article usually affords, it becomes all the more urgent that every effort should be made to enforce so reasonable a standard. This can, of course, only be done by taking frequent analyses of the milk sold by suspected cream extractors and those sellers having an evil reputation among their customers for adulteration, which, in present times, is probably not effected so much by adding water as formerly, simply because separated milk is a far better agent for fraudulent practices, effecting little change in colour or taste, and being therefore less liable to detection.



Prominence in the circular is given to the fact that according to the evidence given before the Departmental Committee, the practice of mixing separated milk with new milk, and fraudulently retailing the whole as new, is greatly on the increase. This is only too likely, as only the shrewdest of customers or those of nice taste would readily detect the deceit. Some may think that such being the case, little harm would be done. But that is a mistake, especially when children and invalids are the consumers, who urgently require all the elements to be retained to make milk perfectly well adapted to their delicate internal organisms. The classes chiefly defrauded are the least wealthy, those who have not the means of availing themselves of choicer delicacies or nutritives of a higher order. Their protectors, the local authorities, should certainly then undertake the duty of insisting that this article of diet so needful to them should be supplied in its purest, most wholesome form. Justice to producers demands this action likewise, inasmuch as every gallon of separated milk, employed in this nefarious system of adulteration, takes the place of the same quantity of the genuine article, rendered thereby not wanted in all probability, and unless the fraudulent use of the former were put a stop to, the price of milk would fall so low, as the natural result of any lengthened period of unbridled licence, as to be no longer worth being produced by farmers in the country; it would not bear middlemen's profits and the railway rates. The Board of Agriculture very rightly perceived it to be urgently important that this infamous artistic adulteration should be stamped out, and it is much to be hoped local authorities, by aid of the regulations, will so severely administer the Food and Drugs Act that the object will be fully attained.

With praiseworthy care to prevent, as far as possible, undeserved prosecutions and convictions, a special clause of the circular points out that, "although the quality of genuine milk will usually be well above the official limits of fat and solids, there may occasionally, and especially at certain times of the year, be cases in which a sample of genuine milk may fall below those limits." Hence, in the absence of other suspicious circumstances, the local authority is recommended, in the first instance, to call the attention of the vendor to the report of the analyst, with inquiry if any explanation can be given; after which they can exercise discretion whether proceedings ought to be taken or not. This is as it should be, it being perfectly well known that sudden changes, both of diet and temperature, have a marvellous influence on the character of lacteal secretion. When the subject was discussed by the Central Chamber, an instance was given of the milk of a herd going down several degrees on a winter morning owing to the windows of the cow-house having been left open all night, thereby causing a cold draught.

The arts and practices of adulteration are manifold, and it is pointed out that the custom

has been proved to be rife of adding gelatin to cream to give a fictitious appearance of richness or thickness. Local authorities are advised to instruct their analysts to ascertain whether this process of adulteration is practised in their respective districts, and, if so, whether to put a stop to its proceedings might not, with advantage, be taken under Section 6 of the Sale of Food and Drugs Act.

We think our readers will join with us in opinion that the action of the Board of Agriculture has all along been highly judicious and praiseworthy on this milk standard question. In the first place, as Mr. Hanbury told the Scotch farmers some time ago, the Board took on itself a serious responsibility when it threw over the report of its own Committee, deeming the standard recommended therein to be a perfectly ideal one. The circular is in perfect character with the regulations, which, if worked in the proper spirit, will, it is to be hoped, have the desired effect in stopping these fraudulent practices which honest producers and consumers alike have suffered from, without unduly straining the law, by prosecuting farmers and dairymen when they are the victims of circumstances.

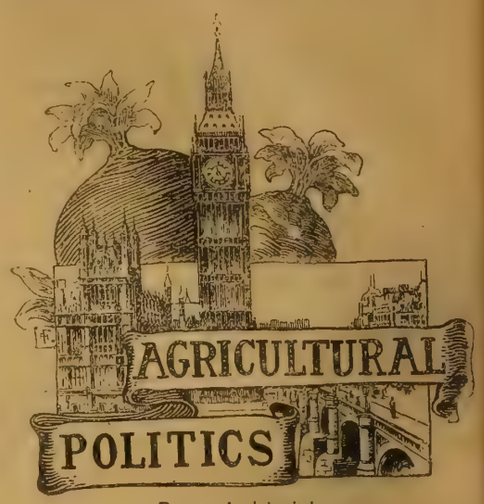
By a Man of Mark Lane.

A telegram from Toronto states that the Canadian Packers' Association has determined to adopt active measures to develop the trade in canned fruits and vegetables of Canadian growth and manufacture in Great Britain. Stores for their sale will be opened in the leading centres in England, Scotland, and Ireland, and energetic efforts will be made to bring Canadian canned goods to the attention of British buyers.

The revenue returns issued on Tuesday show that for the quarter ending 31st December, 1901, the total revenue was £35,991,808, of which £33,071,628 was paid into the Exchequer, the balance, £2,920,180, being lodged to the credit of the local taxation account. The quarter's revenue shows a net increase of £3,596,659 on the amount paid into the Exchequer as compared with the corresponding quarter of last year. For the three-quarters of the financial year the revenue was £94,259,430, of which £87,472,160 was paid into the Exchequer and £6,787,270 to the relief of local taxation. The net increase on the revenue for the three quarters as compared with the corresponding period of last year is £7,989,525.

According to a telegram received from Winnipeg, Canada, on Tuesday, there is a serious block of grain in Manitoba and in the Northwest territories. All the railway storage elevators are filled, and also the grain buyers' elevators, and this, together with a shortage of cars, has caused a serious condition of affairs. The farmers are storing wheat at every available spot, and are piling it about the stations. Not half the crop has been marketed.

The King is patron of the National Association for the Prevention of Consumption and other Forms of Tuberculosis, but, says the *British Medical Journal*, his Majesty, who is nothing if not practical, is not content to play the passive though important part of a patron. A large sum of money —it is understood about C200,000—been placed at his disposal for charitable or utilitarian purposes by a philanthropist who, for the present, does not wish his name to be made public. This money, by the King's direction, is to be devoted to the erection of a sanatorium for tuberculous patients in England. For the carrying out of this purpose his Majesty has appointed an advisory committee, consisting of Sir William Broadbent, Sir Richard Douglas Powell, Sir Francis Laking, Sir Felix Semon, Sir Herman Weber and Dr. Theodore Williams, with Dr. Horton Smith and Dr. John Broadbent as hon. secretaries.



The sanatorium is intended to accommodate one hundred patients—fifty male and fifty female. Of the total number of beds eighty-eight will be reserved for persons who can only pay a small amount towards the cost of treatment, while twelve will be set apart for well-to-do sufferers. In order that no means of attaining this object may be omitted, his Majesty has approved the expenditure of £800 in prizes to be given for the best essays and plans for the construction of a model sanatorium.

The receipts on account of Revenue from April 1st, 1901, when there was a balance of £5,596,918 to December 31st, 1901, were £87,472,160, against £79,477,758, in the corresponding period of the preceding financial year, which began with a balance of £3,517,047. The net expenditure was £147,346,842, against £134,007,234 to the same date in the previous year. The Treasury balances on December 31st 1901, amounted to £1,759,847, and at the same date in 1900 to £2,915,022.

In the current issue of *M.A.P.* Mr. John Treadwell, the well-known breeder of Oxford Down sheep, is referred to, and although the particulars given are not altogether new they are worthy of reproduction. It is first stated that at the Smithfield Show His Majesty the King gave a particularly hearty handshake to Mr. Treadwell, an old acquaintance for whom he has the warmest regard. Then follow these remarks: "This well-known Bucks farmer lives near Waddesdon Manor—where the injury to the King's knee happened during one of many visits to the late Baron Ferdinand de Rothschild. He is now a tenant of Miss Alice de Rothschild, who succeeded to her brother's estate. Mr. Treadwell is a fine type of the English yeoman, tall, stalwart, and sturdy. For forty years and more he has regularly appeared at Aylesbury Market, always wearing a white beaver hat, which has gained as wide a reputation amongst agriculturists as Bernard Quaritch's ancient tile had with book-collectors.

"Mr. Treadwell lets his hats grow old in his service. Once, at the annual sheep sale held at his farm, which is attended by all the chief dealers and buyers in the country, Baron Rothschild produced, amidst much amusement, a new beaver, and requested the farmer to replace it for the extremely venerable one he had on. The King has bought many of his famous rams. This year, during the bidding, a purchaser's name was called for, and 'Edward the Seventh' given by the agent. Thereupon, Mr. Treadwell, removing his hat, remarked that he was grateful that his old friend the King had again patronised him."

Some time since I mentioned that Miss Emma H. King, of New York, had been inoculated by Dr. G. D. Barney with germs from a tuberculous cow, the object being to disprove Dr. Koch's theory that bovine tuberculosis is not communicable to human beings. The experiment, I now learn, is likely to have a fatal result, for both Dr. Barney and Miss King now agree that the lady has got consumption as the result of the injection into her of the disease germs; and three separate physicians have certified to the same effect. "I am sorry to say," Dr. King announces, "that the disease is of a decidedly virulent type." Efforts are now being made to cure the unfortunate lady of the deadly malady with which she has suffered herself to be infected.

By a Lobbyist.

I have to confess to the mistake of a premature judgment. I said last week that though we wre really on the eve of the re-assembly of Parliament, no prefatory organised attempt had been made by any section of legislators to secure legislation for the benefit of agriculture. I had for the moment forgotten the resolution of the pure beer advocates. Fortunately, this resolution has behind it an excellent wisdom. They do not intend to resist the encouragement which they have in the fact that in the last session the principle of pure beer was affirmed by a majority of 102; but they do not, at the same time, intend to repeat the moral of the criticisms passed upon their Bill. The measure was confessedly a faulty one. In the calmness of the present retrospect, I am bound to confess that I doubt not it would have been workable, or, at all events, that it would have accomplished the purpose which the organisers had in view. The revised Bill has not, I believe, been drafted, but, at all events, it is already being given a most practical consideration by the leaders of the movement, and we may be assured that they will not fail to take steps to prevent its being wrecked by effusive garrulity or trade jealousy.

I am directly glad that two names are included among those to be found attached to the circular which has been issued to M.P.'s, warning them of the intention to re-introduce the Bill in a revised guise. I refer to the names of Mr. Corrie Grant, M.P., and Mr. F. W. Wilson, M.P. Both are undeniable Liberals. Mr. F. W. Wilson is a newspaper proprietor, and he may be said to have been, through the means of his daily and weekly journals, one of the influences which have helped to keep alive Liberalism in East Anglia under circumstances which cannot be said to have been other than disheartening. His entrance into Parliament was the result of an electoral victory, which, for the moment, revived and stimulated his party. Mr. Corrie Grant, M.P., has for years been known as one of the most active members of the left wing of Liberalism. He has been one of its leading propagandists; he has been more than once selected to lead forlorn electoral hopes, and he was chosen at the last general election because of his political intrepidity to act as chieftain to the attack upon Mr. Chamberlain in what I may describe as the Chamberlain area. My gratification at the inclusion of the names of these two politicians is due entirely to the fact that it will tend to defeat the Radical parrot-cry that this is really a protective measure, and is intended to benefit the farmers and the squires at the expense of the general community—one of the more inane contentions by which it was sought to wreck Mr. Purvis's well-meant Bill. The incorporation of Radicals in the movement makes for its success. Of course, I ought in fairness to add that Mr. F. W. Wilson has been from the first one of the most strenuous advocates of the principle of the Bill.

I am induced to ask what has become of the anti-tied house agitation? It is but a few years since the House of Commons had the direst pictures limned for its benefit of the effect of this system upon the morality of our villages. Strangely enough, the towns—even in those in which the tied-house system has its most flagrant expression—were not ap-

parently considered to be sensitive to the same unfortunate results? It may be urged that the pure beer agitation will, if it be successful, in a large measure meet the situation. Of course, beer is, no doubt, the great liquor of the villages, but at the same time I believe that a Pure Beer Act would only partially meet the situation. A Pure Beer Act would still permit of a man being poisoned by pernicious whisky. I think these legislators ought to give us some explanation as to why they so precipitately and decisively abandoned their first love in this campaign.

It must not be assumed that, apart from the explanation I have given, I have any reason to withdraw a single one of the statements which I was induced into last week. There is not the slightest evidence—always, of course, excepting the activity of the pure beerites—of any organised intention on the part of any section of members of Parliament to persuade that Parliament to give problems affecting agriculture an intelligent attention. Of course, by way of excuse, it will probably be urged that the more lurid questions, which for the night possess the political mind, the very electricity with which the parliamentary atmosphere is surcharged, would render such an effort an expenditure of unnecessary labour. No labour is useless in the field of Parliamentary agitation. The very fact, indeed, that so many politicians are possessed by the same belief renders it possible that a carefully conveyed agricultural scheme would succeed. There are two questions which imperatively demand the attention of the politician woh has a direct interest in the agricultural districts. There is the question of local taxation, which has been, I may say, thrust into immediacy by the report of the Commission; and there is the question of rural education, which had been also given an immediate character by the announcement of Ministers themselves. Upon neither subject can I see any evidence of an attempt to direct a disciplined and well-regulated attention to the real necessities of ruraldom—a fact which in itself is an appalling illustration of the apathy and Parliamentary sloth which afflict those whose one chief duty should be to study the social and economic position of the countryside.

That agricultural, or rather agrarian, problems will not be excluded from the purview of Parliament in the next session is certain; and this certainty, of course, lends an added emphasis to the difference and apathy of the English agricultural M.P.'s. What is more, too, the economic significance of the problem which will be considered transcends a tenfold the importance of the two issues I have suggested. Mr. T. W. Russell has given such a force and a vitality to his agitation against Irish landlordism that a determined following will insist on the House of Commons dealing with it. His Bill for the buying out of Irish landlords means more than a land reform; it means the first effort in the last attempt to kill property in land. That since the general election Mr. T. W. Russell—who, of course, was then excluded from office—should have accomplished so much is a sufficient evidence of what can be done in the field of agrarian politics. Heaven forfend that it should be imagined for a moment that I desire to see a T. W. Russell achieving success in directing an English agrarian policy. It would be well, however, if we had associated with English agrarian politics a man with his singleness of resolution, his dogged obstinacy and his indisposition to subordinate his aim to the party whips. With English agricultural politicians the instruction of the party whips is a first consideration, and the interest of agriculture a bad second.

I thus see no reason to hope for more from the ensuing session than we secured from the last. We then say a House acquiescing in Mr. Hanbury's historic assertion that the last word on the reform of land tenure had been said. We saw agricultural M.P.'s so apathetic that they wantonly lost a hundred and one opportunities of questioning Mr. Hanbury on points of passing moment. In the last session Mr. Hanbury was little more than a lay figure. No one will rejoice more than I if it should prove to be different in the ensuing session. I repeat that I am not hopeful.

AGRICULTURAL REVIEW 1901.

The past year is one that will not be looked back upon by farmers with any great amount of equanimity. Not only has the season been a droughty one and consequently natural conditions against them, but prices for produce have been bad, and, to crown all, the labour question has been very much to the fore, in many cases sufficient assistance not being procurable to properly carry out farming operations. That this trouble is a very real and serious one is borne out by the census returns, and although the question has been debated and discussed at great length at various times no scheme of a practical nature has yet been advanced. But there can be no question that the migration of people from the country to a town is serious, and one that gives rise to a certain amount of anxiety.

Weather and Crops.

The weather we have experienced this year can by no stretch of imagination be described as favourable to farming industries. The spring was wet, cold, and backward, and in May, when "growing" weather ought to have been experienced, crops were held back by the severe night frosts which did a great deal of damage over the whole of the country. Following upon such a late and disastrous spring and summer drought made itself more severely felt than would ordinarily be the case, not only affecting farm crops but also live stock. The continued dryness throughout the back end put to a great expense many farmers who had to continue carting water until an unprecedentedly late period. The autumn otherwise was of a favourable character, and tillage operations were pushed forward to an exceptional extent so that the position of the farm at the present time is unusually forward, in fact, with anything like a sufficiency of rain during the winter, prospects for the coming season are favourable. The droughty weather made itself felt upon the yield of all crops. The root crop was a very variable one over the whole country. In one district the yield would be good, while in another adjoining neighbourhood but a very poor crop was harvested. The drought and the much dreaded "fly" left an indelible mark and usually the plant was a patchy one, although in some instances the thinness of the crop was made up for by an increased size in the individual bulbs. The yield of hay was short, for the unfavourable spring made the swathe an extremely light one, in fact, in most places the weight per acre was very much below what it had been for years past. Permanent pastures, too, suffered from the late spring and the droughty summer. The yield of hops although confined to a limited district was larger than for many years, in fact, a great portion of the secondary qualities did not pay for the cost of picking, and a considerable quantity was accordingly left on the vines.

Crop Areas.

Again we have to note a considerable contraction in the area devoted to wheat in the United Kingdom. The decrease is not confined to any particular portion of the country, but both in England, Wales, Scotland and Ireland we find that our principal bread stuff is being grown in decreasing quantities. The severe competition with which arable land farmers have to put up with from our Colonies and America give us cause to ponder over the decline in the growth of wheat, in fact, our three principal corn crops have all been cultivated to a lesser extent this year than was the case in 1900. It is true that the area devoted to barley has varied only slightly, but at the same time it all shows in which direction the cultivation of arable land tends. The minor corn crops have also suffered in a similar way, both rye, beans and peas all showing a contraction in the acreage. The acreage of green crops in the United Kingdom does not vary so greatly as that of corn crops. The 1901 area comprises 11,962,247 acres of turnips and swedes, 476,806 acres of mangels, 228,427 acres of cabbage, kohl-rabi, rape, 161,347 acres of vetches or tares, and 178,350 acres of other green crops. The total area of turnips, swedes, cabbage, kohl-rabi, and rape is 2,190,674 acres. Clover, sanfoin, and grasses under rotation, as may readily be imagined absorb a greater area than last year, being 6,140,660, as against 6,025,000; this is subdivided, as for hay 2,987,671, and not for hay 3,152,989. Permanent pasture or grass takes up 28,374,628 acres, as against 28,266,712 acres in 1900. It should be remembered that this figure does not include mountain or heath land that is used for grazing. The potato remains pretty constant, but this is rather due to the slightly increased production of this tuber in England for otherwise there has been a diminution in the area devoted to this crop. Flax was almost exclusively confined to Ireland, and it appears that the growth of this crop is becoming more profitable as the acreage has substantially increased over that of 1900. Hops and small fruit show but little variation, though it is noticeable that bare fallow is put down at 34,000 acres more than it was in 1900. From the following table can be seen the area devoted to the principal crops in the United Kingdom:

—	1901.	1900.	1899.
Total under all crops, fallow, and grass ...	47,761,266	47,795,120	47,795,270
Wheat	1,746,141	1,901,038	2,055,283
Barley or Bere	2,140,875	2,172,129	2,159,396
Oats	4,112,365	4,145,835	4,109,964
Rye.....	67,753	65,044	64,440
Beans.....	254,093	265,743	251,191
Peas	155,665	157,813	163,325
Potatoes	1,223,803	1,227,235	1,222,614
Turnips and Swedes...	1,962,247	1,994,385	2,050,422
Mangolds	476,866	484,015	437,307
Cabbage, Kohl, Rabi, and Rape	228,427	242,972	219,283
Vetches or Tares	161,347	181,677	189,769
Other green crops	178,350	170,996	154,668

Corn Yields and Prices.

A droughty season, such as the one we have passed through, is not looked upon as favourable to the British farmers, for times and customs have changed of late years, and now the area devoted to the cultivation of the three principal corn crops is steadily contracting. Year after year we see the same result; less corn is grown, and we are more and more dependent upon our Colonies, and especially foreign countries, for our supplies. It is noticeable from the table set out below that there has been a considerable decline in the yield of each of our principal crops. Wheat has suffered the least of these, but it is, unfortunately, the case that this crop is always losing ground, while the others are open to a little fluctuation. The season we have just passed was not a very good one for barley; as, owing to the late spring, much of it could not be got in until late, and in some cases where it was intended to plant this crop the land was devoted to something else. Oats show a substantial decline of very nearly four and three-quarter million bushels, the decreased production being mostly confined to England, while in Scotland the yield of the national corn crop was almost one and three-quarter million bushels more than was the case of last year. In this case not only was there an increased production, but the estimated yield was over two bushels per acre less than in 1900; on the contrary, it is estimated that in Great Britain 30.82 bushels were grown to the acre, only 28.53 bushels were grown last year. Barley and oats both show a decreased yield per acre, for while in Great Britain it is estimated that 30.88 bushels were produced, as against 31.31 in 1900 of barley, oats show a still great decline, the figures being 36.74 and 37.95 bushels in 1900. The yield of our principal cereals was:

—	1901.	1900.	+Increase −Decrease
	Bushels.	Bushels.	Bushels.
Wheat	52,457,602	52,639,809	− 182,207
Barley	61,107,623	62,314,510	− 1,206,887
Oats	110,105,530	114,847,537	− 4,742,007

The commercial side of the question is hardly more encouraging, and prices have not materially altered since last year. There are a few fluctuations, it is true, but generally it will be found that the value of a fair average sample is very similar to what it was twelve months ago. It was expected by some that the shortness of the maize crop in America, and the consequent feeding of wheat to stock in that country, would most probably have an effect upon the range of values. Up to the present, however, this has not been the case, although wheat is cheaper in London than in many districts of the United States, where it is grown. With reference to the figures which have been prepared below, they show that the prices of wheat has been fairly steady throughout the year, there being only a range of 2s. between the highest and lowest prices. Barley has shown more fluctuation than this, but the way in which the average prices of the barley crop is collected by the Government leads rather to a misapprehension, inasmuch as no difference is made in the return between the price obtained for malting barley and that given for feeding qualities. It will be readily understood that these two separate and distinct types of grain being put together under one heading in the return would give rise to considerable fluctuation, and it is to this fact that we see that barley has shown a range of 5s. 3d. during 1901. Oats have been selling fairly well throughout the year, and prices have been maintained at a moderate level, the firmness being due to some considerable extent to the large purchases made by the Government for military purposes in South Africa. This cereal in June was as high at 20s. 3d., and although values during the last few weeks have been fairly constant, they have not since reached that figure. Altogether, growers of corn in this country have had quite as good a year as 1900, or perhaps a better way of

putting it would be that they have not suffered to any greater extent than last year.

	Highest Average.			Lowest Average.			Rate.

Milk, Butter, and Cheese.

Dairy farmers will not look back on the past season as a favourable one; more especially will those who were under contract to supply milk to the large towns have cause to remember their losses. The spring proved wet, cold, and backward, and although it was immediately followed by a fair growing season, a succession of cold nights put a damper on the hopes of plenty of keep; and when the time came to turn out cows to pasture only the richest meadows and those that had been heavily manured were found to provide anything like a good bite. The drought which followed burnt up all the herbage, and it became difficult for the cows to continue their average supplies of milk without auxiliary assistance in the shape of cake meal or other feeding stuffs. As neither the price of milk, butter, or cheese could be raised to a degree to give anything like adequate compensation for the increased cost of cows-keeping and the diminished yield, whether it had been direct milk sale, butter-making, or the manufacture of cheese, prices rendered it difficult even for those able to carry on best management to earn more than a bare living. Cheese of high quality, for instance, has been difficult to sell at from 56s. to 60s. per cwt., but a large proportion of what makers would term their best cheese has had to be sold at substantial loss, not making more than 46s. per cwt.

Fruit growers have had only a moderate season, as such large quantities of produce came into the market at one time that values were much depressed. Especially was this the case with the plum crop, which yielded heavily, but there was such a glut in the market that much of the fruit did not pay for the cost of picking. Apples were a heavy crop, but were of poor quality, and generally small in size. Prices consequently for first-class dessert fruit have ruled good, while best quality cider fruit also was in request. The droughty season affected the strawberry crop, and generally soft fruit-growers have but little to congratulate themselves upon. Although hardly fruit, a feature of the past year was the immense quantities of mushrooms which were gathered in all parts of the country, the yield being considerably more than has been the case for many years.

The Stock Industry.

The lot of stock-breeders this year has not been a particularly easy one. The late spring and the droughty summer and consequent scarcity of keep at two important seasons of the year was unfortunate, and the result is to be seen in our returns of the number of stock in the United Kingdom. Of horses there has been an increase of some 11,000, and it is a peculiar fact that the greater bulk of this number were raised in England, all the other sections of the country being almost stationary. Cattle also show a considerable increase, the larger numbers being equally divided among beasts of all ages. The increase more especially was noticeable in Ireland, where it is estimated there are now something like 64,000 more horned stock than was the case in 1900. In fact, in England and Wales there has been a distinct decrease, and it is only to the larger number that has been bred in Scotland and Ireland that we are able to show an increase in this section of the farm. Of sheep there has again been a decline, largely due to the unsatisfactory season from the flockmasters' point of view, while the very precarious position in which the root crops were in the early summer did not afford a rosy prospect for stock-keepers. The decrease has been pretty equally divided over England, Wales, and Ireland, the only section of the country to show an increase being Scotland, where generally the season was of a more favourable character. In spite of the price of pork, the number of pigs has again been on the decline, but perhaps it is to this scarcity that values for meat have kept up in the way they have during the past twelve months. England and Ireland are the principal sufferers in this section, but the decrease all round is noticeable. Below, in tabular form, will be found the numbers of stock in the United Kingdom during the past two years:

	1901.	1900.	+Increase -Decrease
Horses	2,011,651	2,000,415	+ 11,236
Cattle	11,476,636	11,455,009	+ 21,527
Sheep	30,829,784	31,054,726	- 224,942
Pigs	3,411,040	3,663,716	- 252,676

Stock and Meat Prices.

The shortness of keep during the summer adversely affected the price of all stores. Dairy cows, except those in full profit and of a good type, have been cheap throughout the year, but a noticeable feature in our cattle markets has been that the depression was most severely felt in the lower qualities. Anything of a first-class nature throughout the year has been without difficulty turned into money. The earlier sheep fairs in the South of England found prices low and demand slow, but with improved prospects the price jumped several shillings within two or three weeks. In our Northern counties and Scotland sheep-breeders usually have had a much better time, as the drought was not felt so severely in that portion of our islands. With reference to the price of meat, just lately there has been an upward tendency, as really first-class beef has not been in such large supply as was anticipated. Otherwise, however, throughout the year values were rather below those prevalent in 1900. Pigs have varied but little in price, usually making from 2s. 8d. to 4s. 4d. and 4s. 8d. in the Metropolitan market.

Pedigree Stock.—Cattle.

The closing of the Argentine ports consequent upon the outbreak of foot-and-mouth disease in this country has had a wide and far-reaching effect upon our pedigree stock industry. Fortunately, the improved demand from the United States of America has served to instil a little life into the proceedings, for otherwise our owners of pedigree herds would have had a very disastrous season. Shorthorn breeders, where the stock has been of first-class quality, have made good prices. Mr. Duthie obtained £682 10s. for a bull calf, while twenty of this age averaged £157 11s. Lord Lovat succeeded in obtaining £420 for a bull, while Mr. Marr for a bull calf received £320 10s. As regards females, values have ruled lower, the best being that obtained by Mr. Anderson for a heifer calf, which was £162 15s. Herefords have had an exceptional year, not only in this country, but more especially in the United States. Exportations have been more numerous, up to £1,250 being paid privately for a bull. At public auction Mr. Price made 420gs., while Mr. W. Tudge succeeded in obtaining £346. Devon cattle have also had a moderate year, one belonging to Mr. Bowman making £157 10s., and a yearling bull £105. A feature of the year has been the increasing popularity of the Aberdeen-Angus. The best price obtaining for bulls during the year was £89, for one of Mr. J. H. Bridge's. Jerseys have experienced a good demand, one of Lord Rothschild's bulls realising 73gs., while at one guinea less a bull bred by Colonel McCalmont changed owners. Several cases of Jersey cows making more than £100 have to be recorded, Lord Rothschild, Duke of Marlborough, Mr. Pope, and Lady Greenall being the fortunate vendors.

Horses.

Breeders of Shire horses have again experienced a good year for their special class. Perhaps the outstanding feature was the sale of geldings held last spring by the late Lord Wantage, when fifty-one averaged very nearly £89. With regard to breeding stock, Mr. Fred Crisp secured a record when he obtained £1,627 10s. for one of his stallions, while the best sale averages were Sir J. Blundell Maple's £196 18s. 4d. and Mr. P. A. Mintz's £186 18s. 4d. Clydesdales have had a satisfactory season, a number being bought for export, Canadians especially being fond of this type of horse. Values ranged up to £80 for a gelding, while stallions realised 50gs. Hackneys have done rather better than in 1900. A stallion made £451 10s., while at the Agricultural Hall in the spring 400gs. was given for a brood mare. Hunters of good class have been in demand, up to 700gs. being obtained, while for harness horses really first-class animals have made high values. Polo pony breeders, too, had a good season, but just at present the supply of ponies is quite equal to the demand.

Sheep and Pigs.

Pedigree sheep-breeders have suffered from depression all round, this being more especially the case where foreign demand was relied upon. The best price in the sheep section was made by one of Mr. A. E. Mansell's yearling rams, for which the record price of 400gs. was paid. At the same sale a ram lamb made £189, and yearling ewes made 25gs. Lincoln long-wool breeders have had a bad year, the top price being only 52gs., which shows a very great falling off as compared with the values made in previous years. Mr. J. T. Hobbs has made a record for Oxford Down yearling rams, obtaining £178 for a ram with which he was very successful in the showyards throughout the kingdom. South Downs have experienced a quiet trade, as have also the Hampshires, except of the very highest class. Suffolks sold up to £63, while Kentish or Romney Marsh made up to £40. North country breeds have, on the whole, had a satisfactory season, though the prices recorded were hardly so good as in 1900. Of pigs, there have been one or two good sales, Mr. A. Hiscock securing an average of £10 for a draft from his herd, while during the year the large black breed, which has but recently started a herd book, attracted a good deal of attention, good prices being made for choice specimens.

Contagious Diseases.

Although general health of farm stock has left but little to be desired, various maladies scheduled under the Contagious Diseases (Animals) Act have caused a considerable amount of trouble. Foot-and-mouth disease, it seems, has at length been stamped out in England, but during the year twelve different centres of infection were discovered, the number of animals being attacked being 668, which is considerably larger than last year, when 263 animals were involved in 20 outbreaks. Pressure has lately been put upon the Minister of Agriculture to declare if a county free from foot-and-mouth disease, so as to permit the introduction into South American ports of British pedigree stock; as yet, however, no arrangement has been come to with the Argentine Republic, which is the biggest customer at present of our stock-owners. It is pleasing to note that our herds still continue free from pleuro-pneumonia, no outbreak having occurred since 1898, while as a result of the stringent regulations lately in force against rabies the country is now entirely free from the scourge. Anthrax is a trouble mostly confined to city stables, and upon reference to the returns we find that the number of animals attacked during 1901 were somewhat similar to previous years. It is true the number of attacks have been considerably more, but, at the same time, the number of individual animals involved are only a very few in excess of 1900. Increased vigilance in the direction of swine fever has led to an extremely large increase in the number of outbreaks of this troublesome complaint. Well over 3,000 centres of affection have been detected, as against only 1,868 last year and 2,262 in 1899. It is curious, however, to note that the number of swine slaughtered as diseased, or having been exposed to infection, was something like 2,000 fewer than in 1900, the number in the latter case being 17,316, as against 30,221 in 1899 and 41,218 in 1893. It is apparent, then, from the above figures that swine fever is surely but slowly losing its hold on our stock, and it is hoped that the increased attention and the more rigorous measures taken by the Board of Agriculture will result in this costly and annoying trouble being brought within still further limits, if not altogether stamped out.

Shows and Societies.

The last season has been a considerably better one for our agricultural societies, for although there have been a number of instances in which considerable sums of money have been lost through bad weather and other causes the season has been nothing like such a disastrous one as in 1900. Our premier agricultural society, The Royal, held a most successful meeting at Cardiff in June, and as a result of a visit to this densely populated neighbourhood the Council of the Society were able to put by a substantial balance, which may, however, be swallowed by the show at Carlisle in 1902 when it is expected, as this is an agricultural neighbourhood, the attendance of visitors will not be sufficiently large to cover expenses. The Bath and West of England Society which visited Croydon, however, hardly had such a pleasant experience, as in spite of almost ideal weather and its nearness to the Metropolis the public did not visit the Exhibition in the numbers that were expected. The Royal Lancashire have a satisfactory meeting to record at St. Helens, while the Yorkshire Society also met with success at Bradford. The Highland and Agricultural Society did well with their visit to Inverness, while the spring and summer shows of the Royal Dublin Society at Ballsbridge and the North East of Ireland Agricultural Society at Belfast were also well patronised, and succeeded in bringing together good collections of stock and produce.

Agriculture in Parliament.

Very little legislation affecting agriculture was carried during the year. The Agricultural Rating Act was renewed for a further term of four years,

but beyond this there was no Act of any importance affecting the position of the farmer. A useful bill, unfortunately not passed into law owing to pressure of business at the end of the season, was the Damage of Crops by Sparks from Engines, and, although it was passed at the second reading by a majority of 227 it was found impossible by the Government to take the opportunity to put it on the statute book. Another Bill that was lost through a similar cause was the Lights on Vehicles Bill, which aimed at bringing into uniformity the existing bye-laws and other local regulations affecting the carrying of lights on vehicles travelling on the High road. The arsenic in beer scare resulted in the appointment of a Royal Commision; but interest by now has practically evaporated in the subject.

Prospects for 1902.

Prices of all sorts of farm produce do not lead one to expect that farming in 1902 will be of a much more successful character than we experienced last year. The natural conditions, fortunately, leave us in a favourable position, and with a good fall of rain during the winter, so that our much-depleted wells and streams may be refilled, there can be no doubt that the agriculturist starts the year 1902 with a great deal in his favour. Competition from abroad is not likely to be any more lax this year; in fact, rather will it be still keener, and under existing conditions I am afraid that agriculturists cannot look forward to more prosperous times. The sympathetic speech of the Minister of Agriculture shows, however, that the Government are fully alive to the difficulties under which the faiming industry suffers, and it is hoped that they will be able to do something to render their lot more tolerable.

PRACTICE WITH SCIENCE.

South Eastern Agricultural College.

The annual report of the governors of the South Eastern Agricultural College, Wye, for the year 1900-1901, has been issued together with the financial statement. The receipts amounted to £12,024 4s. 11d., including £1,800 contribution from the Kent County Council, £1,200 contribution from the Surrey County Council, £1,000 grants from the Board of Agriculture, £3,379 12s. 6d. College receipts, £4,314 1s. 1d., farm receipts, and £185 18s. 5d. dairy receipts. The expenditure amounted to £13,455 7s. 9d., comprising £7,366 15s. College,, £4,732 13s. 4d. farm. £291 17s. 1d. dairy, £404 13s. 4d. general expenses, £659 9s. interest and principal on loans. There was thus left a deficiency of £1,431 2s. 10d., which, together with £1,396 5s. 7d. expended in excess of the loan for the new buildings and £196 10s. 10d. expended on new sheds, made a total of £3,023 19s. 3d. The County Council at its last meeting decided to bear its proportion of this adverse balance.

The report states that the work of the College has been efficiently and satisfactorily carried on throughout the year. The Farm, with Mr. Smith of the College acting as Farm Director, under the direction of the Farm Committee, had received careful attention throughout the year, and the Governors had expended a considerable sum for new sheds and in improving the yards and barn, whilst the cow yard was being covered in with patent boarded roofing. The loss on the year's working was accounted for mainly by the experimental work which was carried on at the Farm and for which no credit was given, and by the very low prices of the past year. The extension of the College buildings had been completed. The total cost of such buildings and the necessary alterations of the old buildings amounted to £11,396 5s. 7d., being £1,396 5s. 7d. in excess of the loan for such purpose.

The Principal's report to the Governors states that the year began with 53 students, of whom 12 were non-resident; two left at Christmas and three entered; nine left at Easter and one entered; making an average attendance of 50 students for the year. Of the students who left during and at the end of the year, 10 had been at the College for one year or less, 18 for two years, and seven for a longer period. All the students took the ordinary course except four, who were working for a special examination, and two who only attended for scientific work. Of the students who were at College during the year 19 were from Kent, 11 from Surrey, and 27 from other counties (Sussex two, London five, Croydon one).

Outbreak of Anthrax Near Spalding.—The Spalding Cattle Diseases Committee have received information of an outbreak of anthrax at Deeping St. Nicholas, four miles from Spalding. Two animals out of a herd of 49 cattle have died on the farm of Mr. George Freir. The disease has been certified by Mr. Reeks, of Spalding, veterinary inspector, as anthrax, and the usual precautions have been taken.

WATERPROOF SHEETS

FOR

THRESHING MACHINES, PORTABLE ENGINES, MILLERS, CARRIERS, LUGGAGE CART COVERS,

AND ALL PURPOSES.

Illustrated Price List and Samples Post Free.

Waterproof Oil Sheets at 1/6 and 1/8 per square yard. Chemically-Dressed "Peck" Cloth at 1/11 per square yard, complete with tie cords, lettering, &c. Thoroughly seasoned, ready for immediate use.

J. H. PECK & CO., LTD., WIGAN.

Established 1803. *Telegrams*—"Peck, Wigan."

The Sale of Milk: Regulations of the Board of Agriculture.

The Board of Agriculture has issued a circular to the local autorities calling attention to the regulations relating to the sale of milk, which, in pursuance of the powers conferred upon the Board by Section 4 of the Sale of Food and Drugs Act, 1899, were made by the Board on August 5th, and came into operation on September 1st last. It points out that the regulations were as follows:—(1. Where a sample of milk (not being milk sold as skimmed, or separated, or condensed, milk) contains less than 3 per cent. of milk-fat, it shall be presumed for the purposes of the Sale of Food and Drugs Act, 1875 to 1899, until the contrary is proved, that the milk is not genuine, by reason of the abstraction therefrom of milk-fat, or the addition thereto of water.

(2.) Where a sample of milk (not being milk sold as skimmed, or separated, or condensed, milk) contains less than 8.5 per cent. of milk-solids other than milk fat, it shall be presumer for the purposes of the Sale of Food and Drugs Acts, 1875 to 1899, until the contrary is proved, that the milk is not genuine, by reason of the abstraction therefrom of milk-solids other than milk-fat, or the addition thereto of water.

(3.) Where a sample of skimmed or separated milk (not being condensed milk) contains less than 9 per cent. of milk-solids, it shall be presumed for the purposes of the Sale of Food and Drugs Acts, 1875 to 1899, until the contrary is proved, that the milk is not genuine, by reason of the abstraction therefrom of milk-solids other than milk-fat, or the addition thereto of water.

Reducing the Quality of Milk.

In the regulations the limits below which a presumption is raised that the milk is not genuine were necessarily fixed at figures lower than those which are usually afforded by genuine milk, in which the proportion of milk-fat and non-fatty solids very frequently exceeds the percentages specified above. It is therefore imoprtant that local authorities should keep steadily in view the possibility of the artificial reduction of the quality of natural milk to the official limits by the abstraction of cream, or the addition of separated milk, or of water, and arrangements should be made for the taking of samples and the submission of the same for analysis whenever the existence of malpractices of the kind is suspected. In this connection it may be observed that the evidence given before the Milk Regulations Committee tended to show that the practice of fraudulently mixing separated milk with new milk has become increasingly prevalent, particularly in some of the larger towns.

Although the qutlity of genuine milk offered for sale will usually be well above the official limits of milk-fat and non-fatty solids, there may occasionally, and especially in certain seasons of the year, be cases in which a sample of genuine milk may fall below those limits. To meet cases of this kind it is suggested that in the absence of any special circumstances indicating that the case is a fraudulent one, the local authority might, in the first instance, call the vendor's attention to the analyst's report, and ask him whether he desires to offer any explanation, and if the explanation is one they are able to accept, they might, in the exercise of their discretion, refrain from the institution of proceedings or withdraw any summons, which, in order to prevent the failure of proceedings, by reason of the time-limit imposed by the Act, it may have been necessary to take out. But it may be desirable that further samples of milk should be taken in such cases, in order that a satisfactory conclusion as to the character of the milk supplied may be arrived at.

Cream.

The Milk Regulations Committee reported that the evidence submitted to them went to show that it was a common practice to add gelatin to cream for the purpose of giving it a fictitious appearance of richness or thickness. Local authorities are urged to take steps to ascertain whether this form of adulteration is practised within their districts, and if a public analyst reports the presence of gelatin or other similar substance in a sample of cream, the local authority concerned should consider whether the case is one in which proceedings might not with advantage be instituted under Section 6 of the Sale of Food and Drugs Act, 1875.

Collection and Retention of Samples.

It is desirable that, so far as may be found practicable, there should be uniformity of procedure in collecting and retaining samples of milk procured under the provisions of the Sale of Food and Drugs Act, and the following recommendations have been drawn up for the guidance of the local officials employed in this work:—

(1.) The quantity to be purchased should not be less than one pint, except that it may be expedient to purchase only half-a-pint, in cases where there is reason to believe that the object of the purchase would be defeated if a greater quantity were demanded.

(2.) The division of the sample under Section 14 of the Act of 1875, as amended by Section 13 of the Act of 1899, should be made as equally as possible, so that the portion reserved by the purchaser may be not less than one-third of the whole.

(3.) The bottle used for each divided part should have a narrow neck, and be of such capacity that the milk may nearly or quite fill it. The shape of bottle known as "Winchester" is strongly recommended, but in any case the bottles should have rounded sides, in order to give security to the sample during transit by post or otherwise.

(4.) Corks only should be used, and these should always be new and sound, and fitting so tightly as to secure the contents without any aid from the wax which is subsequently used for sealing the sample. It is most desirable that the sealing should be carried out in such a way as to prevent any attempt to remove the cork. It is therefore recommended that the cork should be slit down to one-fourth of its length and the string drawn through and securely fastened round the neck, the ends being afterwards carried to the top of the cork and sealed thereon.

(5.) Special attention should be given that the reserved portion of milk be kept in as equable and cool a temperature as posible, pending its production in court in instances where proceedings are taken; and, if directed by the Justices to be referred to the Government Laboratory, it should be carefully packed so as to secure its safe transmission.

Dairying to Replace Sugar in North Queensland.

The threatened ruin of the sugar industry is bound to give an impulse to dairying in the tropical parts of Queensland, and there are already indications that if the northern tropical coast lands take up this industry they should be able to compete satisfactorily, from their point of view, with the southern districts, where frost and cold make the housing and care of a dairy herd a matter of so much additional expense. That even with dairy-

ing on a large scale the sugar districts will produce products of a value approximating that of sugar is, of course, impossible to suppose, seeing that at the outside butter can be obtained equal to £6 an acre per year, while sugar, even in an ordinary season, is not calculated to return to the country less than £10 to £18. However, the dairy industry appears one of the few possible partial substitutes for sugar-growing. If cane is produced, as in, say, the Sandwich Islands, the product per acre would be worth something like £80, while the outside limit of dairying only approaches one-tenth of that amount. Dairying is not really a tropical industry, but it is one which may be carried on despite the tropics, if the proper steps are taken, and those steps once taken, it may be safely assumed that things will be made somewhat sultry for the southern farmers, especially for those in New South Wales and Victoria, who have at present no competitors inside the Commonwealth, and, in their blind prejudice, are determined to destroy the industry of the sugar-cane growers in the tropics.

Land and Property Sales in 1901.

Having regard to the circumstances that have generally prevailed in commercial matters during the first year of the twentieth century, the total result of the business transacted at the London Auction Mart through the same annual period may be regarded as satisfactory, and as tending to show that the public confidence in land as a safe and profitable means of investment has been steady and certain, says the "Estates Gazette." The total amount of the sales effected by auction at this important centre, during 1901, was £5,553,098, which compares very favourably with that for 1900, namely, £4,934,769, though it is nearly a million below that for 1899, when the figures were £6,290,314. In addition to these sales, however, many important transactions have been carried out by private treaty, and a number of important sales have been held in the provinces.

An analysis of the year's sales shows that whilst one or two large sums have been secured for important landed estates, and a good proportion of the residential domains offered have found purchasers, a considerable number of the ordinary minor investments in house property, as well as building land, have been made. The same observation may be applied in respect of the transactions in land carried out at the chief provincial centres and the country generally. In the metropolis the electric tube railways and tram line extensions have influenced the sale of land and property in the neighbourhood to and through which they run, and in some of these districts there has been a stead rise in values. City sites and properties have, generally, been sold and let at satisfactory prices. Freehold ground rents maintained their popularity with the investing public, but prices were of an ordinary character; the latter observation also applies to licensed properties. Three important family estates have been disposed of in small lots during the year, and in each case the tenants were the principal purchasers. These were the scattered Monmouthshire estates of the Duke of Beaufort, the 23,462 acres of which realised a total of £626,000; the Lloyd estate, Wolverhampton, the outlying portions of which alone produced £54,800; and the Donington Estate, lying in and about Ashby-de-la-Zouch, which realised £37,000.

The principal landed estates disposed of included Battle Abbey, 6,118 acres, for £200,000; Cornbury, Oxon, 5,170 acres, £200,000; Dalham Hall, near Newmarket, 3,475 acres, for over £100,000; the Foston Estate, Derbyshire, 2,800 acres, for about £88,000; the Dunottar Estate, near Stonehaven, 4,000 acres, £80,000; the Grenehurst Estate, Surrey, for about £76,000; the Inchdairnie Estate, Fifeshire, 2,228 acres, £66,000; Ball's Park, Hertford, 1,218 acres, £63,100; Shipton Court, Oxon, 1,600 acres, £61,000; the Stokeley Estate, near Exeter, 1,258 acres, £43,000; Branksea Castle and Island, 750 acres, for about £40,000; Troy House, Monmouthshire, £40,000; Balgreggie, Fifeshire, 602 acres, £46,000; and the Saline estates, in the same county, £38,000; the Netherley Estate, near Stonehaven, 2,600 acres, £34,500; Chiselden House, Wilts, 1,068 acres, £33,117; Doxford Hall, Northumberland, 609 acres, £32,200; Fasnadoich, Argyllshire, 10,000 acres, £30,120; the Trimsaran Estate, 745 acres, £30,500; the Spitchwick Manor Estate, Devon, 425 acres, £28,300; Rockshaw, Surrey, 122 acres, £27,000; the Morris Estate, Ampthill, 881 acres, £26,182; Netherdon Hall, Norfolk, 1,500 acres, £25,000; the Rowalan Estate, near Kilmarnock; Guisnes Court, Tolleshunt, D'Arcy, Essex, 1,850 acres, £22,600; an estate at Well and Snape, Yorkshire, 2,365 acres, £48,385.

The Cultivation of Maize.

A considerable amount of uncertainty appears to prevail in this country as to whether it is possible to raise a maize crop for fodder purposes or as a vegetable, and in this connection various writers in the Press devoted to agriculture have overlooked the fact that the variability of the maize plant and its pliancy of habit has given it an adaptiveness to large regions of country with varying climate; in fact, we now know of no less than 211 different varieties of *Zea mays*, and in the year 1848 considerable attention was given to the cultivation of maize in the southern portion of England in consequence of the introduction of a new variety which is said to have been eminently adapted to our climate No doubt the high prices that prevailed for wheat during the Crimean War had something to do with the ultimate loss of this variety as a crop in this country. However, this season has seen a beautiful crop of maize fully matured on the Cheshire estate of Colonel Cotton-Joddrell, while in Essex many fields have provided a fine supply of "green-corn" for use in the principal hotels in London as a vegetable, because in each case great care had been taken to secure a proper selection of seed and *variety*. As a fodder crop, during the past few years the area each year has been extended, and as a green crop it has been an unfailing success.

One advantage of maize as a crop in ngland is that it admits of being sown much later than most crops, but from the writers' experience May 15th to 31st has proved the best period if the proper variety is selected, for as soon as it starts growing it develops very fast and is ready to cut green at any time during August and September, whichever period suits the farmer; in fact, taking *Zea mays* as a family we find that the cereal will germinate at a temperature as low as 49 deg. Fahr. and as high as 115 deg. Fahr. For a successful crop the seed selected for this country must be of the early ripening varieties, which must be sown during the latter part of May, or, if wanted for green fodder, in a late season, as late as the middle of June, while the best results in the various methods of cultivation tried in this country, so far, have been found to be from thin sowing, on mounds rather than in rows; and as maize requires plenty of air and sunshine for the plant to fully develop, the seed should be planted about 3ft. apart.

In the selection of varieties, if required as a vegetable, some of the early-ripening sweet kinds must be chosen, and even when wanted for green fodder the early and quick growing kinds answer best in this country. In this connection the result of an experiment carried out on one of the Canadian experimental farms is of especial interest, inasmuch as thirty-three sorts of seed were tested, being planted on May 26th in small plots containing twenty-four mounds or hills for each kind. During the experiment the cool weather of a late spring and early summer retarded the plants, but a variety called "Northern Pedigree" was ready as a vegetable by August 10th, while "Mitchell's Extra Early," "Burbank's Early Main," "Early Cory," "Perry's Hybrid" and "Early Adams" were almost as quickly developed. From the care taken in carrying out the above experiment, for the date of planting, time of blossoming, the exact period when ready for table, size of ear, productiveness, sweetness, height of stalk and the time when ripe were carefully noted in the case of each variety, one can judge how important the proper selection of the seed is in order to obtain good results as well as to secure a variety that will suit the condition of the land and the character of the soil. Naturally, in a warm soil the plant will make rapid progress, and the writer has obtained some very fine results in a light, sandy loam which was nice and loose. In this connection it should be remembered that the root is fibrous and the plant belongs to the deep-rooting sorts.

In order to ascertain the distance to which it penetrates the soil to procure its nourishment some interesting experiments were carried out a few years ago at the North Dakota Agricultural College. For this purpose an iron frame was constructed in the shape of a cube 5ft. or 6ft. in each of its dimensions, and was filled with shelves of wire netting placed one above the other with intervening spaces of about 2in. These frames were sunk beneath the surface of the ground and maize and wheat were then planted so that as the plants grew the roots were not obstructed by the layers of wire netting embedded in the soil beneath, but forced their way readily through the meshes. In the autumn the frames were dug out and the soil washed away with water. The netting held the roots in the very position in which they grew, and a valuable object lesson for the study of root growth was presented. The roots of the maize plant had gone beyond the 6ft. limit, and some of the roots were broken off in removing the frame. In the case of the wheat plant the roots had in some cases gone downward to a depth of between 3ft. and 4ft. Concerning the maize plant as a food for live stock, a large area is cultivated in the United States and Canada solely for that purpose, and gives a greater weight of crop per acre than any other fodder plant grown there. The plant is cut and stored for this purpose as soon as the ears are *glazed*; which merely means before ripe and while the stem is green. For this country, therefore, when used as fodder, on account of our climatic differences, the early ripening sorts only must be sown. In America as high an average as 30 tons per acre has been obtained, but 20 tons might be looked for reasonably. When cut green and stacked till dry, in Canada, it has been known to lose half its weight, still there many store it in their barns and cut as wanted. The majority convert into ensilage, chopping all up into lengths ½in. to ¾in., and after being in the silo six months the ensilage is found sweet and malty in flavour and odour. Two tons, according to some observers equal one of hay, but three, all agree, certainly give as much nutriment as a ton of hay and less waste; but below we give a table showing the percentage composition of maize fodder—that is, maize grown for fodder alone and field-cured in the same manner as hay—and certain more familiar forms of hay:—

	Water.	Ash.	Albuminoids.	Fibre.	Nitrogen free extracts.	Fat.
	per cent.	per cwt.	per cwt.	per cwt.	per cent.	per cent.
Meadow hay... ...	15·0	7·0	11·7	21·9	41·6	2·8
Red clover	15·2	6·2	12·3	24·8	38·1	3·3
Lucerne	16·5	6·8	16·0	26·6	31·6	2.5
Rye grass	14·3	6·5	10·2	30·2	30·1	2·7
Barley (grain in milk	16·25	4·5	9·2	26·15	47·5	2·4
Oat hay	13·7	6·3	8·0	33·7	36·2	2·1
Maize fodder... ...	32·1	4·3	4·3	22·1	36·0	1·2

As a food for cattle and milch cows during winter it is a diet to fall back upon, but it must not be assumed that cattle will need nothing else. Horses are not fond of it from the silo, but sheep grow to take it; but judgment is required in its use, and that is only to be obtained by the results from experience. The fodder, however, gives very good results in meat and milk. There is much more to say regarding this most useful cereal, but space does not permit; but in conclusion it should be pointed out that there are varieties to suit any of the various soils or different climatic conditions that prevail in England, and providing due regard

Cheques and Post Office Orders payable to WILLIAM A. MAY, 1, Essex Street, Strand, London.

SUBSCRIPTION RATES:—United Kingdom, one year, 15s.; six months, 7s. 6d.; the Colonies and Abroad, 17s. 6d. per annum.

is paid in choosing the proper time for sowing and the other matters mentioned above, there is no reason why our farmers cannot cultivate maize as a green fodder crop which would be most useful when the pastures begin to fail, or in certain districts as a vegetable for our tables.

The Cultivation of Chicory.

In the course of a speech delivered at the annual dinner of the Derwent Agricultural Club, the Lord Mayor of York (Alderman L. Foster) drew attention to the question of the cultivation of chicory, which was at one time carried on largely in the vicinity of York. Forty years ago the duty on foreign chicory was, he said, 6s. a ton, and on English 3s. per ton. At present the duty on foreign chicory was 13s. 3d., and on English 12s. per ton. He referred to the high rents paid for land in this country as compared with land abroad, and the little necessity there was for manure abroad, where they also had the advantage of cheap labour. Something like twenty-five years ago a little over one-fourth of the chicory consumed in this country was home grown, but at present not more than one ton in every fifty consumed in this country was grown at home.

Chicory could be grown in England, and he thought it would be a good thing if the Government could be induced to take some action in the matter. The chicory question was a small one for the Government, as the duty only realised £55,000. It would be a great benefit if the Government would only take a halfpenny per pound duty off English-grown chicory or put a halfpenny per pound on that grown by the foreigners. The result would be that the great bulk of the chicory consumed in this country would be grown here, and a great deal would be grown between Stamford Bridge and York.

Trade in Fertilisers in 1901.

In the course of his annual report on the trade in chemical manures during 1901, Mr Thomson Ackman, junr., of 6, East India Avenue, Leadenhall-street, E.C., says:—"The fertiliser trade in Europe was affected by the late spring, and, with the exception of nitrate of soda, prices of all articles mark a decline on those current at date last year. The quantity of nitrate consumed during last spring, in the aggregate, showed an increase, chiefly in Germany, the Mediterranean, and the United States, but in some districts a slight falling off was noted. The price in the past three spring seasons averaged 8s., 8s. 6d., and 8s. 7½d. per cwt., but, for the coming spring, a price of fully 1s. over this seems probable owing to the restricted supply; to what extent this factor and the agricultural depression may restrict consumption can only be ascertained by results. Natural causes have led to the production of nitrate being even less than the quantity allowed by the combination of producers, but the improved prices obtained have changed this industry from one of unprofitableness to a highly profitable basis.

"Sulphate of ammonia so far has not shared in an advance in price, and remains at about last year's figure of 11s. per cwt. In some countries, notably in Germany, a falling off in production is reported, but should the Mond system of gas production be largely adopted in coming years, an increase may be looked for. The value of phosphate has fallen to the lowest point ever recorded, largely owing to the heavy fall in freights from producing countries. Peruvian guano shipments have continued on a small scale, and values have been regulated by those of other sources of phosphate and nitrogen. Bone material has shared the depression of other phosphate sources, and potash salts maintain their value. Freights, with a few short periods of improvement, have been lower than for some years, and a period of depression is generally looked for."

New Agricultural Patents.

Specially compiled for *Mark Lane Express* by Mr. G. D. Howard (Hughes, Son, and Co.), Patent Agents, 38, Chancery Lane, London, of whom all information relating to Patents, Designs, and Trade Marks may be obtained free of charge.

25,673.—Charles Hedges, of Chancery Lane, London, for "Improvements in or connected with machines for digging and gathering potatoes."

25,807.—Wilhelm Robert Gentzen and Leonhard Roth, of Chancery Lane, London, for "Improvements in the treatment of woody and other vegetable substances for the recovery of useful products therefrom."

25,841.—Thomas Parker, of London, for "Improvements in machines for crushing and grinding and the like."

Patents Sealed.

15,959.—J. Wittek, of Germany, for "Grain, treatment of."

15,972.—P. Tiedemann, of Ohio, for "Potato diggers."

Seed Crops of 1901.

Mr. John K. King, the well-known seedsman of Coggeshall and Reading, has sent us his views upon the seed crops of 1901. He says:—"I regret I cannot give you a very satisfactory report as the anticipations of the early part of the year have fallen very short. Perhaps the most disappointing crop has been that of Early Peas, both round and wrinkled, which, although at one time promising well, only yielded less than half a crop. The consequence is that such kinds as Earliest of All, Eclipse, and Gradus are a higher price than has been known for many years; in fact, the stocks are at the present moment practically exhausted. Telegraph, Telephone, and other kinds used for market have an upward tendency.

"Radish is another crop which is unusually short, the acreage planted for seed was an average one, but the dry weather and black fly played such havoc with it that in some districts the crops were practically decimated, and the French crops proving much less than anticipated, has made radishes of all kinds, not only very scarce, but unusually dear.

"Speaking of the Brassica tribe as a whole the crops have been fairly good, and have been harvested in very fine condition. I estimate that the supply will be fully equal to the demand.

Another disappointing crop has been that of Carrot. An average acreage was planted out for seed, but the dry weather so injured the growing crops that in some districts they yielded less than half of what was anticipated. Such leading kinds as Altringham and Intermediate are very high in price, and with a short crop in France they will further increase in value.

"The Mangel crop has been a good one, and prices rule very moderate. The acreage of Swede planted out was scarcely up to the average; the yield varied very much. I doubt if many crops in Essex and Kent yielded more than 16 bushels per acre, while other districts produced fully 40 bushels per acre. The seed was harvested in splendid condition.

"Yellow turnips also yielded well, and prices for these are lower than usual; white turnips, on the other hand, are short, and for such choice kinds as Grey Stone and Purple Top mammoth prices are advancing.

"Potatoes have yielded well, with the exception of early kinds, which are advancing in price, while others are comparatively cheap. There has been a brisk enquiry for seed potatoes for the Cape, the varieties principally in demand being Early Rose, Pink Beauty of Hebron, Windsor Castle, Supreme, and Up to Date. I observe that complaints have been made that the Government has placed orders for seed potatoes with German houses. If this were the case the English growers would have just reason to complain, for as we in England have to pay the War Bill it is only right that the orders should be placed in this country. But as a matter of fact, the Government have not, so far as I know, ordered any seed potatoes.

"Orders have come from Cape houses for large quantities of seed potatoes, but the difficulty has been in getting them shipped. One line of steamers possess practically the monopoly of the quick carrying of goods to the Cape, but the demands of the Government for space on these boats have been so great that English merchandise has been shut out frequently at the last moment. The consequence of this has been that Cape houses requiring the potatoes immediately and finding that they could not rely on the shipments arriving in time for planting cancelled their orders with English houses and placed them with German and French houses, which were able to ship them promptly. I have had orders for considerably over 1,000 cases of seed potatoes cancelled by one firm; on the other hand, a German house informs me that they have despatched between 40,000 and 50,000 cases to South Africa. As we pay very heavily for an efficient navy I should have thought that the Government could have employed fast cruisers to take stores and war material to the Cape without shutting out shipments from English merchants, and thus driving trade away from the country."

A waggoner employed by a farmer of Chelsfield, Hants, who had brought produce to Spitalfields Market, was summoned at the Worship Street Police Court, under the Police Act, on Monday, for having thrown certain vegetable refuse on a public thoroughfare. It appeared that the defendant kicked from the tail of his van a quantity of cauliflower leaves. The defence was raised that the market and certain streets surrounding it were comprised within the special charter that granted the market, and that the defendant's action was done in pursuance of market rights, which were protected from the operation of the Police Act. A penalty was not sought, only a decision, and the magistrate convicted, ordering the defendant to pay the cost of the summons—two shillings.

LITERARY NOTICES.

The Agricultural Annual and "Mark Lane Express" Almanac.

This publication has become an exceedingly popular one, and is now looked forward to by a vast number of agriculturists in all parts of the kingdom. It is usually issued during the Smithfield Show week, but the publication of the 1902 edition was, and other years' issues will be, postponed until January 1st, in order to make it a complete record of the past year and to include illustrations and particulars of some of the principal prize-winning animals at our great fat stock shows. We think this alteration will be regarded by its readers as a wise one, for the statistics, which form an important part of the work, are thus enabled to be made more complete, whilst the addition of about a dozen illustrations—reproduced from life-like photographs—of the great prize-winners at the Smithfield, Birmingham, Norwich, etc., fat stock shows, is a very important one, and will sure to be appreciated. Underneath these illustrations particulars are given as to the exhibitor and breeder, the prizes the animal won, and its age and weight on December 1st. These illustrations should prove very serviceable to stock breeders, conveying, as they do, some idea of the type of animal that secures the prizes at the premier fat stock shows. To Colonial readers they will prove even more interesting and useful, whilst in years to come this collection of illustrations will undoubtedly be frequently referred to for comparison with the future winners.

The first article deals with "The Farm in 1901," and is by Mr. Joseph Darby, who reviews the year's work on the farm, and he is of the opinion that there has seldom been before a year such as the past one, when all classes of farmers have been more generally thrown into adversity by the character of the season. The next article is appropriately one dealing with Pedigree Stock in 1901, and the writer is Mr W. W. Chapman. The article is divided into four sections—horses, cattle, sheep, and pigs—and the results of sales of each class of animals, are detailed in an interesting manner; whilst at the end the exports and imports of stock receive attention. Mr. H. Stopes, the well-known barley judge, has something to say concerning barley threshing and dressing, and his remarks will doubtless be carefully perused by barley growers. Tuberculosis has received much attention during the past year, and is still continuing to do so, therefore the article by M.R.C.V.S., entitled "Tuberculosis in Animals on the Farm," is very opportune and will be read with interest. Mr. E. G. F. Walker has a good word to say for the farmer's wife; Mr. J. B. Simpson discusses "Sheepbreeding as Affected by the Price of Wool"; "Studsman" contributes an article on "Light Horses"; and Mr. R. C. Turnbull demonstrates the advantages of well bred stock. "Lobbyist" advocates an Agricultural Party in Parliament, and sets forth the outlines of a programme. As to the necessity of such a party, he says:—"If it is not called into existence the rural Parliamentary interest will confront the growingly extravagant and disciplined demands of the towns—demands which are often brutally avowed to be anti-rural—unorganised and divided. Suspicion will permeate its councils and weakness be the badge of its ranks."

To enumerate all the other articles would be too great a task, but mention may be made of that dealing with "Weeds," by Mr. S. Eames; "The Harvest of Fruit," by Mr. J. H. Hollingworth; "The Census: Town and Country Life," by Mr. A. W. Stanton; and an obituary notice of the late Miss Eleanor A. Ormerod, by Professor W. J. Malden. The list of societies has been made even more complete than last year, whilst the various tables and statistics which have been so much appreciated in previous years have been added to and brought up to date. In addition to the fat stock illustrations, there is a large number of others of cattle, horses, sheep, pigs, and miscellaneous farm scenes, which, together with the reading matter, make up a book of great interest to all associated with the farm. The volume consists of about 250 pages, and is nicely bound in a coloured wrapper, on the front of which appear, in a most artistic frame, portraits of His Majesty the King and H.R.H. the Prince of Wales. The frontispiece is a photograph of the late Mr. A. J. Stanton, who for many years so ably edited this Almanack and the "Mark Lane Express." He was known and held in high esteem by a very large number of readers of the Almanack, and a portrait will be treasured by many as that of an old friend. A portrait is also given of Sir Edward Strachey, Bart., M.P., Chairman of the Central and Associated Chambers of Agriculture for the present year. The volume is still sold at the very low price of 6d., or by post 9d., and is published at the offices of the "Mark Lane Express," 1, Essex Street, Strand, W.C.

The Journal of the Department of Agriculture and Technical Instruction for Ireland has already

attained somewhat a reputation among farmers for its practical articles and reports of experiments dealing with agriculture, and the December number of this useful publication does not belie its reputation. The opening article by Mr. M. G. Wallace, on "Early Potato Growing," and in this the writer points out that the cultivation of potatoes for the early market is undoubtedly one of the most profitable branches of agriculture, provided the produce can be put on the market at the beginning of the season while high prices still obtain. Some idea is given as to how the trade in early potatoes can be preserved for home-grown produce, to the exclusion of the French and other foreign produce. Other useful articles in the agricultural portion of this journal are "The Use and Purchase of Manures," and "The Diamond Backed Moth." The usual official documents and statistical tables are provided.

We have received from State-Councillor J. N. Lodijensky, Commissioner-General of the Russian Section at the Glasgow Exhibition, a copy of a book on Russia, which was on sale at that exhibition. This book will prove most useful to those having any interest in trade with Russia, as giving them a good idea of the social and economic conditions of life there prevalent.

The January number of *The Commonwealth Pictorial* contains a profusely-illustrated description of the Royal tour through the Colonies. This number is first of the second year of the existence of the paper, and will do much to enhance the reputation it has already achieved. It is edited by C. S. Rutledge, F.R.G.S., F.R.C.I., at 28, St. Martin's Lane, Cannon Street, E.C.

The "Scottish Farmer Album" for 1902 is, like its predecessors, a capital picture gallery of numerour prize-winning animals at the pricipal shows—both fat stock and otherwise—of the past year. The illustrations, which are from photographs, number about one hundred, and include the various breeds of horses, cattle, and sheep, but there is only one pig, and that a large white boar. It may be that pigs do not find favour with the canny Scot, but one would expect to see the "gintlemin that pays the rint" better represented than one in a hundred. Still, this is the only fault we have to find with the album, which is a wonderfully cheap sixpennyworth of live stock illustrations and useful reading matter. It is published by the Scottish Agricultural Publishing Co., Ltd., 93, Hope Street, Glasgow.

"The North British Agriculturalist Calendar and Scottish Farmer Year Book" for 1902 consists of a blotting book in a stout cover, with a number of fine illustrations of live stock, etc., and some very useful tables for farmers. This is published by Messrs. C. and R. Anderson, 377, High Street, Edinburgh, price 6d. post free.

Among the annual publications which are issued at this period of the year, "Sutton's Amateur Guide" is always anticipated with keen interest by the horticultural world. For the successful cropping of gardens and the adornment of homes during the entire circle of the seasons, this popular work is justly regarded as an indispensable aid. Year after year the vegetables appear to become more tempting in form, and the flowers more varied and attractive. A comparison of current illustrations with those of favourite varieties of twenty years ago affords convincing evidence of progress in the hybridizer's special art. The ambition of raisers of new peas has been to obtain higher quality, with greater abundance, on really dwarf plants, and Messrs. Sutton offer an extensive list of conspicuously successful examples. The new varieties for 1902 prove that in horticulture constant improvement is steadfastly kept in view. From the section devoted to flowers we infer that recent efforts have been directed to the attainment not merely of increased diversity in colour, but also to gracefulness of form and enhanced docorative effect. In the open ground the improvement is equally striking. Instead of the stiffness which formerly prevailed, we have many graceful flowers of which Aquilegias, Salpiglossis, Schizanthus, and Sweet Peas are typical. A large number of elegant subjects follow in succession, and make borders delightful all through the summer and autumn months. It is scarcely needful to refer to the fact that in the introduction of new potatoes of the highest table quality, combined with the power of resisting disease Messrs. Sutton stand alone. "Sutton's Amateur's Guide" is truly a most artistic and useful work, and those who obtain a copy will be deeply interested in the contents, even if they do not happen to be the fortunate owners of gardens.

Monday (December 30).—Dull and rainy weather prevailed in most parts of our islands Rain was measured in the morning, as the result of the fall in the preceding twenty-four hours, over the entire kingdom, and the fall was heavy at several of the Western stations. The winds had become Southerly over the entire kingdom, and were generally increasing in force. A brisk rise of temperature had occurred, and in the Western and Southern districts the thermometer stood at fifty degrees and above in the morning. Rain fell in the metropolis throughout the morning, but the afternoon was fine, and the temperature rose to fifty-seven degrees.

Tuesday (December 31).—The weather was again very unsettled, and rain fell in many parts of the country, while the sky was nearly everywhere dull and overcast. Rain was measured in the morning as the result of the fall in the preceding twenty-four hours at all except a few places high for the time of year, and in the South and mostly small. The temperature continued very in the West of England, but the amounts were South-west of England the thermometer did not fall below fifty degrees throughout Monday night. The midday temperatures were also much above the average. A cyclonic disturbance was travelling eastwards to the North of Scotland, and the winds were everywhere South-westerly, and were generally rather strong in force.

Wednesday (January 1st).—There was some improvement in the weather over England, although rain was again falling in places during the afternoon. A cyclonic disturbance was still situated to the North of our islands, and the winds were South-westerly over the entire kingdom, while a fresh fall of the barometer had commenced in Ireland. Rain was measured over the whole country in the morning, as the result of the fall since the previous day, and the amounts were large in the central parts of England. A considerable decrease of temperature had occurred, except in the South-west of England, where the thermometer was still very high for the time of year. A slight frost was experienced at some of the Scotch stations during Tuesday night.

Thursday (January 2nd).—The weather was generally fine over the British Islands, but showers were still reported in places. A large cyclonic disturbance had arrived from the Atlantic, and its centre was traversing Scotland. This was occasioning strong westerly winds over the entire kingdom, and a moderate to fresh gale was blowing at many places on our West and South coasts, as well as in the English Channel and the Bay of Biscay. Rain had fallen everywhere since Wednesday morning, and the amounts were large at places in the North. The temperature had risen slightly, and the midday readings were again high for the time of year. In London the day was fine, although the sky was threatening at times, and the highest temperature was fifty-three degrees, which is eleven degrees above the average.

Friday (January 3rd).—Cloudy weather prevailed in most parts of our Islands, and rain fell again in a few places, chiefly in the North and West. Rain was measured in the morning, as the result of the fall in the preceding twenty-four hours, in most parts of the country, but the amounts were small. The wind was everywhere south-westerly, and the force was still strong on our west coasts. The temperature was again very high for the time of the year, and the thermometer indicated 50 degrees and more in most parts of the Kingdom. The day was dull in London, and it was threatening rain at times; the air was, however, very warm, the thermometer registering fifty-four degrees.

Saturday and Sunday (January 4th and 5th).—The weather was generally very unsettled on Saturday, and rain fell over nearly the entire Kingdom, while the winds were, for the most part, strong and squally from the south-west. The temperature was everywhere high for the time of year, and in many places the thermometer stood ten degrees above the average. There was a considerable improvement in the weather on Sunday, although showers occurred in places, but there was at times bright intervals. The temperature has undergone a brisk fall over the whole country.

The December Weather.

Of late years the country has experienced mild weather in the month of December, partaking more of the nature of autumn or late spring than of winter. Taking the ten years 1891 to 1900 the December mean temperature for London has only twice been below the average, both 1898 and 1900 being exceptionally warm, about equal to the early part of April or the end of September. The closing month of 1901 has been characterised by much more normal conditions, the London temperature of 39½ deg. being in defect to the extent of only ½ degree. From beginning to end there was not a day on which the atmosphere was in a quiescent mood. During the opening days the wind was mainly from the southward and westward, so that for the first week mildness prevailed, but when the wind shifted into north and east temperature fell decidedly, and sharp night frosts became common. The closing days were milder than the opening ones, and more stormy. A great deal of fog or mist was experienced, whilst the month was a wet one, rain falling every day in the Shetlands and on the Mayo coast, several localities having twenty-five days and upwards. The amounts were slightly under the average only at four western stations, while in the east they ranged up to double the usual quantity. At Yarmouth 2.53in., or more than the month's average, was measured on the morning of the 1t3h, and falls of ½in. and upwards were unusually frequent over the country generally.

Rain and Sunshine in 1901.

The feature of especial interest with respect to the weather of last year is, perhaps, the persistent continuance of dry weather which characterised, not only the early months, but which continued greatly throughout the summer. In common with so many recent years, there has been a remarkable freedom from storms, although in the autumn heavy gales were generally experienced. The aggregate rainfall for the year was deficient over the entire area of the British Islands, except in the North of Ireland, where there is an excess amounting to 2in. The greatest deficiency in any part of the kingdom is 6.7in. in the South-west of England, and this is followed very closely by 6.2 in the North of Scotland. In the North-west of England the deficiency of rain was 5.2in., and it is nearly 5in. in the East of England, while it exceeded 4in. in the South of England and in the South of Ireland. The mean temperature for the year over the United Kingdom was not generally very different from the average, and there were no extreme readings of special importance. There was everywhere a large amount of bright sunshine, the excess for the year amounting to 287 hours in the North-west of England, while it was 241 hours in the North-east of England. In the South of England the excess was 199 hours. In the Channel Islands the excess for the year was only 35 hours, and in the South of Ireland 36 hours.

Powdered Milk.

The United States Consul at Gothenburg, in a recent report to his Government, says that Dr. Ekenberg, of that city, has made a discovery which will be of importance in dairy farming. He claims to have invented an apparatus by which milk can be brought into the form of powder, like flour in appearance, but possessing all the qualities of milk in concentrated form, moisture excepted. It is said that this milk flour is completely soluble in water, and can be used for all purposes for which common milk is employed. The milk flour does not get sour, does not ferment, and in the dry state is not sensitive to changes in the weather. It can be kept and transported in tin cans, barrels, bags, etc. The cost of production is estimated at about 27 cents per 106 quarts, and flour made from skimmed milk can be sold at about 13 cents. per pound.

At a recent meeting of the Academy of Agriculture, Dr. Ekenberg exhibited samples of the milk flour, which received favourable comments. It is considered that the invention will be of the greatest importance for the utilisation of skimmed milk, which heretofore has largely been wasted, but in the dry form can be transported without losing any of its original qualities. The product mentioned is considered superior to the case in products "proton" and "proteide" now manufactured from milk by the aid of rennet, acid, or lye.

Cornwall.

We have had a very wet time lately, and little has been done on the land except carting manure. Cattle are wintering fairly well, but the stock of winter provision in many cases is very short, and the stack yards have more the appearance of March than January; prices are also low, so that the unfortunate ones who have to sell their store stock will have to do so at a great sacrifice. Sheep have done all right up to now. The recent rains have caused the hoggets to lose condition, and some of the weakly ones have died. The lambing season does not commence (except in a few instances) before the middle of February. I cannot say that the outlook for agriculture is at all prosperous. What with low prices and dry seasons, this neighbourhood has suffered very considerably. Nearly all the farms have been changing hands for some years past, and but few of the old tenants remain. Some have lessened their labour bill. It is a great question if this has been advantageous. I should say not; rents have been lowered very much, and still it is difficult to make a living; and to do this my experience teaches me that the right kind of stock must be kept and the land farmed well.—W. E. M. (January 2nd).

Dorset (West).

The cattle and sheep during the month just passed have played considerable havoc with the hay ricks. We have experienced most severe frosts, deep snow, fogs, and heavy rain. The latter was sadly needed, and will be of great benefit to the many who have had to continually cart water for cattle. The Old Year departed in a blustering manner and the new one was ushered in by a mild and somewhat sunny morning, which, however, before evening relapsed into the former boisterous weather, and the night of January 1st, 1902, was a very rough and wet one in these parts. Ploughings luckily are forward, as cultivations cannot now go on for a week at least. Sheep have suffered more than cattle, owing to the heavy rains, and the turnip ground is now, and has been during the last fortnight, very cold lying. Roots are generally plentiful, but much waste goes on at present. The young wheat will be none too strong if frost sets in again after so much wet. A small area appears to be sown and few acres only are very forward. Good milch cows are selling well, but medium and poor ones are not much sought after, except at low prices. Good fresh, young barren cattle hold their own in price, and good classes of fat cattle are not likely to fall in price just yet. Neither is good mutton of nice weight of English making. Already some good cross-bred lambs are forthcoming, and making from 10d. to 11d. per lb. alive. Good calves and bacon pigs are largely sought after, and also small porkers, but the prices of feeding stuffs leave but little margin for the grazier, and the million are getting the benefit of the farmer's hard labour.—G. S. (January 2nd).

Somerset.

The late severe wintry weather, and now the very heavy rains, has left the pasture lands in a very wet and rotten condition, and caused all outdoor cattle to do badly and lose condition. The hay ricks are going very fast, especially those made the last year, which were very small and not half a crop, and farmers who had not a stock of old hay must feel themselves in queer street. As it is, few will have any hay left at the end of the season, and many will have to purchase largely of feeding stuffs to make it last out. Cattle at the autumn farm sales have sold better than anyone could have expected, considering the bad hay crop, and I think will pay the purchasers very little for wintering. Beef is selling better, and I think will continue to do so for the next few months, but store cattle will be a slow trade. Cheese has been a very dragging trade, and as yet does not seem to improve, although the make was a very short one. Altogether the past year has been a very disappointing one for dairy farmers, and when the accounts are made up few will find the balance on the right side.—E. D. (January 3).

Somerset (Cheddar).

A deal of rain has fallen of late, being very acceptable to agriculturists, as many up to a recent date, owing to ponds being empty, have been obliged to have water hauled to their live stock. Cattle have done well in the pastures, where they are generally allowed to remain during the whole of the winter in this district, owing to the weather being so dry that the cattle have been enabled to pick up all the hay without waste, which fodder is almost entirely depended on as food by the dairy farmers here for their cattle during the winter, not growing corn or green crops for their cattle, and, instead as of old making Cheddar cheese, using the whey, in addition to meal bought from the corn merchants, to fatten large numbers of pigs. Many have now given up cheese-making, the result of which have also given up in great measure the rearing and fattening of the porker, now contenting themselves with selling the milk to the milk factors, which certainly is an easy way of doing things; but I very much doubt the wisdom of such a mode of farming, as practically no manure is now carted or sown on the pastures, in order to keep up its fertility. —A. L. O. (January 4).

Worcester (South).

The rain, so long expected, came to end the old year and usher in the new, much the same as it did a year ago, and we have now floods on the low-lying meadows; but it is fortunate, with the shortness of keep, that the water has kept off them so long. Work on the land is fairly forward, and autumn-sown crops look well. Sheep have done well on the roots, the dry autumn being in their favour, as well as having helped to economise the short crop of sheep feed. The Christmas markets for beef and mutton were quite as good as expected, but owing to high price of feeding stuffs cattle did not leave much margin for profit. Steady trade for all corn at very unremunerative prices. I regret that I cannot see any signs of improvement in agricultural prospects.—J. W. D. (January 2nd).

York.

The feature of the situation is the scarcity of feeding stuffs, hay, straw, and turnips. It was expected that the supply of hay and turnips would be limited, but it was not realised that straw was so scarce. It is now making £3 to £4 per ton, and is difficult to find even at these prices. Oats are dear, compared with previous years, but other grain has not naturally advanced. Beef has sold well during Christmas and the New Year, and is keeping its price; pork, too, has met a good trade, but mutton is cheap. Potatoes are plentiful, and selling at a low price.

As for farm work, it is well forward. A good breadth of wheat was sown in the autumn, and it is looking well. Seeds, too, are fairly good.

We have had heavy falls of snow, but have missed the floods that have prevailed in places. On the moorlands, the snow has been very deep. It is reported from Dent Fell, Hawes, at the junction of Yorkshire and Westmoreland, that a sheep, belonging to Mr. W. Pratt, Garsdale, has been discovered in a crevasse, after being buried in the snow for 22 days. When found it was alive, and able to walk home, a distance of a mile and a half. The same sheep was buried under the snow for ten days in November last. This must be almost a record.—W. P. (January 3).

Foreign Prospects.

France.—Abnormally mild weather is prevalent, but there is apparently no cause for complaint, as the general aspect of the crops is most satisfactory, but farmers would prefer a lower temperature, to prevent the increase of weeds and vermin. The Paris weekly market was very quiet, and provincial Corn Exchanges are always thinly attended in the holiday season. Of the markets held last week 21 came dearer (32 in week before) 90 were firm, 120 unchanged, and 16 cheaper.

Belgium and Holland.—A complete change has taken place in the weather, and this, in conjunction with the holiday interruptions, caused quieter markets, at about steady prices. Antwerp imported 106,000 qrs. of wheat, against 70,000 qrs. in previous week, and 47,500 qrs. in 1901. The receipts of wheat in Rotterdam equalled 45,000 qrs. compared with 74,000 qrs. in preceding return, and 60,000 qrs. in year before.

Germany.—With higher temperature the ice in canals and rivers is rapidly disappearing. Berlin on New Year's Eve was quiet at harder prices, but yesterday, although demand was fairly active, value went lower. May term is quoted at a parity of 37s. 3d. per 480lb. compared with 37s. 6d. a week ago.

Hungary.—In all provinces the Autumn-sown crops present a satisfactory appearance. Budapest reports a quiet, but steady market for wheat. Yesterday's April term was quoted 33s. 7d. per 480lb., against 32s. 11d. a week ago.

Italy.—With scarcely any exception, the Autumn-sown cereals are reported to be in splendid condition, favoured by mild weather.

Spain.—Intensely cold weather last week stopped agricultural work. It is feared that the young crops have suffered.

Russia.—Rain and milder weather have displaced the snow in most of the European Governments, and in several districts farmers are busy sowing. Complaints of ravages by Hessian fly are increasing.

Roumania.—The condition of the Autumn-sown fields is irregular, those early planted looking better than the late sown. The maize crop is all cut and carried.—*Dornbusch.*

GARDEN.

The New Year came in mild and fine, but there have been some showers during the day (the first), and indications of more rain are only too plain. A moderate amount of wet will do the ground no harm, but any excess will be injurious, as likely to hinder the proper working of the land, sowing operations, etc., presently.

Things will soon begin to move again now, especially under glass. Seeds of several kinds will have to be sown shortly, so get a good supply of soil ready for use—under cover, of course—also plenty of pots washed clean and dried, and boxes mended up, and all ready for use. Among the seeds to be sown first are those of the cauliflower, cucumber, and tomato, with another batch of French beans, where these can be grown and fruited under glass. A first sowing of onions for exhibition purposes, also a few leeks, should be made in the course of another two or three weeks.

Keep young tomato plants moving on in a steady temperature of 55 to 65 degs., and cucumbers should have from 5 degs. to 10 degs. more warmth still. Prick off recently-sown seedlings of the former singly into shallow boxes as soon as they can be well handled, or pot them separately in small sizes, using good loamy soil, and keep them comfortably warm, and near the glass also.

Of varieties of the tomato a rather new one called "The Cropper" is one of the best I have ever seen or grown. It well deserves its name, the rather slender stems being loaded with long racemes or trusses of fruit right up to the top of the house. The fruit is also perfectly smooth and round, of a nice medium size, rich red colour, and capital flavour. Other good kinds are Ladybird, Comet, and the Frogmore Selected, and during the last year or two the old Ham Green is making its way to the front again, but personally I prefer Chemin Rouge, which produces almost perfect fruit, though the growth is rather long.

If there is a frame or two to spare, place them over some gentle hotbeds, with 8 in. or 10 in. of soil on the manure, and plant them with sets of a good early potato, such as Sharpe's Victor, the old Ashleaf Kidney, or the newer Ninetyfold. Or where there is a roomy vinery, either now at work or to be started shortly, or any good-sized, light, and gently-heated structure available, a number of sets may be planted in good-sized pots. An 8½-in. or 9-in. pot will grow a good single root of a good dwarf variety, such as those mentioned, or three sets may be placed equi-distantly in the 10-in. or 11-in. sizes. Do not fill the pots more than two-thirds full at first, leaving room to earth up presently, and water must be given very sparingly until the plants have rooted out well and made some amount of growth, especially in a low or cool temperature.

Lay out more early potato sets to sprout ready for planting on warm borders next month, or early in March. The place must be light, or the sprouts will be weak, and moderately warm also, but in a too high temperature they will advance too rapidly. It is a good plan to rub out all but one or two of the strongest sprouts on each set before planting.

It is time that all the outdoor pruning of hardy fruit trees and bushes was completed now, though an exception may be made in the case of peaches and nectarines, which are usually pruned when the trees are returned and re-nailed to the walls, some time next month or early in March. But even these must not be left too long, and there is no real reason why what pruning is necessary should not be done at once. Remember that peaches and their allies fruit chiefly on the young wood formed the previous season, so that this must not be cut away, or even shortened to any extent. The general rule is to leave three of such new growths to each piece of the old bearing wood, one towards the point, and one on each side (top and bottom) near the base.

See that all the cuttings of bush fruits are firmly fixed in the ground, and if any have been loosened by frost tread the soil back against them firmly with the foot.

A first batch of strawberries in pots may be brought in and started now. The best way to do this, when possible, is to plunge them in a bed of just warm leaves or tan, in a pit, with their heads close to the glass. The air temperature should not exceed about 45 degs. at night, and water must be given sparingly till the blossoms expand.

CORN MARKETS.

LONDON.

Mark Lane, Monday.—Malt: A very limited enquiry during the past week. Barley: Grinding and malting unchanged. Wheat quiet at about late rates. Oats slow. Maize dull. Flour firm.—NIXON, GOWER AND CO.

Mark Lane, Wednesday.—Inasmuch as concerns cereals, the New Year was ushered in under favourable auspices to sellers; but, with customary observance during the festive holiday season, business was suspended. English wheat remains firm here. White ranges at 29s to 30s 6d, and red at 28s 6d to 30s per qr. delivered, 29s 6d being the general figure. Of foreign, arrivals off coast continue to be kept down. American firm, at last week's advance. Apart from being featureless, the flour market moved evenly, and ex store quotations pointed in sellers' favour. Bakers' grades continue moderate in supply. American first patents quoted up to 25s; seconds, to 22s. First bakers, 19s to 21s; seconds nominal. English maintained. Town households, 23s 6d; and whites, 3s per sack more. Grinding barley firm. Samples of malting were again withheld temporarily. Oats, if anything, sided more in sellers' favour, but quotations were not altered from those current last Monday, which denoted a decline on the week for Russian. American descriptions remain very scarce at high prices. English oats become more and more scarce, and farmers adopt the same indifference. Gartons, spring-sown, 25s 6d, 42lb; black winters, 23s 6d to 24s, 42lb. Maize unchanged.

Mark Lane, Friday.—There was only a limited attendance at to-day's market, with little desire for business, but prices moved steadily in the various sections. English wheat continues to be offered sparingly here, and local resorts are not in supply, quotations being steady. Whites, 29s. to 30s. 6d., and reds, 28s. 6d. to 30s. per qr. delivered up. American unchanged. Russian descriptions, as of late, are above buyers' ideas, and go to the Continent. The market for flour calls for nothing fresh. Bakers' grades remain scarce. American first patents quoted up to 25s.; second ditto to 22s. First bakers, 19s. to 20s. 6d.; seconds nominal. Cascadias, 21s. 6d. ex store. English firm. Town households, 23s. 6d.; whites, 3s. per sack more, delivered to the baker. Grinding barley rather easier since last Monday. Odessa, 19s. ex quay. Malting well maintained for both English and foreign types. Oats, the turn against sellers, but not quotably altered. American very firm, a persistent scarcity. English oats still command enhanced rates. Gartons, spring-sown, 23s. 6d. 42lb.; black Winters, 23s. 6d. to 24s. 6d., weighing the same. Scotch oats, 23s. to 24s. 6d. 42lb. Maize rather lower on the week.

COUNTRY.

Ashford, Tuesday.—Very satisfactory trade prices for wheat and feeding corn. White wheat made 28s to 31s; red, 28s to 30s; malting barley, 27s to 32s; grinding barley (English), 24s to 25s; foreign, 20s to 21s; black oats, 18s to 22s; white, 20s to 24s; and maize, 28s to 29s per quarter.

Banbury, Thursday.—Wheat, red (new), 28s to 29s per qr; beans (old), 37s to 39s per qr; oats, 17s to 20s per qr. Trade firm, but very small show of wheat.

Birmingham, Thursday.—Market fairly well attended, but demand quiet. Prices for wheats were unchanged, English realising 10s 6d to 11s 3d per bag. Grinding barley 3d dearer, at 18s to 18s 9d Sharpness. Plate maize, 24s 6d Sharpness. English oats scarce, commanding 21s 6d to 23s for white, and 21s to 22s for black. Beans, 14s 6d for new.

Braintree, Wednesday.—Small supply and very quiet trade, red wheat making from 28s to 29s and white 29s to 30s per qr. Barley trade very quiet, prices from 25s to 33s.

Bristol, Thursday.—Since our last, with the Christmas holidays intervening, trade has continued quiet. To-day there was a fair supply of English wheat on market, making about 3d advance on the fortnight. Foreign 6d advance. Barley unchanged. Maize and oats 3d to 6d lower. Fairly good enquiry for flour at fully late rates.—GRACE BROTHERS.

Bury, Wednesday.—Wheat: Supply below average; trade firm at fully last week's prices. Reds 28s 6d to 29s 6d; whites 28s 6d to 30s per qr. on the line. Barley: With a moderate supply, the trade for all grades of useful malting parcels was steady, with a healthy demand at 28s to 32s per qr.; better descriptions firm up to 36s per qr. Oats and beans firm at last week's prices. A considerable business was done in clover seeds. Feeding stuffs quiet but steady.

Cambridge, Saturday.—During the week trade has been very quiet, and with the change from frost to soft weather many samples have quite lost their fine condition. At this market to-day there was a smaller supply of grain, the condition of which was very variable. Wheat sold steadily at last week's prices for dry lots; damp neglected. Red, 28s. to 29s., and white 29s. per 504lb. Barley was in fair supply and made quite as much money. Beans and oats fully as dear.

Carlisle, Saturday.—Fair supply of oats in our market to-day, good demand at unchanged prices. New, 20s 6d to 22s 6d per 335lb; old, 23s to 23s 6d per 335lb.—THOMAS ROBINSON.

Chichester, Wednesday.—Small attendance and very quiet market, with prices unchanged.

Chester, Saturday.—The market was fairly well attended. There were few quotable changes in values. Oats and barley were firm, while Indian corn was a little easier. White and red wheat was quoted at 4s. 3d. to 4s. 4d. per 75lb.; malting barley, 3s. 8d. to 3s. 9d. per 60lb.; grinding barley, 3s. 3d. to 3s. 6d. per 64lb.; beans, 5s. 4d. to 5s. 6d. per 80lb.; old oats, 3s. 4d. to 3s. 6d.; and new, 2s. 8d. to 2s. 11d. per 46lb.

Colchester, Saturday.—Wheat a slow trade, prices unchanged, with poor condition; barley, firmer; oats and beans, unaltered.—FRANCIS AND CO.

Croydon, Thursday.—White wheat, 29s. to 31s.; red ditto, 28s. to 30s.; malting barley, 28s. to 35s.; grinding, 22s. to 24s.; oats, 18s. to 20s.; beans, 32s. to 34s.; peas, 29s. to 31s. Trade for wheat firm at last week's prices; beans and peas dearer.

Glasgow, Tuesday.—The trade during the week has been quiet, and prices are nominally unaltered for bread stuffs, with a limited business passing. Maize has been the turn in buyers' favour owing to large supplies, and other feeding stuffs have also been rather easier.—GIBSON AND CLARK.

Leeds, Tuesday.—London and Liverpool were unexpectedly weak yesterday, and America responds with unexpected strength; shipments prove moderate and foreign limits continue out of reach. Holders of wheat consequently remain exceedingly firm, and on the business doing to-day the rates of this day fortnight are generally exceeded. Second class Yorkshire barleys still favour sellers, and meet with more demand. Maize, 3d. lower; beans and oats unchanged.—DUNNS AND CO.

Leeds, Friday.—The demand for both English and foreign wheat is still very quiet, the former at Tuesday's prices and the latter the turn dearer. Beans, peas, oats, barley, maize, and flour all firmly held, but in very limited request.

Leicester, Saturday.—Good average attendance, with fair supply of home-grown wheats. Trade steady at 28s. to 31s. per 36 stones. Malting barley in better request. Fine old oats, very firm.

Leicester, Saturday.—Fair average attendance of buyers and dealers, with moderate supplies of home-grown wheat. Trade quiet, only fine dry samples being in request. Red wheat, 28s to 30s; white wheat, 29s to 31s per 36 stones; malting barley in better request at 28s to 32s per 32 stones; grinding barley a sluggish trade; beans firm; new oats, 21s to 23s; old oats firm at 25s to 26s per 26 stones.

Lewes, Tuesday.—New white wheat, 29s. to 30s 6d.; new brown ditto, 29s. to 30s.; Malting barley, 32s. to 35s.; grinding ditto, 20s. to 24s.; oats, 20s. to 24s.; beans 35s. to 37s.; peas, 33s. to 36s. per quarter.

Lincoln, Friday.—Moderate supply of wheat, which was firmly held at late rates, the best samples making up to 30s. per qr. Barley short, and prices very firm for both malting and feeding samples. Though there was no quotable alteration in maize, beans, and peas, the tendency was decidedly upward.

Liverpool, Friday.—The market has had a moderate attendance, but wheat has met a very fair inquiry, a good business being put through at about unchanged prices for reds. White sorts are very scarce, and meet a fair inquiry. Flour is quiet, with only a small trade doing, prices being in one or two cases 6d lower for foreign. The Liverpool Millers' Associaton made no change in the price of bakers. Maize—The demand for mixed is moderate and shows a loss of ¼d since last Tuesday. European, owing to free arrivals, is ¼d to 1d lower, but has some inquiry at the decline. Plate is ¼d lower, with a moderate trade doing. Barley—Malting has some inquiry, but prices are slightly in buyers' favour. Feeding is the turn lower and very quiet. Beans are firm, with a moderate inquiry, Sadis being 3d per quarter advance since Tuesday. Peas steadily held, but quiet, at about late rates. Oats firmly held, but meet only a small inquiry at full prices for English. Foreign sorts are in moderate demand, with values occasionally ¼d lower. Oatmeal firm, but inactive at quotations. Oilcake very steadily held with a fairly good inquiry at Tuesday's prices.—SEGAR AND TUNNICLIFFE, Corn Exchange.

Manchester, Thursday.—A steady tone has ruled during the week, and this morning the tendency was slightly against the purchaser of wheat, both English and foreign. Flour continues in quiet demand, but millers are steady in price. Firmness continues in Indian corn, owing to the limited offerings, but demand is slow. Peas and beans are rather strong. Oats steady and unchanged.

Newcastle-on-Tyne, Saturday.—At our to-day's market wheat ruled steady at last Saturday's prices; maize favoured buyers to the extent of 3d. per 480lbs.; barley fairly steady for malting purposes, quiet for grinding. No change in peas or beans. Oats a quiet demand and slightly in buyers' favour.—JOSEPH POLLARD AND CO.

Northampton, Saturday.—A wet day and small market. Quiet business, supply and demand limited. Quotations for farm produce not any better than last week. White wheat, 28s. to 30s.; red, 27s. to 28s.; barley, 25s. to 30s.; grinding ditto, 22s. to 24s.; oats, 19s. to 22s.; fine old, 25s.; beans, 32s. to 36s.; flour, 21s. to 22s.; fine, 25s.

Norwich, Saturday.—There was a steady trade in wheat at our market to-day, but several samples were out of condition owing to damp weather. Barley was in fair supply, with no appreciable alteration in prices. Mild weather mostly prevails, with occasional showers of rain, which make the atmosphere very humid. Wheat, red, 29s. to 29s. 6d per qr., weight 63lb. per bushel Imperial. Corn—Inspector's return for the week ending 30th December, 1901:—Wheat, 1,870-5, 27s. 1¾d.; barley, 5,1 32-6, 27s. 8¾d.—Per J. A. MILLS, C. B. B.

Nottingham, Saturday.—Wheat moderate supply; condition not good; previous rates maintained. Barley in less supply; prices unchanged. Oats and beans both scarce and prices in sellers' favour.—ROBERT HUBBLE.

Peterborough, Saturday.—The damp, mild weather is against the wheat trade which was slow to-day at rather less money. Barey made full prices, and in some cases 6d. advance. Oats steady at late rates.—T. HILL AND SON.

Plymouth, Thursday.—The market here is recovering, feeding and wheat firm, at last week's prices.—ORLANDO DAVIS AND CO.

Reading, Saturday.—Owing, no doubt, to the very wet and unpleasant weather, the attendance on the exchange here to-day was much smaller than usual; the quantity of corn on offer was also considerably below the average, and trade ruled firm in all departments. Wheat made from 27s. to 31s. per qr., fully up to late rates, and other corn changed hands at recent currencies.

Ripon, Thursday.—The market presents a more brisk tone than of late and the attendance was larger. New oats firm, and making rather more money. Wheat, English, new, 29s 6d to 30s 6d; ditto foreign, 29s to 33s; barley, grinding, 22s 6d to 23s 6d; ditto malting, 26s to 31s; oats (old), 24s to 25s; ditto (new), 21s to 24s; round maize, 27s to 28s per qr; beans (old), 1s per stone.

Romford, Wednesday.—Wheat trade unchanged, and very little doing. Only a small supply on offer. Red wheat 27s 6d to 28s 6d, white 29s to 30s per qr.

Rye, Wednesday.—White wheat, 27s. 6d. to 30s. Red ditto, 27s. to 30s.; white oats, 18s., to 24s.; black ditto, 19s. 6d. to 24s.; winter ditto, 20s. to 22s.; tick beans, 34s. to 36s.; mazagan, 32s. to 34s.; grey peas, 31s. to 33s.

Spalding, Tuesday.—At the Corn Exchange there was a fair attendance of merchants and farmers. Wheat was a firm trade at 29s. per qr. Oats made 21s to 22s. Barley firm at late rates. Beans and peas unchanged, and not much business doing.

Stamford, Friday.—There was a fair show in all departments. Wheat, 30s to 30s 6d; barley, 26s to 29s; oats, new, about 22s; old oats, 26s to 26s 6d; beans, 32s to 34s. Maize made late rates.

Sunderland, Saturday.—Wheat steady, at fully late rates; barley, quiet; oats, firm; arrivals coastwise: wheat, 837 qr; barley, 532; foreign, nil.—E. AND F. RICHARDSON.

Wakefield, Friday.—Foreign wheat may be quoted firm at late rates, and English a dull trade at about last week's prices. A fair supply of malting barley on market to-day, with but few buyers. Maize 6d per qr lower on the week, and other feeding stuffs unaltered.—MICHAEL SANDERSON AND SON, LIMITED.

Wakefield, Friday.—There was a steady consumptive demand for wheat, at 3d to 6d advance from the rates of this day fortnight; this applies chiefly to American and Russian descriptions, Indians and Californians scarcely participating in the improvement. Rather more doing in malting barley, at full prices. European maize 6d lower. Other feeding stuffs firm.—DUNNS AND CO.

Winchester, Saturday.—Wheat in short supply on our market to-day, which met a quiet demand at late rates. Best samples of barley fully 1s dearer; secondary qualities, unaltered; maize, 6d cheaper, oats, slow, with rather easier tendency; flour, 22s to 23s 6d. Weather very unsettled.—FEAR, COLEBROOK AND CO., LD.

Wisbech, Saturday.—A better supply of wheat, trade slow at barely late rates. Prices, 28s 6d to 29s. Oats, 21s to 24s; barley, 26s to 29s; beans, 34s to 38s.—JAMES FLETCHER.

Wolverhampton, Wednesday.—There was a holiday market, with no alteration in prices. Quotations:—Wheat, new, 12s 6d to 13s per 216lb., Kansas 6s to 6s 2½d per cental; oats, old 15s 6d to 16s, new 12s 6d to 13s; beans, old 15s 6d to 16s 6d, new 14s 3d to 14s 9d per 196lb.; barley, 31s to 32s. per 448lb; maize, 27s to 28s per 480lb.

Worcester, Saturday.—Trade ruled quiet all round. Wheat in moderate supply, and values unchanged. Barley made rather more money. Oats and beans steady.

Worksop, Wednesday.—Small attendance and moderate supplies. White wheat, 28s 6d to 29s 6d; red wheat, 27s 6d to 28s 6d; best malting barley, 28s to 32s; secondary, 26s to 28s; grinding barley, 25s to 26s; white oats, 21s to 23s; black oats, 19s to 21s; ground maize, 27s to 28s per qr.

York, Saturday.—Average attendance; wheat still held at old rates, but trade kept rather dull. Good wheat, 29s. to 30s. per quarter of 36 stones. Rather less barley shown fine sorts were neglected, nquiry being for some thing at little money, of which very few samples were shown fine sorts were neglected, inquiry being for some-of 32 stones. Rather more oats on offer; blacks, 21s.; fine white 22s. per quarter of 24 stones. Beans were very scarce.

FOREIGN.

Paris, Tuesday.—Although favoured by splendid weather, there was at to-day's market, as might have been expected, a very small contingent of farmers, for this happens every year at this period. Trade as of late was almost nil. Compelled to make concessions, owing to the decline in the *Marche de Paris* and the dulness of the foreign exchanges, farmers offered very sparingly and only brought forward for sale a few trifling lots. Quotations are as follows:—Choice red, 37s 10d; ordinary, 36s 11d; and white, 37s 10d to 38s 9d per 480lb. Consumption marks flour: The position has modified but little since last week—transactions among dealers and bakers are still inactive, the demand being rather restricted, prices are nevertheless well supported although unchanged. Quotations are as follows:—Choice marks, 31f. to 31f.50 (31s 5d to 31s 11d); first marks, 30f.50 to 31f. (30s 11d to 31s 5d); good marks, 29f.75 to 30f.50 (29s 2d to 30s 11d); ordinary marks, 28f.50 to 29f.50 per 100 kilos (28s 11d to 30s 2d per 280lb). Rye: The demand is in general very quiet, the special milling trade is for the present rather dull, while distillers are also only making very few purchases. Here prices were nominally unchanged with, however, a few more sellers; buyers offer 27s 5d, but no sellers under 27s 10d per 480lb. Oats: This article is receding in value almost everywhere, and it seems that the tendency will be even weaker with the opening of the year, for farmers' and traders' offers are perceptibly in excess of the demand. Here to-day dealings were still very quiet, and values quotably unchanged on the week. Grey beauce, 24s 4d to 24s 8d; white, 25s 9d to 25s 6d; red, 25s 2d to 25s 6d; black, from the Central provinces, 24s 11d; small Picardy, 24s 11d to 25s 3d; large, 26s 5d.—DOMBUSCH.

Hamburg, Saturday.—With unseasonably mild weather and much rain, the ice in our rivers has disappeared. Trade quiet, with firm prices for wheat. The imports into Hamburg during the past year amounted to:—Wheat, 668,229 tons (1900, 318,706 tons); rye, 281,955 tons (1900, 174,612 tons); barley, 289,600 tons (1900, 255,116 tons); maize, 508,000 tons (1900, 735,113 tons). The imports during the past week amounted to:—13,699 tons wheat; 1,031 tons rye; 5,006 tons barley; 1,527 tons maize. Wheat is held for more money; hard winter No. 2 floating 29s.; February shpment, 29s. 9d.; red winter No. 2, January, 30s. 6d.; Russian, Ulka and Azima, 28s. 3d. to 29s. per 480lb.; Walla Walla, 29s. 9d. per 5001b. Rye quiet. Russian 915-20 was sold at 22s. 6d. per 480b. cif. Malting barley firm. A few parcels of fine Saal have been taken for England at 33s. to 34s. 6d., and good Bohemian to arrive, per barge, fetched 30s. 9d. per 448lb. for home use. Fine Saal continues scarce at 33s. to 35s. up to 38s. for best. Good Bohemian fica'ing is offering at 31s.; Pomeranian at 26s. 6d. to 27s. per 448lb f.o.b.—50-61. Ko. Russian feeding is held at 18s.; February shipment at 18s. 3d. per 400lb. c.i.f. Mixed maize is held at 25s. 3d.; River Plate at 23s.; Odessa and Danubian at 22s. 6d. per 480lb. ex-ship Hamburg.—JOHN TATLOCK.

FOREIGN CORN TRADE.

The shipments of grain from the chief exporting countries last week were as follows:—

(No official change since last date given.)			

POULTRY AND PROVISIONS.

Glasgow, Wednesday.—Market was quite of a holiday character, and there were few buyers about; indeed, prices were wholly unchanged from those of last week. Cheddars and Dunlops varied from 52s to 58s per cwt. There are now no Canadians in the market, but it is expected that Australian and New Zealand will be forward in a month.

Smithfield, Saturday.—Supplies large, a quiet demand, and sales progressed slowly. Quotations:—Fowls: Yorkshire, 2s 6d to 3s; Essex, 2s 3d to 2s 9d; Boston, 2s 6d to 2s 9d; Surrey, 3s to 3s 6d; Sussex, 2s 9d to 3s; Welsh, 2s 9d to 3s 3d; Irish, 1s 6d to 1s 9d; turkeys, 4s 3d to 7s 6d; geese, 4s to 6s; Irish, 1s 9d to 2s; pigeons, 7d to 1s 2d; quail, 10d to 1s 2d; wild rabbits, 7d to 9d; tame, 10d to 1s each; Australian, 7s to 8s 6d per dozen; pheasants, 3s 6d to 3s 9d; young partridges, 3s; old, 1s 8d per brace; hares, 2s 6d to 2s 9d; leverets, 1s 6d to 2s; wild ducks, 1s 6d; pintail, 1s 3d to 1s 4d; widgeon, 1s to 1s 2d; teal, 8d to 10d; woodcock, 2s to 2s 3d; snipe, 8d to 10d; golden plover, 7d to 9d; black, 4d to 6d; capercailzie (cocks), 2s to 2s 9d; hens, 1s 6d to 1s 9d each.

WOOL.

Glasgow and Leith Wool Sales.—The Scotch wool market has, on the whole, been quiet in December. At the Glasgow sales on 11th the number of buyers was unusually small, and very little wool of any description was sold publicly—nor was the private buying of much importance as regards whitefaced wools, values being kept down by the low prices of English and colonial cross-breds. Towards the close of the month there has been a movement in blackfaced, principally for export, although there are also some enquiries from home users. Hogg and wedder lots being now pretty well exhausted, more attention has been turned to ewes, which have been taken up at low prices to some extent. The month closes with a strong tone, and, as holders are meeting the demand liberally, stocks are being rapidly reduced—in fact, they have not been so small for some years.—J. AND W. GREIG.

POTATOES.

Borough, Saturday.—Arrivals were good, but a slow inquiry predominated at about late rates. Scotch Maincrops, 80s to 90s; Reading Giants, Blacklands, 45s; Blacklands Up-to-ates, 45s to 50s; Lincoln Silts, 60s; Gartons, 45s per ton.

Spitalfields, Saturday.—Market heavily supplied, a fair demand prevailed, and prices ruled steady. Quotations:—Best Lincoln Up-to-Dates, 60s to 70s; Blackland ditto, 50s; Wisbech ditto, 55s to 65s; Scotch ditto, 50s to 60s; Scotch Maincrops (grey soil), 60s to 70s; Lincoln Maincrops, 80s to 90s; Reading Giants, 45s; and Blackland Gartons, 45s to 50s per ton.

HOPS.

London, Monday.—The inquiry noted in our last continues. The exceedingly low prices English hops are selling at makes them the cheapest in the world—some consumers, realising this, are stocking up.—W. H. LE MAY.

FRUIT AND VEGEABLE .

Covent Garden, Saturday.—Fair supplies of greenstuffs on offer experienced a slow demand. Potato trade very quiet. A fairly good supply of fruit met a good demand. Greenstuffs: Cabbages, 4s to 5s; savoys, 7s to 8s per tally; beetroots, 2s 6d to 3s; spinach, 1s 6d to 2s per bushel; Brussels sprouts, 1s 6d to 2s 6d per half-sieve; carrots, 2s; parsley, 2s to 3s; leeks, 2s 6d per dozen bunches; celery, 9s to 14s per dozen rolls; horseradish, 1s 3d to 1s 6d per bundle; English onions, 6s 6d to 7s per cwt; Valencia, 7s to 8s per case; Dutch, 4s to 4s 6d per bag; potatoes—Maincrops, 70s to 75s; Reading Giants, 40s; Blacklands, 40s; Up-to-Dates, 50s to 60s; Gartons, 40s per ton. Fruit: English apples, 3s to 10s per bushel; Nova Scotian, 18s to 26s per barrel; Jaffa oranges, 7s to 15s; Valencia, 9s to 15s per case; Almeria, 12s to 20s per barrel; Messina lemons, 6s to 18s per case; English tomatoes, 4s 6d to 5s per strike; pineapples, 1s 6d to 4s 6d each; bananas, 7s 6d to 12s per bunch; Redon chestnuts, 6s 6d to 12s per bag.

Review of the British Corn Trade

DURING THE PAST WEEK

Written exclusively for the Mark Lane Express.

The year which closed in wind and rain on Tuesday night was marked by under an average amount of rain, and also of sunshine, but a full average temperature was reached, and the mean of wind force was considerably exceeded. There are many reasons for believing a windy year to be a healthy one for stock as well as for humanity, but the effect of air in rapid motion on vegetable life is not appreciable. Not so the effect of sunshine, and the poor sunshine record of 1901 would forbid our speaking favourably of the season's effect on vegetation even if there had been a sufficient rainfall. The actual rain record as ascertained by us in the County of Middlesex is as follows, the average with which it is compared being that of the last 25 years of the last century:

	1901.	Average.
January	0.90	1.85
February	0.75	1.53
March	2.58	1.54
April	1.89	1.69
May	0.72	2.00
June	1.80	1.94
July	3.69	2.58
August	2.07	2.38
September	1.50	2.34
October	2.52	2.81
November	0.90	2.34
December	3.00	1.97
Total	22.92	24.27

Harvesting is now in active progress in La Plata, and will begin in a week or so in Chile. The weather is favourable, and the early provinces of Argentina have already secured much of the grain in good condition. The good yields in the South and in the province of Buenos Ayres are expected to nearly efface the deficiency in Entre Rios, Uruguay, and the Argentine North. The Australian wheat harvest is very good in New South Wales, but only a very mediocre result is anticipated in the South. Cape Colony will need large imports in 1902. With a splendid area of fit land and with a protective duty to help home produce, it is disappointing to find wheat culture declining in this region. It must, however, be borne in mind that the vast development of Californian wheat-growing did not occur until the gold fever had died away. It may be the same in South Africa.

The record sales of British produce for the first four months of the cereal year were 1,085,000 qrs. of wheat, 2,465,000 qrs. of barley, and 354,000 qrs. of oats, which may be taken to represent about 2,712,500 qrs. of wheat, 7,395,000 qrs. of barley, and 5,310,000 qrs. of oats gone into consumption out of the United Kingdom yields for 1901. The wheat yield of the United Kingdom was estimated at from 6¾ to 7 million qrs., but in the absence of returns from Ireland, estimates of the yields of barley and oats are to a great extent guess work. In 1900, the last year for which we have returns from Ireland, the yields were 8,578,000 qrs. of barley and 20,650,000 qrs. of oats. It is to be hoped that much greater precision in these market sale returns will be attained in the new century, and that the Irish officials will be compelled to send in returns not later than those of the far greater areas controlled by Mr. Hanbury.

The Russian exports during December were very good of maize and very fair of oats, but both wheat and barley shipments were a good deal less than usual. Actual figures were:—Wheat, 652,000 qrs.; barley, 238,000 qrs.; oats, 53,900 qrs.; and maize, 432,000 qrs.

Roumania played quite an important part in December, shipping 430,000 qrs. of wheat, 94,000 qrs. of barley, 124,000 qrs. of oats, 104,000 qrs. of rye, and 482,000 qrs. of maize. These figures include Bulgarian and Turkish ports on the Black Sea.

The United States sent off good supplies of flour, 725,000 sacks, but 1,223,000 qrs. of wheat is a small quantity for America, and the shipments of maize, 96,000 qrs., and barley, 170,000 qrs., are very much below a December average.

Argentina in December shipped 64,000 qrs. of wheat, 173,000 qrs. of maize, and 4,000 qrs. of linseed. India in the same period shipped 120,000 qrs. of wheat (wholly from Kurrachee) and 66,000 qrs. of oilseeds (chiefly linseed). Egypt shipped 40,000 tons of cottonseed and 3,000 qrs. of beans. Hungary sent us 24,000 sacks of flour.

Last week's imports of grain were much below the mean:—

	Qrs.
Wheat	191,000
Barley	85,000
Oats	115,000
Maize	165,000

But of flour the imports reached the formidable total of 210,400 sacks. This sufficiently accounts for the otherwise curious fact of the new year beginning with wheat in sellers' and flour in buyers' favour. There are now, however, only 390,000 sacks of flour on passage, against 444,000 sacks a year ago, so that we may hope to see the position of flour improving as the month advances.

On New Year's Day the following quantities of wheat were on passage to the United Kingdom:—

	Qrs.
Californian	1,585,000
American	280,000
Argentine	65,000
Russian	70,000
Australasian	225,000
Indian	120,000
Other countries	20,000
1st January, 1902	2,380,000
1st January, 1901	2,060,000
1st January, 1900	1,420,000

The figures for 1900 and 1901 were small. During the last decade of the old century the mean was 2,250,000 qrs., or not much different from the figures of to-day.

New Year expectations of spring corn are as follows:—

	Barley. Qrs.	Oats. Qrs.	Maize. Qrs.	Beans. Qrs.
American	450,000	—	45,000	—
Argentine	—	—	185,000	—
Russian	115,000	125,000	400,000	—
Roumanian	70,000	40,000	300,000	—
Other countries	60,000	20,000	10,000	8,000
Total 1st Jan., 1902	695,000	185,000	940,000	8,000
1st Jan., 1901	490,000	300,000	760,000	8,000
1st Jan., 1900	535,000	250,000	820,000	9,000
1st Jan., 1899	280,000	200,000	840,000	14,000
1st Jan., 1898	610,000	200,000	740,000	11,000

It will be seen that of barley and maize our expectations are now good, but that oats and beans are likely to be scarce. The failure of America to ship oats is the feature of the above returns, in one direction, while the large supplies of Russian and Roumanian maize on passage are the leading fact in another. It may be added that the American barley is all malting on brewery grain on passage from California. There are no surplus stores of feeding barley in America. It is somewhat surprising that none of our four great sources of supply send us any beans, yet Egypt gets 34s. per quarter for her produce landed here, a price which exceeds the value of the best wheat.

The New Year opened at Paris with wheat at 38s. 6d., against 33s. 6d. a year ago, but if we deduct the 12s. 3d. duty we shall see that the intrinsic value of French wheat is only 26s. 3d. per quarter.

New York opened the campaign of 1902 with 29s. 3d. quoted for No. 2 Red Winter wheat. On 2nd January, 1901 (the 1st is an American Bank Holiday), 28s. 9d. was quoted. The price is so high, as compared with English terms, that only extremely low freights allow of America shipping at all.

The quantity of English wheat remaining in farmers' hands on New Year's Day is thus estimated:—

	Qrs.
1st January, 1902	3,560,000
1st January, 1901	3,945,000
1st January, 1900	4,240,000

These figures argue that British local markets in the period 1st January-31st August, 1902, will have much less wheat on offer than in the last two years at the same season. There should, therefore, be a larger attendance of millers at the great centres, such as Mark Lane, Bristol, Birmingham, etc., and a better feeling should soon result.

The term market opened on New Year's Day with 31s. 3d. quoted for January delivery, against 32s. 9d. on 1st January, 1901. The larger American crop is the cause of the decline, but if the American surplus is going into use in the States as a substitute for maize, the situation may soon harden, and a rise at the speculative centre herald an improvement for actual food wants also.

The imports of maize into the United Kingdom for 1901 (preliminary returns) thus compare with preceding years:—

	Qrs.
1901	11,957,000
1900	12,399,000
1899	14,511,000

As demand keeps up and supply rather falls than rises prices advance, so that the quotations now prevailing are 1s. to 2s. above those of a year, and 2s. to 3s. above those of two years ago. The American official supply is cabled at 1,313,000 qrs. against 1,057,000 qrs. a year ago.

THIS DAY'S MARKETS

[FIRST REPORT.]

MARK LANE, MONDAY.

The market to-day was well attended, but millers seemed to think that a wet wild week warranted a reduction of 6d. in wheat prices, a move which neither farmers nor merchants fell in with. Trade, therefore, was inert, prices remaining firm. The finest American wheat made 32s. 6d., the very best English 31s. 6d. The cheapest wheat offered was Essex Rivetts at 28s. 6d., and short-berried New Zealand at 29s. per qr. Barley was quiet for all malting and brewing descriptions. Feeding sorts were in fair retail request at currencies. Argentine maize was cheaper from Friday, 24s. 9d. was said to have been accepted. Round corn was for the most part unsaleable at the nominal currencies. The price of American through scarcity, is fully maintained. Rye was steady at 24s. per quarter. Oats were held above the ideas of purchasers in some cases. The trade was decidedly firm. Some very fine, Bombay linseed made three guineas per qr., and American was offered at 55s. per qr.

(For Close of Market see foot of Column.)

CLOSE OF THE MARKET.

By Telephone, 2 p.m.

The market closed rather dull, but holders are not so discouraged as they were in December.

THE FLOUR TRADE.

MARK LANE, Jan. 6.

The market to-day was dull, but steady. Oregon and Californian flour is held for 3d. advance; which checks sales. The price of the commoner American also favours sellers. Kansas straight and common baking grades are in very small supply, and anything in second hands is held for same advance.

There are some 2nd bakers' grades of Minneapolis flour on offer at 17s. 9d. per sack. All English sorts, whether London or country, are both offered and bought at the terms of last week. Oatmeal made £14 per ton for Grampian, oat flour £17 15s. for Midlothian. Canada continues to send rolled oats at £14 per ton, but "maple leaf" is hardly to be had. Maize flour is held for 18s. 6d. per sack, with buyers at 18s. Maize cones average a sovereign per sack. Red Dog flour is scarce, in fact it is for the moment scarcely obtainable.

Flour.—A quiet trade at last week's full prices. —T. S. MEDILL AND SONS.

Maize futures are dull; 4s 10d asked, 4s 9d paid.

GRAIN AND FLOUR FACTORS' REPORT.

Moderate arrivals of wheat, liberal of flour. Trade firm, prices fully supported. Feeding stuffs dull, prices of wheat 3d. and 6d., and of grinding barley 3d. to 6d. lower. Oats unchanged.—COVENTRY, Mark Lane.

Milling offals are in very little demand. Prices are about the same as last Monday.—JOHN BAWCOMB AND CO., Mark Lane.

Only a quiet trade in wheat is passing at to-day's market. For forward shipment, 3d. advance is asked, but only a quiet spot trade is passing at practically unaltered prices. Oats unchanged; quiet trade. Barley steady, but without change. Round maize in fair demand at 9d. less than last Monday.—W. P. WOOD AND CO.

Liverpool Stocks, 1st Jan., 1902.—Wheat, 302,670 qrs.; barley, 70,300 qrs.; oats, 17,370 qrs.; beans, 5,636 qrs.; peas, 2,110 qrs.; maize, 168,610 qrs.; flour, 42,898 sacks.

Bristol Stocks, 1st Jan., 1902.—Wheat, 132,500 qrs.; barley, 281,900 qrs.; oats, 33,876 qrs.; beans, 3,680 qrs.; peas, 250 qrs.; maize, 6,271 qrs.; flour, 124,700 sacks.

Offals.—Bran in moderate demand; prices unchanged.—GREENHILL BROTHERS (Belfast).

Flour.—The demand is improving, and prices continue firm, with an upward tendency. Values on spot are as follows—1st Spring Patents, 24s. to 24s. 9d; 2nd Spring Patents, 23s. to 23s. 6d.; American Winter Patents, 24s. to 24s. 9d.; Extra Fancies, 22s. to 22s. 6d.—GREENHILL BROTHERS (Belfast).

THE BALTIC.

There is a steady market for wheat cargoes. The sales include Californian at 30s. 6d., Blue Stem at 30s. 3d., Walla Walla at 29s. 3d., Odessa Azima at 29s. 9d., Australian at 30s. 6d., and Argentine new crop (for prompt shipment) at 29s. 6d. per qr.

Maize has been rather weak for futures, as the large supply on passage meets all wants that an ordinary January demand can amount to. Sales include Roumanian at 23s., Argentine at 21s. 9d. (for May shipment), Bulgarian at 23s., Galatz at 23s., and Caucasian at 23s. No buyers of American are to be met with, the price asked being above their ideas. Barley cargoes are very quiet, but full prices rule. Sales have comprised Kustendje at 18s. 9d., Californian Brewing at 24s., and Caucasian at 19s. per qr.

Oats are less neglected. Cargoes for January shipment have been placed at 22s. 6d. for Swedish, 17s. 6d. for Roumanian, 18s. 9d. for South Russian, 19s. for Black Libau; and 17s. 6d. for White Libau. No American oats are to be had.

Other cargo sales are Morocco beans at 32s. 6d., white Calcutta peas at 31s. 6d., green Calcutta peas at 26s., Roumanian rye at 22s. 3d., Calcutta linseed at 50s. 3d., Argentine linseed at 45s., and Turkish canary seed at 38s., all per quarter.

SEEDS.

London, Monday.—We had a fair attendance at to-day's market, and some inquiries for seeds, though little business resulted. There was a small show of English red clover, mostly of medium quality, which found buyers at late rates. Foreign is quiet and unchanged; white clover, alsiki, and trefoil are fully as dear; perennial and Italian ryegrass maintain the late advance; very little doing yet in spring tares, owing to the high prices asked; canaryseed quiet; in blue peas and haricots there is little doing.—JOHN PICARD AND CO.

London, Monday.—Messrs. John Shaw and Sons, Seed Merchants, of Great Maze Pond, Borough, London, S.E., write that the new year brings an improving inquiry for farm seeds generally, and a fair, seasonable, all-round demand is shortly expected. Meanwhile, all descriptions of clover and grass seeds are held with firmness, and stocks mostly are in moderate compass. Mustard, rape, and linseed move off slowly on former terms. The high rates demanded for Koenigsburg tares prohibit business. anary seed is dull of sale, but strong in value. Other bird seeds are wthout quotable variation. The recent mild weather has naturally restricted the consumption of boiling peas and haricot beans. Some choice giant scarlet runners are now offering on attractive terms

FEEDING STUFFS.

Mark Lane, Monday.—Linseed cakes:—In consequence of the recent open weather, there is little or no improvement in the demand, and values remain steady in the absence of any signs of weakness on the part of shippers. Russians continue to come to hand slowly, while quotations are unchanged. Americans meet a quiet sale at last week's prices. Calcutta made in bags also offer at unchanged prices. London-made are still obtainable in second hands at last Monday's quotations at which they are relatively cheap. Cotton cakes:—The low figure of 1s. 3d. per ton under last week's prices, demanded by English crushers, have had the effect of depreciation the value of Egyptian, which may now be bought at the same reduction, regardless of the comparatively small quantity available on spot. Decorticated are in fair request at unchanged prices, with meal offering at 2s. 6d. per ton more money on the week. Rape cakes dull. East India unchanged. Maize germ meal.—There is very little trade doing in this article, the high price almost entirely checking business. American and English are nominally quoted at 1s. 3d. to 2s. 6d. per ton more money. Rice meal.—Landed parcels of Rangoon make last week's prices, while the price asked for shipment is also unchanged:—

Sheep and lambs	9,560	9,560	9,570
Calves	10	10	10
Pigs	50	50	110
Milch cows	60	60	60

Quotations per 8 lbs. (sinking the offal).

ENGLISH.

	Inferior. s. d.	Second. s. d.	First. s. d.
Beasts	2 8 ...	4 0 ...	4 9
Sheep	3 4 ...	4 10 ...	5 6
Lambs	5 10 ...	6 4 ...	7 0
Pigs	2 6 ...	3 8 ...	4 4

Milch cows, per head, £16 to £23.

British arrivals include as follows:—Scotland, 65; Eastern Counties, 537; Midland, Home, and Western Counties, 733; Devon, 30; Ireland, 55.

In the beast market to-day, compared with Monday last, there was an increase of 230 head. The supply consisted chiefly of prime quality Norfolks and Scotch. Trade was of a slow nature, at late rates; second quality, at a slight decline in value; for butchering cows and bulls there was more inquiry by country buyers, with an early clearance at improved rates.

The following are top quotations per 8lb (sinking the offal):

	To-day.	Jan. 7th, 1901.
Scotch	4s 7d to 4s 9d	4s 7d to 4s 9d
Devons	4s 6d to 4s 8d	—
Herefords	4s 6d to 4s 7d	—
Norfolks	4s 6d to 4s 8d	4s 6d to 4s 8d
Runts	4s 6d to 4s 7d	4s 2d to 4s 4d
Lincolns	4s 4d to 4s 6d	4s 4d to 4s 6d
Irish	4s 2d to 4s 4d	4s 6d to 4s 8d
Fat cows	3s 8d to 3s 10d	3s 8d to 3s 10d

In the sheep market, there was an increase of 1,360 in the number penned. For wether sheep trade was dull at a decline of 2d per 8lb; best quality ewes being short in number made late rates, whilst other descriptions were more difficult to clear. A few good lambs met a ready sale. The supply included 320 Scotch, and 4,280 from the Eastern Counties.

Undermentioned quotations are at per 8lb (sinking the offal), and are for the best of each class penned:—

	To-day.	Jan. 7th, 1901.
7½ to 8-st. Downs	5s 4d to 5s 6d	5s 8d to 5s 10d
9-st. ditto	5s 2d to 5s 4d	5s 6d to 5s 8d
10-st. Half-breds	4s 10d to 5s 0d	5s 2d to 5s 4d
12-st. Lincolns	4s 8d to 4s 10d	4s 10d to 5s 0d
10-st. Down ewes	3s 10d to 4s 0d	4s 4d to 4s 6d
11-st. Half-bred do.	3s 6d to 3s 8d	—
5-st. Down lambs	6s 10d to 7s 0d	—
6-st. Half-bred do.	6s 6d to 6s 8d	—

For pigs there was little inquiry; but small breeds were quoted at 4s 4d per 8lb.

FOREIGN CATTLE.

St. Ives (Hunts), Monday.—Beasts, 230; sheep, 262; pigs, 429. beef, 7s 6d to 8s 3d; mutton, 7s 7d to 9s 4d; pork, 6s 6d to 7s 3d; sows, 5s 6d to 6s 6d; fat beasts, brisk trade; stores, slow; fat and store sheep, middling; fat and store pigs, good; milch cows, fair prices, £14 to £22.

Liverpool, Monday.—There were more cattle in market to-day; demand slow, and last week's top prices barely maintained. Sheep supply also larger, trade quiet at late rates. Beef, 6½d to 5¼d per lb; mutton, 8d to 5d per lb. At market, 1,574 cattle, and 3,437 sheep.

PROVISIONS.

London, Monday.—The arrivals from Ireland last week were 2,086 bales bacon, and from foreign ports 8,457 bales bacon. The bacon market was firm at the close of last week, accumulations of Irish, Danish, and Canadian having cleared fairly well, but at irregular prices. Irish ranging from 50s, 58s up to 63s; Danish, from 46s, 47s, up to 63s; and Canadian from 46s, 51s, up to 56s. The butter market was quiet; French, 104s to 118s; Danish, 100s to 114s; Australian, 80s to 108s; Russian, 86s to 100s; New Zealand, 86s to 108s. Lard steady, Irish, 54s to 63s; American, 50s to 51s.

THE BALTIC, 1 p.m.

STATE OF TRADE.

Wheat cargoes maintain full rates. Maize is 3d. cheaper for February and later shipments. Oats are 3d. dearer for futures. Barley is comparatively neglected, but holders are firm. Rape seed and cottonseed seem declining.

BUSINESS DONE.

WHEAT.—Walla Walla, 29s 6d, prompt shipment; No. 1 Northern, 29s 9d, prompt shipment; Manitoba, 30s, prompt shipment; Australian, 31s, arrived; White Kurrachee, 29s 3d January shipment; Red Kurrachee, 28s 9d, January shipment; Argentine, 29s 6d, February shipment (new crop); Red Calcutta, 28s 9d, May shipment (new crop).

MAIZE, Bulgarian, 23s 3d, February shipment; Argentine, 21s 9d, May shipment.

BARLEY.—Nicolaieff, 18s 3d, arrived; Crimean, 19s, on passage.

OATS.—Roumanian, 17s 9d, prompt shipment; Swedish, 22s 6d, prompt shipment; Konigsberg, 20s, prompt shipment, New Zealand, 23s 6d, prompt shipment

PEAS.—Indian White, 31s, May shipment; Indian Green, 25s 9d, May shipment.

LINSEED.—Argentine, 45s 3d, January shipment; Indian, 51s 9d, on passage.

RAPESEED.—Red Delhi, 40s 3d, January shipment.

POPPYSEED.—Bombay, 47s, January shipment.

COTTONSEED.—Egyptian, £6 5s, arrived; Indian, £4 7s 6d, January shipment.

LIVE STOCK AND MEAT TRADE REVIEW.

(WRITTEN SPECIALLY FOR THE "MARK LANE EXPRESS.")

Trade in London.

At the Islington Cattle Market, as usual on a Monday following Christmas Day, there was a full supply of beasts, including about 50 Scotch, 107 Irish, 363 from Norfolk and Essex, and 630 from the Midland counties. Owing to a slack demand experienced by retail butchers, their wants were soon supplied, trade from start to finish being of a very slow nature, with a marked downward tendency in value, especially towards the close of that day's business, a few middling descriptions being turned out unsold. Trade for both butchering cows and bulls, owing to the small number on offer, was firmer both in regard to tone and value. An early clearance being made on Thursday, very few transactions were recorded, notwithstanding a light supply. At Deptford, markets were held on Monday, Wednesday, and Saturday, the largest number being shown on the latter day. Trade generally was of a rather slower nature, the previous week's rates as a rule governing all transactions. No Canadians were marketed; the total number on offer was 3,469—previous week 2,528—consisting of 1,270 British (increase 800) and 2,199 foreign (increase 141). These latter consisted entirely of consignments from the United States. The following were the top rates paid per 8lbs. (sinking the offal):—90-stone polled Aberdeens, 4s. 8d. to 4s. 9d.; 90-stone Devons, 4s. 6d. to 4s. 8d.; 90-stone polled Norfolks, 4s 7d.; 100-stone Lincolns, 4s. 6d.; 90-stone Irish 4s. 4d.; 90-stone States, 4s. 5d. to 4s. 8d.; 100-stone fat cows, 3s. 8d. to 3s. 10d.; 100-stone fat bulls, 3s. 4d. to 3s. 6d. The sheep trade at Islington showed a want of life, sales being rather forced. Choice Downs and Half-breds to dress under 8lbs. made late rates, but heavy sheep must be written 2d. per 8lbs. lower. Even at this reduction a clearance could not be made. Best quality ewes were firm and steady, but other grades decidedly lower. At Deptford trade ruled slow, and as usual was confined to carcass butchers. The total number penned at both markets was 10,503, consisting of 8,060 British and 2,443 from the United States; best pens made, per 8lbs., as follows——7½ to 8-stone Downs, 5s. 8d.; 8-stone Scotch, 5s. 6d.; 9-stone Downs, 5s. 6d.; 10-stone ditto, 5s. 4d.; 10-stone Half-breds, 5s. to 5s. 2d.; 10-stone Irish, 5s.; 12-stone Lincolns, 4s. 10d.; 8½-stone States, 3s. 10d. to 4s.; 10-stone Down ewes, 4s.; 11-stone Half-bred ditto, 3s. 8d. Only 20 calves on the market. Pigs numbered 160, and were slower of sale, there being less demand; best small breeds were quoted from 4s. 6d. to 4s. 8d. per 8lbs. (sinking the offal).

Trade in the West.

The dulness which characterised the trade of the past week was further accentuated by deluging rains, which not only entirely put a stop to what little business there was passing, but in many districts wrought great havoc by flooding the low-lying lands, much of which for some days assumed quite the aspect of a vast sea. Stockowners can ill afford to bear such trouble at present, and to many it means a great, almost irreparable loss. The enquiry for milch beasts, of which the supply is evidently altogether inadequate to the demand, continues phenomenally active, despite the interruptions to which we have referred; and those who are fortunate enough to have reserves in this line can hardly have a more opportune moment for pulling them out, as the best young heifers and also good class cows are selling freely at from £17 10s. to £21 apiece, as a general run, whilst animals to which a fancy has been taken go up to £22. The more ordinary runs are also very saleable at from £14 to £16 or £17 apiece. Barrenners, too, are finding a capital market, the more forward bullocks especially, at prices that should induce any who have barreners at all fat for the purpose to put them out at a time when there is every prospect of their getting a fairly remunerative price for this class of stock. The best drafts, sold in pairs, meet a ready sale, at from £22 to £27, which is by no means a bad price, seeing that many fat bullocks only realise a trifle more when brought into the ring for slaughtering purposes. Plainer kinds, however, range from £16 to £20; but keen in any of these are either aged bullocks or in very backward condition. There is scarcely anything passing in store sheep, which fail to attract attention, possibly in a large measure owing to the low price to which mutton has now sunk, and with very little prospect, it seems, of anything like a revival being near at hand. All classes of mutton are making an equally unsatisfactory, for while a few very ripe wethers of nice weights make 7½d. or perhaps 8d. per lb., the great bulk of the mutton does not realise more than 6d. to 7d. Of course, the little passing in lamb is confined entirely to house-fed animals, for the best finished of which perhaps 10d. or even 11d. is paid; but then there is by no means a large enquiry at the price; the more ordinary runs are less saleable at 8½d. to 9d. Calves, too, are by no means so saleable as they were at from 6d. to 7d. per lb., the latter, except in a few rare cases, being almost an outside price. Pigs are also much slower of sale, and rates may be quoted from 6d. to 1s. lower than they were, except for fancied lots; 10s. now is almost the outside price, whilst plenty others at 8s. 6d. to 9s. 6d. Taken as a whole, the present trade outlook is by no means too roseate.

Trade in Ireland.

The supplies of cattle and sheep in last Thursday's Dublin market, while showing a large increase on the previous market, were really of moderate dimensions for this time of the year, and there was a decided improvement in business. Grass-fed cattle are practically all disposed of now, and nearly all the beef was stall-fed, but some of it not what it should be, and complaints were made of beasts which were nothing more than stores being forced on the market. There was a brisk inquiry for well-finished bullocks and heifers, and prices were firm to the close, and in some cases perhaps 10s. per head more money was realised. Prime ox and heifer beef made from 52s. to 56s. per cwt., and 58s. for extra good lots; good second-class beef 46s. to 50s., and inferior from 42s. 6d. to 45s. per cwt. A good number of coarse half-meated cattle could only be disposed of by owners accepting in-and-out prices. The number of beasts on market was 2,631, an increase of 544 on previous Thursday, but a decrease on the corresponding week of 1901 of nearly 700 head. In the mutton department there was a good inquiry for prime wethers and hoggets, and prices were from 2s. to 3s. a head better, but for rough sheep business was of a dragging nature, and many lots were not sold; still, with an increase of just 1,400 on the previous Thursday, the market must be considered a satisfactory one. For really prime wethers up to 7d. per lb. was paid, the average figure being about 6½d. per lb., good ewe 5d. to 6d., and inferior sheep from 4½d. Small to medium hoggets from 27s. to 40., and heavy ditto from 42s. to 52s. each. The shipping trade was of rather a lifeless character. A few house-fed lambs were on offer, and made about 40s. a head. Choice veal scarce, and worth from 7½d. to 8½d. per lb., rough calves difficult to dispose of at from 4½d. per lb. up. Dull sale for dairy cattle, especially for inferior qualities. Really choice springers made from £18 to £21 each. In the pig market, light-weight pigs were in small supply, and with a brisk demand sold at the extreme rates of last day. Middle and shipping qualities, however, did not share in the demand, and sold draggingly, and it was only at a late hour that a clearance was effected. Choice light-weight pigs from 44s. to 46s. per cwt., coarse from 32s. to 38s. The store cattle trade throughout the country shows little or no improvement. Reports from late fairs in the south and midlands all show business to be of a very stagnant condition.

LONDON.

London Meat.—Good supplies; trade slow. Beef carcases, 3s. 8d. to 3s. 10d.; hind quarters, 4s. 4d. to 4s. 6d.; roastings, 5s. to 5s. 8d. Sheep, ewe, 2s. 10d. to 3s.; wether, 3s. 8d. to 4s.; hind quarters, ewe, 4s. to 4s. 4d.; wether, 5s. to 5s. 4d. Pigs, large, 3s. 8d. to 4s.; small, 4s. to 4s 4d.

COUNTRY.

Ashbourne, Thursday.—There was only a small show of horned stock at the fortnightly market, with a fair attendance of farmers, dealers, and butchers. A rather better show of milk cows, which found slightly improved sale; otherwise the market generally was unchanged. Only a few pens of sheep shown, fat wether making up to 8d. per lb. Quotations: Calving cows £18 to £20, for best secondary £15 to £16; calving heifers or stirks, £12 to £15; young barren cows or heifers, £10 to £12; lean or older cows, £8 to £10; beef, 5d. to 6d. per lb., and very little on offer.

Ashford, Tuesday.—Beef sold very well at a slight advance on former rates, prime steers and heifers ranging up to 12s. per score or a little over. Second class beasts made 10s. to 10s. 6d. Mutton was again cheap, small Down wethers making 5s. to 5s 2d. per stone of 8lb., while Kent wethers fetched 4s. 8d. to 5s., and barrens less than 4s. Veal showed a wide range, prime calves making 5s. 4d. per 8 lb., and secondary ones 4s. 6d. to 5s. Pork was scarce and dear, the best roasters fetching 11s. per score. There was very little store stock trade.

Basingstoke, Wednesday.—At Raynbird and Sons' saleyard there was a good attendance of buyers to meet a supply of 26 fat beasts, 66 calves, 481 fat sheep and lambs, 262 pigs, and 43 head of dairy and store cattle, which realised the following prices: Fat Devon steers up to £21; two year old polled heifers, £20; shorthorn steers, £19 5s; prime quality fat sheep realised from 44s to 57s; seven months' old ditto, from 34s to 48s; fat ewes, 34s to 49s 6d; rams, 32s, 37s, 44s; fat hogs, 75s to £5 5s; fat porkers, 36s to 64s; store pigs, 13s to 24s 6d; fat calves, 80s to £5 5s; small, 20s to 60s; dairy cows, £8 to £20, etc. A clearance made of the short supply of fat beasts, and full prices paid for the best lots:—A full entry of good quality fat sheep. Lambs were cleared at fully late rates, with the exception of the heavy-weight sheep, trade for which is adversely affected by the damp, close weather. A clearance was made of the dairy cows offered with a good trade and high prices. Store cattle continue a slow business. Fat calves realised more money. Fat hogs and porkers met a firm trade at the late satisfactory prices. Store pigs met a fair demand. Ruling values: Prime Devon and polled beasts, 7d to 7½d; ditto shorthorns, 6d to 6½d; bulls, cows and inferior beasts, 5d to 5¾d per lb; fat calves, 6d to 7½d per lb; best quality sheep, 7½d to 8½d; second ditto, 6½d to 7½d; old ewes, rams, and inferior sheep, 5d to 6d per lb; fat hogs, up to 10s 6d; fat porkers, 12s 6d to 12s 6d per score.

Braintree, Wednesday.—Trade at Messrs. Ball's auction mart very quiet. The pens below the average bulk, comprised 32 beasts, 97 fat sheep, 53 hogs, 20 store cattle, and 5 cows. Average prices: Beef 4s 8d and mutton 5s per stone; pork up to 11s per score.

Bristol, Thursday.—Fat cattle in large supply to-day, large proportion of inferior quality. Trade very dull. Best animals made 80s. per cwt.: second class 53s. to 56s. Short supply of sheep, limited demand at 7¾d. per lb. for light wethers and 6d. for ewes. About 1,000 pigs on offer. Baconers 9s. 3d. per score; porkers 10s. 9d. to 11s. No store cattle in market.

Bury, Wednesday.—At Messrs. Simpson and Sons' auction mart, there was a large supply of fat beasts, but the quality was hardly up to the average. There being a full attendance of buyers, a good all-round trade prevailed. The few lots of store cattle and cows found ready purchasers at late rates. Very large show of fat sheep, for which trade ruled rather slower than of late, in sympathy with the London markets, excepting for the best hoggets, which fetched fully late rates. Very short supply of keeping sheep, for which a slow trade must be reported. Good show of fat pigs, which met a sharp trade at late rates. Several lots of store pigs also sold well. At Messrs. Lacy Scott and Son's auction mart, tere was a fair supply of stock, for which trade ruled upon the lines of recent quotations. Large show of pigs, which were cheaper on the week. Fat sows went up to £7 5s. London jointers and store pigs must be reported as easier in value. In the general department of the market there was a moderate supply of store cattle, including some Irish beasts. Trade was not very brisk, and prices were about the same as of late.

CALNE, FRIDAY.—Present prices for prime pigs, in lots of net less than 10, on rail within 100 miles of Calne.

Prime Stores.	Thickness of fat in any part of the Back.	Price per Sc.
		s. d.
6 sc. 10 lbs. to 9 sc. 10 lbs.	2½ in. and under ...	9 6
Under 10 sc.	Not exceeding 2¼ in. ...	9 0
Under 11 sc. 10 lb. ...	Not exceeding 2¾ in ...	8 6
Under 12 sc.	Not exceeding 3 in. ...	

Any pigs outside these limits at their value.

Charles Harris & Co.

Cambridge, Monday.—Beast, 206; sheep, 292; pigs, 264; horses, 7. Beef, 7s to 8s; mutton, 4s 2d to 5s 4d; pork, 6s. 6d. to 7s. A few lots of store beasts, and trade slow. Fat beasts a good number to hand, trade fair. Fat sheep a fair show for the day, and prices unchanged. Stores scarcely any to hand. Fat pigs a good show, and fair prices. Stores trade not so good. Hay, straw, and roots short supplies.

Carlisle, Saturday.—On the Sands, there was a fair show of Irish store cattle, among which were a number of stripping cows. The attendance was small, and trade quiet. Stripping cows were quoted at £11 10s; heifers, £7 10s to £12 10s.

Dorchester, Wednesday.—Business still somewhat distracted, and it is somewhat perplexing to give a comparison of prices. Fair supplies came to hand. Fat bullocks ruled steady, at 10s 6d to 11s 6d per score for the best; secondary 10s. Mutton still a very slow trade, at 7½d per lb for the best wethers, and ordinary runs 6d to 7d. Best fat calves made 6½d to 7½d per lb. Good class porkers and baconers sold well at 10s to 10s 6d per score; heavy pigs 8s 6d to 9s 6d. The poultry trade very quiet, on lower terms. Good cheese brought full prices for the best. Butter unaltered.

Dublin, Thursday.—Numbers in market: Beasts 2,631, increase 544; sheep 3,490, increase 1,393; calves 41, increase 41. Finished beef in good demand at full rates of last week. Rough descriptions easier to place, and an early clearance effected. Sheep: Owing to short supplies a better trade at higher prices. Cattle: Live weight (best), 31s to 34s 6d per cwt. Other sorts, 27s to 31s per cwt. Mutton: Dead weight, 5½d to 7d per lb.—GANLY, SONS AND CO.

East Grinstead, Thursday.—Forty-five fat beasts, 200 fat sheep, and a quantity of pig and store stock. Beef made from 4s. 6d. to 4s. 10d. per stone, and mutton 5s. 6d. to 6s. per stone. Mr. Harry Turner (Messrs. Turner, Rudge, and Turner) was the auctioneer.

Hereford, Wednesday.—Bullocks and cows, 328; calves, 34; sheep and lambs, 563; pigs (fat and sows), 16; sucking pigs, 11; pigs (stores, not more than ten), 176; pigs (stores, more than ten), 102; horses, 6. Prices of stock.—Best beef, 6d. to 7d. per lb.; wether sheep, 6½d. to 8d. per lb.; ewes, 5½d. to 6d. per lb.; veal, 8d. per lb.; lamb, 9d. per lb.; pork, 5½d. to 6d. per lb.; bacon, 4d. to 5d. per lb.

Ipswich, Tuesday.—Messrs. Robert Bond and Sons report good supplies of all descriptions, and satisfactory prices characterised the closing market of the year. Fat cattle came to hand in larger numbers than were expected, the majority of which were in excellent condition. Buyers were well represented, including some from the Midlands. Biddings were brisk and prices ranged from 8s. 3d. to 7s. 9d. per stone. Fat hoggets and shearlings were in request and realised more money, Suffolk hoggets making up to 55s., shearlings to 54s. Grazing hoggets were in fair demand up to 36s. Calves were numerous; those for weaning were dearer, the best making from 61s. to 40s. Fat calves met a better trade up to £5. Fat swine sold freely, there being plenty of buyers in attendance; recent values were fully maintained. Well-bred stores were in request. A good entry of grazing cattle, for which there was an improved demand. Polled steeres made up to £8 7s. 6d. Yearlings made from £5 10s. to £4 12s. 6d. Cows and heifers were short, those recently calved, or near, sold well from £16 15s. to £15 5s. Numbers at sales and market, 414; Calves, 55; sheep, 579; swine, 1,452; horses, 22.

Leicester, Wednesday.—Large consignments of home-fed bullocks came to hand in good condition. Buyers were well represented and trade ruled steady for choice lots, but secondary descriptions were dull. Choice bullocks made 6½d to 6½d per lb; secondary sorts 6d, cows 5d to 5½d, and heifers 6½d to 6¾d. Sheep were a full supply, and sold rather slowly at easier prices, finest making 7½d to 7¾d; large sheep 6½d to 7d, and ewes 5d to 6d. Calves flat, at 7d to 7½d.

Lynn, Tuesday.—A small market; no store beasts; fat beasts average show, trade firm, 7s 6d to 8s per st; store sheep, few shown, and made 38s to 43s each; fat sheep, average show, trade bad, at 8s to 8s 6d per st.

Newbury, Thursday.—Our market being closed for the pig trade, the supply of stock on offer to-day was not so large as usual. Messrs. Wreweatt and Watson held their usual weekly auction sale, at which the following figures were obtained:—Fresh cows, £11 5s. to £11 17s. 6d.; heifers and calves, £8 7s. 6d. to £9 12s. 6d.; calves,

£3 to £4 5s.; ewes, £1 18s. to £2 1s.; and wethers, £2 to £2 6s.

Newport (Mon.), Wednesday.—Market very quiet. Quotations: Beef, best 6½d per lb., second 6d to 6½d per lb.; cows, 5½d. to 6d. per lb.; mutton, wether, 8d per lb., ewe, 6d. to 6½d. per lb.; veal, 6½ l. to 7½d. per lb.; pigs, porkers, 11s. to 11s. 6d.; bacons, 9s. to 9s. 6d.

Norwich, Saturday.—The supply of store beasts here to-day was moderate; a quiet business was passing at about late rates. Fat beasts were in good supply; trade was somewhat inactive at 7s 6d to 8s per 14lb. The supply of store sheep was not excessive, but the demand was far from active; hoggets were quoted at 27s to 34s; and keeping shearlings at 35s to 45s per head. Fat sheep, which were in good supply, were dull at 7s 6d to 8s and 8s 6d per 14lb.

Nottingham, Wednesday.—There was a good supply of best beef, which sold at 7s. 6d. to 8s. per stone. Beef of moderate quality made 7s. to 7s. 6d. per stone. Small weight sheep realised 8d. per lb.; heavier weights 6d. to 7d., ewes 5d. to 6d., veal 7d. per lb.

Romford, Wednesday.—Large supply of fat beasts, trade slow. Best animals 4s. 6d. to 4s. 8d., and middlings 4s. to 4s. 2d. per stone. Calves in very short supply, trade fair, at 5s. to 5s. 2d. per stone. Sheep in average supply, trade slow. Best sheep 5s. 2d. to 5s. 4d., and middlings 5s. to 5s. 2d. per stone. No store beasts on offer. Pigs in fair supply, trade about the same.

Rye, Wednesday.—Number of entries:—Sheep and lambs, 800; fat beasts, 40; calves, 5; pigs, 12. Heifers and steers, 4s. 4d. to 4s. 6d. Cows, 3s. 6d. to 3s. 10d. Maids and wethers, 4s. 8d. to 5s. Farrens, 4s. to 4s. 4d. Calves 4s. 8d. to 5s. Pigs, 3s. 6d. to 4s.

Salford, Tuesday.—About an average supply of cattle and sheep for the time of the year, and a fair attendance of buyers. Trade for both ruled slow at about last week's prices. A large show of calves and a dull trade, but late prices were fairly maintained. Cattle, 4½d to 6½d; sheep, 6d to 8½d; calves, 5d to 7½ per lb. At market: Cattle, 2,635; sheep, 6,417, calves, 156.

Shrewsbury, Tuesday.—Beef trade better all round. Mutton good, with a brisk demand. Pigs fair with a good clearance Quotations:—Beef, 5½d. to 6½d.; mutton, 6½d. to 8½ l.; and veal, 7d. to 8d. per lb. Porket pigs, 9s. to 10s. 6d.; and bacons, 8s. 6d. to 9s. 6d. per score; cows with calves, up to £22 5s. Hay up to £5 5s. and clover up to £5 per ton. Number offered, 428 cattle; 51 cows with calves; 347 sheep; 82 calves; 50 fat; 158 porket, and 301 store pigs.—(Signed) B. R. CROXTON, Markets Inspector.

Spalding, Tuesday.—A fair show of beasts, and a brisk trade for fat beef which made fully 8s. per stone. Of stores there was a good show, and for the better class of animals there was a good trade. Cows were in demand, and fetched high prices. In the sheep market Lincolns made 7d. and half-bred sheep 8d. Store sheep sold well.

Stockton, Wednesday.—There were on offer 181 cattle, 2 calves, 179 sheep, and 212 pigs. The market was of a holiday character, and trade was slow. Best cattle 7s. 6d. to 8s.; rougher kinds, 6s. 6d. to 7s. per stone; calves, 6d. to 7d.; sheep, 6d. and 7½d.; ewes, 6d.; tups, 5d. per lb.

Thame, Tuesday.—There was a fair supply of stock at market, and trade all round was brisk, there being a large attendance of buyers present. Beef was in demand at better prices, and a clearance was effected. Mr. Bond's sale comprised 41 fat beast, 163 fat sheep, 75 fat and weaning calves, and 195 pigs. Fat bullocks made £16 to £23; fat heifers made £13 to £19 15s.; fat wethers made 40s. to 46s. 6d.; fat tegs made 38s. to 45s.; fat ewes made 33s. to 50s. 6d.; fat calves, £3 to £4 7s.; cow calves, 27s. to 55s.; bull calves, 14s. to 46s.; fat pigs, 10s. per score; stores, 16s. to 27s.

Wakefield, Wednesday.—Owing to the large supply business was relatively slow. Best beef 6½d., secondary 5d. to 6d.; young sheep 7½d., heavy animals 6½d. to 7d., ewes and tups 5d. to 6d. Number in market: Beasts, 1,246; sheep, 3,104.

Wolverhampton, Wednesday.—There was only a small attendance of dealers and butchers. Quotations: Herefords, 6½d. to 6¾d. per lb., shorthorns 6½d. to 6½d. per lb.; calves, 7½d. to 7¾d. per lb.; wether mutton 7¾d. to 8¼d. per lb., ewes 6½d. to 6¾d. per lb.; pigs, bacon, 10s. per score, porkers 10s. 6d. to 11s. per score, sows 8s 8d. to 9s. per score.

Worksop, Wednesday.—Capital show of stock and good trade for everything except sheep, market being overstocked. Consequently prices were below late rates. Best beef to 8s., secondary 6s. 6d. to 7s. 6d. per stone, best wethers 6½d. to 7½d., ewes 5d. to 6d. per lb.

FOREIGN.

Deptford, Wednesday.—Beast supplies to-day totalled 223 United States, for which a slow demand was experienced at 4s. 3d. to 4s. 5½.; exceptionally, 4s. 6d. 503 States sheep met a very dull sale at 3s. 10½. per 8 lb, to sink the offal. 420 United States beasts were not shown.

Yorkhill, Monday.—The usual weekly sale of American sheep was held in the morning, when there were penned in the sheds 286 sheep landed by the Livonian (s), from Boston, and 1,010 sheep landed by the Amarynthia (s), from St. John, N.B. The consignments consisted principally of ewes and young sheep, and as regards quality were up to the average. There was the usual attendance of buyers, but trade was very slow, and the values realised experienced a drop from those ruling last week. The deadweight quotations may be given as follows:—Young sheep, best class, to 7d. per lb.; secondary and heavier, to 6½d.; ewes, best sorts, to 5½d.; secondary and heavier, 5d.; lambs, 6½d. to 7d.; tups, to 4d.

Yorkhill, Tuesday.—A supplementary sale of American sheep was held to-day, when there were penned in the sheds 153 sheep landed by the Amarynthia (s), from St. John, N.B. Taken all round, the sheep were a handy sort, good quality, and all showed well. Trade was similar to that ruling at Monday's sale, and if anything the values were slightly lower. Young sheep secured the best demand, and they sold at fairly good prices. Ewes and tups met a stiff and dragging sale. The deadweight quotations may be given as follows:—Ewes, best sorts, handy, made to 5½d. per lb.; secondary and heavier, 5d. per lb.; young sheep, handy sorts, to 7d. per lb.; secondary and heavier, 6½d. per lb.; tups, from 4d. to 4¼d. per lb., according to quality and finish.

Yorkhill, Monday.—At the usual weekly sale of United States and Canadian cattle, held to-day, there were on offer 541 animals, bullocks again forming the greater portion. Taken all round, the animals were fully up to the average as regards quality, many of the bullocks being prime beasts, and showed well. Trade was of a good character, the demand for small, neat, well-fed beasts being keen, and high prices easily realised for them. The large number of bulls on offer was rather a drawback for them to realise good prices. Secondary and heavier animals met a good inquiry, and last week's prices were fully maintained. The deadweight quotations may be given as follow:—States bullocks, best quality, medium weight, 60s. per cwt., and for really choice from 62s. to 64s.; secondary and heavier animals, 56s. to 58s.; bulls, 48s. for butchers', and really choice up to 50s.; secondary and inferior, 44s. to 46s. Canadian bullocks, best class, handy sorts, 58s per cwt., and for choice up to 60s.; secondary and heavier bullocks, 56s.; bulls, 44s. to 48s., according to quality and finish.

BUTTER.

Leeds, Tuesday.—York lump, 15s. 6d. to 16s. 6d. per st; ditto long rolls, 1½lb, 2s to 2s 2d; fresh in 1lb prints, 1s 4d per lb. Danish: 117s to 122s per 112lb. Irish creameries, 106s to 110s. Colonial, 100s to 112s. Bedale: In rolls of 2oz, 1s. 6d. to 1s. 8d. per roll. Settle: 1s. 2d. to 1s. 3d. per lb. Spalding: 1s. per lb. Stockton: 1s. 4d. to 1s. 5d. per lb. Stone: 1s. 4d. to 1s. 5d. per lb.

Wednesday.—Colne, 1s. 3d. per lb.; Goole, 1s 3d. to 1s. 4d. per lb.; Keighley, 1s. 4d. per lb.; Kirbymoorside, 1s. 2d. per lb.; Knaresborough (wholesale), 1s. 8d. (retail), 1s. 10d. per roll of 24 oz.; Louth, 1s. per lb.; Market Drayton, 1s. 3d. to 1s. 4d. per lb.; Market Weighton, 1s. 2d. per lb.; Worksop, 1s. 3d. to 1s. 5d. per lb.

Thursday.—Brigg, 1s. 1d. to 1s. 2d. per lb.; Driffield, 1s. 1d. per lb.; Kidderminster, 1s. 5d. to 1s. 4d. per lb.; Penistone, 1s. 4d. per lb.; Ripon, 1s. 6d. to 2s. per roll of 24 oz.; Scarborough, 1s. 5d. per lb.; Wellington, 1s. 4d. to 1s. 5d. per lb.; Wetherby 1s. 2d. to 1s. 3d. per lb.

Friday.—Easingwold: 1s. 2d. to 1s. 3d. per lb. Grimsby: Danish, 116s. to 120s. per 112lb.; Dutch, 106s. to 112s.; anadian, 98s. to 106s. Helmsley: 1s. 2d. per lb. Leeds: Danish, 117s. to 122s. per 112lb.; Irish creameries, 106s. to 110s.; olonial, 100s. to 112s.; York lump, 15s. 6d. to 16s. 6d. per stone. Leyburn: 1s. 6d. to 1s. 8d. per roll of 24oz.

Saturday.—Appleby: 1s. 3d. to 1s. 5d. per lb. Berwick: 10d. to 1s. per lb. Carlisle: 1s. 2d. to 1s. 6d. per lb. Doncaster: 1s. 3d. to 1s. 6d. per lb. Grantham: 1s. 2d. to 1s. 3d. per lb. Lancaster: 1s. 3d. per lb. Malton: 1s. 3d. per lb. Pontefract: 1s. 3d. to 1s. 4d. per lb. Retford: 1s. 2d. to 1s. 4d. per lb. Richmond: 1s. 4d. to 1s. 5d. per lb. Stokesley: 1s 3d. to 1s. 4d. per lb. Whitby: 1s. 3d. to 1s. 4d. per lb.

EGGS.

Leeds, Tuesday—Yorkshire, 12s. to 20s. per 120. Irish: 13s to 17s 6d. Danish; 12s to 15s. Austrian blues: 8s 3d to 9s; ditto reds, 6s 9d to 7s. Bedale: 7 or 8 for 1s. Settle: 7 or 8 for 1s. Spalding: 10 for 1s. Stockton: 6 or 7 for 1s. Stone: 6 or 7 for 1s.

Wednesday.—Colne, 2s 8d per score; Goole, 7 or 8 for 1s; Hereford, 8 or 9 for 1s; Keighley, 6 for 1s; Kirbymoorside, 9 or 10 for 1s; Knaresborough, 8 or 9 for 1s; Louth, 12 for 1s; Market Weighton, 10 for 1s; Worksop, 2s 4d to 2s 8d per score.

Thursday—Brigg, 11 or 12 for 1s; Driffield, 9 or 10 for 1s; Kidderminster, 7 for 1s; Penistone, 7 for 1s; Ripon, 8 for 1s; Scarborough, 6 for 1s; Wellington, 8 for 1s; Wetherby, 6 for 1s.

Easingwold.—8 or 9 for 1s. Grimsby: Austrian, 6s. 6d. to 8s. 6d.; Styrian, 7s. 6d. to 10s. 8d.; Egyptian, 5s. to 5s 6d.; preserved, 6s. 8d. to 8s. 3d. per 120. Helmsley: 10 for 1s. Leeds: Yorkshire, 17s. 6d. to 19s. 6d. per 120; Irish, 12s. 9d. to 16s.; Danish, 11s. 6d. to 16s.; Austrian blues, 8s. 3d. to 9s.; ditto reds, 6s. 9d. to 7s. Leyburn: 9 or 10 for 1s.

Saturday.—Appleby: 7½ to 9 for 1s. Berwick: 1s. 6d. per dozen. Doncaster: 8 for 1s. Grantham: 8 or 9 for 1s. Lancaster: 5 to 7 for 1s. Malton: 9 for 1s. Pontefract: 9 for 1s. Redford: 2s. to 2s. 2d. per score. Richmond: 7 for 1s. Stokesley: 7 or 8 for 1s. Whitby: 7 or 8 for 1s. York: 6 or 7 for 1s.

COLONIAL DAIRY PRODUCE.

London, Friday.—Butter: The demand this week for Australian and New Zealand butter has not been brisk, but a very large quantity of butter has changed hands. Had the frosty weather continued there would have been a brisk demand. Buyers are either operating in the expectation of an immediate rise in value, or they are compelled to come on the market by exhaustion of their stocks. Owing to the delay in the arrival of the "Cuzco," there were 48,752 boxes on the market this week, and none from New Zealand. "Choicest" brands make 104s to 106s, and in special and particular cases a shilling or two more; "finest" 98s to 102s. There arrived a fair quantity of "milled" New Zealand butter on the "Paparoa," which will be landed next week, and it is selling from 86s to 94s. The Copenhagen Committee has, to the surprise of everybody here, lowered the quotation by 4 kroner, and it is now 13 kroner, or 14s 6d, below the corresponding week of last year. A north of England authority explains the reason for this lowering of the quotation as follows:—"The amount of New Zealand butter coming to the north of England this year is greater than ever; and buyers are preferring it at present values to Danish." Cheese.—The advance to 49s and 50s recently made in Canadian and New Zealand cheese has been firmly maintained, and the week closes with a tendency to higher values.—W. WEDDEL AND CO.

FEEDING STUFFS.

London, Monday.—Linseed cake trade since Christmas has been dull; stocks are light and shipments very small; prices are unaltered. Decorticated cake and meal very firm and dearer, owing to America buying back. Linseed has had a set back, but the tendency now is upwards. English linseed cake, £7 16s 3d to £8, ex mill; American Calcutta linseed cake, £7 12s 6d to £7 15s, ex quay; American western linseed cake, £7 5s to £7 7s 6d; decorticated cotton cake, £6 12s 6d to £6 17s 6d, ex quay; decorticated cotton meal, £6 15s, ex quay; London-made cotton cake (best), £4 15s, ex mill; Egyptian cotton cake (in bags), £4 12s 6d, ex quay; Burton desiccated ale grains (bags included), £5 7s 6d, on rail, Burton; Russian linseed in bulk, per 416lb, 53s to 57s, ex warehouse; Calcutta linseed in bags, per 410lb, 53s, ex warehouse.—ROBT. AND JOHN HEWETSON.

HAY AND STRAW.

Whitechapel, Saturday.—Arrivals smaller and a good business was effected. Best clover, 95s to 110s; inferior ditto, 80s to 90s; specially picked hay, 117s 6d; good ditto, 108s; inferior ditto, 80s to 90s; mixture and sainfoin, 90s to 110s; and straw, 28s to 40s per load.

London, Saturday.—There has been a fall in prices of Canadian and other hays during the week, and prices are about 2s 6d lower. I quote: Canadian hay (timothy and clover mixture), 86s 6d to 87s 6d; Russian hay, 90s; French and Dutch (1st cut clover), 90s to 92s 6d; good Dutch hay, 85s; inferior Dutch hay, 80s; all these prices are per ton delivered by barge alongside.—WALTER H. PRENTIS.

HOPS

Worcester, Saturday.—During the past fortnight business has been in abeyance, owing to the holidays. The New Year opens with a considerable inquiry and a good trade is looked for in a week or two, when travellers get on their rounds. A fair number of growers at market to-day, and full prices were paid for choice and good coloured hops, which are extremely scarce. Copper hops also sold well at the tempting prices they are to be bought at. 334 pockets have been weighed during the past fortnight.

WOOL.

London, Friday.—English—per pk. of 240 b.—Fleece 8 Dn. Hoggs, £7 to £8 10s; half-bred hoggs £6 to £6 10s; half-bred wethers, £5 to £6 10s; Kent fleeces, £5 to £6; South Down Ewes and wethers, £7 to £8 10s; Leicester do, £5 to £5 10s. Colonial—per lb—Vic.—Fleece super, 1s 5d to 1s 7d; scoured good, 1s 7¼d to 1s 8½d; scoured average, 1s 6d to 1s 7d; greasy average to fair, 10½d to 11½d; N. S. W., scoured average, 1s 2¼d to 1s 3d; Greasy average, 8d to 1s 2d; S. Aus., greasy average, 6½d to 6¾d; N.Z., scoured average, 1s 4d to 1s 5d; grease average, 8d to 8½d; Cape scoured sup., 1s 5d to 1s 6d; fleece average, 6¾d to 7½d; greasy average, 5d to 6d; Natal, scoured, 1s to 1s 1d; greasy average, 6d to 6¾; crossbreds—Greasy.—Vic., good to supr., 10¾d to 11½d; New Zealand fine, 8d to 9d; New Zealand medium, 4½d to 4¾d; New Zealand, coarse, 3¾d to 4½d.

Liverpool, Friday.—Since the opening of the New Year more activity has characterised the markets. Nitrate of soda is firm, whilst sulpate of ammonia is rater easier. Basic slag continues in active request, and consequently it is impossible to secure immediate deliveries, as the present demand far exceeds the rate of production. Fish guano testing 9 per cent. am. and 13 per cent. phos. can be bought at about £5 7s 6d to £5 10s per ton, January delivery. Kainit and bone meal in fair request. Feeding stuffs are attracting more attention from consumers, and in many instances command advanced rates, owing to the limited offerings; an arrival of choice new American decorticated cotton cake meal found ready buyers ex quay. To-day's quotations are as follows:—Nitrate of Soda, best quality, *i.e.*, guaranteed 95 per cent., pure, in bags, £9 7s 6d to £9 10s per ton; East India Bone Meal, fair to prime, in bags, £4 1s 3d to £4 6s 3d per ton; Kainit, prime, 25 per cent., in bags, £2 7s 6d to £2 10s per ton: Palm Nut Cake, prime, in bags, £5 12s 6d to — per ton; Linseed Cake, American thin oblong, prime, in bags, £7 12s 6d to £7 17s 6d per ton; Linseed Cake, English, prime, in bulk, £8 10s to £8 17s 6d per ton: Linseed Cake, foreign, oblong, prime, soft, and oily, in bags, £8 5s to £8 7s 6d per ton; Cotton Seed Cake, N.A., decorticated, prime, in bags, £7 2s 6d to £7 6s 3d per ton; Cottonseed Cake, English do, prime, soft, in bags, £7 0s to £7 12s 6d per ton; Cottonseed Cake, English, undecorticated, prime, in bulk, £4 15s to £5 per ton; Cottonseed Cake, Egyptian, undecorticated, prime, in bags, — per ton; Cotton-seed Cake (crushed) 20/25 per cent. oil, prime, in bags, £7 5s per ton to —; Maize Germ Meal, prime, in bags, in bags, £5 10s to £5 12s 6d per ton; Indian Meal, coarse to fine grinding, prime, in bulk, 13s 6d to 13s 9d, per 240lb; Linseed, fine bold feeding, in bags, £3 5s to £3 7s 6d per quarter, 416lb; N.A. Cloverseed, new red, fair to good, in bags, nominal; D.N.S. Brand, Superphosphate of Lime, guaranteed 25 to 27 sol., in bags, nominal; D.N.S. Brand, Superphosphate of Lime, guaranteed, 30 to 31 sol., in bags, nominal; Superphosphate of Lime, guaranteed 35 to 36 sol., in bags, nominal; Basic Slag, prime quality, guaranteed 30 to 35 per cent. phos., in bags, £1 12s to £1 13s at the producing depots; Basic Slag, prime quality, guaranteed 35 to 40 per cent. phos., in bags, £1 14s 6d to £1 15s 6d at the producing depots; Basic Slag, finest quality, guaranteed 39 to 45 per cent. phos., in bags, £1 17s 6d to £1 19s at the producing depots.—H. JONES LANGAR AND CO.

Caerphilly Cheese.

A decade since and Caerphilly was to the average Englishman practically unknown. But now this name has become a household one in many parts by means of its make of cheese. At one time the small Welsh farmers produced small thin cheeses, weighing from seven to ten lbs. each, with a sourish curd. These soon became extremely popular with the colliers, because by cutting out a chunk from the cheese wedged-shape, the collier could hold the rind in his grimy hands, and bite out the soft interior. A wasteful method certainly, but still it was useful where clean water was scarce. Anyway, the local makers could not supply the demand, and the makers soon appeared on both the Gloucestershire as well as the Somersetshire side of the Severn. Several classes were provided for it at both Gloucestershire and Somersetshire shows, and then the London Dairy Show followed the excellent lead. This gave further encouragement to the movement.

And yet how many can tell what constitutes genuine Caerphilly? No two judges have the same idea. One may select a spongy sour curd, the next may favour a miniature Cheddar. In fact, such interest now attaches to Caerphilly cheese that the following report has been presented to the Somerset County Council by its Education Committee. "Enquiries made by the County Instructor in Agriculture on the instruction of your committee have shown that Caerphilly cheese-making has become a very important industry in the north-west of the county, and your committee has promised the Somerset Dairy Farmers' Association that it will give such aid as is practicable towards the development of this industry by means of technical instruction. It is not intended at first to establish a fixed Caerphilly Cheese School, and the arrangements with regard to the Cheddar Cheese School will remain as before.

STOCK AND SHOW NOTES.

By Herdsman.

I hear that thirteen births were recorded in Mr. J. J. Cridlan's Maisemore Park herd of Aberdeen Angus cattle, between November 22nd and December 28th. The sire of six of the animals was Elate, 16,513, the champion bull at the Royal and Great Yorkshire shows last year the same number being by Elmeo, 12,450, and the other one by Mailbag, 13,637. Evergreen 2nd, daughter of Evergreen (sold at the Minmore sale with her bull calf for 405 guineas), gave birth to twins on December 19th, their sire being Elate, whilst their grandsires were the champions Equestrian, Justice, Young Viscount, etc., a truly magnificent pedigree. Evergreen 2nd is herself one of the most perfect cows in form and symmetry, and although many American buyers offered Mr. Cridlan some fancy prices for her last autumn, he would not part with her. I may mention that her daughter, Evergreen 3rd, produced a heifer calf within an hour of the twins' birth. On the 24th of December, Euphorbia, half sister to Minx of Glamis, the Smithfield champion, and bred by Lord Strathmore, produced a sweet heifer calf, whilst on December 28th, Elite (the dam of Elate, a typical Erica of the choicest breeding, purchased at the South Ella sale for 95 guineas, and whose bull calf fetched thereat 105 guineas) produced a fine bull calf by Mailbag, consequently an own brother to Elate; Pride the 13th, of Kippendavie (winner of a second prize at the Royal show at the York and Royal Counties, Weymouth), also produced a good straight bull calf, a valuable Mulden Pride.

Two cows, a present from the King of Corea to King Edward VII., have been brought home in the battleship Barfleur, which arrived at Plymouth on Tuesday night. The animals became very tame during the voyage, even taking food from the hands of officers and men.

The Norfolk Agricultural Association have decided to accept the invitation to hold their next year's show at Norwich, and at the recent annual meeting of the association Mr. Russell J. Colman, Mayor of Norwich, was unanimously elected president for the ensuing year.

The Rome correspondent of the *Morning Post* states that experiments conducted all over Italy have struck a hard blow at Professor Baccelli's cure for foot-and-mouth disease by injections of a solution of corrosive sublimate. In large numbers of cases the injections have failed to cure the disease, and have been followed by the death of the animals from mercurial poisoning. The failure of these experiments on a large scale to confirm the results of the earliest experiments is creating a sensation in medical circles. Professor Baccelli, Minister of Agriculture, declares that the bad results are due, not to his system, but to bad applications of it, and is preparing a pamphlet to show the proper means of application.

Mr. W. H. Lythall, secretary of the Birmingham Agricultural Exhibition Society, has forwarded me a list of the shows to be held at Bingley Hall, Birmingham, during the present year. The spring shorthorn show and sale will take place on March 5th, 6th, and 7th, entries closing February 4th, and the autumnal show and sale of the same breed of cattle is fixed for September 11th, entries closing on August 16th. There will be a show and sale of Aberdeen Angus cattle on March 11th, and of Jerseys on March 13th, the entries for which close onFebruary 1st and 18th, respectively. The annual fat stock show will be held on November 29th and December 1st, 2nd, 3rd, and 4th, entries closing as follows: —Implements, October 20th; stock, poultry, etc., November 1st.

The deliveries at the Halles Centrales, Paris, this Christmas were very large, according to *Le Bulletin*. During the last four days, from December 21st to December 24th, the demand was higher for pork than any other meat, there being about 5,472 cwts. sold. Beef came second with an average of about 708 cwts. per day; veal, 669 cwts.; and mutton, 295 cwts. There wre nearly 74 cwts. of butter per day; 1,100,000 eggs; 2,263 cwts. of poultry, which included fowls, turkeys, geese, and ducks; 73 cwts. of truffles; whilst among other dainties there were no less than 63 cwts. of edible snails.

As many of our raders probably notice, the wording undernath the illustration given on this page last week was incorrect—a result of the wrong block being accidentally inserted. We therefore give on this page the correct illustration of Miss Alice de Rothschild's cross-bred steer. The animal illustrated last week was the natural-polled heifer Not Too Bad, bred by and exhibited at the Royal Dublin Society's Winter Show last year by the Right Hon. Viscount de Vesci, Abbeyleix House, Abbeyleix. Not Too Bad was calved on April 20th, 1899, its sire being the Aberdeen Angus Jumper II., and its dam a shorthorn dairy cow. At the show mentioned this heifer won first prize in the class for natural-polled heifers over two years and not exceeding two years eight months old, and was reserved for the Challenge Cup for the best animal in the cattle classes bred by the exhibitor.

Gloucestershire Horse Society.

The annual general meeting of shareholders in the Gloucester Shire Horse Society, was held at the New Inn Hotel, on the 28th ult. The President (Mr. J. Skipworth Gibbons) in the chair, and he presented the financial statement, which showed that the receipts, including a balance brought forward of £52, amounted to £185—(67 shareholders' nominations at 35s., £117 5s., and seven outside nominations at 45s., £15 15s.). After payment of expenses, there was a balance left in hand of £80 18s. 3d. As the expenses included five quarters' keep of the horse — one quarter's, amounting to £13, having been left over from the previous year—the profit on the year's workings was £41 18s. 3d. The President remarked that he considered that a satisfactory state of affairs, and that the object for which the society was founded had so far been attained. The society was in a condition of absolute solvency—if it were wound up now all the members could be paid back their shares; and then there would be left something to the good; and he hoped that it would continue to progress satisfactorily.

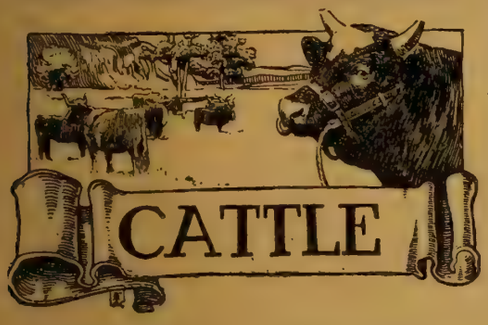
The election of officers was then proceeded with. Mr. Gibbons was re-elected President, Mr. W. Priday vice-president, and Mr. H. B. Chandler secretary. The committee were re-elected as follows:—The President, Vice-president, Secretary, Messrs. Sidney Chandler, Martin Crump, W. S. Dowding, Benjamin Read, and Joseph Surman.—A proposition that the fee should be raised from £1 15s. to £2 was rejected by nine votes to seven.

THE CROSS-BRED STEER we show above is an Aberdeen-Angus Shorthorn Cross, and was bred and exhibited at the Birmingham Fat Stock Show by Miss Alice de Rothschild, Waddesdon Manor, Aylesbury, Bucks. At that show it won first prize in its class, and was awarded the special prize for the best young steer in the show.

SHEEP.

The Sheep Diseases Inquiry.

In our last issue we announced that the President of the Board of Agriculture had appointed a Departmental Committee to investigate the diseases of sheep, known as louping-ill and braxy. On Thursday we received a note from the Board of Agriculture confirming this statement. The Committee is to "report as to the etiology, pathology, and morbid anatomy of the diseases of sheep known as louping-ill and braxy; to make experimental investigations as to the bacteriology and life history of these diseases, and as to their communicability, either directly or indirectly, from animal to animal; to bring together the results, if any, of the work of investigators at home and abroad; and to indicate the directions in which preventive or remedial measures are likely to be successful."



The committee consists of the following gentlemen, viz.: — Professor D. J. Hamilton, M.B., F.R.C.S.E., of Aberdeen University (Chairman); Mr. J. Mc. I. McCall, M.B., C.M., M.R.C.V.S., Assistant Veterinary Officer, Board of Agriculture; and Mr. E. G. Wheler, of Alnwick. The Secretary and Demonstrator to the Committee is Mr. R. B. Greig, F.H.A.S., F.Z.S., of the Durham College of Science, Newcastleon-Tyne.

SPENCER'S
COD LIVER OIL FOR CATTLE.
Calf Brand.

The Best and Cheapest article for rearing Calves, being a natural substitute for Cream. Equally good for all other stock—a medicine and food combined. Far better and cheaper than Feeding Meals.

Write for booklet giving full particulars to the Manufacturers:—

ISAAC SPENCER & CO.,
HULL.

The Increase of Store Cattle.

An interesting address on the increase of store cattle was given at the last meeting of the Morayshire Farmers' Club, by Mr. Archibald Macneilage, of Glasgow, who said that he had got the opinions of fifty representative breeders and feeders from Sutherland in the north to Yorkshire in the south. They were in general agreement that the scarcity of stores last season was caused by an abundance of winter keep in 1900-1, and by the luxuriance and earliness of the grass in the spring both in Ireland and this country. Breeders could thus keep on their stores longer than they otherwise would have done. There was also a prevailing tendency to lay down land to pasture, and this militated against so many keeping stores over the winter, and they were early in the market looking for them in the spring. There was also the increasing desire for light cattle, and lean beef, and this depreciated the older sorts and especially cow beef. The slaughter of young heifers to meet the demand could not but have a more or less permanent effect on the quantity of calves in the country.

While, therefore, the situat on at the beginning of this season might fairly be representative to a large extent of the scarcity of suitable store stock rather than of store stock generally, there could be no doubt that there were at present fewer lean cattle put upon the market than was necessary to supply the demand for cattle at rates which in normal circumstances would leave a fair profit. Breeders could do much to relieve the market. Much could be done in the north of Scotland to extend the breeding of suitable stores, dairy farmers could help by using a better class of bulls or mak ng a more judicious selection, more interest could be taken in the work by farmers, and farms of from 80 to 200 acres could be re-established in the fertile valleys now given over to deer. If railway companies lowered their present prohibitive rates cattle could be brought north from the English districts.

All classes agreed that there is abundance of the right sort of sires available if they were only taken advantage of. It was held by many that ignorance and carelessness were wofully rampant amongst those engaged in cattle-breeding in this country. The feeling of many prominent agriculturists was against Government interference with the cattle-breeding industry in Scotland either by way of giving bulls or by subsidising heifers for service by selected bulls, except, perhaps, in a few of the more remote and upland districts of the western and northern Highlands. But many are of opinion that Government should secure to the home producer of beef fair play in the markets of his own country. Others advocated several farmers joining in the purchase of a first-rate sire for use in their herds jointly. Cows could also be made to foster two or three calves, and feeders should breed three-fourths of the stores they require, and buy the rest from small farmers.

Live Stock in the United States.

Some interesting particulars as to the number of live stock in the United States were given in the course of a paper, read at the annual convention of the National Live Stock Association, held recently in Chicago. Mr. Powers, chief of the Agricultural Bureau of the ensus Office, U.S.A., was the writer of the paper, and he stated that for the first time the census of the United States has attempted a complete enumeration of the domestic animals of the country. Since 1850 the Government has collected statistics of the animals on farms, but no census has ever been taken of the domestic animals not on farms or ranges; that is, the animals in cities and towns and those possessed by the small householders scattered throughout the country, but not living upon farms. There were in the country on June 1, 1900, including those on and off farms, 18,172,914 dairy cows; 11,686,829 other cows, kept mainly for breeding purposes; 15,641,480 calves or neat cattle under one year; 7,041,643 steers one and under two years; 5,227,378 steers two and less than three years; 3,141,722 steers three years and over; 1,337,277 bulls one year and over; 7,273,731 heifers one year and less than two; making a total of neat cattle in the United States (June 1, 1900) of 69,522,734.

At the same time there were 18,532,137 work horses two years old and over; 1,359,652 colts less than one year of age, and 1,473,461 colts one year and under two; a total of 21,365,250 horses. There were 2,912,953 work mules over two years of age; 255,166 mule colts less than one year old, and 291,458 mule colts one year and over; a total of 3,459,582 mules. There were also 119,992 asses and burros. Of sheep one year and older there were 32,056,129 ewes and 8,060,124 rams and wethers, a total of 40,116,263 wool-bearing sheep. There were also 21,529,062 lambs under one year, making a grand total of sheep of 61,645,325. There were in the country a total of 64,615,363 swine and 1,893,491 goats. The sheep on farms and ranges constituted more than 99.6 per cent. of all sheep in the country.

The number of wool-bearing sheep in the United States in the last decade increased from 35,935,364 to 39,936,663, a gain of 11.1 per cent. This gain was confined to one of the five grand divisions of states and territories, the Western. In the North Atlantic the percentage of decrease was 38.9; the North Central, 18.3; the South Atlantic, 27.4; and the South Central, 46; while the gain in the Western was 104.1. On the ranges sheep husbandry is still a leading industry, and in the Western states we find the number of wool-bearing sheep increasing in ten years from 10,806,999 to 22,211,325. This increase is confined almost wholly to the ranges, and represents in these states the substitution of over 11,000,000 sheep for their equivalent in cattle on the public domain.

Particulars of Transactions in Store Stock.

[*From the Department of Agriculture and Technical Instruction for Ireland.*]

At the fair at Mallow, Co. Cork, on Wednesday there was an average supply of cattle, for which there was a fair demand. A few buyers from grazing counties attended, but did not consider stock shown good enough. Prices: Calves, first class, £3 19s. 5d. to £4 15s.; second class, £3 10s. to £3 15s.; third class, £2 10s. to £3. Yearlings, first class, £7 5s. to £8; second class, £6 to £6 15s.; third class (24), £5 to £5 7s. 6d. Two-year-olds, second class, £8 to £9 15s.; third class, £7 10s. to £7 12s. 6d. Three-year-olds, first class, £10 10s. to £13 5s. Springers, second class, £13 to £13 10s.; third class, £9 to £10 10s. Sheep were not in much demand. Lambs, first class, £1 5s. to £1 10s.; second class, £1 2s. 6d. to £1 4s.; third class, £1 1s. 6d.; over 12 and under 24 months old, first class, £2 to £2 4s.; second class, £1 11s. to £1 15s.; third class, £1 5s. to £1 7s.

The fair at Bandon, Co. Cork, held on Wednesday, was a small one of store cattle; demand slow. Prices: Calves, second class, £3 12s. 6d. to £4 10s.; third class, £2 5s. to £3 5s. Yearlings, second class, £6 to £6 15s.; third class, £4 7s. 6d. to £5 10s. Two-year-olds, second class, £7 to £8 10s.; third class, £5 15s. to £6 10s. Springers, first class, £14 7s. 6d. to £16; second class, £11 10s. to £13; third class, £9 15s. to £10 15s.

At the fair held at Killarney on Monday there was but a small supply of cattle, and the demand was slow. Prices: Calves, second class, £3 5s. to £4; third class, £2 7s. 6d. to £3. Yearlings, second class, £5 10s. to £6; third class, £3 12s. 6d. to £5. Two-year-olds, second class, £7 5s. to £8; third class, £4 5s. to £6 10s. Springers, second class, £11 to £12; third class, £7 15s. to £10 2s. 6d.

Messrs. Hitchcock's flour mills at Leicester were destroyed by fire on Thursday evening, the damage done being estimated at £30,000.

Farm Fires near Crewe.—At Crewe, on Thursday, William Butler was charged with setting fire to a haystack at Weston. The evidence showed that during the last few weeks several fires have occurred in the Crewe district, and it was supposed that they were the work of an incendiary. On December 22, early in the morning, prisoner was seen leaving a burning haystack at Weston, his clothes being covered with hay seeds. He was committed for trial.

The London Horse Shows: Notes of this Year's Prize Lists.

King's Premiums for Thoroughbred Stallions.

The show of thoroughbred stallions suitable for getting half-bred horses, held under the auspices of the Royal Commission on Horse-breeding, will be held in conjunction with the Hunters' Improvement Society's Show at Islington on March 11th, 12th, and 13th. This year twenty-eight King's premiums of £150 are offered, or one less than last year, the age of the animals being the same, namely, between four and twenty years old. The district in which one premium has been withdrawn is that named "C," and which is for Derbyshire, Leicestershire, Lincolnshire, Northamptonshire, Nottinghamshire, and Rutlandshire. With but one exception the districts are the same as last year, the exception being "K," which is for Moray, Nairn, and Banff-shires. Whereas last year it was entitled "Inverness and District."

We give below a list of the districts together with the number of premiums offered:—

District A.—Bedfordshire, Buckinghamshire, Cambridgeshire, Essex, Hertfordshire, Huntingdonshire, Middlesex, Norfolk, Oxfordshire, Suffolk—three premiums each.

District B.—Cumberland, Durham, Northumberland, Westmoreland—three premiums each.

District C.—Derbyshire, Leicestershire, Lincolnshire, Northamptonshire, Nottinghamshire, Rutlandshire—three premiums each.

District D.—Berkshire, Cornwall, Devonshire, Dorsetshire, Hampshire, Kent, Somersetshire, Surrey, Sussex, Wiltshire—four premiums each.

District E.—Yorkshire—three premiums.

District F.—Gloucestershire, Herefordshire, Monmouthshire, Shropshire, Staffordshire, Warwickshire, Worcestershire, South Wales—four premiums each.

District G.—Cheshire, Lancashire, North Wales—three premiums each.

District H.—Roxburghshire, Berwickshire and district—one premium.

District I.—Fifeshire and district—one premium.

District J.—Ayrshire and district—one premium.

District K.—Moray, Nairn, and Banff-shires—one premium.

District L.—Ross-shire—one premium.

Hunters.

The total amount offered in prizes by the Hunters' Improvement Society for their show at the Royal Agricultural Hall, Islington, on March 11th, and three following days, is £1,195, as compared with £1,160 last year. The classes and prizes are very much the same as last year, but there are one or two notable alterations which we will mention.

At the last show Class II. was for registered hunters, colts, three-year-olds, and upwards, calculated to make hunter sires, and three premiums of £10 each were offered, but no entry was received for it. This evidently induced the society to alter the class, for in the present prize schedule it is for colts, and is divided into three sections, viz. (a) yearlings, (b) two-year-olds, and (c) three-year-olds, bred as follows:—Thoroughbred or registered hunter sire, dam's sire, and g. dam's sire; the dam a mare registered, or entered for registration, in the Hunter Stud Book. Two premiums of £15 each are offered in each section, thus making a total of £90 in this class only. The yearling and two-year-olds entered in this class can also compete in the other classes.

The only other alteration we noticed was the withdrawal of the special prizes of £10 each for the best colt or gelding in classes 3, 4, and 5, and the best filly in classes 6, 7, and 8. The other special prizes are again offered, namely, the society's challenge cup, value £50, for the best filly, colt, or gelding in the young stock classes; the challenge cup, value 100 guineas, and gold medal, for the best mare or gelding; and the special prizes of £10 each for the best mare and best gelding.

Entries close on February 3, but post entries at double fees will be received up to February 10th. Forms of entry, prize lists, etc., can now be had on application to the secretary, Mr. A. B. Charlton, 12, Hanover Square, London, W.

Polo Ponies.

The Polo Pony Society's third annual show will be held on March 13th and 14th, in connection with the Hunters' Improvement Society's Show. The prize list has been considerably augmented, the total amount offered being £536 5s. 0d., as against £455 in 1900. A few remarks concerning the alteration of the classes may prove interesting, and we will take them in the order of the prize list. The first section is for polo pony stallions, and here there is a new class for polo-bred sires, 3, 4, or 5 years old, with a 1st prize of £10, 2nd £7, 3rd £5, and 4th £3. In the other three classes in this section, the amount of the prizes has been altered. For stallions not exceeding 14.2, the prizes are now:—1st £10, 2nd £7, 3rd £5, and 4th (a new prize) £3; for those not exceeding 15.2, the 2nd prize has been increased from £3 to £5, and a third prize of £3 added; whilst for Eastern sires, a fourth prize of £3 has been added at the expense of the others.

In the sections for brood mares and young stock the classes and prizes are as last year. A new riding class has been added, and it is for four-year-olds and upwards not exceeding 15.2 hands, the prizes being £5, £3, and £2. Army re-mounts are provided for, there being offered prizes of £7, £5, and £3 for animals five to nine years old, not exceeding 14.2 hands; whilst there is a new class for mountain and moorland ponies.

With the exception of Sir Humphrey de Trafford's gold challenge cup, which was won outright last year by Mr. Barker, all the challenge cups and special prizes are again offered, together with some new ones. The Rev. D. B. Montefiore has given a challenge cup, value £50, for the best stallion or entire colt in the show. Mr. J. Norris, Midwood, a five-guinea cup of the best Eastern sire; Mrs. D. B. Montefiore, a five-guinea cup for the best three or four year old brood mare; and Mr. H. C. Stephens, M.P., a cup, value five guineas, for the best Arab brood mare; whilst Professor Cossar Ewart and Mr. E. Mucklow, jun., give five-guinea cups each for the best mare in the Mountain and Moorland sections respectively. The entries close on February 3rd at ordinary fees, and on February 10th, at double fees. The secretary is Mr. A. B. Charlton, 12, Hanover Square, London, W., from whom prize lists, entry forms, etc., can be obtained.

Hackneys.

The complete prize list of the London Hackney Show, to be held on March 4th, 5th, 6th, and 7th, at the Agricultural Hall, Islington, has now been issued by the society. The schedule includes classes for Hackney and Pony Stallions and Mares of all ages and heights, one of the several new features being a separate class for four-year-old stallions, which will in future compete among themselves, and not with older horses as hitherto. Attention is drawn also to the fact that the barren mares and geldings which must be registered in the Studbook, or at least be by a registered Hackney sire, can also be exhibited in harness, whilst the limit of age has been extended to include horses six years old.

The pony section has been amplified by the inclusion of an additional class for mares; one being for mares not exceeding 13 hands, and the other for mares over 13 and not exceeding 14 hands. The class for ponies in harness remains the same. The produce group is again included, and the auction sale on the last day will, as last year, be conducted by Messrs. Sexton, Grimwade, and Beck. It is intended also to publish a separate sale catalogue, containing descriptions which the vendors will be asked to furnish. Copies of the prize schedule and entry forms can be obtained of the Secretary, at 12, Hanover Square, London, W.

Shires.

The Shire Horse Society have made no alteration in the classes for their show to be held at Islington on February 25th, 26th, 27th, and 28th, but they have considerably increased the prize money, the sum offered for competition being £2,007, or £470 more than last year. Of the latter sum no less than £235 is given in additional breeders' prizes in some classes as many as is being added. The largest number is given in the class for three-year-old stallions, where no fewer than eleven are offered, and the same number of ordinary prizes, the first being £20, the second £15, third £10, and the others £5 each. These sums are the same as in the other classes for stallions, the prizes for mares and fillies being, first £15, second £10, and the others £5; whilst for geldings a first prize of £10, second, third, and fourth of £5 each are offered. Additional ordinary prizes are also offered in some of the stallion and mare and filly classes.

One new feature has been introduced, and it will undoubtedly prove a most popular one with exhibitors, and is likely to be adopted by other societies in a flourishing condition; it is the awarding of prizes to animals receiving reserves, highly commended, and commended tickets. The society has taken last year's awards as an estimate, and set aside £200 for the purpose, and the exhibitor of each reserve animal will receive £3, the highly commended £2, and commended £1. This applies only to stallions, mares, and fillies, the gelding classes not being included.

The valuable cups and medals are offered as last year, and with such a generous prize list the society should have a record show this year. January 20th is the last day for entries of double fees. Prize lists, entry forms, etc., can be had of the secretary, Mr. J. Sloughgrove, 12, Hanover Square, W.

Nitrate of Soda Report.

Messrs. W. Montgomery and Co.'s half-yearly nitrate of soda report was issued on Tuesday. In it they state that the nitrate of soda trade in the first year of the new century has been marked by development in consumption and advance in price, the former establishing a fresh record.

During the year also the combination agreement of the producers for the restriction of production has come into operation, and to this circumstance must, to some extent, be ascribed the upward movement in prices during the summer and autumn. The coming agricultural season is, therefore, looked forward to with interest, and in some quarters with anxiety, in order to learn whether or not any serious check is to be experienced in the consumption by reason of this steady appreciation in price, which to-day is 20s. per ton over that of December, 1900.

The visible supply as compared with that of 31st December, 1900, shows a deficiency of 150,000 tons, but this deficiency will be reduced by steamer shipments in January and March (in excess of 1901) by 60,000 tons, so that we calculate the following quantities may be relied upon for actual consumption to the 15th May next, as compared with the quantities in 1901:—Visible supply to-day, 642,000 tons, against 794,000 tons on 31st December, 1900; estimated steamer shipments, January and March, 1902, 135,000 tons, against 68,000 tons in January-March, 1901; total of 777,000 tons, as against 861,000 last year.

The consumption from 1st January to 15th May, 1901, was 770,000 tons. So that whilst there may be enough on this basis to go round, there is little margin for stock or for the many unforeseen emergencies which so often occur in regard to nitrate of soda. The supply also in inland warehouses is, this year, believed to be smaller than usual, the small arrivals and correspondingly light deliveries during October and December, appearing bearing this out.

Prices close very firm. Cargoes due are worth 9s. 7d. to 9s. 8d. per cwt. November shipments, 9s. 9d. December and January shipments 9s. 8d. to 9s. 6d. per cwt. Refined quality has been in continuous demand throughout the year at from 2d. to 3d. per cwt. over the value of ordinary.

The total consumption of the world for the past three years has been as follows:—

	1899. Tons.	1900. Tons.	1901. Tons.
Continent of Europe	1,017,000	991,000	1,036,000
United Kingdom	123,000	135,000	118,000
United States	160,000	175,000	192,000
Other countries	30,000	23,000	18,000
Tons	1,330,000	1,324,000	1,364,000
Shipments	1,373,000	1,429,000	1,263,000

The Inspectors of the Board of Agriculture has paid a visit to the Somerset County Council's experimental farm. In his report, he states that the farm was in a very poor condition when the County Council acquired it. Now it already shows a distinctly improved appearance. The land is cleaned, and is being gradually got into better condition. Attention was called to a stack of silage made from over ninety loads of mixed fodder, viz., tares, lucerne, oats, and a certain amount of maize. To provide similar food for next year, a field of eight acres was on the day of my visit being drilled with a mixture of two bushels winter tares, one bushel beans, half a bushel winter oats, and half a bushel of wheat per acre, but the crop of most interest to me was a field of lucerne. At this time last year, it presented only a fair appearance, but has subsequently done exceedingly well. Three, and in one part of the field four, cuts have been made during the current year, and the crop is now standing some nine inches to one foot high.

Mention must be made of the deficient hay crop. This was, of course, due to the abnormally dry season, but it has enabled a most important lesson to be taught to those who care to learn. Had this farm been managed in the ordinary way, one of two things must have taken place. Either the stock kept on the farm would have had to have been greatly diminished, or else a considerable quantity of hay at high prices would have had to have been purchased. As it is, owing to the system of fodder crops and catch crops grown on this farm, the full head of stock can probably be carried through the winter without the purchase of any extra fodder.

Causes of soft Pork.

Experiments have recently been carried out at the Ottawa Central Experimental Farm, in order to investigate the character and causes of softness in the fat of pork. The experiments were conducted under the guidance of F. T. Shutt, M.A., who is the chemist to the Dominion of Canada Experimental Farms. The results presented in this report throw much light on this difficult subject, for by persistent chemical research, based on the results obtained from the feeding of a variety of rations, the causes and conditions by which softness in the fat of pork is brought about are satisfactorily shown.

In his introduction to the report of the experiment Mr. Shutt states that the export bacon trade is one of great importance to Canada, the value of last year's exports to England alone being more than 12,000,000 dols. Moreover, the limit has not yet been reached; those engaged in the packing business assure us that the demand for first-class Canadian bacon will continue to increase for some years to come. It is, therefore, advisable that our farmers and dairymen should well understand the requirements of this large and remunerative market as regards size, shape, fatness, and, above all, the character or quality of the bacon. These are matters which closely concern the raiser of pigs, for they are not under the control of the packer. Further, it is well to remember that the highest price will only be paid in England for that article which conforms with the demands of the consuming public, and that it is only first-class bacon that can be exported with profit.

As the particulars of this experiment cannot fail to be of interest to a good many pig breeders on this side of the Atlantic, we give below some extracts from the report.

Naturally, the first step in undertaking the solution of this difficult problem was to ascertain the difference in composition of "firm" and "soft" pork, so that chemical analysis might be employed as an accurate discriminating agent in the examination of pork produced under varying conditions of food, exercise, etc. The tables prepared during this investigation are given in the report, and they clearly show that the fat of the "soft" bacon contains a much larger proportion of olein than that of the "firm" bacon, accompanied necessarily by a correspondingly decreased proportion of the solid fats, palmitin and stearin. We have in this fact—the large percentage of olein—the explanation of the peculiar and characteristic flabbiness of "soft" pork. We also have afforded us in this discovery, through the estimation of olein, a ready means of tracing the effect of any particular food or condition on the pork produced.

Next an examination was made of four very young pigs in order to learn the nature of the fat of immature animals, and the results indicate that it seems probable that the fat of all young pigs contains a large amount of olein, and is consequently more or less soft. This and subsequent work inclined the experimenters to think that age and maturity or ripeness are factors of importance towards a "firm" fat. It was found that the fat of animals slaughtered when about 100lbs. live weight invariably possessed a large percentage of olein than that of pigs, fed on the same ration, which were not slaughtered until they had reached a live weight of 180 to 200lbs.

On the completion of the preparatory work the first series of feeding trials was instituted upon the Central Experimental Farm, Ottawa, followed by a laboratory examination of the pork produced. There were in all about one hundred and eighty pigs, and the experiment was commenced in the month of May, 1899, when the majority of them were between one and two months old. They were either Tamworths or Tamworth grades. The scheme of the trial was such that information would be gained as to the effect upon the quality of the pork of the following possible factors—Character of food (a) fed throughout life, and (b) fed during the initial and finishing periods respectively; limited and unlimited supply of food; soaked or cooked grain as against dry or uncooked grain; age of animal when slaughtered; exercise and lack of exercise; locality or district where raised.

Result of First Experiments.

The more important inferences drawn from the first series of trials may be briefly stated as follows:—That of all the grain rations employed, that consisting of equal parts of oats, pease, and barley gave the firmest pork. It may further be added that the fat was deposited evenly, and not too thickly, and that this ration gave a very

thrifty growth. That no difference could be observed in the firmness of the pork from the preceding ration, whether fed soaked or dry. That when half the grain ration consists of corn meal the resulting pork shows an increased percentage of olein; in other words, a tendency to softness. That in this ration (half corn meal, half oats, pease, and barley in equal parts) the feeding of it boiled gave a slightly higher olein content, but this is only apparent when the average from the four pens is taken into consideration. That, considering the effect of feeding the ration of oats, pease, and barley during the first period (to a live weight of 100lbs.) and corn meal during the finishing period, compared with the reverse of this plan—that is, corn first, followed with oats, pease, and barley—we may conclude that the former gives a firmer pork.

That in both methods mentioned in the preceding paragraph, no marked difference was to be observed from the ration fed dry or previously soaked, though taking an average of the two groups on each ration the "dry" feed gave a somewhat higher olein content. That when corn meal formed half the first period ration, and the whole of the second period ration, the resulting pork was somewhat softer than from that of any of the rations already discussed. We conclude that the longer the period during which the corn is fed as a large proportion of the ration, the softer will be the pork. That beans produce a soft and inferior pork. The growth of the pigs so fed was poor and miserable, and the deposition of the fat meagre. That corn meal fed exclusively as the grain ration, either dry or previously soaked, results in an extremely soft fat, the percentage of olein being considerably higher than from any other ration tested. The pork was of an inferior quality. Here also we noted the miserable growth of the animals, the ration in no sense being an economical one.

noticed, however, that a large proportion of corn in the ration tends to an increase in the deposition of fat, especially above the shoulder.

Clover was not tried save in conjunction with a grain ration, half of which was corn meal. We are scarcely in a position, therefore, to speak positively as to its effect upon the relative firmness, but there are certainly strong indications that its influence is in the same direction as corn, increasing the percentage of olein. It is quite evident that the root crops—turnips, mangels, and sugar beets—can be used with benefit and with impunity in such a ration as meal, oats, peas, and barley, the animals fed on which produced first-quality pork. No softening effect due to the results of feeding rape, artichokes, or pumpkins, cooked or raw, was noticed.

Conclusions.

The more important conclusions drawn from the whole investigation are set forth as follows:—

1. That the one great controlling factor in the quality of the pork of finished pigs lies in the character of the food employed. 2. That Indian corn and beans tend to softness, i.e., to increase the percentage of olein in the fat. If these grains are used they must be fed judiciously if first-class firm pork is to be produced. If fed in conjunction with skim milk it has been shown that a considerable proportion of Indian corn may be used in the grain ration without injuring the quality of the pork. 3. That a grain ration consisting of a mixture of oats, pease, and barley, in equal parts, gives a firm pork of excellent quality. 4. That skim milk not only tends to thriftiness and rapid growth, but counteracts in a very marked manner any tendency to softness. 5. That rape, pumpkins, artichokes, sugar beets, turnips, and mangels can be fed in conjunction with a good ration without injuring the quality of the pork. 6. That the fat of very young pigs and animals of unthrifty growth is softer than that of finished pigs that have increased steadily to the finishing weight.

THE TWO CROSS-BRED PIGS which form the subject of the above illustration are the property of and were bred by Mr. A. Brown, of Hill Farm, Southampton. They are by a Black pig, their dam being a Large White, and at the Smithfield Show they were 11 months, 2 weeks 5 days old. At that Show they were awarded the £10 Silver Cup for the best pen of any distinct or crossbred pen of pigs, and also won first prize in their class.

Second Series.

On the completion of the work of the first set of experiments it was thought desirable to institute a further series to obtain corrobation of certain results, as well as to ascertain the influence of several modifications in the rations already employed. In this second series the effect of the ration on the fat of the finished pig simply was determined. It was also decided to examine chemically the fat taken from above the shoulder only, the difference in olein content between the shoulder and loin fat from the same carcase being, as a rule, extremely small. In all important features the deduction drawn from the results of the first experiments received strong confirmation from the data of the second series. There were, however, from this latter series several additional and important features noted. The first was with regard to the use of skim milk in conjunction with the grain ration. In every instance in which it was tried skim milk produced a much firmer fat than resulted from the same grain ration, fed without skim milk. The softening effect of corn, so repeatedly referred to, was in a very large measure counteracted by this means. Therefore, while the results point to the injurious effects of a ration containing one-half or more corn without skim milk, its use as a part of the grain ration in conjunction with skim milk produced an excellent quality of pork. It was

---

Rochdale Dairy Farmers' Combine.—The farmers of Rochdale and district have decided to form a Farmers' Association and raise the price of milk from 3d. to 3½d. per quart. It was mentioned that provender is now 3s. per load dearer than it was last summer; that hay is very scarce and higher in price; that in the surrounding towns farmers were receiving 3½d. per quart for the milk, and some 4d., whereas in Rochdale the price was 3d. a quart.

Plant Colonists.—Mr. R. Lloyd Praeger writes as follows in "Knowledge" on "Plant Colonists"—"When our forefathers commenced to till the ground, a destruction of the native plant associations was the result; and this gave an opening for other plants suited to the new conditions. Annuals could maintain their hold year by year on the tilled land, where the former perennial plant-groups could no longer exist. And clearly those plants whose seeds happened to be mixed with the grain which the early husbandmen sowed, would have an excellent opportunity of survival. Thus we can conceive that the now large and well-marked group of weeds of cultivation had a very early origin.

TRADE IN FEEDING STUFFS IN 1901.

Business in London.

Messrs. Ashton, Edridge, and Co., of 30, St. Mary Axe, E.C., have issued their annual circular dealing with the trade in linseed and cottonseed, etc. They state that high prices have been maintained for linseed throughout the year. The crop in Argentina has proved the largest on record. As regards cotton seed, the Egyptian crop has been a good one; and a somewhat new feature has been the unprecedentedly large sale of Bombay seed, which may be accounted for by the high prices ruling for Egyptian. Reporting on the trade in linseed, Messrs. Ashton, Edridge, and Co. state:—January opened with a firm market for all near positions, an increased estimate of the Plate crop, coupled with heavy shipments from that quarter, caused a sharp decline for forward positions. In February continued heavy Plate shipments still further weakened the market, but the month closed firm with a demand for transhipment to the U.S.A. and North Russia. Towards the close of March, with the advance in oil, light shipments from all quarters and small offers from the shippers, values steadily improved, 47s. paid for March Calcutta, and up to 45s. for April-June; Plate on the spot made 45s. At Hull, Calcutta April-June made 45s. 6d., and 45s. was paid for spot Plate. In April unfavourable crop news from India, coupled with continued scarcity of first-hand offers, prices rapidly rose with up to 52s. 6d. paid for Calcutta on passage, and 50s. 3d. for April-June. At Hull, Plate afloat made 47s. 9d., shipping 47s., and April-May 46s. 3d., scarcely any business passed in Calcutta. During the greater part of May the advance continued, further stimulated by a good demand for oil; heavy arrivals subsequently causing a partial reaction. Calcutta arrived sold from 54s. to 55s. 3d., but closed 52s.; April-June touched 52s. 6d. At Hull, Calcutta 15th May, made up to 53s.; Plate changed hands from 48s. 3d. to 50s. June opened with a quiet market, which developed into a good consumptive demand. North America bought seed both here and in Calcutta, and prices rose to 52s. 3d. spot, and 52s. for shipment.

During July prices continued to improve, and a considerable business done, although shippers offered cautiously. Calcutta in near positions sold up to 55s. 6d., while 55s. 9d. paid for shipment. At Hull a quantity of July-August done between 52s. 6d. and 56s.; Plate on passage touched 54s. The earlier part of August marked a further advance, but towards the close of the month North America offered very freely, and values rapidly declined; Calcutta due touched 56s. 9d. and 58s. paid for September-October, closing 55s. and 56s. respectively. At Hull, business done between 56s. 9d. and 57s. 6d. for August-September; Plate, ex store and on passage, made 54s. 6d. During September values showed little alteration, business being restricted owing to the unsettled state of the American market. October opened with a dull market, which developed into a good enquiry at advancing prices on unfavourable crop news in the Plate, and the stiffness of the Indian shippers. Throughout November near positions continued steady, the forward market eased with increased shipments from India. Calcutta, shortly due, sold at 57s. 3d. to 56s. 3d., while down to 54s. 9d. taken November-December. At Hull 55s. accepted for a line of November Calcutta; Plate changed hands from 49s. 6d. to 47s. 6d., December-January shipment. During December values steadily declined, the shipments from all quarters were much larger than anticipated. Calcutta spot and near sold from 54s. 6d. to 51s. 6d.; November-December shipment closes 51s. 6d.; a few sales of April-June recorded at about 46s. At Hull Calcutta on passage nominally 53s.; Plate was dealt in from 47s. 9d. to 45s. December-January, while 44s. accepted January-February.

Linseed Cakes.

In January, market firm but only a moderate trade passed at £8 6s. 3d. to £8 12s. 6d. for London made. During February demand was very slow, despite the cold weather which prevailed, quotations ranged from £8 7s. 6d. to £8 10s. March opened with a continuation of the poor enquiry, but closed firm at a decline of 10s. per ton, £7 15s. to £8 being closing value. Throughout April, stocks being very limited, market continued firm at £7 13s. 9d. to £7 15s. In May, notwithstanding the small trade, values showed little alteration, closing £7 12s. 6d. Throughout June prices declined to £7 7s. 6d., the demand being almost lifeless. In July, with the advance in seed, values improved to £7 17s. 6d. During August and September, through scarcity, £8 2s. 6d. was hard, but business was much restricted. Throughout October values dropped, and trading continued at a minimum, £7 16s. being the ruling price. During November there was a better consumptive demand, values improving to £7 17s. 6d. During December demand again improved, closing quotations being £7 17s. 6d. for London made. The import of foreign cakes for

all kinds into the United Kingdom in 1901 amounted to about 390,000 tons, against 394,889 tons in 1900.

Cotton Cakes.

During January market steady, with an improving demand at £4 17s. 6d. to £5 for London make. Towards the close of February, after a good business done, demand slackened, £4 17s. 6d. being the closing value. Throughout March prices continued to droop, but closed steadier at £4 10s. to £4 15s. In April the improvement was maintained, with London makes selling up to £4 17s. 6d. During May free arrivals from Egypt caused a reaction to £4 11s. 3d. In June, owing to scarcity, values were maintained, although the consumption was below the average; and in July prices advanced to £4 18s. 9d. In August, with the improvement in seed, and continued scarcity, £5 3s. 9d. was paid. During September demand was only moderate, and values declined at £4 18s. 9d. In October down to £4 12s. 6d. taken, but a considerable trade passed at the lower price. During November cakes sold freely at improving prices, which ranged from £4 11s. 3d. to £4 15s. Throughout December the trade continued good at £4 12s. 6d. to £4 15s. for London made.

Messrs. Keighley, Maxted, and Co.'s Report.

In the course of their annual review of the past year, Messrs. Keighley, Maxted and Co., of Hull, making some interesting statements concerning the trade in feeding stuffs, and below we give some extracts from the review:—

Linseed.

The imports into Hull for the year are 732,566 qrs., against 572,106 qrs. last season. The market has again been characterised by wide and sometimes violent fluctuations. The year opened with a serious slump in values, caused in the first instance by reports of an enormous linseed crop in the Argentine, and further accentuated by large—in fact record—shipments from that country in January and early February. Weekly shipments during this period varied from 38,000 qrs. to the largest, viz.: 238,000 qrs. Values dropped to 38s. for River Plate, and Calcutta April-June to London was sold at 3s8. 6d. These figures showed a drop from the highest values of about 12s. to 14s. per quarter. These low prices, lasting only a few days, were followed by a substantial and continuous recovery. Indian shipments were fairly liberal, viz.:—737,000 qrs. United Kingdom, 980,000 qrs. Continent, total, 1,717,000 qrs., but these were counteracted by the practical failure of the Russian crops, both North and South.

Owing to the extreme scarcity, Baltic oil commanded a high premium, and the small quantities of seed shipped from Petersburg realised very high prices. Report has it (and this may not be altogether legendary) that one shipper stored a parcel in warehouse, as he was not prepared to accept the price of 61s. per quarter. The upward tendency was, therefore, with the exception of occasional relapses, steadily maintained, until prices again reached a high level in the month of August, River Plate seed touching 56s. 3d., and Calcutta 57s. 6d. to 58s. In the late autumn, America offered freely, and the market has been "jumpy," with an ultimate downward trend, values at the close of the year being 55s. 6d. Calcutta, 46s. 3d. December Plate, 45s. December-January, and 44s. January-February. Baltic sorts, owing to scarcity, remain on a high level. Riga and Libau 54s. delivered.

Linseed Cake.

Owing to the falling off in the supplies of foreign cakes, especially from Russia, by reason of the deficient seed crop in that country, Hull linseed cakes have been in better demand than might have been expected considering the high prices current throughout the year. Early in the year, an abnormal supply of linseed was expected with consequent low prices, and the result was an enormous drop in both seed and oil, but it soon became evident that the expectation was not justified, and prices recovered to practically the levels at which they stood at the beginning of the year. As oil declined with seed, cakes did not vary so much when the decline was in force, as would otherwise have been the case. Prices of 95 per cent. quality were as follows:—January 1st, £8 7s. 6d., at which they remained to February 15th, declining to £8 by March 1st; March 15th, £7 12s. 6d.; April 15th, £7 12s. 6d.; May 1st, £7 10s.; June 1st, £7 7s. 6d.; June 15th, £7 (the lowest point in the year for spot); July 1st, £7 5s.; July 15th, £7 10s.; August 1st, £8 2s. 6d.; August 15th, £8 7s. 6d., and they continued at that to £8 5s. up to the end of the year.

Cotton Cakes.

The supplies of seed have been liberal, especially during the last three months. Prices of best quality cakes from Egyptian seed have ruled at the following prices:—January 1st, £4 17s. 6d.; January 15th, £5; February 1st, £4 17s. 6d.; March 1st, £4 12s. 6d.; March 15th, £4 15s.; April 15th, £4 15s.; May 1st, £4 12s. 6d.; May 15th, £4 10s.; June 15th, £4 7s. 6d. (the minimum of the year); July 1st, £4 15s.; July 15th, £4 15s.; August 1st, £5; August 15th, £5 7s. 6d.; September 1st, £5 2s. 6d.; September 15th, £5 5s.; October 1st, £5; October 15th, £4 15s.; November 1st, £4 10s.; November 15th, £4 12s. 6d., at which the price remained to the end of the year. The make is now (December 28th) much larger than usual, but the mills are bare of stock. Cotton cakes are cheaper than anything else, and the very large trade for them is expected to continue right into the spring. Cotton seed crushing has been very profitable for some months past.

Feed Cakes have been in good demand throughout the year, many of the best makes, being of a very superior quality, are attracting a large volume of trade. The year closes with a more hopeful and satisfactory outlook than has been the case for many years.

Agricultural Co-operation.

One of the questions which is frequently asked is "What would happen if England was to drift into a great war and had its food supply cut off?" That was a question which concerned him as a Londoner apart from the interest he took as an Englishman in what was the greatest of their national industries. If the food supply was cut off, and even if it was threatened there would be bread riots in London, where six millions of people were crowded together. Nothing but the invasion of a foreign foe or a bombardment could inflict upon them anything equal in horror to what would take place under such circumstances in an overcrowded city like London. The question of food supply, therefore, was one which should apply to every Englishman, no matter what his politics or creed might happen to be. It might become absolute life or death to the nation, and in that sense the question must be of peculiar interest to those engaged in agriculture, as upon them would fall the necessity of providing the supply in time of war. They must put themselves, therefore, to some little inconvenience, and look at the question apart from the immediate personal effect it might have on their individual interests.

It was common knowledge that two-thirds of their food was imported from foreign countries, and that the country only supplied one-third of the food required for the population. That was the outcome of a system of free trade which he did not intend to discuss from its economic point of view, further than to say that the strongest supporter of Free Trade recognised, like Mr. Cobden recognised at the outset, that the throwing open of our ports involved the question of universal peace which they must endeavour to maintain. Further, if they had foreign imports of corn they must have such a navy that, no matter what combination was brought against it, it was capable of ensuring the food supply not being cut off. They lived in a fools' paradise sometimes with respect to their fleet if they thought it was in that happy position. If they were to have free imports of corn as they had had since 1847 the navy must be kept up to such a state of efficiency that any combination of Powers could be resisted. The navy was not now in that position, and that was one of the questions on which agriculturists should combine and co-operate upon to force the powers that be to do their duty.

Using the word co-operate in its ordinary acceptation, to supply combination, he said he did not know why, but the farmers throughout the country evinced a grave objection to anything like a systematic co-operation amongst themselves. They did not perhaps like their neighbours to know what they were doing, but that was a narrow way of looking at the question. The real rival of the British farmer was not his next door neighbour, but perhaps a gentleman residing three thousand miles away, and what they had to face was the flooding of the markets and competition to which they were exposed through the sending of American and other corn by farmers they had never seen, and who were able to flood the English markets through their combination. Corn was bought by agents for miles round Chicago and stored in granaries to be sent to foreign countries who required it. It was a modified form of combination amongst the farmers, for the distribution of the corn, and such a form as that might be adopted by the English farmer for ensuring their produce being dealt with in bulk, and thus saving an expense which might possibly sometimes convert a margin of loss into a slight margin of profit.

The workmen in the towns were indirectly interested in that question of maintaining the great industry of agriculture, not only with respect to the great question of food supply, which might assume a terribly grave aspect in times of war, but in other respects, and it was for the farmers to combine and see that those in the town were made acquainted with that indirect interest. This included the maintenance of the physical condition of the race. If the soldiers and sailors were to be drawn from the ranks of overworked and overcrowded population of the great cities they would not obtain the same amount of blood and muscle which had hitherto carried their arms to victory in foreign countries. They must have a healthy leaven of the country blood in the towns, in the army, in the navy.

He did not think the British workman was so narrow-minded, unpatriotic, and selfish not to see the force fo such arguments as these when placed before him by persons interested in agriculture, and in order to show the working man how much it was to his interest to try and uphold the agricultural industry they must send missionaries to him. They had their farmers' clubs throughout the country, and the Central Chamber to assist them. They also had a Board of Agriculture, but that, being a Government department, was hampered with the inevitable red tapeism. At present many people knew nothing of the importance of the great industry, but if they tried to make the hundreds of thousands of workmen know about it they would listen and take an interest in it perhaps, but if the farmers held aloof and allowed their votes to be swamped by the voting power of the workmen of the towns their interests would be neglected.

Co-operation to Secure Legislation.

The agricultural interest had the same right to combine and show they had the power by their votes to have a really legitimate grievance discussed as the brewing and other interests. They should also be in a position to say to their Parliamentary or County representatives if they were going to regard the brewing or any other interest and disregard the agricultural interest the agriculturists would take good care to have such a political form of organisation or combination that those representatives would not dare to pass by their just grievances, and which they were asked to remedy through the Legislature. If the farmers did that they would meet their adversaries on equal terms; if they were in the right they would prevail; but at the present time, without combination, whether right or wrong, they could not expect to prevail, as they could not get or enforce an hearing. At the present time they were ignored as being a negligible quantity without organisation amongst themselves or those they employed.

He had heard there was an antagonism between farmer and labourer, but he could hardly believe it. There may be individual cases of the kind, but those in subordinate positions looked to their employers generally. If such was not the case he thought the farmer would do well to remedy that state of affairs. He did not for a moment suggest the farmer should imitate the policy pursued by modern trades unionism, which had, through being so much abused, lost all traces of trades unionism, and become a form of conspiracy. By the Act of 1875 workmen were allowed to combine on the assumption they would use that liberty for the purpose of combining, but there was all the difference in the world between the combination contemplated by the Trades Union Acts and the combination used now in the abuse of those Acts. The combination meant was to band together for their own good, but it was a conspiracy to band together to do others harm, even if they employed legal means to obtain their object. He did not suggest that kind of combination to agriculturists, but asked them to guard against it; and to combine together in a proper manner was a duty they owed to themselves, and a duty, he would say, they owed to their country. If they combined to do themselves good and advance the true interests of agriculture they would be adding to the strength, health, and wealth of the whole of the country. He asked them to look at such combination from a patriotic point of view, and to work out the details of such combination amongst themselves in their individual districts.

The Provision Trade in 1901.

Here the year 1901, like its predecessor, has been clouded over by an almost uninterrupted spell of unprofitable rates at prime cost, and operations in provisions have in consequence been under severe restraint. As the margin between profit and loss has become narrower, the strain on buyers or distributors has grown more acute towards the close, with little promise of relief; and additional anxiety having been produced by the announcement of dishonourable financial failures, the trade at one time and another has been wrought up to a high pitch of nervous tension as to "Who's who?" in commercial circles.

Butter.

Taking the augmenting imports into the United Kingdom as a criterion (which is indeed the only one we can adopt as a guide), the consumption of

butter in this country may be said to progress at an accelerated rate, which it requires all the resources of home and foreign producers adequately to satisfy, and prices, as a natural sequence, have nearly always been on an ascending scale. For the finest qualities this has been peculiarly the case, and it has often happened that the choicest brands of different descriptions of butter have been commanding the same money, till in October they were dearer than in December last. Within the past month prices of most kinds except Dutch and French have declined about 10s. per cwt. A conspicuous feature in the supply during the year 1901 has been the surprisingly heavy quantities received here from Russia and Siberia, which have frequently so encumbered the warehouses and cold-storage chambers that holders have scarcely known what to do with them, or how to dispose of them quickly enough to ensure a satisfactory sale; and where the quality has undergone deterioration, more undeniably so than in other years, the difficulties in effecting a speedy riddance of the same have been greatly increased. Fancy creamery butters have taken a decided lead in the market throughout their respective seasons, Irish and Canadian most of any; but while these, together with the receipts from Holland, have been heavier than in 1900, the importations of Colonial sorts, as well as those from France, have largely fallen off, and have thus conduced to a higher range of quotations, which the retailers, try all they know, have, for the most part, been unable to resist, till quite near the close, when choicest qualities were procurable at

THE DEXTER HEIFER LUCAN NELLIE, 1,643, which we illustrate above, was exhibited at the Royal Dublin Society's Winter Show last month by Mr. R. G. Nash, Finnestown Lucan, and won first prize in the class for Dexter heifers under four years old, also being reserve for the Waterhouse Cup for the best animal in the Kerry and Dexter classes bred and fed in Ireland. We may mention that Mr. Nash was awarded this cup in 1900, and if he had won it last month it would have become his property. It has to be won twice by the same exhibitor before becoming his property, but not necessarily in succession, so that Mr. Nash has yet a good chance of winning the cup outright.

102s. to 106s., or 14s. under the opening rates of the season.

Margarine and Mixtures.

bear evidence of a good trade having been done so far as it relates to the increased turnover; but in respect to the prices obtainable there is not much benefit on which to congratulate producers, who have had to pay materially enhanced rates for the raw materials, such as "Oleo" and other substances, although at the same time they have been powerless to secure a corresponding advance from the retailers for the manufactured article.

Bacon.

A persistent shrinkage in the supplies from Denmark and Canada within the last year or two, only imperfectly made up for by enlarged importations from the United States into this country, has been the chief cause of the continued high prices that have been maintained during the past twelve months. To account fully for the dearness of bacon it must also be taken into account that the consumption of this necessary of life has been actively extending among all classes of the community, who have had more ample means of purchasing what extra provisions they require, and under this stimulus to fresh activity in the demand one improvement has been added to another, until quotations have been piled up to a height which has deprived the smaller distributors to the public of all reasonable profit, and left them at a palpable disadvantage in catering for the wants of consumers. How to get a fair monetary return for cutting up a side of bacon has been a puzzle to a good many retail salesmen during 1901, and the question of raising the "ticketed" prices to their customers, in accordance with the upward moves in the import market, has also been a ticklish one where competition in any neighbourhood has been peculiarly keen. Placed thus between two evils—constantly advancing rates on one hand, and retail figures fixed at too low a point on the other—the retailers have occupied a rather awkward position as concerns bacon in the past year; and their ingenuity in trimming their sales to their purchases, so as to make both ends meet, has been taxed to the utmost. With quotations for "green" bacon more generally pointing to the "seventies" (i.e., 70s. per cwt.) than otherwise, the chances of dealers making a profit have been strongly against them, notwithstanding the growing popularity of this article of food; and it is, therefore, to be hoped that, after so long a period of adverse fortune in not always successfully managing their business in bacon, a return of more prosperous times in greater abundance and cheapness being assured will by-and-by be witnessed.

In other salted or scalded meats nothing particularly interesting has occurred during the year now closing, the market for which has invariably followed the same course as that above noticed, and stiff prices have mostly been current. Scarcity and its consequent attendants, rising values, have entirely controlled the trade in hams in the year now passed, and intervals of depression have been less frequent than before. Although the imports of lard into the United Kingdom have been heavier than in 1900, stocks nearly everywhere have been reported to be light, if not entirely exhausted, and consequently insufficient for ordinary needs, proving that the latter must have outgrown former limits, and prices all round have ruled considerably above those in the previous year, being at the best points 52s. to 53s. per cwt. for American pails, 58s. to 70s. for Irish (kegs and bladders), and 70s. to 80s. for English bladdered.

Cheese.

For home produce the market has been the least affected of any by movements that have been going on elsewhere, supplies sent forward having been so regulated as to occasion little or no deviation from the beaten track of common-place dealings in cheese for immediate use, and no extremes of buoyancy or inactivity have been experienced. The new season's make of English has been of fair average extent, enough to meet all demands, without leaving over surplus quantities of any weight, to be forced off at reduced figures later on; and full to somewhat better prices have been asked and obtained almost throughout the year, more especially for the primest qualities. With Canadian and American cheese, however, the case has been very different and much less satisfactory, the season 1900-01 having turned out to be a disastrous one for operators on this side of the Atlantic. The losses incurred by speculation (on extravagant "c.f. and i." terms) carried to undue lengths were never thoroughly recovered by the trade here, who were consequently little inclined to resume active purchases on the opening of another campaign last spring; and the occasional spurts put on since have been unequal to the task of cleverly handling an outturn of cheese described as being one of the biggest ever produced. Reports of heavy unsold stocks both at the shipping and arrival ports have also exercised a depressing influence during the latter half of the present year, and transactions of moment have been practicable only at drooping rates. At first Canadian cheese, costing 56s. to 58s. to arrive, was thrown on this market at a ruinous sacrifice—44s. to 48s. per cwt., and it can hardly be said that the unlucky importers, as a body, have yet survived the shock. Afterwards a healthier feeling seemed to set in, when newly-arrived cheese began to be freely purchased, and early in August finest coloured realised 49s. to 50s., and white 48s. to 49s.; the order of the two grades being reversed from what it was in 1900, when white took top and coloured makes second place in point of value. From that time onwards the tendency was rather downwards, when the same kinds were sold landed at 45s. to 47s. per cwt.; but the value has since returned to 48s. to 50s. The season for New Zealand cheese has been of a more favourable character, liberal supplies of superior quality having been received and disposed of with facility at relatively good prices, whilst some other descriptions were partly unsaleable. Dutch cheese has kept up remarkably well for farmers' products, the outlet for which seems to have been considerably widened, and very firm rates have been quoted all the year through. Factory sorts have likewise claimed a large share of attention, and the decline which took place at the commencement was afterwards followed by a smart reaction. —*The Grocer.*

East Stirlingshire Agricultural Society.

A general meeting of the Eastern District of Stirlingshire Agricultural Association was held at Falkirk on the 26th ult., Mr. Charles Brown Kerse, president, in the chair. The secretary, Mr. William Wright, submitted the annual report, from which it appeared that while the affairs of the society continued generally in a fairly prosperous condition, the funds in hand showed a further decrease of £23 19s. 5d., the balance at December, 1900, being £183 17s., while this year it was £159 17s. 7d. This continued decrease in the funds seemed mainly due to the larger sums that had been paid away as prize-money this year, to the considerably reduced sum drawn at the gate at the summer show, and partly to the number of still outstanding subscriptions.

The chairman, in moving the adoption of the report, suggested the introduction of military and other sports at the summer show in order to draw the people out. Mr. Buchan, Dalgrain, seconded the adoption of the report, which was approved unanimously.

Contagious Diseases of Animals.

Summary of Returns issued by the Board of Agriculture for the week ending December 31, 1901:—

PRICE SIXPENCE (by post, 9d.).

1, ESSEX STREET, STRAND, LONDON, W.C.

By Hordeum.

1901.

The year that has gone has been a bad one in many ways, and in very few of the many branches of agriculture can farmers or those depending on them look back with satisfaction. So far as the growth of barley is concerned this is especially the case. The worst seed time in living memory was followed by a harvest of the worst type. I say this advisedly, for the shortness of time of ingathering is of dubious benefit to the great majority of farmers, and the early rush of grain into the markets effectually kept down prices to a level utterly inconsistent with the facts, if there is any truth in the old axiom that prices are ruled by the laws of supply and demand.

The statistics furnished by the Board of Agriculture, with the admirable precision and promptness characteristic of so much done by the Board (to the immense advantage of practical men if they only would learn how to turn them to account), made it early evident that this season there must be a

Small Supply of Barley.

Yet, because of the methods of dealing recently adopted by buyers, there was such a rush of new corn to the markets, that in the recorded sales in the registered markets we find that, whilst in the three months June, July, and August under 10,500 quarters of barley were sold, in the one month of September (September, mark you), no less than 233,200 quarters were sold, followed by 710,700 quarters in October, and 917,300 quarters in November.

It is not surprising that buyers found no difficulty in getting all they wanted, and that prices stood almost stationary throughout the year. Yet it was well known, in addition to the decreased acreage under barley and the known poor yield, that the maize crop was a failure, and had caused the price of what our American cousins call "corn" to go up 5s. to 7s. per quarter, and there had been a duty placed upon sugar which may be roughly put at the same amount, say 5s. to 7s. per quarter. Had prices risen in accordance with the facts, the position of barley growers would not have been much improved, but with the average standing at a dead level of sameness, the outcome of the year's work to the majority of growers must be of a most unsatisfactory type.

Prosperity turns on Price

to a greater degree than upon anything else. A short crop at a high price makes it possible to live, but a poor crop with stagnant prices is ruination.

Probably no trade has suffered greater stagnation in the past autumn and winter than brewing. Yet it is well known that once the price of grain is forced below a certain limit there is no direct gain to the brewer, and there is much indirect loss. Bearing these facts in mind, a retrospective glance at 1901 is very alarming. Barley growers have met with much discouragement. Many classes of other traders, directly and indirectly affected by the success of barley growers, are suffering from depression or stagnation.

But the chief loss is of a more serious type. It is a grave

National Risk

to have the steady decrease of arable cultivation of our soil going on without a check. If we allow arable land to be represented by wheat, barley, oats, peas, beans, green crops, and roots we lost last year alone from under the plough upwards of 250,000 acres. This follows a loss in thirty years of nearly 3,400,000 acres. What this means in keeping workers on the soil is little realised or understood. More important still is the value of such an area under arable cultivation to the nation as a source of national defence and for provision of necessary food.

It is obvious to any thinker that there is something radically wrong somewhere. The farmers of this country prove every year by the quality and quantity of their produce that they are practical men who deservedly stand first in many walks in their industry, and on a high plane in nearly all others. Yet they are being steadily killed by

Unfair Competition

and the steady reduction in price obtainable for their produce. Were it a matter that affected the farmers solely they might be left to fight their own battles and take their chance. But there is a much more important question involved. National defence and the integrity of the Empire have become phrases filled with a deep meaning now they would not have possessed to anyone only a few years ago. In them rest the lives and property of the majority of the peoples in these islands, and the maintenance of our soil under conditions of fullest productiveness has ceased to be a mere matter of business concerning only a dwindling number of farmers and their poorly educated employees, it is a question of deepest and truly vital significance to the dwellers in towns and industrial centres. The disastrous year of 1901 will not be an unmixed evil if the public conscience is awakened through it to the true sense of our national duty.

The Pure Beer Bill.

A circular has been addressed to all members of Parliament asking whether they are disposed to ballot for a Bill dealing with the Brewing and Sale of Beer, which is to be introduced into Parliament next session. The circular, which is signed by Sir Cuthbert Quilter, Sir John Dorington, Colonel Brookfield, Colonel Kenyon-Slaney, Messrs. Griffith-Boscawen, Corrie Grant, Laurence Hardy, R. J. Price, Robert Purvis, James Round, and F. W. Wilson, points out that the Bill of last sesion passed its second reading by a majority of 112, and was subsequently referred to the Grand Committee on Law, but unfortunately the proceedings on another Bill, also affecting the trade and referred to the same Committee, were so persistently delayed as to make it useless to persevere with it in the short time that remained before the rising of Parliament. It is hoped, however, that the criticisms it elicited and the time afforded for consideration will result in the framing of a measure, which will not only prove of advantage to beer-drinkers and agriculturists, but will also meet with greater approval at the hands, both of the Inland Revenue authorities and of the better class of brewers.

Agricultural Produce.

The following is an account showing the quantities of certain kinds of Agricultural Produce imported into the United Kingdom in the week ended December 28, 1901, together with the quantities imported in the corresponding week of the previous year :—

		1900.	1901.
Animals, Living :—			
Oxen, bulls, cows, and calves	Number	8,012	4,759
Sheep and lambs	,,	5,981	6,928
Swine	,,	—	—
Fresh Meat :—			
Beef	Cwt.	40,182	36,509
Mutton	,,	31,201	20,861
Pork	,,	12,523	17,954
Salted or Preserved Meat :—			
Bacon	Cwt.	98,454	77,658
Beef	,,	2,222	4,336
Hams	,,	27,692	23,682
Pork	,,	3,902	1,303
Meatunenumerated, saltedorfresh	,,	5,241	5,451
Meat, preserved otherwise than by salting	,,	7,788	10,274
Dairy Produce and Substitutes :—			
Butter	Cwt.	70,027	63,897
Margarine	,,	13,725	14,527
Cheese	,,	21,451	44,234
*Milk, Fresh, in cans or drums	,,	469	661
*Milk, Cream	,,		204
*Milk, Preserved, other kinds	,,		29
Milk, Condensed	,,	16,219	12,989
Eggs	Great Hundred	283,443	289,506
Poultry and Game	Value £	42,477	38,219
Rabbits, dead (not tinned)	Cwt.	6,472	3,760
Lard	,,	39,912	30,890
Corn, Grain, Meal, and Flour :—			
Wheat	Cwt.	1,141,800	818,600
Wheat Meal and Flour	,,	384,100	548,500
Barley	,,	354,800	313,100
Oats	,,	311,500	311,800
Peas	,,	57,200	37,800
Beans	,,	36,600	16,100
Maize or Indian Corn	,,	1,245,700	706,800
Fruit, Raw :—			
Apples	Cwt.	37,109	22,397
Apricots and Peaches	,,	—	—
Bananas	Bnchs.	9,942	22,525
Cherries	Cwt.	—	—
Currants	,,	—	—
Gooseberries	,,	—	—
Grapes	,,	333	247
Lemons	,,	8,654	1,244
Oranges	,,	175,601	140,233
Pears	,,	688	92
Plums	,,	115	2
Strawberries	,,	—	—
Unenumerated	,,	164	321
Hay	Tons.	1,634	5,459
Hops	Cwt.	11,074	7,149
Vegetables, Raw :—			
Onions	Bush.	95,005	111,695
Potatoes	Cwt.	100,505	81,539
Tomatoes	,,	8,163	2,003
Unenumerated	Value £	8,793	4,060
†Dried	Cwt.	—	6,269
†Preserved by canning	,,	—	2,250

* In 1900 these were not shown separately.
† Included with Vegetables, Unenumerated, prior to 1901

By Lupulin.

Trade Notes.

The Borough.

Hop traders returned to the scene of their labours on Monday morning, and have since been fairly busy in handling samples in preparation for the visits of travellers to the town and country brewers. The journeys of these gentlemen will be resumed to-day, and I trust their holiday rest will invigorate them and create additional energy in commending their goods to the notice of customers. During the week many lots have changed hands, and the total amount of business done has been quite up to expectation. There is still evident much desire to get hold of good qualities, and merchant has not infrequently bought from merchant, with profit to the original buyer, as it is practically impossible to find any choice or even first-quality hops in the hands of growers. The great bulk of the unsold balance is only ordinary, medium, or inferior, but there is demand even for these, and, at present rate of selling, it cannot be long before the market is absolutely cleared. But the drawback of unremunerative prices still remains, although there is not an ounce of pressure upon the market from abroad. The bugbear of foreign competition is for the moment banished out of sight, and we have to face the truism that

The English Crop is the Principal Factor

in determining the value of English hops. There may be exceptional seasons in which a superabundant foreign supply exercises a depressing influence upon our prices, but inasmuch as our brewers are compelled by the taste of their customers and the other exigencies of their business to use English hops in far greater proportion than Californian or any other foreign growth, the quantity of native produce available must invariably be the main feature in fixing the range at which our hops are marketable. According to the official returns, we have grown in the last three crops 1,658,707cwt, and I suppose experience has taught us that these figures hardly represent the actual weight produced; but if we take them as they are, we are given an average of over 550,000cwt. per annum, which, considering the imports and the estimated annual consumption, is a greater yield than home demand requires. If the average were reduced by about 20 per cent. it would be nearer the mark. This surplus is doubtless the cause of the low prices of the present season, and when we also bring into account the large proportion of inferior stuff with which the market has been overloaded, it is scarcely surprising that growers have had to submit, and are still compelled to submit, to sales at ruination rates. The more closely this matter is examined the more urgent appears the necessity and desirability of a curtailment of the acreage. The careful growth and gathering of the choicest hops only, the unsparing destruction of all the poorest sorts—such a line of policy is forced upon us both by past and present circumstances, and I earnestly trust that my friends will well consider their surroundings and take action without hesitation. Let them not lose sight of the serious fact that every pocket now bought by brewers in excess of their annual requirements is being put aside in cold storage for future use, and will ultimately act as a double-edged sword in their hands, which they will ruthlessly use in slaughtering planters next season. We can only meet them with any prospect of success by limiting the supply and thus securing control of the business. This is our only effective shield, and, if we handle it aright, will protect us from the otherwise inevitable attack.

Continental Markets.

retain the firmness with which they closed before the holidays. At Nuremberg business has been resumed with animation, and an appreciable advance has taken place in the value of all the best hops on offer. Only the poorer samples are stationary, but a general movement upwards is anticipated, and there is little doubt that, as stocks are much reduced, the stronger tendency will be supported throughout the remainder of the season. Present values are far above English level, therefore exports are very limited, and the home demand is solely accountable for the healthy tone of the trade. In Belgium the holidays have inter-

fered with business, with the result that a temporary slight reaction from previous strength is noticeable. As soon as the people settle down again to their ordinary avocations the brewery demand will be resumed, and it is expected that a higher range of hop values will be established.

The Consul-General at Warsaw reports that the annual hop fair in that city turned out rather badly for local growers, contrary to expectation. The bulk of the crop was late, and did not come up to promise, being more or less damaged by the weather. The main object of the fair is the fixation of prices, but on this occasion but little trade was done, and no prices could be established. A depression in the local brewing trade also reacted upon the business of the fair.

At New York the market is by no means active, brewers being very cautious in their dealings. Hops are worth nearly as much in the country centres as they will at present realise at New York. It is, therefore, a bad time for dealers, whose profits are cut down to the lowest margin. Values of choice samples remain at 14 to 15½ cents. The shipment of Oregon hops to England, under the auspices of the local growers' association, to which I previously referred, has been effected to the extent of 2,800 bales. The agents who accompany the hops have promised to return to growers the proceeds of their sales in London within 45 days of the date of shipment, being confident of quick business at remunerative prices. The general trade on the Pacific coast is active, and values are fully maintained.

English and Foreign Hops.
German Criticism.

At the request of a large brewer in North Germany, an eminent scientific authority has recently undertaken to test the comparative value as brewing material of hops from various sources, and I am indebted to the editor of "Mittheilungen Deutschen Hopfenbau-Verein" for the results of this interesting inquiry.

The total number of samples tested was 94, the whole being of the 1900 growth, and the process adopted was that of "Reibsläche," or surface rubbing, perfected by the professor 20 years ago, and since constantly used by him for the practical information of brewers. Of German growths the following were examined:—From Spalt 4 samples, Spaltlaux 6, Middle Franconia 1, Aischgrund 2, Hallertau 9, Wurtemberg 3, Baden 3, Alsace 4, Lorraine 2, Altmark 2, Neutomischetz (Poland) 8, being 44 samples in all, of which 22 were from Bavaria. Austria contributed 20 samples, 12 being from Saaz, 5 from Rothauscha, 2 from Dauba, and 1 from Styria. There were 7 samples of Russian origin, chiefly from Volhynia, also 2 samples of Burgundian hops, and 2 of Belgian. Of English growths, the professor tested 2 samples, each of choice Worcesters, Wealds, Mid and East Kents, Sussex, and Farnhams, making a total of 12 samples, and also examined 8 samples from New York State, Washington, Sonoma, Sacramento, and Oregon, U.S.A. It will, therefore, be observed that the whole of the world's hop-growing districts were fairly represented.

The expert's conclusions are that the test as to lupulinic contents is the most favourable in the cases of hops grown in England and America, the German and Austrian produce being much less desirable in this respect. The same comparison is made with regard to the quality in the bittering principle, and it is remarked that all the English varieties were very choice, Farnhams being at the head of the list, East Kents coming in second, followed by the Mid and Weald of Kent growths. American hops proved to be remarkably rich in the essential constituents, but they did not equal the English samples. Of the samples grown in Russia, the professor speaks very highly, stating that they surpassed in brewing value those from Germany and Austria. A few samples of the German and Austrian products were exceptionally rich and choice, but the general average was not satisfactory, the German growths being somewhat superior to the Austrian. The Polish hops were deficient in lupin and general quality, but those from Wurtemberg, Baden, and Alsace were rather more attractive. The Burgundian samples were fairly supplied with lupulin, while the general quality was not very good. The most unsatisfactory results were found in the samples from Belgium, which were poor in condition and flavour, and very short of bitter. Regarding the flavour alone, our author ty awards the highest praise to a sample from Markt Au, in Hallertau, this being followed by the sample of "sealed" hops from Wolnzach.

A few samples of the 1901 crop were also tested, Saaz hops proving to be usually rich in lupuiin, aroma, and bitter, both Moravians and Spalts being inferior to them.

On the whole, English growers have reason to be gratified by the issue of this investigation. Being conducted by one whose prejudices were reasonably favourable to h's own people, it proves that, despite the supposed disadvantages of our climate and our soil, our planters, who exercise their skil in the production of choice hops, can still hold their own in respect of quality against the world's competition.

A Plea for Protection.

Sir,—I have read the article in "The Financial Times" of the 18th inst. on Mr. Byng's book, showing that manufacturers are tired of Free Trade, and I have also at the Farmers' Club dinner, on the 10th inst., heard Mr. Chaplin in a part of his speech advocate Protection for farming by imposing a small duty on wheat. Mr. Chaplin and Mr. Byng both seem to think that the poor agriculturist wants Protection. I, being a farmer, think just the opposite. What the farmers require is Free Trade for all articles the country cannot produce, wheat included; protect everything else, the British workman included. As we all know, England cannot grow enough for her own consumption, and what is grown is grown at a loss. Many earnest thinkers are now advocating the purchase and storage of wheat by the Government to protect the country's food supplies in case of war or a successful corner in wheat, but the objections to such a course are serious injury to agriculture and its prohibitive cost. Now, if the Government will condescend to take advice from a farmer—if instead of placing a duty on wheat the Government will give the farmer a bounty of 5s. per quarter on wheat, or so much per acre grown, on the understanding that the farmers will hold one year's stock of wheat on hand, this would mean that the Government would have such a granary at their back that they need not think of imitating Pharaoh.

I am, etc.,
C. Hedges.

Heath Farm, Godalming, Dec. 23rd, 1901.

The Apple Orchard.

Sir,—I cannot notice the remarks, in the Mark Lane Express of the 30th December last, of a "Fruit Grower in Kent," as in any way a *reply*, in reference to my detailed statistics in the previous week's Express, as to the cost of establishing "the Apple Orchard."

The "Fruit Grower in Kent" says of me, "I *think* if he were to go into detail he would discover his error." Well—into detail I have gone, and given most minutely—of the purchase of the stocks, the distances in setting out the area, the cost of labour in planting, the appliances necessary, and their cost for securing the stocks from injury, the pruning for the formation of their heads for the future, and for the proper use of the pasture also—and I have given the figures of the cost of each in detail. What further does "Fruit Grower" want? Why has he not set them forth?

The only further detail with the industry I have not given is the gathering and the storing of the produce, which may be covered by 1s. per bushel; but it may be noted I have put the sale price of "Blenheims" at 8s. per bushel—they are now quoted in the wholesale market at 12s. 6d.—and they can be sold on "the spot" at this without any further expense attending. As "Fruit Grower in Kent" has not made the slightest attempt to overthrow the figures I have set forth, I think I may venture to assume that he is very prejudiced against the further extension of the apple orchard, and that it is a disagreeable subject to him to entertain. So, like the lawyer who has a bad case, and cannot oevrthrow his opponent's facts, he takes to mere carping and personally depreciating the opposite party. Of myself, "Fruit Grower" says, and that without any warranty, "I should *think* the gentleman knows nothing about apple growing." Well, I may tell him I am 85 years old, and I have had between 50 and 60 years' practical experience in the industry.

In his feeble attempt to oppose apple orchard extension, "Fruit Grower" throws as a stumbling block in the way the 10 years before the "Blenheims" come to fruit. I know it quite as well as he, for I have planted the trees, and I did not propose to establish the orchard *entirely* with these trees. I expressly said "keeping apples," and indicated with the Blenheim, Wellington, Hanwell, Sowering, etc., expressly for those who cannot rest to wait for the prolonged ever better result.

The "Fruit Grower's" 10 years' stumbling block of the Blenheim gives me the opportunity of showing the handsome investment from the orchard planted entirely with this tree. Take, say, the period of 21 years in an orchard planted on a field of pasture land 20 acres.

In the first ten years there would be on the average a sprinkling of fruit:—

	£	s.	d.
During the succeeding 11 years the produce from 108 trees per acre one bushel average each at 8s. The market price is now 12s. 6d.	43	4	0
For 20 acres	20	0	0
	864	0	0
For 11 years	11	0	0
21)	9504	0	0
Average of 11 years spread over 21 years, per year	452	12	0

This, I think, must be considered a very good investment on £214 13s. 4d. required, as I have shown, to completely establish an orchard of 20 acres, the expense afterwards being merely a very little judicious pruning, and an occasional supervision to see guards and stakes properly in order.

Yours truly,
The Advocate of the Apple Orchard.

January 2nd, 1902.

BEST TREATMENT FOR FINGER AND TOE.

Sir,—I shall feel greatly obliged if you or any of your readers can give me any information as to the best treatment of land subject to finger and toe. Lime made from chalk at the rate of 160 bushels per acre is the remedy usually applied in this district, which is very costly. I have not read of any experiments with either basic slag or basic superphosphate, but should be glad to know if any have been made, and, if so, with what success.

Yours truly,
Gilbert Eames.

IMPROVED IMPLEMENTS AND MACHINERY.

Hardy Trenching Strutt and Automatic Slip Hook.

The Hardy Patent Pick Co., Ltd., of Sheffield, have recently introduced two novelties which are worthy of attention. One is the "Hardy" trenching strutt, a tool which will be appreciated by all interested in drainage or entrenching of any kind, for by its use the many falls which occur in trenching, the great waste of timber in strutting, and the loss due to unnecessary labour will be avoided. The barrel is of wrought steel tubing, 2½ inches in diameter, fitted with removable nuts, solid steel square-threaded screw, with flexible feet at each end for automatic adjustment to any irregularity in the trench sides. For trenching in rock the strut may also be used as a bar, from which boring machines for blasting may be worked. It is capable of extension from 27 inches to 42 inches, or may be made to any special dimensions desired. It will thus be seen that the tool is a very serviceable one in the work of drainage, etc.

The other new appliance is the "Hardy" Automatic Slip Hook for tipping tubs, loading and unloading buckets of all descriptions, and for the automatic release of large stones, iron, or blocks of any materials, without manual assistance. The tipping tub or box is provided with four eyebolts—two on each side; one at the back, and also a short chain at the mouth. When in use for tipping the box is hung by the two back side eyebolts and the hook to the short chain in front. As soon as the box rests on the tip or place at which it is desired to deliver the material, the spring lifts the handle, giving instantaneous release. It will be readily seen that with such an apparatus the services of a man to release the tub are not required.

The release is not effected until the load touches the place on which it is to be deposited, and the discharge is gradually brought about by the withdrawal of the box. There is no tipping action, therefore dust is reduced to a minimum, and, what is of great importance, there is an absence of breakage when dealing with friable materials.

Both the above new patents, of which the Hardy Patent Pick Co. are the sole manufacturers, have been thoroughly tested in practice and have given the greatest satisfaction.

Serious Floods.—Reports from North and South Wales show that the recent floods were of a most extensive character. The Severn, Dee, Conway, and Clwyd have been out of their courses for many miles, owing to the continuous rains and melting of snow in the mountainous districts. So high did the Dee rise that in the Vale of Llangollen the waters leaped over the chain bridge. The village of Bangorisycoed was surrounded and rendered inaccessible. Many farmers have sustained serious losses of sheep and cattle, and work had to be suspended at many Welsh mills.

FOREIGN AND COLONIAL

Exports of Wheat Grown from the United States in 1901.

According to returns issued by the United States Treasury Department, the exports of wheat from that country for the ten months ended October 31st, 1901, exceeded the exports for the corresponding months in 1900 by 75,201,993 bushels; and exports of wheat flour for the same months in 1901 exceeded those for the corresponding period in 1900 by 552,744 barrels. Flour is usually expressed in bushels of wheat by counting 1 barrel of flour equivalent to 4½ bushels of wheat. Exports of wheat flour, therefore, for the first ten months of 1901 exceeded those of the corresponding period in 1900 by a quantity equivalent to 2,487,348 bushels of wheat; and the total exports of wheat and flour, as wheat, up to November 1, 1901, exceeded like exports for the same period in 1900 by 77,689,341 bushels, an increase of almost 52 per cent.

The total value of wheat and wheat flour exported during the first ten months of 1901 amounted to 172,309,733 dols., against a total of 114,022,100 dols. for exports in the corresponding period of 1900. The increase in the total value of exports of these products to November 1, 1901, over those of the same period in 1900 amounts to 58,287,633 dols., or over 51 per cent., corresponding very closely to the increase in exports as measured by quantity and indicating a remarkable steadiness in export prices during the two ten-month periods.

The following statement gives the quantities and values of wheat and flour exported during the first ten months of 1901 and 1900:—

	1901.		1900.	
	Quantity.	Value.	Quality.	Value.
	Bushels.	Dollars.	Bushels.	Dollars.
Wheat ...	155,142,574	113,197,125	79,940,581	57,465,111
	Barrels.		Barrels.	
Flour ...	16,014,182	59,112,608	15,461,438	56,556,989

A fact which for some months has attracted much attention and discussion is that the remarkable increase in the 1901 exports of wheat and wheat flour, taken together is, upon analysis, found to be almost entirely due to increased exports of wheat; the exports of the manufactured article, flour, show little increasing tendency. In other words, exports of wheat in 1901, as shown in the above statement, have increased, as compared with those of 1900, about 94 per cent. in quantity and 97 per cent. in total value; exports of wheat flour, on the other hand, have increased only 3½ per cent. in quantity and about 4½ per cent. in total value.

In oyly two previous years within the past decade have exports of wheat from the United States been on an exceptionally large scale, as compared respectively with the years immediately preceding; but, in both, exports of flour have faield to increase in anything like a corresponding ratio. In 1898, owing to short crops in Europe, exports of wheat increased in quantity over those of 1897 by about 86 per cent., but exports of flour showed an increase of only about 5 per cent. In 1892 likewise, exports of wheat, as compared with those of the preceding year, increased by about 185 per cent., while exports of flour, though showing a more decidedly increasing tendency than in the other years mentioned, increased by only 34 per cent., a gain, however, which has never since been wholly lost.

The International Live Stock Exposition at Chicago.

The International Live Stock Exposition held in Chicago at the beginning of last month was a great success, and some idea of the estimation in which it was held by the breeders and Press in the United States may be gathered from the following extracts from a very lengthy report given in the "Breeders' Gazette," Chicago:—

"The expected happened. All records fell before the second International Live Stock Exposition. A milestone has been set in the forward movement of the industry. Another monument to the magnitude of the live stock trade has been built. The faith of the promoters of this show met with full fruition. Projected in confidence, born of knowledge, planned with breadth and liberality, nurtured with ceaseless and intelligent care, this creation of the organised efforts of breeders of meat-making animals assumed the proportions and dignity befitting the industry, and writ a new record in magnitude, character and spectacular display. All that had been hoped for was realised. Appreciative of the opportunity for a grand exposition of the industry, grateful to the corporate enterprise that made it possible, cognisant of the supreme importance of the show which leaped into life almost in a day, the breeders and feeders of America made royal returns. The second International Live Stock Exposition, which claimed the attention of the world at Chicago, set a new mark for the expanding industry which it illustrated, and closed the records of a remarkable year in marvellous manner. Standing beside it, it towers so magnificently as even to dwarf the memory of its predecessor. Viewing it as it recedes, it assumes place as the capsheaf of live stock expositions of the world."

The national scope of the Exposition was typified in the presence of the Hon. James Wilson, Secretary of Agriculture, on the opening night, and by the attendance of Governor Yates, of Illinois; Governor Shaw, of Iowa; Governor Bliss, of Michigan; Governor van Zant, of Minnesota, and Governor Savage, of Nebraska. An international air was lent, not only by the exhibits from Canada and by the presence of animals imported from across the seas, but also by the official representations of a number of foreign countries. Two representatives of the Governments of Argentine, Germany, and Italy were present, and one each from Belgium, Japan, Mexico, and Central America.

Few shows have been better judged. With the exception of two or three glaring instances of incompetency, the record in this regard is a gratifying one. Considerable of the complaint current during the past season has been stilled by the work of the judges, most of whom were men experienced in the responsibilities of the position. A single judge was used in the competitions under the management of the executive committee of the International, and in some of the breed shows where the suggestion of that committee was heeded. In other sections the two-judge system with alternating referee was in use. The marked celerity of the work of the single judges was in sharp contrast to the tedious examinations and consultations of the committees, and furnished a potent argument for the adoption of the one-judge plan where the rings are so large as at this show.

In this connection it is a great pleasure to record an appreciative word of the very clever work of Mr. James Peter, Berkeley, Eng., who allotted positions among the grades and crosses in the fat stock show and selected the champions in that section. Keen-eyed and keen-witted, intelligent in discrimination, clear as to type, and quick to discern and conclude, the work of Mr. Peter among the bullocks furnished one of the most satisfactory records ever left by a judge at our fat stock shows. His breadth of view, his thorough appreciation of the superior stock submitted to his inspection, and the excellent taste in which his comments were couched, appealed to the consideration of all and won him a place high in the esteem of those who were privileged to make his acquaintance or follow his work.

The fat stock show proved alike a disappointment and a source of gratification. Undeniably the single animal classes were not up to expectation. Of course a two-year-old bullock cannot be made in a year, but the younger classes did not show that preparation for the future which the re-establishment of the fat stock show demanded. The "toppers" were bell-ringers that sounded clear and convincing notes; the champions by ages and the grand champion and reserve were clinkers—of grand character, object-lessons of rare value, an enduring credit to their breeders and fitters. But the sub-standard sorts were far too much in evidence. Breeders must address themselves to this problem quickly and seriously. The carload lots redeemed the show. Little wonder is it that Mr. Peter expressed the greatest regret that his time-limit would not permit him to visit the ranches, the farms and the feed lots of the West and Central West where such grand bullocks as he saw in the pens are bred and fed. Marvellous has been the improvement in our beef stocks, and the International is the prophet of this industry.

It was "white-face" year. The gloom cast so long by the colour of the dusky "lack-skins" over the Christmas spirits of the advocates of other breeds has been dispelled. The grand champion of the show was a pedigreed Hereford and the champion car-load lot was composed of grade Herefords bred in the Pan-handle. The "blacks" made a gallant fight, but this time got no higher than second place. As to the Shorthorns—shall we be obliged to import bullocks as well as breeding cattle to win?

The horses emphasised their claims to positions in this show. Rarely has such an exhibit of breeding horses been assembled, and certainly this country never witnessed such displays of draft horses in harness. The days of horse breeding have returned. All breeds were creditably represented in the classes for breeding horses and some of the rings were sensational. Local interest added greatly to the throngs which witnessed the contest among the packers in the harness classes, but the constituency which was drawn out by the displays of breeding horses was very large. Memorable was the exhibition, and record-breaking the sales of stallions and mares directly resulting from it.

Sheep and swine furnished one of the most imposing exhibits yet chronicled. Taken all together, considering the strength of the wether classes in numbers and character, it is doubtful if such a show has ever been assembled. Britain and the Continent had been searched for sheep, and a few of the swine had made the trip across the seas.

Corn Exchange New Year's Notices.

The London Corn Trade Association contract forms for 1902 contain material modifications from 1901. They should therefore be acquired as soon as possible from the offices, at 2, Line Street Square, Fenchurch Street. Books containing all the forms are supplied.

Messrs. Schwartz and Dupee, the well-known wheat brokers, of Chicago, retire as from January 1st, Messrs. J. F. Harris and E. W. Kalb, by arrangement, succeeding them and taking over their connection.

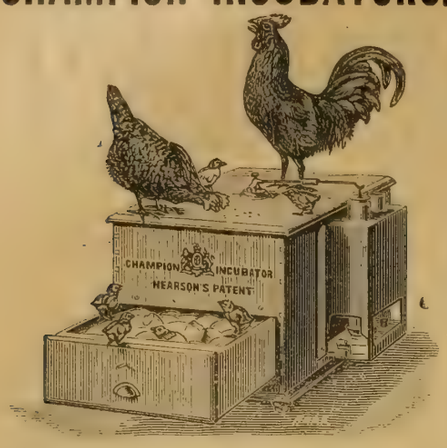
The London Flour Trade Association have elected Mr. Langdon and Messrs. Byrne, Mahony and Co. as members from the new year. This brings up the list of members to sixty-four, which is the highest number yet attained.

Messrs. Harter and Co., of Manchester, will be represented in London by Mr. Percy Brandon, at 147, Fenchurch Street, E.C.

The Corn Exchange smoking concert is fixed for 8 p.m., at Cannon Street Hotel, on January 29th. The receipts are applied to the benefit of corn factors and their clerks who have fallen into want, and so well is the concert supported that although the tickets are only 2s. each a net profit of £50 is obtained in a good year. We hope it will be surpassed for 1902.

Tickets for the Corn Exchange concert may be had of Mr. Sydney Young, the secretary to the Exchange, who kindly offers his services in this not unimportant respect. Mr. Young's office is in the passage leading from the Old Market into Seething Lane.

Mr. Scaramanga, one of the leading Greek merchants at the Baltic, has retired from business. The firm of Scaramanga and Eumorphopoulos is dissolved, and the business will be carried on under the name of the Brothers Eumorphopoulos.



Mr. Frank Cyril Tiarks has been admitted a member of the firm of Messrs. Schroder and Co.

Berlin Term Market re-opens for 1902 with forward quotations for May wheat, rye and rape oil. Forward prices for maize are also licensed, but no grain has as yet been tendered. The defeat of the Kaiser's restrictions seems tolerably complete.

The Rapeseed Committee announce that from January 1st standard samples can be inspected at Camomile Street Chambers, close to the Baltic's present quarters at the Liverpool Street Station Hotel.

Among the town houses sold have been Stratheden House, Hyde Park, for over £80,000; Nos. 2 and 8, Belgrave Square, S.W., for £20,000 and £21,000 respectively; No. 8, Stratton Street, S.W., £20,000; No. 2, Palace Green, Kensington (Thackeray's house), £15,500; and the historic house, No. 4, Whitehall. Metropolitan and City sites, offices, and mansions disposed of included the area occupied by the Indigent Blind Schools in St. George's Circus, for £140,000; a site in the Haymarket, W., for £60,000; a site of 600ft. in Great Marlborough Street, £13,750; 3,800ft. in Bishopsgate Street, £30,000; 10,000ft. in Kensington Court, W., £12,000; 7,917ft., in Beech Street, Barbican, £20,000; Nos. 62 and 63, New Bond Street, W., and Nos. 15 to 17A, Brook Street, £70,000; No. 37, Cornhill, 752ft. super., £40,800; Nos. 7 to 10, South Place, Finsbury, £33,750; 15,000ft. super., in Ely Place, Holborn, £36,500.

CHICKENS ALL THE YEAR ROUND.
BY USING
Hearson's Patent
CHAMPION INCUBATORS.

The CHAMPION INCUBATOR has now been before the world over 20 years, and has achieved a reputation which eclipses all competitors.

Illustrated Price List, One Stamp.

40
NEW-LAID EGGS
FOR SIXPENCE.

On receipt of a postcard we will send you a sample of our Egg-producing Poultry Powder, together with a 24-page book on "Profitable Poultry Keeping."
If you are a poultry-keeper and your birds are not laying as you would like, or your pullets not so forward as they should be, there is one thing you should fly to—

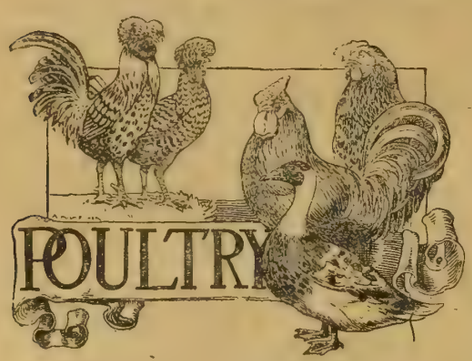
COVERDALE'S
EGG-PRODUCING
POULTRY POWDER.

Sold in Packages, carriage free, 8d., 1s. 3d., 3s., and 5s. 9d.

It has by far the largest sale of any similar preparation, and all poultry-keepers, from the humble cottager with his pen of four or five barn door fowls to the large breeder and exhibitor, speak of it in glowing terms (see testimonials). It is the best poultry tonic on the market, and its use guarantees
WINTER LAYERS.

Ask your corndealer for it. The cost is only about 1d. per week for 10 fowls.

COVERDALE'S POULTRY POWDER, LTD.,
20, PARLIAMENT STREET, YORK.
AGENTS WANTED.



AWARDED THREE PRIZE MEDALS FOR THE BEST INCUBATOR, DAIRY SHOW, 1898, 1900, 1901. SEVEN OTHER GOLD AND SILVER MEDALS IN ENGLAND AND CONTINENT, 1901.

The Largest Manufacturer of Incubators in the World.

Eggs and the Egg Trade.*

By A. NEWPORT.

(Copyright.)

My subject for this lecture is "Eggs and the Egg Trade,"* and I am delighted to have the opportunity of speaking upon a topic upon which I have long had very strong opinions. It will be a relief to me to be able to point the little items whereby we allow our trade in this commodity to be wrested from us by the foreign producer. Also I shall be glad to disturb some of the existing fallacies with regard to English and foreign eggs. Some of you are probably aware of a few of these points, but others I believe I speak of for the first time, and though it may not be pleasant to us poultry keepers, yet I believe the best way of combating a danger is to first recognise it and then face it boldly. To begin with, let us go into the matter of the egg itself. This is roughly divisible into three distinct portions—the shell, the white, and the yolk. The shell is composed of granules of carbonate of lime; but these granules do not form a perfect covering, and so the shell is porous, that is to say, there are numerous holes through it. I dare say most of you already know this, but I doubt whether you appreciate to what extent they exist. For home proof, take a cold, raw egg—new-laid or otherwise—drop it into a tumbler of warm water and watch the effect. The air held between the granules expands with the heat and rises in bubbles, giving somewhat the effect of soda water. This proves then that the shell is porous, and you can readily understand that evaporation takes place through the shell. Nor is this all that comes of this porosity, and I shall have occasion to refer to it again in a moment.

The next part, the white or albumen, contains about 86 per cent. of water. This quantity varies, and I dare say you have noticed (particularly the ladies who use cooking eggs) that some eggs are more gelatinous and others more watery than the average. This wateriness is particularly noticeable at times in the Mediterranean goods such as Italians, and they are styled "weak," that is, the keeping powers are not great, owing to the large percentage of water. As soon as this water begins to evaporate, the albumen becomes the victim of the microbe and decomposition starts. The albumen contains sulphur, and this gives rise in time to that decidedly unpleasant smell, sulphuretted hydrogen, that accompanies an egg kept too long. This decomposition in turn reacts upon the third portion, the yolk, and those of you who have ever had the misfortune to be in the vicinity of a broken, addled egg, or a very stale specimen indeed, know how powerful the gas is that is freed when the shell is broken.

All these defects are owing, primarily, to the porosity of the shell; but, as I promised, they are not only drawbacks that follow its decomposition, for in addition to creating bad odours within itself, this delicate composition, the egg, is greedily voracious in acquiring foreign flavours, that is to say, it is capable of taking and retaining the smell and tastes of other substances. At one time this caused a lot of trouble in certain portions of the trade, viz., the Moroccos, and it was some time before we could persuade the shippers in those countries to use more care. The complaint was that the eggs always possessed a certain "faint" flavour, and this was owing to having travelled in ships that carried fruits, *e.g.*, oranges, as part of their cargo, the flavour of the fruit being seized upon and retained by the eggs, giving thereby the "faintness" so objectionable. Even now we occasionally get eggs that travel in fruit ships, and they are spoken of as "fruity," and so lose value.

The retailers, too, are often worried by this power of acquisition of other flavours that the egg possesses, for example: The housewife or servant goes out shopping, and in the course of her perambulations purchases, say, onions, fish, fruit, and eggs. These are all deposited in the same receptacle—the market bag, or basket—and possibly left there till wanted for use, with the result that the shopkeeper gets a scolding at the next visit for selling eggs, warranted perhaps new-laid, and which were "Oh, so nasty!" "No; they were not absolutely bad, but had a funny taste."

The English Egg Trade.

I think I have now said sufficient to show you to what variation the flavour and goodness of the egg is subject, and how it can be influenced for the better by care and fore-thought. I shall now proceed to speak of the trade in English eggs, and endeavour to show you where the faults mostly occur. I am not going to be at all merciful in my comments, for I consider the time for tolerance has passed, and if I condemn the English egg as a whole, you can rely upon it, the reproof is well earned. You will say, "How do I know that?" I can answer that I speak of these things as I find them, and I find them bad. I don't want to put any of you off poultry-keeping for egg-production, but it will be just as well to cut deeply whilst I am about it.

As I said at the beginning, I am glad to have this opportunity of laying bare the bad places, and giving you the knowledge of where faults lay. I shall now speak of the English egg, and shall enumerate some of the faults. We are much too easy-going, too ready to overlook mistakes and errors of calculation and judgment, and whilst we are behaving like this the foreigner is stepping in and taking our trade by his acuteness and general business methods. Who has not heard that we spend five or six million pounds a year on foreign eggs? And why? Because the foreigners have managed their trade better than we have. I admit there are other influences at work, but we don't occupy that position in the market that we easily could. As I see them, English eggs are unsorted, unreliable, dirty, badly packed, the supply is irregular, also they are not obtainable in large quantities. Speaking in detail on these points, I dare say I shall convey to you, by comparison, some idea of the foreign trade.

Sorting Eggs.

First of all they are unsorted. This is not a very grave fault, as the English trade is at present, but if we grow more pretentious in other details, this will need alteration also. The assortment is made in two ways, viz., weight and colour. In weight we want more uniformity. If I open a hamper of English eggs, what do I get? A part as large as marbles, some of medium size, and the rest large eggs, some of which are monstrosities in shape. This causes me trouble, both in fixing the price returned, and in selling. Then as to colour. It is a fallacy to suppose the consumer does not care about the colour so long as the contents are good. This may be the experience of those who have a private sale for small quantities, but it never answers in trade. Give customers the chance of choosing between chalky-white and coloured eggs at the same price, and the latter always go first. I admit there is nothing different in the interior, but the eye takes more kindly to the brown than to its white neighbour, and in retailing eggs, to please the eye goes a long way. I have here a list of one week's prices from one of the biggest firms in London, and I quote as examples: Italians (all white), 17lb., 11s. per 120, down to 13lb. at 7s. 3d.; French (all brown), 14s.; white, 12s., a difference of 2s. per hundred on account of colour. Styrians (blues), about 75 per cent. coloured, 15lbs. 9s. 6d. reds, smaller and more white, 7s. 3d.; English new laid, so-called, 17s. 6d.; Moroccos, the marbles of the present season, 6s. 6d.; Glycerine Canadians, 7s. 6d. Home-grown, genuine English new-laids are worth as much as you can get for them. Referring to weight. The standard weights are 11, 13, 14, up to 18lb., and if you do not know what an advantage it is to me to buy by weight, I will tell you. If I buy 11lbs. eggs, I know just what size I am getting, and that they will be all of the same size. Let me say that the foreigner is generally a shade over, rather than under, the specified weight; and if I prefer coloured to whites, I must pay an increased price for them, but I can depend upon getting what I pay for. Another advantage is, there is less inducement to the man selling by weight to keep back his eggs, as they evaporate in keep and lose weight.

Unreliability.

This is one of the points upon which the wholesaler is very keen, and it is a ground of serious complaint against English eggs. It is only one perhaps among the others, but it is the one the broker is most ready in quoting. I can recall the names of several firms who used to work genuine

*A lecture delivered under the auspices of the Utility Poultry Club by Mr. A. Newport.

English eggs, but now do not do so. I will guarantee that if I went into the stores of the ten largest brokers in London I should not find an egg of English origin. Why? The answer they give is, "unreliable." Again, suppose we discover that a case of foreign eggs is not in such good condition as the price warrants, we can obtain an abatement or return them. Another of the fallacies I want to draw attention to is this: People think that all foreign eggs are in a state of incipient or advanced rottenness, and no matter how old an English egg may be, the foreigners are worse. This is decidedly not so. The eggs from abroad are put on the market in absolutely prime and fresh condition.

This gives me the opportunity of speaking upon *Blending*. This is one of the greatest menaces that the winter English new-laid (genuine) has to contend with. It has got to be quite a large trade to send best quality foreign eggs out of London, to be unpacked, repacked, and returned to London as new-laid. Could this be done if the foreign eggs are rotten? When they come back they make up to 17s. 6d. per hundred. The eggs so treated are principally the all-brown French, but lately these have been too dear, and so Styrians are used. About a month ago French were making more money than English; and I have known French eggs sold here for 11s. 3d., for which the packers were paying the peasant producer at the rate of 12s. 6d. Rather than lose touch with their customers they are prepared to sacrifice a little.

As illustrating the blending, here are one or two instances. One firm has a weekly customer in the country for twenty cases of Styrians (best blues at 9s. 6d.), and these are re-packed as genuine English. Another mixes four English with eight foreign to the dozen, and so on to no end. Also French eggs travelling from St. Nazaire via Newhaven, circulate in tons through the southern counties, and eventually arrive in London as new-laids. Returning to the question of freshness, I have done a great deal of artificial incubation, and tried to hatch eggs from almost every country that sends them to us, and successfully with French, Italian, Styrian, Danish, and Austrian. Russian I have just been again experimenting with, though without result, nor do the Canadians hatch, owing to the glycerine and chilling chamber.

Dirtiness.

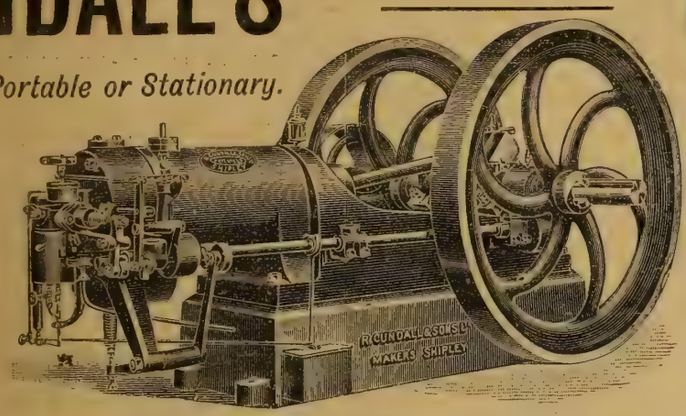
is the next point. I need not say much upon this after what I have told you of the porosity of the shell, and the acquisitiveness of the contents. The foreigners sort all these out most religiously, and sell them at about 2s. per hundred less than the clean ones. They know, and I want you to remember, that a dirty egg not only spoils itself, but several others in the immediate vicinity.

Packing.

This is another department in which we fall short, and it will continue, I suppose, until all the other faults are remedied. Taken side by side with other countries we are not in it in this section, nor shall we be until we can bulk many small supplies together and get them treated expertly. You must not think that the vast consignments from abroad are the production of a few large farms. No! They are the converged produce of many small poultry keepers.

Take the Russian, for instance. The district from which their eggs, poultry, and butter come is badly served by travelling facilities, and the buyers post up notices at the canal locks and railway stations, saying that so-and-so will attend on given dates to buy specified produce. That is quite sufficient; and on the days named the goods are brought, bought, and forwarded by the agents to the depots to be there properly dealt with. This is where we lose. We could do this if we chose, but our independent spirit does not fall that way.

As things are at present the division box is perhaps the best packing; but if you pack your eggs in an open box, put them in clean, sweet straw, as hay is too compressible, and they seldom arrive in good order if placed in it. Pack three layers of eggs only—it requires an expert to manage four. Allow plenty of straw to line the case and separate the layers. In closing, press down the whole firmly and evenly; but only experience can give the necessary knowledge, and egg-packing is an art that very few in this country possess.



(To be continued.)

Already the golden-flowered winter aconite is beginning to expand its green-frilled blossoms in sheltered spots, and this will soon be followed by the snowdrops, crocuses, narcissi, tulips, and many more. A sadly-neglected class of hardy spring-flowering plants are the lenten roses (Hellebores); these have handsome blossoms of rose, pink, purple, and similar colours, often finely spotted, and are very floriferous and useful. Seed of Hollyhocks, Pyrethrum (P. roseum), Delphiniums, Aquilegias, Antirrhinums, and a few other perennials, as well as of the biennial Coreopsis grandiflora, sown this month in a gentle heat will produce flowering plants in the course of the coming season.

"CUNDALL'S" PATENT OIL ENGINE.

THE Most Perfect Power for Threshing, Grinding, Chopping, Pulping, &c.

Portable or Stationary.

Contractors to His Majesty's Government.

THE CHEAPEST POWER FOR AGRICULTURISTS.

WHAT USERS THINK AND SAY:—

"I am fully convinced that Cundall's Oil Engine is far superior to steam for my purpose as an agriculturist. I am using the Engine for driving Chaff Cutting, Grinding Mill, Oat Crusher, Threshing Machine, Reed Machine, and Circular Saw."

"The 8 B.H.P. Oil Engine you supplied is used for driving a Threshing Machine with a 3ft. 6in. drum, a pair of Grey Stones, 3ft. 6in. in diameter, also a Grist Mill, Circular Saw, Chaff Cutter, &c., &c., threshing and grinding at the same time."

"I am well satisfied with the 5-brake H.P. Oil Engine you supplied me with to drive my Mill, Pulper, and Chopper. I did not expect to drive more than two machines at a time, but I can drive the three with ease; the Mill itself having previously been too hard work for four horses to drive."

THE CREAM OF CREAM SEPARATORS

Follow in the wake of the multitude, and your interests are usually in safe keeping.

Three hundred thousand prudent farmers and dairymen all over the world have given practical and positive proof of their faith in the pre-eminence of the "**ALFA-LAVAL**" skimming system by purchasing "**ALFA-LAVAL**" machines.

Farmers and dairymen who are unmindful of their best interests, and who disregard the question of successful results, will address themselves to the numerous mushroom-like imitators, whose knowledge and experience of centrifugal skimming are not infrequently confined to mere paper theory.

Can there be any doubt as to which Cream Separator you should adopt? There can hardly be very much. Address a post-card to the sole "**ALFA-LAVAL**" Agents in British Isles:—

DAIRY SUPPLY CO., Ltd., Museum Street, London, W.C.

Sole "**ALFA-LAVAL**" Manufacturers: AKTIEBOLAGET SEPARATOR, Stockholm (Sweden).

SHEEP.

LINCOLN LONGWOOL.

DUDDING, HENRY, Riby Grove, Gt. Grimsby, Lincolnshire, has always for inspection and sale a large flock of pure LINCOLN LONGWOOL SHEEP, including many prize-winners, having taken the leading prizes for many years at the Royal and other shows for both rams and ewes, including champion medals at both the Paris Exhibitions, Vienna, Amsterdam, Canada, Australia, New Zealand, and all the leading prizes at Chicago; also the first for the best collection of Lincoln fleeces of wool at the Royal Windsor Show, which proves the character of this flock, which is most famous for their great size and 125 years' good breeding: Rams from this flock made the highest average on record last year. Riby Grove is seven miles from Great Grimsby, and three from Stallingboro' Station. Telegrams, "Dudding, Keelby."

HAMPSHIRE DOWNS.

COLES, CARY, Manor House, Winterbourne, Stoke, Salisbury.—Registered HAMPSHIRE DOWNS, prize-winners Royal, Bath and West, and Royal Counties Shows; Salisbury Prize Sheep Fair, 1900 and 1901. Twenty-five guineas Challenge Cup best pen 8 Ram Lambs. Flock numbers 1,200. All ages for sale.

FLOWER, JAMES, Chilmark, Salisbury. Undoubtedly the leading flock of the day; in show yard records at all the largest shows, including the Challenge Cup at the Salisbury Great Prize Sheep Fair six years in succession; also highest average last eight years for 100 ram lambs at annual sale at Britford Fair, August 12, Ram Lambs and Ewes. The Flock is one of the oldest existing, combining fine quality, strength, constitution, and true character.

SHROPSHIRE.

COOPER, WILLIAM, AND NEPHEWS, "Cooper's Dip" Works, Berkhamsted, England. BREEDERS and EXPORTERS of PURE SHROPSHIRE SHEEP. First Prize for five Shearling Rams, Second for Shearling Ram, and Second for Shearling Ewes, at the Royal Show, Cardiff, 1901. First and Third for Ewes, Royal Show, 1898. 500 breeding Ewes. Largest export flock of Shropshires in England. Sires used this season include four First Prize Royal winners. The 310 Guinea Champion "Royal Record," "Ashlyns Knight" (winner of Six Firsts and two Champions), "Shenstone Cardiff," and "Royal Cardiff."—For particulars apply to FRANK WEBB, Estate Office, Shenstone, Lichfield, or J. P. MILNE, Ashlyns, Berkhamsted.

LIVE STOCK AGENTS.

INVERNESS, WEST HIGHLANDS.—JAMES ARNOTT, Scotch Live Stock Agent, Ellandonan, Inverness, established 1870, selects and supplies on commission all classes of SCOTCH STOCK. He attends all the leading markets to purchase Stock at lowest rates. References can be given if desired to customers who have been annually supplied. All orders are personally attended to. List of classes and approximate prices sent on application. Reference required; terms cash. Telegrams: "Arnott, Inverness." J.A. is now booking orders. N.B.—Polled Angus or West Highland Heifers and Black-faced Gimmers, Ewes, Wedders, and Lambs for crossing or feeding, in truck loads, at moderate prices. Fat Stock of all classes also purchased.

CATTLE AND SHEEP FOR WINTERING. E. GOODWIN PREECE, Live Stock Agent and Exporter, Shrewsbury, will be glad to receive orders for the PURCHASE of CATTLE and SHEEP, which, owing to the shortness of winter keep in the West of England, can now be bought very cheaply. A good profit is assured either for feeding or wintering.

Several lots of Shropshire and Clun ewes, Shropshire, Oxford and Lincoln rams, and cattle of various classes on sale, which can be seen by appointment.

Address, Portland House, Shrewsbury.

BIBBY'S
"CREAM EQUIVALENT" for CALVES.

An Ounce of Fact is worth a Ton of Theory.

A STRIKING FACT.

In our Spring number of "Bibby's Quarterly" we reproduced the photographs of two groups of Calves which are now being reared at the Hornby House Farm, Bedale, Yorks, by his Grace the Duke of Leeds.
One of the groups is being fed on New Milk and the other on Separated Milk and "Cream Equivalent."
We asked our readers to tell us which of these groups were fed on New Milk, and 707 Farmers, Farmers' wives, their sons and daughters competed for a small prize which we offered to those who guessed correctly.

445 selected the "Cream Equivalent"-fed Calves as having been fed on New Milk.

We think the above striking FACT speaks volumes for "Cream Equivalent."
The "Cream Equivalent" can be had at 15s. per cwt., carriage paid to nearest station.

FOOD SUPPLIES: OUR PRESENT POSITION.

What is the salient fact about the past year on the London Corn Exchange? It is the undisturbed and unbroken cheapness of bread. The price of the best white loaf in the West-End has been a level fivepence from January to December, while fourpence-halfpenny has been the usual suburban value, and fourpence that of wholesale cash contracts. The matter would be one for congratulation if the material for the loaf, from the first labour of the sower to the removal of the loaf itself from the oven, could be supplied at the price. But it cannot, and thus the new century starts with a declining wheat average. The price of straw, the necessity of rotations, above all the force of custom, combine to keep the acreage at a higher figure than wheat prices justify, but the stream of tendency is inevitable, and if the prices to rule in the twentieth century do not exceed those which thus far have ruled wheat culture will cease in England before the half-way-house of 1950 is reached. Fifty years is so little in the life of a great nation that we may fairly speak of the crisis as already imminent.

The competition of foreign wheat is, of course, a leading cause of the depression in the home-grown grain. The population of the wheat-consuming countries increases year by year, and it is probable that the annual consumption of wheat in the civilised lands is augmented by not less than four million quarters annually. Hitherto, however, the area of new land ploughed and sown with wheat has exceeded two million acres annually, and as new land produces perhaps an average of three quarters per acre, supply has got ahead of demand. The future in this matter depends on not very many countries, but they are optimists who hold that the stream of competition in wheat has already culminated. Argentina, South-Eastern Europe, and the Canadian North-West are now the only regions where new land remains in any quantity to be subdued to the plough. We refer to land fit for growing wheat, and for obvious reasons we omit South Africa, where unprecedented conditions prevail. From La Plata we do not expect increased wheat supplies; on the contrary, it is likely that the figures of 1894, 1899, and 1900 will remain a high-water mark. But the other two possibilities are not calculable.

South-Eastern Europe includes Roumania, Servia, Bulgaria, Greece, with Crete and the other islands, and Turkey in Europe. Only one of these five political units is under anything like a good Government, and that one, Roumania, though neither the largest or the most fertile, has shown an advance in agriculture and resulting exports perfectly surprising. The corn trade can only watch political developments; it cannot influence them. But we must be prepared for a great increase in production in this long-neglected quarter of the world. This is not a statistical article, but we give elsewhere a special return of Roumanian grain exports, not previously published. It will, we think, surprise many of our readers. With respect to the Canadian North-West, fuller information is needed, and should be forthcoming. Mr. Hanbury might well reappoint the commission on which Mr. Read and Mr. Pell did yeomen service about twenty years ago. The conditions then existing have been completely changed, both by the Pacific Railway and by the extraordinary fall in ocean-borne freights.

Competition has yet to culminate. The American wheat area may be called stationary, but during 1901 the depression of Mark Lane has been very largely due to American influences. America is determined to seize the manufacturing profit, as it is called, in other words, is interested in delivering flour rather than wheat. There is a saving in the offals which are retained for stock use in America; there is a saving in freights and there is a saving in the continued use of machinery. America is fully aware of all this, and thus we have closed 1901 with wheat mending a little on the year, but household flour a florin down. The depression in London makes of flour is directly due to American competition. There was on the market at Christmas a plethora of fine and strong flour from the United States, and the London miller asking 24s. for his town household would have found the baker able to buy the choicest products of the famed Minnesota mills at the same price, or even at about sixpence less. The farmer was not helped by the miller in 1846, and is inclined to take little interest in the latter's difficulties now. This, however, is a short-sighted policy; all the agricultural interests must stand or fall together. The millers in 1901 have appointed a committee to investigate and see if the English wheat cannot be so strengthened as to be more largely useable in ordinary milling mixtures. But the protection of the mill stands on a different footing to a duty on imported wheat, and the taxation of foreign flour would not raise the price of bread if wheat continued to come in free. Farmers can be helped in other ways than by an import duty on corn.

It seems but yesterday that there was a scare about maize being used to adulterate wheat. The year that has just closed has "changed all that," and maize is now almost as dear as wheat. Rice is quite as dear, and it may therefore be taken for granted that in 1901 we have enjoyed a remarkably pure and unadulterated loaf. The use of rye-bread in 1901 has scarcely increased, but the property a rye-loaf has of keeping moist and palatable for quite three days is one which the ordinary consumer should bear in mind at Bank Holidays and other times when the baker is irregular. Large families, where much bread is eaten, might well take a rye loaf weekly as a pleasant and healthy variant. The wholemeal and other so-called hygienic loaves do not make any great advance in use, and the buckwheat recently imported in increased supply has been for poultry and pheasants. In France and America buckwheat cakes are deservedly appreciated by children. They are healthy and very rich in fattening matter, so that they might well be tried here.

Rolled oats and oatmeal have increased in favour for human consumption in 1901. The use of lentils for soup, &c., has, on the other hand died away in a remarkable manner, this form of pulse being no longer emphasised even at the vegetarian restaurants. The imports have fallen to a figure which is quite trivial. Haricot beans show a small advance in London favour, but it is surprising how seldom they are served at the ordinary middle-class table, though in nutritious value they stand extremely high, and the wholesale price, three-halfpence per pound, enables the householder

to add a useful vegetable to the table at a twopence per pound level. Cornflour at present high prices is not so remunerative as it was in the nineties, but the profits on confectionery and fancy cakes are high also, and in this branch of baking it is the securing of custom which is the great thing. From time to time the Londoner is advised to bake his own bread, make his own cakes, and otherwise save the middleman's profit. It only remains to state that 1901 has shown no material signs of such advice being taken. The consumption of breadstuffs in London, however, appears to be influenced rather noticeably by the cheapness and abundance of green vegetables, and although the population of the metropolitan area increases by fifty thousand persons annually the total imports of breadstuffs into that area do not need to be increased. The best judges are of opinion that London grain food wants have been stationary for the last three years, the decline in the consumption per head of population about balancing the increased number of people to be fed.

SCHOOL ATTENDANCE.

The law of school attendance has been the subject of so much tinkering in recent years that it is not surprising that a good deal of doubt exists as to the provisions at present in force. The confusion arising from the various enactments, depending for comprehension on constant reference to other statutes, and to bye-laws varying in different localities, might well daunt all but the most indefatigable inquirers. When therefore we were asked recently by a correspondent to discuss the law of school attendance we hesitated at first to embark on a task which for its adequate discharge would demand more space than is at our disposal for the purpose.

However, we do not forget that we exist for our readers, and if we can be of any assistance to them in any particular direction, we are only too glad to have the opportunity of helping them. We have therefore endeavoured to summarise the law of school attendance in rural districts, in the shape of the following epitome.

All children between the ages of five and twelve years must attend school full time, with the single exception of children employed in agriculture, where special bye-laws authorising such employment have been adopted. The school authorities, however, are under no duty or obligation to make bye-laws to facilitate the employment of children in agriculture, and if they fail to do so the ordinary rule will apply. If the local bye-laws so provide, a child who has reached eleven years of age may claim partial exemption, under the following conditions:—

(*a*) The parent must give notice to the local authority that the child is to be employed in agriculture.

(*b*) The child must have reached the standard named in the bye-laws as qualifying for partial exemption.

(*c*) The child cannot claim total exemption until the age of thirteen is reached; and

(*d*) The child must attend school 250 times in each year between the ages of eleven and thirteen.

Between the ages of twelve and thirteen a child must attend school full time, unless he has reached the standard fixed by the local bye-laws for either partial or total exemption.

If the bye-laws do not provide for partial exemption, then full time attendance is compulsory until the total exemption standard has been reached.

Between the ages of thirteen and fourteen, if the local bye-laws extend to a child of the age of fourteen years, then a child between these ages must attend school until either partially or totally exempted by the bye-laws. If the bye-laws do not so extend, then the child must attend school until he has either passed Standard IV. or has attained a certificate of having made 350 attendances after five years of age, in not more than two schools during each year for five years. These years need not be consecutive.

There are three exceptions which are held to be reasonable excuses for the non-attendance of a child who ought to attend school, viz.:—

1. That the child is under efficient instruction in some other manner.
2. That the child is prevented from attending school by sickness or any unavoidable cause. The members of a school authority and the magistrates have an unlimited discretion as to what constitutes an "unavoidable cause."
3. That there is no public elementary school open which the child can attend within three miles. The bye-laws, however, generally cut down the distance exemption to two miles.

The maximum penalty for breach of bye-laws for school attendance has recently been increased from 5s. to £1.

The bye-laws frequently provide that children twelve years of age shall be totally exempt on passing a certain standard. It will be noticed, however, that if advantage is taken of a bye-law permitting children to be employed in agriculture on reaching eleven years of age, such children are bound to make up their lost time by remaining at school till thirteen, even though they pass the standard for total exemption; but they need not make more than 250 attendances in any year if they have passed the standard fixed for partial exemption. The bye-laws may provide that those 250 attendances must be made within a specified period or periods of the year, leaving the child totally free for the remainder of the year.

The employment during school hours of children legally liable to attend school is prohibited under a penalty of 40s., unless such children can claim total or partial exemption. This exemption does not accrue merely by being placed by the schoolmaster in a particular standard. The child must be specially examined by an inspector of schools and must obtain a labour certificate before it can be employed.

Thus there is a considerable risk in employing boys or girls under fourteen years of age. If the child is only thirteen years old, even if there be no bye-law requiring him to attend until he is fourteen, he cannot lawfully be employed until he has obtained a certificate that he has passed Standard IV. or made 350 attendances per annum for at least five years. If he be under thirteen, but over twelve, his employment is illegal until he obtains a certificate of partial or total exemption, whilst if he be under twelve it is illegal to employ him at all (during school hours) except in agriculture, and then only if he has reached eleven years of age, and has obtained a certificate of partial exemption, and only in those districts where a bye-law permitting such employment has been formally made.

Vines of the Black Hamburgh, Buckland Sweetwater, or Foster's Seedling varieties may be started at any time now, whether planted out or in large pots, but of course pruning them and cleaning the house down well previously. Pot Vines are very convenient, especially in small gardens, as a few can be brought into a forcing or other warm house at any time, and started.

Be very cautious in ventilating vines all through the spring, and until the leaves are well developed and have attained some degree of substance, as a current of cold air acting on the young and tender foliage, even for a short time, is almost certain to induce an attack of mildew. A temperature of about 55 degs. at night is usually sufficient until the first leaves are well expanded, and the trusses of bloom beginning to show, when 5 degs. more should be afforded, if possible. Maintain a nice, sweet, moist atmosphere at all times, and mulch the borders with some good, half-decayed manure.

By a Man of Mark Lane.

It has been pointed out to me that the recent visit of a Russian deputation for the purpose of studying English agriculture is not an unprecedented event. The *Bath Chronicle* of February 10th, 1780, contains this announcement:—"Bath Agriculture, &c., Society meeting, held February 8th, 1780. Monsieur Komhoff, from Russia, now in England, by order of the Empress, for the purpose of studying agriculture, being proposed and elected an honorary and correspondent member, the secretary is directed to inform him by letter of such election." I may mention that the "Bath Agriculture, &c., Society" is now the Bath and West and Southern Counties Society, which, under its earlier name, was founded in 1777.

It is stated that the Royal Commission on Arsenical Poisoning, presided over by Lord Kelvin, will resume its sittings soon after the opening of Parliament. A considerable volume of evidence has yet to be collected, and many offers of expert testimony have been made, but it is not thought that the inquiry will be protracted. A final report will probably see the light within three or four months.

In France the agricultural year of 1901 has left behind it, according to the "Journal d'Agriculture Pratique," nothing but disappointment. After the harvesting of the very medium cereal crops growers had counted upon a rapid improvement in prices. Some advance, it is true, did take place, but it was slow in progress and fell short of expectations. The decline in the price of alcohol and sugar has been seriously felt in the northern districts, whilst the midland departments have suffered not less owing to the over-production of wine. France experienced heavy falls of rain, rough winds, and high temperatures during the week before last, and the latter helped on the later-sown wheats. Wheat and winter oats are receiving more attention from northern growers on account of the discouraging prices they have been receiving for sugar-beet. In the western districts also winter oats have been more largely sown. The crop outlook is regarded as satisfactory.

The Board of Trade returns issued on Tuesday show that the imports for last month were £46,770,097, against £46,446,662 in December, 1900, being an increase of £323,435. The exports for December amounted to £24,313,777, as compared with £23,611,972 for same month of 1900, an increase of £701,805. The imports for the year ended December 31st were £522,238,986, against £523,075,163 in 1900, being a decrease of £836,177. The exports for last year amounted to £280,498,889, as compared with £291,191,996 in 1900, a decrease of £10,693,107.

The Bengal Department of Land Records and Agriculture has issued its final report on the winter rice crop of Bengal, 1901, in the course of which it is stated that on the whole the weather was unfavourable for the crop. The normal area under the winter rice crop in this Province is estimated at 30,443,600 acres. The area actually sown this year is estimated at 28,727,200 acres, as compared with 28,474,400 acres sown last year, the increase being due to seasonable weather during transplantation.

Out of the 45 districts in the Province, only eight (24-Parganas, Darjeeling, Pabna, Faridpur, Backerganj, Noakhali, Chittagong, and Manbhum) estimate an outturn of 100 per cent. or over. Mymensingh and Dacca expect 93 and 94 per cent., respectively. In six districts (Birbhum, Bankura, Midnapore, Jalpai-

guri, Tippera, and Puri) the estimate varies between 80 and 89 per cent., and in nine it varies from 70 to 79 per cent. In 14 others the outturn is estimated at between 50 and 69 per cent., while the remaining six districts show an outturn below 50 per cent. Saran, with a 25 per cent. crop, being the worst in the whole province. In all the Bihar districts the crop has been a failure. This is due to the serious deficiency of the June and October rains.

The final estimates made by the District Officers give an outturn of only 74 per cent. for the whole province, but the directors of the department mentioned above estimated the outturn at 75 per cent., or a twelve-anna crop, for the province as a whole. Taking the provincial outturn at 75 per cent., the gross outturn for the province will amount to about 237,439,100 cwts. this year, as compared with an estimated outturn of 263,591,600 cwts. in 1900.

Basic Slag Deficient in Phosphates.

John W. Proctor and Richard Thompson, trading as Richardson and Co., chemical manure manufacturers, York, were summoned at the Leicester County Police Court on the 4th inst., under the Fertilisers and Feeding Stuffs Act, 1893, for selling basic slag which was deficient in phosphates.

Mr. Rowlatt, on behalf of the County Council, said the defendants were large traders at York, who had gained, he did not hesitate to say, a well-earned reputation, and he did not believe that they would be guilty intentionally of the offence charged against them.

Evidence was given showing that Mr. Garrett, agent for the estates of Lord Stamford, ordered the best basic slag from the defendants at 43s. 7d. per ton, but samples taken from the slag delivered were found on analysis to contain 7 per cent. less phosphates than the standard fixed for the lowest quotation.

Mr. W. Simpson, for the defendants, stated that when the order was placed for the basic slag they had not it in stock, and they sent on to Messrs. Smith and Morris to execute the order, and that firm having no slag on hand executed the order through another firm, who occupied a high position in the trade, and were in fact the largest dealers. The defendants paid a full price for the slag, so that it was not a case of getting an inferior article and charging it as the best to Mr. Garrett. There was no moral offence, and if there was anything wrong with the sample they were anxious to make it good.

Mr. Thompson, one of the defendants, gave evidence in support of this statement, and Mr. George Morris, of the firm of Messrs. Smith and Morris, said they supplied the slag as asked for, and as of the best quality.

Mr. Simpson asked to be allowed to call a member of the firm who supplied the slag, but the Bench stated that they were quite satisfied as to the standing of all the parties.

After consulting in private, the Magistrates stated that they had decided to convict, but as this was the first case to be brought before them they were inclined to deal with it as a test case. The defendants were fined 20s., and costs 52s.

Berwick Shepherds' and Farm Stewards' Hirings.—There was a fair attendance of shepherds and farm stewards at the annual hiring market held at Berwick on 4th. Numbers are now engaged by means of advertisement, but, nevertheless, the parties take an opportunity like this to meet one another. In consequence of the varying conditions under which shepherds are hired it is impossible to give any distinct figures regarding the terms of their engagements, but farm stewards were generally receiving 18s. to £1 per week, with the usual perquisites. The money and stock wages of shepherds were stated to be practically the same as before.

By a Lobbyist.

It would be ridiculous not to pay a great heed to the recent speech of M. A. E. Pease and the recent letter of Sir G. Giffen. They have the utmost and the gravest significance for the agricultural interest. Let me take Mr. Pease's speech first. I attach significance to that speech because it illustrates the fact which I have more than once laid down that the Liberal party is abandoning its old fetish-adoration for what I prefer to call anti-Protection. Mr. Pease may be described as a lineal descendant of the leaders of the Manchester school. A Quaker by descent, he has inherited many of the sympathies of that profession, and has reflected heretofore not a few of its prejudices. Yet it is this man who has advised the levying of a registration duty of one or two shillings per quarter upon all wheat imported into this country. I am not going to minimise the significance of this declaration by any comments. Its importance is best indicated by its own unchastened directness. It means the loosening of the bond; it means the relinquishment of a narrow idea conceived only for the benefit of the great urban princes; it means that Liberalism is at last becoming aware of the parlous state into which agriculture is drifting. It is enough to say this. The rural world should appreciate its import.

The declaration of Sir G. Giffen is of even a graver moment. It is all very well for Sir Michael Hicks-Beach to dub him an "amateur financier." It is a stupid description. Giffen—for the future will not apply any prefix to his name—is probably the greatest economist of his time. He is officially regarded as a statistician; but he is infinitely greater than that, for the statistician is, after all, little better than an accurate recording machine. Giffen belongs to the line of Mill and Fawcett—never forget this. Yet it is this man of all others who has not hesitated to advise the Chancellor of the Exchequer to impose a tax upon foreign grain. Again, I am not going to emphasise this fact. I deliberately desire it to stand by itself. Giffen is a great economist; and, I repeat, of the line of Mill and Fawcett. His declaration is another indication of the loosening of the bond—of the return of Liberalism to sanity. I heard a Liberal M.P. declare to-day "Free Trade is only justified when a country cannot supply its own necessities; if I were in a virgin country like Australia I should probably be a Protectionist." Another indication, my dear readers. The fetish is being discrowned; and when the deed is finally accomplished it will be well for agriculture. The object, in fact, of all this discrowning is to benefit our interest. This fact is better than the formulation of a score of agricultural programmes. The world moves, and the sun shines.

I have again to apologise. I said—who of my readers will not remember it?—that I perceived no evidence in the Parliamentary portents of a resolve on the part of agricultural benefit of agriculture. Mr. Rowlands is the honorary secretary of the Land Law Reform Association; and that association is possessed by a virile, strenuous, determined purpose. If I were asked to indicate the purpose of the association I should describe it as the embodiment of Channingism—Channingism, that is, minus the desire of Mr. Channing to eternally survey the world from China to Peru. Moved thus, it is determined to make itself felt in the next session. It refuses to accept Mr. Hanbury's assertion that Parliament has said its last word—what a stupidly-fatal phrase—on the question of legislation with a view to the equalisation of the rights of tenants and landlords.

I wonder how Mr. Hanbury regards this activity on the part of the association of which Mr. Rowlands is so excellent an honorary official. Mr. Rowlands has been a friend of mine for years. I remember once accompanying him to a meeting called, I fancy, by the accoutrement-makers to the army; and I then found that his co-agitator was Mr. Hanbury, the persent Minister for Agriculture. The purpose of the two was to secure a redress of grievances which were urged against the War Office. Mr. Rowlands has assuredly a fine declamatory power, but he cooed as gently as any sucking dove in comparison with the denunciatory, vehement Mr. Hanbury. I wonder how the Minister for Agriculture likes his erstwhile associate tapping vigorously at his Ministerial door! Does he pardon his vigour? Does he condone his energy for the sake of old times? Well, whether he does or not, the Land Law Reform Association will—if I know my Rowlands aright—allow nothing to come between the wind and the nobility of its aim.

It is well that we agrarian politicians should know something more of this association, and in order to secure this knowledge I waited upon Mr. Rowlands, who fiercely glowered upon me because I had dared be inappreciative of its activity. First as to its representative character. A sufficient indication of this is to be found in the fact that at the last conference on the housing question in the villages—and the reform of housing is probably one of the keenest of its purposes—there were representatives present from five county councils, twenty-nine town councils, twenty rural district councils, sixteen urban district councils, and fourteen boards of guardians, in addition to many medical officers of health and many representatives of the municipal authorities of the greater towns. Its representative character is good, but its purpose is better. "You advocate the three F.'s," I said to Mr. Rowlands. Now, my ex-Parliamentarian is a cautious man, and I saw that I had not gone far enough. True, I had indicated the object of Sir Arthur Arnold's old organisation; but we have moved since that had its being. "Well," quothed he, "that may be your description of our object, but don't give it as mine."

Now, as to the objects of the association—which is resolved if it can to make its influence felt in the session which assembles a week hence. In the first place, it assails Mr. Hanbury's "final word" theory. It wisely accepts Mr. George Lambert's Tenure Bill. It then echoes the purpose of men like Earl Carrington and advises the extensive provision of land for small holdings, and the more extensive utilisation of land for public purposes. It indulges in a platitude—will my friend Rowlands forgive this?—by averring that it is "in favour of effective legislation to provide the country with healthy and adequate housing." A good mouthful this, which may mean anything or nothing. It advises "the acquirement of land by the people for residence and cultivation," which, I suppose, means the cheapening of the cost of transfer. It would abolish the customary tenure and obsolete manorial rights, would decapitate the law of primogeniture, and would forbid any landlord creating life estates in land. This, you may say, is too ambitious a purpose to be easily realised. In saying his, you know not the energy of the secretary, Mr. Rowlands, who confidentially imparted this information to me. And its president, Mr. F. A. Channing, M.P., is not without the quality of persistence. Ah, if he would only concentrate this quality on agrarianism rather than distribute it over the world at large!

Extensive Rick Fire.—The rickyard of a large farmer named Jones, of Tettenhall, near Wolverhampton, caught fire on Wednesday, and several ricks of hay, valued at some thousands of pounds, were involved. Altogether ten of them were burnt to the ground.

The Growing of Early Potatoes.

The opening article of the current issue of the "Journal of the Department of Agriculture and Technical Education for Ireland" is on "Early Potato-Growing." Mr. M. G. Wallace is the writer of the article, and he says:—The cultivation of potatoes for the early market is undoubtedly one of the most profitable branches of agriculture, provided the produce can be put on the market at the beginning of the season, while high prices still obtain. In May phenomenally high prices are procurable; any time in June the price is good enough to secure handsome profits; the first half of July is, as a rule, better than the ordinary late or main crop, and the latter half of July as good as winter marketing. With the advent of August prices often fall to a very low point, and the risk of disease being very great, only those growers who are in favoured positions as respects markets and freightage can succeed. It should be borne in mind that the cost of production is much greater than in the case of the late crop, and unless several pounds sterling per acre more is received for the early crop it is not profitable. Within the last twenty years great developments have taken place in this industry. Foreign countries have participated in a trade which was thought impossible to them, and in our own country the crop has been greatly accelerated. The season opens in April with potatoes from Malta and Teneriffe. In May great quantities are poured into our markets from Jersey and Cotes du Nord, France. Strangely enough, the next place in point of earliness is a strip of seaboard on the west coast of Scotland, where for fifty miles in Ayrshire and Wigtonshire the Gulf Stream exercises a beneficent influence directly through the North Channel, and renders that district singularly immune from spring and May frosts. The Ayrshire season commences generally about the middle of June. Good crops ready to raise at that date are worth £40 per statute acre, and are sold growing to merchants, who take all further risks and bear the expense of raising, the farmer having no more to do except cart the potatoes to the nearest station.

Ireland's share in this lucrative industry has hitherto been small, although her physical conditions are extremely favourable. It would not be possible to approach the earliness of the Channel Islands, but what can be done in Scotland may assuredly be improved upon in Cork and Kerry, subject to the same ameliorating influences in even greater degree, 200 miles further south, and possessing ideal soil. The east coast of Ireland does not enjoy so mild a climate, but whatever is lacking in that respect is compensated for by contiguity to markets and greater facilities for intensive farming. Early potato-growing has long been practised in county Dublin, and at one time Scottish markets were largely supplied from there. Even now it is perfectly wonderful what has been achieved at Rush, by a race of shrewd and hardy men, whose ceaseless and laborious industry deserves a better reward. By the adoption of some of the new methods for accelerating the crop, they can in some measure recover their lost supremacy, and Ireland generally may to a very large extent participate in the extremely profitable industry of supplying England with early potatoes. Soils have considerable influence on earliness. Sandy loams are best, red or grey. It is wonderful what can be done even with poor sand under favourable circumstances and with generous treatment. Here again Rush may be cited. Much of the soil there appears to be drifting sand, and farmers have to resort to an expedient of lacing it with straw and seaweed to keep it from blowing away and laying bare the potato sets. Still it bears good crops of potatoes. Blacklands, or bogs, are not suitable for early potatoes, as the frost seems to grip more keenly there, and besides the sample is not so nice, nor is the quality so good.

Early Production.

As the success of an early potato crop depends chiefly upon the date at which it can be marketed, there is a constant striving to accelerate the crop. Considerable success has attended these efforts, and the date of raising has been put forward a fortnight to three weeks. This acceleration has been achieved mainly by three causes, viz.—Seed: the selection of early tubering varieties. Sprouting the seed in boxes before planting. Manuring. The selection of early tubering varieties, that is, kinds that commence to form young potatoes at an early stage of their growth, and which grow to root simultaneously with the top, has resulted in a great gain to earliness. At the same time, something has been lost in quality, and occasionally, in a wet season, one is apt to sigh for the good old Red Bog Kemp, which has been supplanted by less tasty kinds. The public, however, will have early potatoes, and the business of the farmer is to produce what is wanted. In purchasing early seed it is obvious that purity is most important—much more so than in the case of a late crop. In a late crop if there should be a sprinkling of another late sort, they will ripen together, and it may not matter much in the marketing, but if there be present in an early crop a mixture of later potatoes, it is fatal. Great care should therefore be exercised in selecting, that the stock should be true to name and pure. Another consideration is, what is the best change of seed? Whatever has been found to suit for the late crop will make an equally good change for earlies, with this exception, that potatoes grown on black moss or bog do not make the best seed for earlies, as they germinate and mature much more slowly than those grown on red or grey soil.

Selection of Varieties.

To determine the best variety to cultivate is a matter of some difficulty. A sort that does well in one climate may not suit another, and what does well one year may do badly the next. Then the fashion of the market to which the produce is consigned has to be considered. Some will only have them round in shape and white in flesh; others will only take kidneys; while all are more or less shy of lemon-fleshed sorts, wherein they show great lack of discrimination, as these are often the best quality.

Exhaustive experiments with early varieties are being made by the Department of Agriculture, and no doubt by another year an authoritative pronouncement will be given upon the best sorts to cultivate. So far as Scotland is concerned, "Early Puritan" undoubtedly holds the field, and has probably had a longer tenure of life and popularity than any other of the same class. It is round, white, very early, and good enough quality to hold the market for a few weeks. It is an American variety, which has been in commerce in this country since 1884. It is consequently of an age when its vigour may be expected to flag, but its successor has not yet arrived. In Jersey only kidney-shaped tubers are grown, flukes and ashleaf prevailing. If a kidney is desired, there is one new sort which deserves mention, "Duke of York." It is early (on the heels of "Puritan"), and far surpassing "Puritan" for quality and flavour. It is, however, long-shaped and of a deep yellow flesh, which detracts from its popularity in some markets. Several new seedlings of a first early class have recently been brought out by Messrs Sutton, Sons, and others, which promise to meet a want.

Sprouting in Boxes Before Planting.

Another important matter is the size of the sets, and this falls naturally to be considered with the method of sprouting in boxes or trays before planting. This method is the most powerful agent in hastening on the early potato crop. It is now in universal use in England and Scotland wherever early crops are grown, and it has so much to commend it that in many districts it has been adopted for the late crop also. The system, however, is not well known in Ireland.

Marketing the early crop requires no little forethought. In districts where large quantities are grown, merchants appear and provide all the plant necessary for packing and conveying to market. But with an industry in its infancy growers will need to look ahead and find out how best their produce can be quickly disposed of. The cities and large towns of Ireland can no doubt absorb a large quantity, but a considerable surplus must find its way somehow to English markets. Green potatoes will not carry in bags; they must be packed either in baskets or barrels. As a rule, commission salesmen are willing to supply these, and if they are filled and firmly packed on the top with fresh, green stalks and laced securely, they will carry quite safely by rail or steamer.

Canker in the Potato Plant.

Mons. C. Priston, the departmental professor of Agriculture of Charente, writes in the *Journal d'Agriculture Pratique* that during the last few years the extremely dry summers have been the cause of the appearance of disease in the potato which is of a microbe origin, and causes the destruction of the whole crop. He says—"It was not the end of July or the beginning of August that the disease first appeared, and in 3 or 4 days whole fields were destroyed. Perfectly healthy crops turned a pale grey, withered and died. Upon the tubers being lifted the stalks are found to be partially or entirely rotten at the base, and the tubers not receiving any nourishment, soon dry up."

In this department of Charente many growers have entirely lost their crop owing to this disease, and those which have suffered the worst are those who have sown a late variety which matures either in the late summer or autumn. The cause of the disease is called the "Bacillus Caulivorus."

Mons. Prillieux, the professor of the French National Agronomic Institute, is of opinion that canker of the potato stalk chiefly attacks those plants which are obtained from tubers cut in pieces for seed. This is not the cause, as we know growers who always use whole tubers for seeds, and whose crops have been absolutely destroyed by canker (gangrene). Neither can it be said to be caused by the use of manures, because it has been seen in most diverse situations, in rich as well as poor soil dry and calcareous, and in land fed with farmyard or chemical manures, or without any at all. Neither do we believe that the fact of the same crop being grown on the same land two seasons running plays a very important part, as in Charente the system of rotation is carried out, the potato usually following two consecutive crops of cereals. From recent observations the disease has been equally developed on lands which have not been sown to potatoes for some years as on those which had been grown with them.

If plants or seeds from neighbouring departments which were perfectly free from disease were procured and planted, would that produce good results? Mons. Prillieux says that he could not say that this would prevent it, as last year many growers exchanged seeds on account of a very medium crop following a dry summer, and these varieties have also suffered like the others. It is true they do not know if the seeds came from a non-attacked locality.

When one reflects on the sudden appearance of the disease in the most varied places and soils, with this characteristic, however, that it is, perhaps, in the most humid calcareous land, which is reputed to be most healthy, that the greatest ravages have been made, one is inclined to ask whether the growth of the disease should not be attributed to atmospherical conditions.

In that locality excessive heat and great drought prevailed in mid-July, but during the last week of that month an abundance of rain fell, accompanied with a fall of temperature to below normal. These atmospherical phenomena have brought about a great disturbance in plant life, by gorging with water all the tissues, and maybe breaking the stalks in certain places with the great pressure of liquid, which would offer under these conditions a favourable spot for the penetration and growth of the bacilli. It would be useful to find out whether some varieties are more liable than others, and thus be able to cultivate the most resistant.

As great difficulties have been found during the last few years in potato cultivation resulting from the drought causing canker in the stalk, the following hints might be taken:—(1) Reduce the surface sown to potatoes to the smallest extent possible, and give a more important part to the cultivation of the Jerusalem Artichoke, which is a hardy plant, and gives a tuber of excellent qualities for ruminants. (2) Grow early varieties, which mature in July, and be careful to plant them early in the spring.

The Cheshire Potato Experiment.

There has just been issued the report of the experiments in potato-growing which have been carried out during 1901, at the Holmes Chapel Agricultural School, under the supervision of Mr. E. Druce, the principal. The object of the experiments was to try the productiveness of certain classes of tubers, their quality, the effects of different manures, and the liability to disease of certain varieties. The net result of the experiment shows that the average yield of potatoes per acre this season was considerably greater than 1900, and that the disease was less prevalent. The yield, however, was not so large as it had been in previous years.

The planting of fairly large sets gave a greater return than small sets. That the best and most profitable yields were again obtained from a good dressing of farmyard manure, supplemented with a full mixture of artificials, containing nitrogen, phosphorus, and potash in an available form.

The experiments showed that manures have considerable influence upon the size of the tubers, and that a small dressing of muriate of potash is more economical than a larger one.

Kainit was found to be the least profitable of the potassic manures used during the trials.

The Deterioration of Hill Farms.

An interesting paper on the above subject was read at the last meeting of the Teviotdale Farmers' Club by Mr. W. M. Oliver, Whitriggs, who said he thought it was an undisputed fact that hill farms do not now carry the same amount of stock that they did fifty or sixty years ago. He proposed to point out some of the causes which he thought were responsible for this state of matters. Some

would say that, owing to the improvement in the breed of Cheviot sheep, they were larger in size, and so required more ground to carry them. That might to some extent account for the matter, but was it not also a fact that even farms which still carried stocks of the old-fashioned breed, were also not able to carry the same numbers, consequently some other cause must be looked for. One reason he would suggest was the yearly cast sold off the farms, consisting of bone, mutton, wool, etc., without anything being returned to the land. To illustrate his meaning, he would take the old data of a farm carrying 1,000 sheep, which, allowing 1½ acres to the sheep, spoke to an area of about 1,500 acres. He took the average live weight of the lambs sold off the farm at, say, 36 lb., and that of the ewes at 70 lb.; thus they had:—lambs at 56 lb., 13,968 lb.; 140 ewes at 70 lb., 9,800 lb.; wool and skins, say, 3,800 lb.; total, 27,568lb., or about 12½ tons, which, distributed over the 1,500 acres, gave something like 18½ lb. per acre of what he might call the essence of the soil off every year.

Or, to put it another way, in forty-five years it amounted to over 7½ cwts. per acre, equal to a very fair dressing of artificial manure containing all the constituents necessary for the enrichment of the soil. Some of this might be returned to the soil by atmospheric means, but how much he was not scientific enough to judge. It was something like a continuation of the old system of cropping, according to which a patch of land was ploughed and corn crops taken off it every year, so long as it would give any return, after which it was allowed to lie fallow, and take on a sward of such grasses or weeds as the wind supplied the seeds—a system which no sane agriculturist would think of following nowadays. Of course, in those times to which he referred there was no such thing as rotation of crops, and turnips were seldom grown, and artificial manures were totally unknown. The only remedy for this wastage that he was able to suggest, which it was within the power of a tenant-farmer to adopt, was hand-feeding.

Another reason was the reduction of the land area by the removal of turf in making open drains. While the old circular drains still remained, the new system of straight up and down drainage had been very largely adopted, and when this matter came to be looked into a rather startling fact became apparent. Of course, the whole of the land did not require draining, but let them take, say, 800 acres of the 1,500, and make their drains at a distance of 18 yards apart, with a surface width of 21 inches, they removed turf to the extent of about 156 square yards per acre, which over 800 acres amounted to over 25 acres. But they must bear in mind that was the best of their land, which might probably carry nearly one sheep to the acre, so that they had removed the sustenance of from 2 to 2½ per cent. of the number of sheep that the farm was originally supposed to carry, and that without taking into consiedration the gulfs which very often occurred on steep land or where the soil was friable, and which might sometimes extend to 21 feet instead of 20 inches.

The old circle drains did their work very well, and had these been cleaned it would have been more profitable for the farmer to-day if not a single straight drain had been cut. These straight drains had also an effect on salmon fishing. He held that these drains were not only directly responsible for the destruction of millions of salmon ova, but indirectly they assisted to a great extent in both river pollution and poaching. It had often been remarked to him by strangers going over the hills in summer, "Surely the hills might carry far more sheep than you have on them, seeing the amount of roughness there is." His answer to such was, let them put on as many sheep as they liked, the numbers would soon reduce themselves to their proper level, and the only profit they would realise would come from the increased number of skins.

Small Holdings and Rural Depopulation.

The subject under discussion at the meeting of the Boroughbridge Agricultural Society, held on the 4th inst., was the question of small holdings.

It was introduced by Major Dent, of Ribston Hall, who in the course of an interesting speech, remarked that the recent census returns had proved conclusively that in most parts of the kingdom the population was leaving the country and flocking to the towns. Many thoughtful people saw in this migration a great danger, and thought it would lead to a deterioration of the nation's physique and character. Various ideas were held as to the best means for preventing it, and bringing the people back to the land. Townspeople might be and were being brought into the country by the establishment of industrial villages on modern principles, and by the extension of town suburbs. What they would, however, like to see was a plan whereby the country people might be kept on the land. At the same time, it must be borne in mind that nowadays the farmer required fewer hands for his work than he did 30 years ago, owing to the development of machinery, and that if the rural population was largely increased, occupation and employment must be found for them.

Mr. Rider Haggard, at the end of his interesting series of articles on the state of the country districts, strongly advocated the encouragement and development of small holdings, by which he presumed the distinguished author meant principally small freeholds, not tenancies. No doubt, there was great interest and pleasure in the ownership of land, as well as responsibility, and a man was more likely to spend time, labour, and money on what was his own than on another's property, but he was by no means sure that the man would not get a better return for his capital by hiring land than by buying it. If we could see the old race of yeomen once more brought into existence he certainly would welcome it, though he feared that that was not likely. Nor did he believe that peasant proprietors, as on the Continent, were suited to England at the present time. Had the children of small holders stayed on the land more than others? He feared not. One of the chief reasons for the disappearance of the yeoman class had been that the younger generation were not content to live on the land as their forefathers did, and, as far as his own experience went, the same applied to the labouring class.

He took it that the term small holding might mean anything from a rood in an allotment field to a farm of 100 acres managed by a man and his family, without the help of any hired labour. Small holdings might be divided into three classes:

1. Those in which the occupier was mainly dependent on regular employment for his income, and supplemented that by his holding.

2. Those in which a man's income was largely derived from his holding supplemented by some trade or occasional labour, etc.

3. Those in which the occupier was solely dependent on his holding.

He did not think there was truth in the statement sometimes made that landowners and farmers were averse to the development of small holdings. In certain districts and under certain conditions an increase of small holdings would, he was sure, benefit all classes. He looked upon what he had termed Class 2 as most useful in providing extra hands for the farmer at busy times, while Class 1 ought to give his regular labourers an inducement to settle down and stop with him. As a landlord, he had always found a steady demand for small holdings of all three classes, even at what at first sight seemed to be high rents. It must, however, be remembered that most of the land so occupied was the best land, and most conveniently situated, while a landlord might easily have to spend two or three years' rent in improvements and repairs without being able to charge any extra rent for the outlay.

Examining the matter from the occupiers' point of view, Major Dent said that Class 1, with a bit of grass land for a cow, as well as an allotment, could do very well if his wife would do most of the work and his allotment was not too big. A rood was sufficient arable land for a man to cultivate in his spare time. No. 2 could also do very well if his wife would do a considerable share of work in the management of the holding, and when circumstances made poultry, fruit, or vegetable raising profitable. Class 3 had the hardest task. If a man had a family growing up who could help he would often do well, but he was afraid, often at the expense of the children. The man took them early away from school, and they worked on the land for their keep alone, whereas they might be earning wages if they went out to service. He also often suffered from want of capital, and consequently could not do full justice to his land or avail himself of the best markets.

It had been said that by increasing small buildings they would increase the produce of the land, but his own experience was that the large farmer who farmed well could produce more per acre cheaper than the smaller one. Manure was the chief difficulty on small holdings. Only a limited amount of farmyard manure could be made, and the small holder could not afford, and had not the opportunities of purchasing artificial manures that the large farmer had. His arable land might be fairly well done to, but his grass land suffered. He did not refer to fruit cultivation or any special industries, as he had practically no experience of them.

If some small holdings were to be increased in numbers, were they to desire any legislation on the subject? Personally, he did not believe in creating industries by Act of Parliament. If there was real need for small holdings they would gradually be developed, and present legislation would suffice. It might perhaps be possible to further simplify and cheapen the sale and transfer sale of land. He had always lived on the best of terms with his small freehold neighbours, and though they all had "Naboth's vineyards," he should be sorry to see small freeholders all absorbed by larger people.

In concluding, Major Dent said he thought that in some districts and under favourable circumstances, small holdings might with advantage be largely increased and developed, while in others they are not needed; and that no legislation is wanted on the subject, unless it may be to further simplify the sale and transfer of land.

Tithe Commutation—Septennial Averages.

The Editor of "Willich's Tithe Commutation Tables" states that as the result of the corn averages for the seven years to Christmas, 1901, published in Tuesday's "London Gazette," viz., wheat, 3s. 5½d per imperial bushel; barley, 3s. 0½d. per imperial bushel; oats, 2s. 1d per imperial bushel, each £100 of tithe rent-charge for the year 1902 will amount to £67 3s. 8¾d., being on the commutation rather over ½ per cent. more than last year. The following statement shows the worth of £100 of tithe rent-charge for the last seven years:—For the year 1895, £73 13s. 0½d.; 1896, £71 9s. 6¾d; 1897, £69 17s. 11½d.; 1898, £68 14s. 11d.; 1899, £68 2s. 4¾d.; 1900, £66 15s. 9¾d.; 1901, £66 10s. 9¼d.

It is to be remarked that tithe rent-charge shows a rise in value—however slight—for the first time for many years past, there having been a constant decrease since 1878, when the value of £100 of tithe rent-charge stood as high as £112 7s. 5d. It fell to £66 10s. 9d. in 1901, when it stood at its lowest.

SEED REPORTS.

Messrs. Goldsmith Bros.

Messrs. Goldsmith Brothers, of Bury St. Edmunds, have issued their annual seed report, in which they state that of red clover and cow grass not a great quantity has been held over. A large acreage was saved, and was mostly harvested in good condition. The seed suffered very much from the drought, and the greater part is consequently very small in the grain, but there are some fine seeds which sell readily. The yield is very variable, some farmers getting as much as 3½ cwt. per acre, and others only getting ½ cwt., but we think that, taking all things into consideration, there is an average crop.

Very little single-cut cow grass was held over, and new seed is scarce. Next to nothing in useful white clover was held over. Here again the yield is very variable, but there is an average crop of good quality seed. Of red suckling very little was held over, and there is but a small crop of new seed. Prices advanced rapidly owing to the autumn sowing demand. Trefoil was practically cleared out at the end of last spring. A good crop of fine seed at very reasonable prices, which we think will harden as the season advances.

The Italian ryegrass crop was under an average, and very little indeed held over from last season. Prices have advanced recently, but this article will go much dearer, as practically the whole of the crop has been marketed. A very large crop of common sainfoin, but a small crop of giant. Both secured in good condition. Giant very reasonable in price now, but expected to be very much dearer. Rape, a small crop; fine black seed is very scarce. Mustard is a good crop of fine quality seed, which is being offered at very low prices. Winter tares are under average crop. Windsor beans: Very short crop. Fine samples scarce owing to the drought.

Messrs. Hurst and Son.

Messrs. Hurst and Son, of 152, Houndsditch, E., state in their clover and grass seed circular for 1902 that the general conditions seem to point to a rather high range of prices for most articles, and as stocks are low, and as yet very little buying has taken place, it seems probable that values will be firm throughout the season. Concerning the various seeds, Messrs. Hurst report as follows:— Of English red clover and cow grass there has been a large acreage saved in most of the producing counties; so far as threshing has progressed yields seem very variable. From the latest saved crops on the heavy lands good reports come to hand, but the earlier crops on the light lands are reported short in yield. We notice a peculiarity of this season, that the great majority of the samples run particularly even both in size and colour. Very fine coloured and large-grained seed is decidedly scarce. The single-cut cow grass crop is reported small, and very few yearling lots were held over.

The American crop of red clover in many of the States is below an average, and as they will require seed for their own use we do not expect a large export. Canada has a good crop of fine quality, and at the present time it is being freely taken by the States. France will not be able to export, and is already buying from this country. Germany, as far as we have seen, has none of the fine seeds so extensively used in this country last season, and her crop is reported under average. In England the acreage of white clover saved was extensive, and the samples already brought to market would indicate a large yield. Germany

reported a small crop, and has been buying to a limited extent from this country, but the latest offers of their own seeds show a decline in value, seeming to point to their having originally underestimated their own crop.

Alsike is a smaller crop both in America and Canada than for some years past, and coming after a medium crop only in 1900, the present available supply must be very restricted. Germany may have some lower qualities to send us, but being generally weedy they are not popular in this country. There was a large crop of trefoil in England of good quality. Continental crops under average in almost all districts. Lucerne was under an average crop in France, and quality of samples not equal to the usual standard. America reports a short crop. The English crops of both varieties of sainfoin are quite up to an average in extent, and of good quality. Very short crops of giant in France, but a large one of common. There was but a short crop of English Italian ryegrass. The crops in the best districts of France were very light, and more weedy than usual. The expense of re-cleaning is so great this season that perfectly-machined seeds are commanding very high prices. The Irish crop was large and of good quality, and it will to a great extent have to make up for the shortage of French seed; prices have already advanced, and all appearances point to a yet higher range. A fair crop of perennial ryegrasses of a very high average natural weight, so that lower-weight grades will be scarce. As stocks were so low everywhere at the commencement of the season an advance in values soon took place, and as an active demand may be anticipated prices will continue to rule high.

Natural grasses, with few exceptions, are much below average supply, and many in consequence rule high in price. Timothy, meadow, foxtail, meadow fescue, tall fescue, crested dogstail, and several of the finer grasses are very scarce. Cocksfoot and poa pratensis are plentiful. Of white mustard there are good supplies of excellent quality. Rape was an average crop in both England and Holland. Very short crops of spring tares, much above average prices. Supplies nearly exhausted of winter tares.

New Agricultural Patents.

Specially compiled for the *Mark Lane Express* by Mr. G. D. Howard (Hughes, Son and Co.), Patent Agent, 38, Chancery Lane, London, of whom all information relating to Patents, Designs, and Trade Marks may be obtained free of charge.

26,127.—August Mayer, of Liverpool, for "Improvements in mowing machines."

26,184.—Albert Hateley, of Birmingham, for "Improvements in bins for corn and other bird foods."

26,249.—Anatole Borsu, of New Bridge Street, London, for "Improvements in centrifugal separators."

Patents Sealed.

16,099.—J. McDonald, of Dumbartonshire, for "Planting tools for garden use."

16,199:—E. W. Morris, of Whitechapel, for "Milk."

Leeds Dairymen and the Tuberculin Test.

A deputation from the Leeds and District Cowkeepers and Dairy Farmers' Association waited on the Leeds Corporation Sanitary Committee, on Thursday, to draw attention to the losses to which cowkeepers and dairymen are exposed in the event of any of their cattle being declared tuberculous.

The first suggestion put forward by the deputation was that the Corporation should grant compensation for loss on the milk of cows suffering from supposed tuberculosis of the udder during the time they are being tested with tuberculin by order of the medical officer. Equally important was the suggestion that the Corporation should purchase such cows with tuberculous udders as re-acted to the test, at a fair and reasonable value, according to the practice in Liverpool.

The deputation represented that the milk clauses of the recent Leeds Corporation Acts are most stringent, and the medical officer had given notice that these would be strictly enforced. When a dairyman received notice that the milk was tuberculous according to the bacteriological test, the Corporation veterinary surgeon went and examined such cows as he thought suspicious, and if these cows re-acted the dairyman was forbidden to sell any more of the milk for human consumption. If found selling such animals for slaughtering, and they proved to be suffering from "general" tuberculosis, he was liable to a fine of £20 under the Public Health Act. A cowkeeper must either break the law or send his cows to the destructor, which meant ruin to many.

If the Corporation did not offer some assistance, many of the dairy farmers in and around Leeds, who retail their milk to the city, would be compelled to reduce the number of cows they kept, and to buy their milk from districts over which the Corporation had no sanitary control. This, it was pointed out, would cost the Corporation considerably more in inspection expenses than the small amount they would be asked to pay for the slaughter of cows under their direct supervision.

Questions were put to the deputation. In reply, Mr. Hackney said if cattle re-acted to the tuberculin test, and had tuberculous udders, dairy farmers would, when they could, sell to the butcher. Should the meat prove to be generally tuberculous, the dairyman would be liable to a penalty of £20. The milk from cattle which re-acted could be used for pigs or calves, but not for human consumption. That, of course, distributed the disease to other animals.

Asked whether cowkeepers could not have cattle tested before buying them, Mr. Hackney replied in the negative. There was, he said, such a good demand for young and "apparently healthy" dairy cattle that a farmer or cattle dealer could sell them readily, and would not think of having them tested before bringing them to market. Certain dealers might allow their cows to be tested, but the purchaser would then have to pay £2 to £3 per head more for them, and to wait five or six days to see if they re-acted to the test. Our customers, added Mr. Hackney, would not wait that time for the milk.

With regard to cows no longer giving milk, it was stated that those not sent to the butcher were sent into the country and sold for breeding purposes. This, however, was distributing disease if it existed in any of the stock, and the same cattle might again come into the cities.

After the committee had conferred in private, the chairman said they were in favour of giving compensation for the loss of milk whilst cattle were undergoing the tuberculin test. On the question of compensation for slaughtered stock the committee were favourably disposed towards partial compensation, but they could not give a definite answer until they obtained more information as to what was being done in other parts of the country. The matter would, however, receive immediate consideration. A small committee was appointed to make full inquiries.

It was reported to the committee by the city analyst that there had been a distinct improvement in the general quality of the milk sold in the city, due, he thought, to the regulations issued by the Board of Agriculture.

PRACTICE WITH SCIENCE.

A Mangold Experiment.

Mr. John H. Wilcox, of Patterdown, Chippenham, Wilts, sends us some notes concerning a simple experiment on mangolds carried out by him. He says:—"The whole of the piece had farmyard manure, and when singled out were top-dressed with 1 cwt. nitrate of soda per acre. Soil gravelly sand. The sort grown was Yellow-fleshed Golden Tankard. Two plots were marked out and dressed in addition to the above, Plot 1, nitrate 2 cwt. per acre; Plot 2, 2 cwt. muriate of potash per acre.

"The leaves on Plot 1 were bigger and better colour after being dressed with the nitrate, but, quite contrary to my expectation, Plot 2, dressed with muriate of potash, gave nearly 10 tons per acre more; the cost of dressing would be about the same in each case.

"It appears from the above that it is not so beneficial to use all one sort of manure, but the right combination seems to answer best.

The death is announced of Mr. Eskricke John Inman, of York, who was for over 30 years superintendent of the horse and corn department of the North-Eastern Railway Company. He was 75 years of age.

Tuberculous Pork.—At the Guildhall Police Court, on Thursday, George Saunders Weston, farmer, of Hall Farm, Bildeston, near Hadleigh, Suffolk, was summoned for sending the carcase of a diseased pig to the Central London Market, intending it for sale as human food. Mr. Vickery prosecuted, and said defendant had several pigs, which were in so poor a condition that he could not sell them, so he sent for a local butcher and instructed him to kill and dress them and send them to London for him. This was done, and the butcher found that the lungs of one of the pigs had adhered to the side. The pigs were hung up, and pointed out to the defendant, but he took no further trouble in the matter. The pigs were duly sent to London, and this one was seized in the London market by Inspector Terrett as being unfit for food. Dr. Collingridge, the medical officer, described the state of the meat, which formed part of an animal which had died from acute tuberculosis. He considered the eating of such meat would be highly prejudicial. Defendant gave evidence on his own behalf, and said he saw nothing in the pigs in question to suggest disease. He had never been in trouble before, as he had always been very strict not to evade the law.—Cross-examined: He was told that the lungs had adhered to the chest of one of the pigs, but this was after they had been sent to London. Had he thought anything was wrong with them he should have examined them himself.—The Alderman said he did not think the defendant knew that the meat was unfit for food, but still he had been careless, and he must pay a fine of £10 and £3 3s. costs.

A Brief View of the Past Year.

As might have been expected, only a limited amount of business in the sale of flour has been done during the past week or two, but for all that prices are generally firm, and in some parts have advanced 6d per sack, in sympathy with the rise in wheat. Trade in offals of all kinds has been, as usual, brisk, especially in bran and pollards, at very remunerative prices, so much so that some millers have been tempted to make more flour than they would otherwise have done for the sake of the bye-products. English wheat has not been in very plentiful supply during the past week or two, and the parcels which have been received at the mills have, in most cases, not been in the best of milling condition.

Re-introduction of Porcelain Rolls.

With the coming of the New Year it is usual in most industries to take a look back at the progress made during the past twelve months. In the case of flour-milling machines, there is very little new to record; practically the year has been an uneventful one in this direction. Nothing better than the roller-mill has been found for the reduction of the raw material, and the successive processes until the finished flour reaches the packers are very much the same as they were at the dawn of 1900. True, there have been some few changes, both in machinery and in process of manufacture, but they have been rather a continuation of the developments of the past few years than absolutely novel to the present.

The introduction of porcelain rolls for the reduction of middlings has made some progress during the year which has passed, and one is not surprised, considering that they approximate nearer to the millstone than the ordinary smooth rolls. It is thought by some millers who have introduced them into their reduction system that they make flour of a better colour than that from cast-iron rolls. Certain it is that they are infinitely superior to the old type of porcelain roll, which was introduced by Mr. Wegmann from the Continent in 1877. The old rolls were soft and easily wore away; they were also very short, while the adjustments were not nearly so handy as in the roll lately introduced. It is probable that on certain stock in the mill these rolls can be used to great advantage.

The Perfection of the Roller Mills.

The ordinary roller mill, as now built by the best firms of milling engineers, has reached such a state of perfection that it is really difficult to look for further improvements. If any changes come in the future they will probably have reference to entire reconstruction on different lines altogether, as well as to the relative position of the rolls to each other, to differential and to the angle of grooving on break rolls. In fact, a new mill has been brought before the public during the past year or two. In this machine the rolls are placed diagonal to each other, that is to say, at a large angle from the vertical, although there are one or two mills made now in which the rolls are slightly out of the vertical.

As to methods, the past year has seen a further tendency to reduce the breaks from four to three, and this again entails another change in that it would not be possible to make fine patent flours on two breaks and a bran roll unless the wheat was thoroughly conditioned, the skin of the berries having been so toughened as to prevent the making of a minimum amount of bran powder.

The Conditioning Process.

In cases where three breaks are found—and such a system is now to be seen in some of our largest mills—a great deal of the work of reduction of the wheat must be done on the first break, and if the covering of the endosperm is not properly prepared the flour will be specky and anything but clear. This question of conditioning is the one, perhaps, more than any other which has received the most attention during the past year. Water and heat have for some years been the principal factors in conditioning, but there is at the present time a tendency to rely more upon water. An exception, however, must be made in the case of Indian wheats, for unless these are treated to what may be called a bath of steam their peculiar ricey flavour will not be dissipated.

Very little changes have been made in the construction of either the purifier or the flour dresser. The battle between the centrifugal and the plansifter is still being waged, although it seems clear that the former is losing ground. Still, the difference of opinion held by millers in regard to the plansifter is remarkable.

Future Prospects.

Some have not a good word for it, although confessing it is capable of good work on some of the break stock, while others swear by it for all purposes of separation in the mill—scalping, grading, and dressing. The tendency during the past year has been to shorten systems; to get the flour into the sacks as soon as possible consistent with purity. This has, in some cases, led to less purification, some millers endeavouring to reduce pure semolina at one operation, whereas the popular method has been to gradually reduce it in order that it may be gradually purified. But in the new method a great deal of the work of purification is done on other machines than that called the purifier, and in this the flour-dressers have contributed their full quota. Practically every machine in the mill is a purifier. These are the principal points of interest so far as practical milling is concerned, but owing to competition and underselling, and the difficulty of making a profit at all, most millers have had to pay special attention during the past year to commercial points. Unfortunately millers are not so associated as they were a year ago, an unfortunate state of things, born chiefly, it would seem, of mistrust. What the coming year will see in this direction it would not be safe to prophesy; but, except for this dark side of the position, millers could look confidently to the future, and in most cases anticipate a prosperous and successful year. Let us hope that the New Year will see an improvement. MILLER-FARMER.

LITERARY NOTICES.

Among the practical articles contained in the issue of the Journal of the Board of Agriculture is a useful one on "Cultivation by the Use of Deep-rooting Plants" (Mr. R. Elliot), and another on "Manures for a Four Years' Rotation," by D. A. Gilchrist, B.Sc. There is the usual number of short papers dealing in an instructive manner with nearly all branches of farm work, while an illustrated article on the Currant Aphides will be found most useful by market-gardeners and fruit-growers. The usual tables and reports of foreign crops are included.

Some useful hints may be obtained by farmers from the report on the potato-growing experiments which have been carried out at the Holmes Chapel Agricultural and Horticultural School, under the supervision of Mr. E. Druce, the principal at Holmes Chapel.

Messrs. Little and Ballantyne, of Carlisle, who are seedsmen to his Majesty the King, have now issued their 1902 catalogue of vegetable and flower seeds, and it contains particulars, together with illustrations, of a very large and choice variety of seeds. This firm's collection of vegetable seeds have in past years been exceedingly popular, and the collections given in the new catalogue should be equally satisfactory.

A useful and profusely-illustrated manual and seed catalogue has been issued by Mr. J. K. King, of Coggeshall, Essex, and Reading. With this is sent an abridged seed catalogue, containing in an abbreviated form all that was given in the larger catalogue.

From Z. Coleman, seed grower and merchant, of Sandwich, Kent, we have received a copy of a catalogue of vegetable and flower seeds.

The seed guides sent out by Messrs. Barr and Sons, 11, 12, and 13, King Street, Covent Garden, usually enumerate a large stock and variety of specimens, and this year's list is no exception. The illustrations are somewhat insignificant, otherwise the catalogue is well and conveniently presented.

Watered His Master's Milk.—A milk carman named William Jones, 23, of Roman Road, Barnsbury, who was caught outside a dairy at Hoxton, pouring water into a large churn of milk, and thus wilfully damaging it, was, upon pleading guilty, at Worship Street Police Court, on Thursday, sentenced to two months' hard labour. The magistrate remarked that it was rarely the man who adulterated the milk was caught, and that it was a bad offence, as the prisoner's employer or the retailer of the milk might have suffered.

The Woods and Forests Commissioners' Report.

The annual report of the Commissioners of his Majesty's Woods, Forests, and Land Reserves was issued as a Blue Book on Tuesday. It gives a sketch of the changes that have taken place in the administration of the office since 1832; and it then states that the system under which the land revenues are now managed was inaugurated by the Act 14 and 15 Vict., c. 42 (1851), and as it differs materially from that under which they were previously managed, the following observations are confined to the period (fifty years) that has since elapsed. The hereditary possessions of the Crown in 1851 were widely dispersed, and in England there were few counties that did not contain detached and outlying parcels of land, which, from being intermixed with, and in some cases surrounded by, the estates of private individuals, were more valuable to the adjoining owners than to the Crown. In some instances blocks of land of considerable extent, belonging to the Crown, possessed, to adjoining owners, an accommodation value. In other parts of the United Kingdom the Crown revenues were largely derived from fixed rents charged on, or from interest in, or rights affecting, properties belonging to private owners. It was consequently decided, as opportunities offered, to sell such properties or rights provided the full value could be obtained, and to re-invest the consideration moneys in the purchase of other land adjacent to more extensive Crown estates, or of estates large in themselves, and thus, by consolidating the Crown estates, to diminish the cost of management. Copyholds have also been enfranchised, and manors and quit and fee farm rents have been sold. The amount realised by these sales and enfranchisements between March 31st, 1852, and March 31st, 1901, was £4,212,925. During the same period a total sum of £4,531,506 has been invested in the purchase of estates, houses, and premises, and in the redemption of charges.

Since 1873 ground-rents, secured upon high-class houses and buildings in London, have been purchased to a considerable extent as investments for capital moneys, and out of the moneys invested in purchasing estates, etc., a total sum of about £1,982,336 has been expended in buying ground-rents, while further sums amounting to about £326,362 have, since the same date, been invested in the purchase of other house property in London. The ground-rents so purchased amounted to £75,909 per annum, and the rental obtained for the houses, etc., purchased and let otherwise than at ground-rents amounted to £12,682 per annum. The investment of about £2,308,698 has, therefore, produced an average return of nearly £4 per cent., and, in addition to this, the capital values of the properties acquired have now very largely increased

The net income of the Land Revenue between 1851 and 1901 showed an increase of £205,265 a year; the revenue having been £259,178 in March, 1852, and £464,443 in March last. Excluding the land belonging to individuals over which the Crown posseses no rights whatever, or merely a bare forestal right, the Royal forests and woodlands, exclusive of Windsor, extend to about 98,000 acres. Of that quantity a little less than one-sixth part, or about 17,000 acres, belong to the Crown absolutely, free from any rights of common. The whole of these 17,000 acres are planted or otherwise occupied. Upon the remaining five-sixths, which are subject, when unenclosed, to rights of common by a numerous body of persons, there are in the open forests about 23,000 acres covered with timber or trees, and there are about 18,000 acres of growing timber and trees, which have been planted in enclosures, under the provisions of various Acts, by which the Crown is empowered to enclose and plant certain limited quantities of the commonable land, and to keep them enclosed as long as may seem desirable.

At Wakefield County Court on Tuesday, Mr. J. H. Holdsworth, who farms some land at Hall Green, Wakefield, was awarded £48 3s. 10d. as damages against Mr. C. H. Hebblethwaite, seed merchant, Wakefield. The plaintiff purchased seed potatoes from the defendant on the representation that they were of a variety known as "Up-to-date," whereas a large proportion were a less productive kind.

Sheep-worrying near Swindon.—Early on Thursday morning a number of sheep belonging to Mr. E. J. Keyloch, of Broome Manor, near Swindon, were worried in a shocking manner. The animals were left in apparent security the previous night, but when the shepherd visited the fold in the morning he found two dead and eight others so mutilated that one subsequently succumbed and the rest had to be destroyed. Most of the ewes were in lamb, and the loss to Mr. Keyloch is consequently a very serious one. All efforts to trace the ownership of the dog which was responsible for the mischief have proved futile, and Mr. Keyloch has offered a substantial reward for information.

The Cultivation of Maize.

Sir,—I notice an article in the MARK LANE EXPRESS this week on the growth of maize in this country. It is well known that it has been grown here successfully for many years as a fodder crop; but you also mention a crop which was grown in Cheshire last year which fully matured. As there appear to be so many different varieties, it would be interesting to know the kind which produced this crop, in order that it might be more generally grown. I have for several weeks now sown a small quantity in the garden, about the second week in May, from seeds grown the year previous. I herewith send you a specimen of last year's seed, of which I do not know the name, but believe it was taken from a sample bag at market some years since. I do not know whether by growing it consecutively here for some years it would become sufficiently acclimatised to admit of its being sown earlier, which would give a better maturity. The late Wm. Cobbett, I believe, endeavoured to grow it here, but failed to do so; but it does not follow with the many varieties obtainable in the present day, that it cannot be done now.

NOWTON, H. H.

Orchards v. Plantations.

Sir,—The nom de plume adopted by a recent correspondent to the EXPRESS, viz., "The Advocate of the Apple Orchard," induces me to write a few lines on a subject of vital importance to the modern fruit grower. Those whose business carries them into several of our large fruit-growing districts, cannot fail to notice how the old-fashioned grass land orchard still remains, in spite of its numerous disadvantages. The effect of turf on the health and prolificacy of young trees is most marked, and those who during last autumn have set young trees in grass would do well to consider the advisability of its removal. Surface culture, the application of artificial manures, and the sweetening and purifying influence of sun and rain, are all rendered difficult when the surface soil is clogged with an almost impenetrable mat of root fibres. Besides, nourishment which rightly belongs to the trees themselves is required to sustain this useless encumbrance. By adopting the plantation system, proper attention can be given to surface culture, root pruning, feeding, and the destruction of insect pests. Furthermore, the space between the trees can be intercropped with a variety of small fruits, vegetables, etc., these giving a return until the trees themselves are capable of yielding paying crops. It would be interesting if some advocate of the orchard or grass land system would give his views on the subject; personally, I fail to see how profitable fruit culture can result, either from its adoption or continuance.—I am, etc.,

AN ADVOCATE OF THE PLANTATION SYSTEM.
Jan. 10.

Best Treatment for Finger-and-Toe.

Sir,—On page 28 of your issue of the 6th inst. Mr. Eames asks for information as to the best treatment for finger-and-toe, and it is presumed that anbury or clubroot is intended, and not the real finger-and-toe. In anbury the tap-root is badly dwarfed and the side-roots swollen, and to the appearance thus presented the term finger-and-toe is often applied. In true finger-and-toe there is a malformation of the root, but the growth is otherwise healthy, while in anbury the growth is filled with decaying matter. This disease of the cruciferous crops (turnips, swedes, rape, cabbages, etc.) is particularly rife on some soils, more especially those of a light and sandy nature, and it is aggravated by certain manures, in particular by acid-treated manures, and it is also aggravated by forcing manures such as nitrate of soda. When the disease makes its appearance there is no remedy whatever for the affected roots, and so the farmer must confine himself to methods of prevention. One plan is to postpone the taking of another cruciferous crop during the next rotation, but this is not practicable in every case, especially on soils where the four-course system of its modifications are common. If the taking of another crop of this kind can be avoided for the space of seven or eight years, an attack may be averted, but, as already pointed out, this course is impracticable on many soils. One plan, however, is resorted to with great success, and that is, in each rotation to sow with mangolds, potatoes, etc., half the land falling for roots, and to sow the other half with turnips, swedes, etc., thus taking a turnip crop from the same land only once in two rotations, and in this way the disease can be kept under.

Where this is impracticable, the use of lime is the sovereign remedy for anbury, although the use of potassic manures is sometimes of service. Lime may be applied in various forms, the most efficacious and durable being in the form of carbonate as chalk. In this way dressings of from 70 to 100 tons of chalk to the acre are applied; but this is a very costly remedy, and is only available where chalk can be got in the affected field or in adjoining land. The application, if made, is very durable, and will avert finger-and-toe for the remainder of the life of the applicant. A much smaller quantity would suffice if the chalk were only ground to fine powder. Where true marl can be obtained, it forms an equally potent dressing, and is also much better for the land. Mr. Eames says that in his district 160 bushels of lime to the acre are found to be necessary, but there are soils where even larger dressings fail to effect a complete cure and where the soil is light, and badly affected, 160 bushels per acre is insufficient. If practicable, lime should be applied for this purpose, hot from the kiln, and a couple of years in advance of the root crop, although it is found that its effects are intensified of applied only a year in advance. For this purpose some apply lime to old leas before sowing with wheat, the wheat being followed by turnips. In the application of lime, one great object is to secure its equal distribution in the soil, and so some slake the lime slightly before spreading The best method is to apply finely-ground lime hot from the kiln, but it is difficult to obtain lime in this form—where it is practicable, a decidedly smaller dressing will suffice. Superphosphate is no remedy for anbury; on the contrary, it tends to aggravate this affection because of the treatment with sulphuric acid, but, on the other hand, basic slag is said on some soils to be a decided source of prevention. This is because of the excess of lime it contains and because of the fine powder to which it is reduced.

Light land, subject to anbury, should be consolidated before sowing with turnips. When such soils have become very full of twitch, and are thoroughly cleansed in the spring before sowing with turnips, the danger of an attack of anbury is increased, but this may be to some extent avoided by the free use of the roller before drilling the turnips.

M. Y.

GARDEN.

The severe winter phophesied by so many has not put in an appearance so far, but as there is plenty of time for a good spell of hard weather yet, perhaps it will be as well not to holloa till we are quite out of the wood. Still, the fact remains that the weather for some time past has been and still is remarkably mild for the time of year. Quite recently I saw quite a nice gathering of blossoms of the Viola from the open air in one of the Midland Counties, and there they have had much more severe frosts than any experienced here, in the Metropolitan district.

Cucumber seed may be sown at any time now, with good results; plants from a sowing made now—say the middle of January, should begin cropping about the end of April, if grown on vigorously with plenty of warmth and moisture. A good hotbed at 70 to 75 deg. is necessary to induce vigorous germination of the seed, and this should be sown singly in small 2in. or 2½in. pots—never in "store" pots or boxes, with several seeds in each—when this is done the young plants always suffer a good deal when potted off singly, and this throws them back for some time. But when started singly in small sizes, they can be moved on into larger pots, with scarcely the loss of a single rootlet, and will go right ahead throughout. If to be planted out in a bed, or mounds, of soil, the plants need not be moved into larger than 4½in. or 5in. pots, but where this cannot be done they may be grown and "fruited" in large pots, those 10in. to 12in. in diameter being most suitable.

There is time enough for melons yet, unless wanted very early.

Cauliflowers raised from seed sown during the next two or three weeks, in a little warmth, will form hearts nearly as soon as the autumn-sown plants, and even if a little later they will form a useful succession. Keep the little plants near the glass from the first, with plenty of air in mild weather; prick them off or pot singly when about 3in. high, and if they can be got into 5in. pots for a time before being planted out so much the better.

MONDAY (January 6th).—The weather was fine in most parts of our islands, but there was still a great deal of cloud. Rain was measured in the morning as the result of the fall in the preceding twenty-four hours at several places in the North and West, and the amounts were fairly large in the extreme North. A large cyclonic disturbance had its centre on the coast of Norway, and under its influence we were experiencing strong West to North-west winds over the whole country. Temperature had risen briskly over the entire kingdom, and the midday readings were everywhere high for the time of year. The day was fine in London, and the thermometer rose to fifty-two degrees, which is ten degrees above the average.

TUESDAY (January 7).—Fine weather prevailed over the greater part of the British Islands, although rain was again falling at a few places in the North-west. Very little rain was measured in the morning as the result of the fall in the preceding twenty-four hours, and there was scarcely any appreciable amount anywhere in England. The winds continued strong from the West and North-west over the United Kingdom. Temperature had changed rather irregularly, although it had generally decreased somewhat, but the thermometer was everywhere above the average. The day was fine in London, and the temperature rose to forty-eight degrees.

WEDNESDAY (January 8th).—Dull and gloomy weather was experienced over the British Islands, but there was very little rain anywhere. The weather was still unusually mild for the time of year, especially over the northern and western portions of the kingdom, where the thermometer was as high as in any part of Western Europe, and warmer by several degrees than on the south coast of France. The mercury was steadily falling throughout the day, and the wind had shifted to the south-west and south. The wind was strong in the extreme north of Scotland and in the North Sea. The weather was gloomy in London throughout the day, and the temperature rose to 47 degrees.

THURSDAY (January 9th).—The weather was again generally dull and cloudy, and rain fell at a few places in the West of our Islands, where rain was also measured in the morning as the result of the fall in the preceding twenty-four hours. A mild South-Westerly wind was still blowing over us from the Atlantic, and the wind continued strong in the North and West. The temperatures over the United Kingdom in the morning were higher than in any other part of Western Europe, while the mid-day readings were commonly above 50deg.

FRIDAY (January 9th).—The weather was cloudy over our islands, and rain fell again at several places in the West. Rain was measured in the morning as the result of the fall in the preceding twenty-four hours, over nearly the entire country; but it was only in the North that the amounts were large. The winds were still everywhere South-westerly, and they were strong on our North coasts. The temperatures in the United Kingdom continue much higher than in the South of France, and at eight o'clock in the morning London was ten degrees warmer than Nice. The day was dull in the metropolis, and the temperature rose to fifty-five degrees, which is twelve degrees above the average.

SATURDAY AND SUNDAY (January 11th and 12th).—The weather continued very damp and mild over our islands during these two days, although the conditions varied considerably in different parts of the kingdom. The barometer was again lower in the north than in the south, and the winds were chiefly light from the south-westward. Rain fell in several places, and misty weather occurred in many parts of the country. The temperature had considerably decreased in Scotland on Saturday, and there was a sharp frost at many of the northern stations during the succeeding night, but the thermometer in the west and south continued much above the average. Misty rain fell in London throughout Saturday, but Sunday was fine. On both days the temperature in the metropolis rose to about 50 degrees.

Bucks (Central).

A nice rain came just right to fetch up the late sown wheat, and to freshen up everything after the frost. It has been very drying this week so far, and sheep are now much more comfortable than they were after the frost went. Turnips and swedes now go away very fast—the crop being so light but luckily there is a fair crop of mangolds to fall back upon. No lambs in this locality at present; the end of the month and the beginning of next will be about the commencement. Sheep look healthy, and have done fairly well, but fat sheep will most assuredly be very scarce hereabouts shortly. Although markets have been overdone for some time previous to Christmas, beef does not seem to quite keep up the Christmas market prices, but that will be very short about here ere long. It is too expensive to make, with a short hay and root crop. Wheat has a trifle hardened in price, but 28s. or 29s. for good wheat is a ruinous price, and I think about the cheapest feed we can have for stock; but maize or other like corn to mix with it makes it (with the grinding) come up high for feed. Barley turns out very bad indeed, and the price gets lower for chaffing every year. Beans are the worst crop for years, except the winter ones, and although higher in price, we have none to sell—rather have to buy for seed.—J. T. (Jan. 10).

Gloucester.

The year 1902 has opened rather boisterously, bringing with it the much-needed rain to fill the ponds and raise the supply of water at the springheads. Few can remember the ponds on the farm being dry close on to Christmas, but such was the case in this district, and the water-supply had become extremely short for all purposes. Now, on January 7th, ploughing is being proceeded with under very favourable conditions, thus showing the dry state in which the land was previous to the latter rainfall.

Wheats, as a rule, are looking a thin plant, which was to be expected with such a deficiency of moisture at seeding-time and since. Beans are looking fairly strong. A continuation of the present open weather will be much appreciated by stock owners, as it will tend to save the very small hayricks. All kinds of feeding-stuffs maintain a high price. Cattle and sheep are healthy, and their condition is fair.—B. R. (January 8th).

Leicester.

Wheat and winter oats good. Cattle have done well on grain so far. Sheep looking well. Turnip, "swedes," rotting, believe owing to grub eating from bottom to heart, of swede, where they are found dead. Thousand heads of cabbages destroyed last spring by fly. Turnips have had black aphis on leaf all summer.—J. P. C.. (Jan. 8)

Nottinghamshire.

The weather of late has been of a very variable character, and accompanied by heavy rainfalls, which have ended in a large tract of land being flooded, especially the low-lying fields. The ploughed land is very saturated with moisture, so that very little field work has been possible during the excessive rains. The frosts were very severe about Christmas time, when a great inroad was made into the fodder stacks, which were hereabouts, generally speaking, of small dimensions. The wheat plant has withstood the rigorous weather in a marvellous manner, and, generally speaking, looks very well, considering the harsh weather encountered. Winter beans and tares are variable in appearance, and leave something better to be desired. All store cattle are reported to be healthy and doing nicely, and the flocks are doing well. Not many lambs about yet, but there are a few early ones. The ancient adage, "If January calends be summerly gay, it will be wintry weather to the calends of May," will perhaps help us to bear philosophically the trying weather generally associated with January. It is pre-eminently the month for frosts. A few would not come amiss now, rather than later in the spring. There will be a large number of spring sales, many farms changing hands again, for corn does not yield up to expectation; many farmers find it very difficult to make ends meet. The outlook all round is not of an encouraging character in North Notts.—"Agrestic" (January 10).

Shropshire.

Weather mild and showery; strong wind from the north-west. No interruption to ploughing or carting. Farm work forward yet. The gale rising now at 2 p.m.—J. G. (January 3).

Somerset (West).

The New Year comes in with changeable and rainy weather, the same as the Old Year ended with, some days very mild, making the grass land look quite green and growing; but cabbage, swedes, and turnip keep is shrinking fast, showing that the crop of past year was not a good one. Only a small breadth of wheat is sown. Some of it is a good plant, other looks like wire worm in it. Ploughing is proceeding rapidly, in preparation for the barley crop, which is the main straw crop grown in this part. Some early lambs are ready for market and others coming on, and a later lot now lambing for a month hence. I hear a favourable account of health in the flocks and herds; also a fair increase. Prices for beef and mutton are fair and not complained of. I am thinking that hay and straw will be pretty well finished up by the time winter ends. We trust that the year may be altogether a most favourable one. As yet we can make no speculation.—A. B. (January 10).

Staffs (Mid.)

Under the influence of the abnormally mild weather, following the melting of the snow (of which we had a heavy fall in the concluding days of the old year), grass land is looking fresh and growing. There is every probability of a keen enquiry for cattle and sheep later on, and if the warm temperature is maintained a short time longer, buyers will begin to fill up for spring grazing. On the whole, the winter season up to now has made less demands on dry fodder than is usual at the time of year, and the general health of both cattle and sheep is very satisfactory. According to the doctrine of averages, a grazing year is now due, and a full produce of grass in our pastures would be all the more acceptable, because of its scarcity in recent summers. Our streams and ponds are now well supplied with water, and at the same time the condition of the surface and subsoil on all descriptions of land is favourable to vegetable life. The higher prices of all feeding stuffs have considerably increased the cost of production of milk and meat, and owners of live stock are by no means favourable to an import duty on grain or other food used for farm stock. Consumers of breadstuffs, as things now go, do not buy so many quarters of wheat and flour as the owners of live stock buy of feeding stuffs.—T. C. S. (Jan. 10).

Westmoreland.

December, with its severe frosts, bitter and biting cold winds, followed by almost unprecedented storms of wind and heavy falls of snow, which in several districts blocked highway traffic and caused a large number of sheep to be overblown on the Crossfell and other mountain ranges, a great quantity of which have perished through the extreme severity of the weather and weight of snow by which they were overlaid. It is many years since anything so disastrous to the fell side farmers has occurred. The extreme wintry character of December has seriously shaken the confidence of our local weather prophets, who predicted that a mild winter was sure to succeed a hot, dry summer. This feeling was strongly supported by the delightful November weather which immediately preceded; so much for human sagacity. The Christmas fat shows are now things of the past, but the general results are not so soon forgotten; the prices obtained for mutton were extremely disappointing, and left little or nothing for their expensive keep since autumn. Beef was more satisfactory, as there was a general rise upon previous values, though the rise was more apparent than real, as Christmas cattle are, almost without exception, heavier in the carcase in proportion to live weight than ordinary fed cattle. There is reason to think that butchers, dealers, and other distributors fared better than producers, which we hope may react upon values in future. Outdoor labour has been almost entirely suspended during the month, but as stock of all kinds has depended entirely upon hand feeding much extra labour has been required over them. A very serious inroad has, however, been made upon the shortage of fodder, which is evidently causing considerable alarm, as is evidenced by the sharp and considerable rise in the price of all feeding stuffs, especially oat straw, which is now realising more per cwt. than the best hay does under normal conditions. Threshing has been proceeding rapidly, and the general results are more satisfactory than was expected. Prices, too (in harmony with other feeding stuffs), are rising. There are two subjects of a general character which are beginning to excite some interest among agriculturists—viz., education and the line which the Chancellor may adopt to replenish his exhausted exchequer. It is to be hoped that the farmers' interests in the former subject may not be entirely overlooked, and when the opportunity occurs that they may make their voices heard and have some scheme adopted which will produce more satisfactory results than the hard and fast line of the London syndicate, who appear to have no sympathy for farmers, and, if possible, less knowledge of their requirements.—T. B. (January 7th).

Foreign Prospects.

FRANCE.—The weather is mild, and in farmers' opinion, too mild for the well-being of the wheat crop, which they consider would be all the better for lower temperature, to strengthen the plants and exterminate weeds and vermin. The only change of note in the market position, is the growing inclination of farmers to sell instead of continuing to hold wheat in hope of higher prices; on the other hand, millers are apathetic and will buy only just enough to meet pressing needs, the demand for flour and bran not being remunerative.

HOLLAND AND BELGIUM.—Weather continues suitable for agricultural matters, but a colder spell would not be amiss to dry the land and give a filip to consumtive inquiry. Rotterdam reports a quiet trade for wheat, while flour is firmer and meets inquiry for immediate delivery.

GERMANY.—Much rain and unseasonably high temperature have cleared away the ice from inland navigation, but have not improved the tone of grain markets, which are more dependent for their cue upon American cables than upon the healthier influences of supply and demand.

RUSSIA.—In the south the weather continues mild and damp; snow has fallen again in Central and Eastern districts; there is nothing of importance to say about crop prospects, farmers are already busy where the land is clear, and spring sowings will soon become general. The approach of the New Year (old style) has a quieting influence upon trade everywhere; the milling demand for wheat continues good, but the wretched state of the roads prevents vehicular traffic, and thereby supplies are stopped.

HUNGARY.—Crop conditions continue satisfactory. Weather dull, damp, and very mild. Business at Budapest during the last few days was quiet, but yesterday there seems to have been a sudden upspring in term wheat, which closed 10d. per 480 lb. higher, with demand active to the last.

ROUMANIA.—The condition of the young cereal crops leaves little to be desired, and snow would be welcomed to protect the late sown fields.

SPAIN.—No weather report to hand. Barcelona market has been quiet. Millers buy wheat sparingly, as flour sells slowly. Feeding stuffs tend easier.

ITALY.—The latest crop accounts are satisfactory.

UNITED STATES.—The wheat plant is tender in some sections, but the general position favours good results, barring the development of adverse conditions later. Farmers are selling live stock and holding grain, especially wheat.—*Dornbush.*

We are in receipt of a copy of the thirtieth annual circular of the West Norfolk Farmers' Manure and Chemical Company, Ltd., King's Lynn. As in previous years, it is an interesting review of the past year from an agricultural point of view.

Farm Fire near Maidenhead.—A destructive fire occurred on Thursday night at Knowl Hill, near Maidenhead, on Micklem Farm, belonging to Mr. William Tomlinson. The cause of the conflagration is unknown. It originated in a barn, which was totally destroyed, together with other outbuildings, two corn ricks, and a threshing machine and gear.

Interesting Presentation.—Mr. James Forbes, M.V.O., King's Commisioner at Balmoral, who recently retired from his Majesty's service in order to superintend the management of the Duke of Atholl's estates in Perthshire, has been presented with a massive silver bowl and candelabra, the former being a replica of the Monteith bowl in possession of the Vintners' Company, London, 1702, as a mark of esteem from those employed under him. The presentation was made at Abergeldie Castle, in the name of the retainers and tenants on the Royal estates.

Light Railways.—The Board of Trade has recently confirmed orders authorising the construction of light railways in the Boroughs of Jarrow and South Shields, in the County of Durham; in the City of Worcester and in the rural districts of Pershore and Upton-on-Severn, in the County of Worcester; in the County of Sussex, between Northiam and Rye; in the parish of Clifton, in the rural district of Barton-on-Irwell, in the County Palatine of Lancaster; and in the County of Leicester, from Loughborough to Mountsorrel, and in the Borough of Loughborough.

CORN MARKETS.

LONDON.

Mark Lane, Monday.—Malt: A quiet trade. Barley: Grinding 3d per qr cheaper; malting rather dearer. Wheat: Firm. Oats: Steady. Maize: About 3d per qr lower on the week. Flour: Unchanged.—NIXON, GOWER AND CO.

Mark Lane, Wednesday.—There was only a small attendance at market, and buyers evinced little desire for fresh business, but the general tendency of prices denoted steadiness. Home-grown wheat, though slow, inclines in sellers' favour, the supply being still scanty. Good reds about 29s 6d per qr delivered. American unchanged. No. 1 Northern Manitoba, 31s 9d ex ship. Hard Kansas Winters, 30s 3d ex ship; 30s 9d ex quay. Flour unaltered. Iron Duke quoted 20s ex store. Grinding barley neglected at the recent decline. Odessa, 18s 6d ex ship. Oats the turn better in tone, and maize unchanged. Beans and peas remain at late high prices, while sparingly submitted. Arrivals of grain this week: English and Scottish: Barley, 170qr; maize, 120qr. Foreign: Wheat, 8,960qr; barley, 1,540qr; oats, 57,200qr; beans, 610qr; peas, 190qr; maize, 22,410qr. Flour, 40,060 sacks.

Mark Lane, Friday.—To-day's Exchange was thinly attended, and what little business transpired proved unimportant. Prices were without material alteration. The supply of English wheat continues to come up very sparingly, as town millers still manifest no inducement to farmers, while country markets continue wanting, and prices keep firm. Whites range at 29s 6d to 31s, and reds at 28s to 30s 6d per qr., delivered up. Foreign descriptions unchanged, and arrivals off the coast continue small. Sellers of American descriptions evinced no desire to press. No. 1 Northern Manitoba held for 31s 9d ex-ship; No. 1 hard Manitoba, 32s ex-ship. Hard Kansas, Winters, 30s 9d landed, and nominal ex-ship. Flour generally firm, despite a poor consumptive demand. Town households were again fixed this afternoon at 23s 6d; and whites 3s per sack more. Whole meal, 172s per ton. Grinding barley easy. Odessa 18s 6d asked ex-ship to come up, and 19s ex-quay. English malting well maintained, useful types remaining scarce up to 40s. Attention is still being paid to anything suitable for spring seed sowings at 27s to 30s. Inferior sorts continue plentiful. Oats, although slow, were fairly steady. English very firm. Holders of beans and peas remain indifferent, despite rather less money being named for the former recently.

COUNTRY.

Ashford, Tuesday.—Trade for wheat firm, with a little more inquiry. No improvement in prices, which ranged between 28s and 30s for both red and white varieties. Oats up to 23s; and maize, 28s per quarter.

Banbury, Thursday.—Wheat, red (new), 28s to 28s per qr.; beans (old), 37s to 39s per qr.; oats, 17s to 20s per qr. Market firm to 6d or 9d more money.

Birmingham.—Although fairly well attended the market was quiet. English wheats were unchanged on the week, realising 10s 6d to 11s per bag. Foreign wheats unchanged to 3d lower. Grinding barley 18s to 19s 3d per qr. Sharpness flat maze, 4s 9½d per cental Liverpool. English oats very scarce, and English beans 3s per bag dearer.

Boston, Wednesday.—Wheat, 28s 6d to 29s; malting barley, 26s to 31s; oats, 20s to 21s; peas, 52s to 56s; beans, 34s; grinding barley, 22s 6d; maize, 25s 9d.

Braintree, Wednesday.—There was a large attendance, but trade ruled quiet. Prices showed no inclination to rise.

Bristol, Thursday.—Since our last a moderate trade has passed. To-day English wheat was in fair supply, and made about 6d advance. Foreign 3-1 higher. Barley 3d dearer. Maize and oats both 3d to 6d lower. Demand for flour not large, consumers being reluctant to pay the advance.—GRACE BROTHERS.

Bury, Wednesday.—Wheat: The supply was barely sufficient to meet the local demand. This made trade firm, and prices were fully equal to last week's. Reds and whites, 28s 6d to 29s 6d per qr. Barley in about average supply, with a steady demand for all useful samples, running from 28s to 33s per qr. Not many better sorts on offer, but some trade at 34s to 36s per qr. Feeding corns very firm, except maize, which was steady, but no better on the week.

Cambridge, Saturday.—During the week trade has been quiet. Supplies are fair, but many samples lack condition. Spring corn is sparingly offered, and there is some demand for parcels for seed. At this market, to-day, we had a good supply of wheat. Trade was quiet, but no change can be noted in values. Red, 28s to 29s; and white, up to 29s per 504lb. Barley is falling off in quantity offering, and prices are against the buyer. Some inquiry for seed lots. Oats very firm.

Carlisle, Saturday.—Better supply of oats in our market to-day; good sale at late rates; new 20s 6d to 22s 6d, old 23s to 23s 6d per 336lb.—THOMAS ROBINSON.

Chester, Saturday.—English grain met more inquiry, and wheat is quoted 2d dearer. Oats in good demand at similar advance. Beans and barley firmer. Wheat, 4s 4d to 4s 6d per 75lb; malting barley, 3s 8d to 3s 9d per 60lb; grinding barley, 3s 3d to 3s 6d per 64lb; old oats, 3s 4d to 3s 6d; new oats, 2s 10d to 3s 1d per 46lb.

Chichester, Wednesday.—There was a moderate supply of wheat on offer, and trade was firm at fully last week's prices. A similar remark applies to other departments. The attendance was about up to the average.

Colchester, Saturday.—Wheat: Small supply; very firm market at the extreme prices of last week. Beans, peas and oats fully maintained.—FRANCIS & Co.

Glasgow, Wednesday.—There was a good attendance at our market to-day. Wheat and flour are quiet, and prices rather in buyers' favour. Indian corn and round maize quiet, and about 3d per 280lbs cheaper. Foreign oats quiet at late rates. Home oats slow, and 3d to 6d per 264lbs easier. Grinding beans scarce on spot, and rather dearer. Canadian pease unchanged. Barley steady. Bran and thirds steady, and unchanged. Oatmeal dull.—GIBSON & CLARK.

Ipswich, Tuesday.—Wheat, with a rather better supply, was steady, at last week's prices, although the condition of samples was hardly so good; reds 29s to 30s; whites 29s to 30s per qr. Barley was in good average supply, with a fairly healthy demand for all useful parcels, running from 28s 6d to 33s per qr; a few better class parcels made 34s and 35s per qr; grinding corn firm; foreign 3d lower. Oats: Last week's prices were well maintained, good parcels being worth fully 23s to 26s per qr. Beans and peas a small but firm trade. Lentils: German scarce and nominal: Indians, to arrive, 33s per 504lbs. Maize quiet, and unaltered; new round 24s to 24s 6d: old round and flat nominal. Linseed cakes firm, at £8 5s to £8 10s per ton. Cotton cakes £5 5s per ton. Bran easier, at £5 10s per ton.

Leeds, Tuesday.—Wheat and flour stocks in the United Kingdom prove lighter than expected, and shipments continue moderate. The American markets display great strength, and Continental ones follow suit; millers in this country, whether they like it or not, have to pay more money, and with an improved consumptive demand for wheat, last week's rates are exceeded, Russians and Americans being 6d dearer; barley, unaltered; maize, 6d lower; beans and oats, steady.—DUNNS AND CO.

Leeds, Friday.—Both English and foreign wheats fully maintain Tuesday's advanced prices, with a further slight rise for finest qualities, English making from 30s to 31s, and foreign 28s to 31s 6d. Flour the turn dearer, and all other articles very firm.

Lincoln, Friday.—Good supply of wheat, which sold at the full rates of last week, top price being 31s qr. Malting barleys, small show, and very firm at recent quotations. New maize a trifle easier, but old maize, beans, and peas very firm. Oats a little dearer.

Leicester, Saturday.—Fair supplies of wheats. Dry samples in better demand at 28s to 31s 6d per 36 stones. Malting barley a better trade. Grinding barley quiet. Fine oats in very good demand.

Liverpool, Friday.—The market has had a fair attendance, but wheat is only in moderate demand, resulting in a quiet trade, with prices unchanged from last market day, the gain of ½d in the interim being lost. Flour continues to hold steady at previous rates, but only a slow trade is passing in foreign. A slight improvement is to be noted in domestic flours; prices unaltered. Maize—Mixed is very scarce, but is ½d lower, with a quiet trade. European is unchanged to 1½d lower, but meets a good demand at the decline, Odessa selling freely at 4s 10½d. Plate meets a fair inquiry, but only a moderate trade is in progress at 1d decline. Barley is very quiet for malting without alteration. Feeding slow, but steady. Beans are firmly held, but inactive. Peas had a moderate inquiry at a reduction of ½d per cental for Canadian. Oats are very steadily held, with only a small inquiry at late rates for English. Foreign sorts are steady without change in price. Oatmeal firm, but inactive at quotations. Oilcake continues to have a brisk demand at last market day's full prices.—SEGAR AND TUNNICLIFFE.

Maidstone, Thursday.—Trade for wheat to-day very slow. Mild, dark weather affects the condition, and with a slack demand, the tone is very weak and inclined to relapse. Other grain quite a small business, the prices such as to cause buyers only to supply for passing needs. No change in rye, tares, hemp, bran, sergum, or millet.

Manchester.—The tendency this week has been for the most part towards slightly higher rates. English wheat is quoted at fully last Thursday's prices, but foreign is rather worse to buy. Demand limited. Flour is quoted 6d per sack dearer, but here also business is only of retail extent. Indian corn tends against buyers. Oats and barley quietly steady, in odd quarters. Peas and beans are slightly cheaper, but mostly unchanged.

Newcastle-on-Tyne, Saturday.—Wheat at our to-day's market ruled steady at last week's quotations; maize favouring buyers; beans and peas a fair demand, last week's prices maintained; barley quiet, no change in values; oats in buyers' favour.—JOSEPH POLLARD & Co.

Newport, Wednesday.—Wheat steady, and no change. Maize slow demand, and 3d to 6d cheaper on the week. Barley, oats, and beans, no change in price. Flour, fines 23s 6d per sack. Offals were dearer.

Northampton, Saturday.—Wet day, stormy and unpleasant. Small market; supply limited; demand inactive. Quotations very firm; in some cases for very fine samples of wheat a trifle dearer. White wheat, 28s to 30s; red, 27s to 29s; barley, 26s to 32s; grinding ditto, 21s to 25s; oats, 19s to 22s; old fine, 25s; beans, 33s to 34s; old fine, 40s; flour, 22s to 23s; fine, 26s

Norwich, Saturday.—Wheat was in better supply today, but with no new feature in the trade. Only a small supply of barley offering, prices being about the same as last week. Mild and open weather continues. Wheat, red, 28s 6d to 29s per qr; weight, 63lbs per bus. Imperial corn inspector's return for the week ending January 6th, 1902: Wheat, 2,477, 26s 5¾d; barley, 5,180.5, 28s 7½d.—J. ARTHUR MILLS.

Nottingham, Saturday.—Wheat in moderate supply; fair trade; values in sellers' favour. Barley, less offering; trade steady at full rates. Oats and beans small show, and each 6d higher.—ROBERT HUBBLE.

Peterborough, Saturday.—The supply of wheat today has not been large, but trade was flat, and last week's prices were scarcely maintained. Not much barley offering, and more money asked for it. Oats and beans firm.—THOMAS HILL & SON.

Plymouth, Thursday.—Moderate attendance. Wheat dearer; maize unaltered, spot scarce; barley and oats steady.—ORLANDO DAVIS AND Co.

Reading, Saturday.—We had an excellent attendance in the Exchange here to-day, but trade was rather quiet. Wheat came to hand plentifully, and where sales were effected the prices realised were fully up to last week's quotations. Barley also was in good supply, but here, again, the demand was limited. Recent rates, however, were fully upheld, as well as for oats, beans, and peas.

Ripon, Thursday.—There is a scarcity of samples on offer. The attendance is very thin, and little business is being done. Wheat, English (new), 29s 6d to 30s 6d; ditto foreign, 22s to 33s; barley, grinding, 22s 6d to 23s 6d; ditto malting, 26s to 31s; oats (old), 24s to 25s; ditto (new), 21s to 24s; round maize, 27s to 28s per qr.; beans, 1s per stone.

Romford, Wednesday.—Wheat trade firm at last week's prices. Only a small supply on offer. Red wheat 28s, white 28s 6d to 30s per qr.

Sheffield, Tuesday.—Very little change in the wheat market, sellers maintaining last week's prices for both English and foreign wheat. Oats 6d per qr dearer; beans firm, and corn 6d a qr cheaper. Barley unchanged. Quotations:—Wheat, white, 30s to 31s; ditto, red, 30s 6d to 31s per 504lb; oats, new white, 21s 6d to 22s 6d; ditto new black, 20s to 21s per 336lb; peas, grinding, 32s to 34s; ditto blue, 53s to 80s; beans, Egyptian, 35s to 36s per 504lb; ditto English, new, 37s to 37s 6d per 532lb; barley, grinding, 21s 6d to 22s; ditto malting, 28s to 32s per 448lb; Indian corn, small, 25s to 26s; ditto American mixed, 27s 6d to 28s per 480lb.

Spalding, Tuesday.—At the Corn Exchange wheat was 3d to 6d dearer, making 29s per qr. Oats a firm trade, at 21s 6d to 22s. Beans, peas, and barley firm and unchanged.

St. Neots, Thursday.—There was not a great quantity of wheat on offer, and prices were very firm, but there was not much business passing. The trade for barley was quiet, at rates not quotably altered. Oats and beans firm.—ELGOOD AND SON.

Stockton, Wednesday.—A small supply of farmers' wheat, which made 30s to 32s per qr. Foreign wheat trade has been firm during the week, and holders are asking 6d to 9d per qr more money, the demand being fair. Oats and maize 3d easier. There was not much malting barley showing, which made late rates.

Sunderland, Saturday.—Fair supply of grain. Wheat quiet, unchanged. Spring corn steady. Arrivals coastwise, oats 420qrs, foreign nil.—E. & F. RICHARDSON.

Wakefield, Friday.—There is no material change in the trade since Tuesday; firmness is still the order of the day, America and Russia rather raising their limits, but millers hesitate to buy wheat far ahead at any advance. Barley slow. Maize, beans, and oats unchanged.—DUNNS AND Co.

Wakefield, Friday.—In the small business passing on to-day's market, foreign wheat is quoted 3d to 6d per quarter dearer, and English remains steady at late rates. Malting barley is pressed for sale at about late prices. No alteration in feeding stuffs.—MICHAEL SANDERSON AND SON, LIMITED.

Winchester, Saturday.—Wheat in moderate supply; dry samples made fully late rates; inferior lots difficult to sell. Barley firm, with more inquiry. Maize 0d to 1s cheaper. Oats quiet, with easier tendency, not quotably lower. Flour 22s 6d to 23s 6d; quiet trade.—FEAR, COLEBROOK AND Co., LTD.

Wisbech, Saturday.—A small supply of grain. Wheat maintained late rates; red 28s 6d, white 29s. Oats and barley steady at late rates.—JAMES FLETCHER.

Wolverhampton, Wednesday.—The proceedings were of a quiet character. Quotations:—Wheat, new, 12s 6d to 13s per 216lb; oats, old 15s 6d to 16s, new 12s 6d to 13s 6d; beans, old 15s 6d to 16s 6d, new 14s 3d to 14s 9d per 196lb; barley, 31s to 32s per 448lb; maize, 27s to 28s per 448lb.

Worksop, Wednesday.—Moderate attendance and small show of grain. White wheat 28s to 29s, red wheat 27s 6d to 28s 6d, best malting barley 28s to 32s, secondary qualities 26s to 28s, grinding barley 25s to 26s, white oats 21s to 23s, black oats 19s to 21s, maize 27s to 28s per qr, fine sharps £6 to £6 10s per ton, barley meal £6 16s 8d to £7, bran £5 10s to £6 10s per ton, flour 1s 1d to 1s 3d per stone.

York, Saturday.—Large attendance, and a moderate show of samples of grain. Best wheat sold at 29s to 30s; medium, 27s to 28s per 35 stones; fine barley, to 30s; medium, 28s to 29s; common, 26s to 27s per 32 stones. The demand was chiefly for the commoner sorts. Oats were more plentiful, but still maintained late rates. Blacks, 20s to 21s; short white, 21s to 22s per 24 stones. Beans, peas, and other feeding stuffs were firm.

FOREIGN.

Hamburg, Saturday.—Barley Report.—Market rules quiet here, but prices are maintained, as holders are by no means pressing, and finest is evidently getting very scarce. In the meantime the demand is unsatisfactory, as maltsters and brewers seem to be well stocked. Besides from England we are hare of any orders, as the prices ruling here are considered too high. I quote good to fine new Chevalier, Saale, and Bohemian, 30s to 32s; extra fine, 33s to 35s; choice, 36s to 38s per 448lb. f.o.b. steamer here, or 2s per quarter more delivered E. C. of England.

Hamburg, Saturday.—Weather rainy and boisterous. Market firm for all articles, with a fair demand for wheat. The imports during the week amounted to 2,746 tons wheat; 244 tons rye; 525 tons barley; 5,085 tons maize. Hard winter wheat No. 2 is scarce and held at 30s to 30s 6d. Russian Azima, February-March shipment selling at 27s 9d to 28s 6d per 480lbs., while Kurrachee is offering at 28s 6d; Walla Walla at 33s to 33s 6d per 500lbs. ex ship at Hamburg. Rye firm; 9 15-20 South Russian, March-April, 22s 9d per 480.bs., c.i.f, Hamburg. Malting barley quiet, but fine quality continues scarce, and best Saal is eagerly taken by inland brewers at equal to 34s 6d to 35s f.o.b. Good Saale is held at 31s 6d to 32s 6d; Bohemian to arrive per barge at 30s 6d to 31s; fine Slovakian and Moravian on the spot at 37s 6d to 39s per 448 lbs f.o.b. South Russian feeding barley is selling at 18s 3d to 18s 9d per 400 lb c.i.f. Hamburg. Mixed maize floatng is offered at 25s 6d, but meets no attention. Odessa and Danubian, arriving in fair condition, is selling at 22s 3d to 22s 6d per 480lb ex ship here; demand slow.—JOHN TATLOCK.

Paris, Wednesday.—The situation of trade, as regards native wheat, exhibited a slight change from that of the previous week, in so far that on farmers' part there was a little more inclination evinced to sell at rather lower prices, if not in all, at least in the majority of the provincial exchanges. The exceptionally mild weather now being experienced is evidently the principal cause of the retrogression in values, as farmers deem it inadvisable to maintain any large stocks of wheat, which would certainly have the effect of depreciating prices later on should the growing crop, having well supported the rigours of the winter season, give promise of a bountiful yield. Offers were consequently more regular at to-day's reunion, farmers appearing to have abandoned their expectant attitude; however, millers have modified but little their mode of operations adopted since the opening of the campaign. In short, in face of more liberal offers there was still the same quietude in the demand. Quotations are as follows:—Choice red 37s 10d, ordinary 36s 11d, and white 37s 10d to 38s 9d per 480lb. Trade in foreign wheat is nil and tendency quiet. Term wheat opened weak at 15s decline, but closed supported at a slight advance, at the following rates: Jan. 38s 3d to 28s 8d, at the following prices:—Jan. 28s 2d, Feb. 28s 5d 39s 7d, March-June 39s 7d to 40s, and May-Aug. 40s to 40s 5d per 480lb. Flour.—*Fleur-de-Paris.*—The market was weaker at the opening, but closed at a slight improvement, at the following prices:—Jan. 28s 2d, Feb. 28s 5d o 28s 8d, March-April 28s 11d to 29s 2d, May-June 29s 2.1 to 29s 5d, and May-Aug. 29s 5d to 29s 8d per 280lb. Consumption marks flour.—Transactions are still within an ordinary compass among dealers and bakers, but millers firmly support their currencies owing to the high prices they have to pay for the raw material. Dealings in rye are still inactive, which is not at all surprising in presence of the dulness of the provincial centres. Under these conditions prices remain unchanged, but with a supported tendency. Here prices were nominally unaltered with, however, a few more sellers. Oats show a little firmer feeling, as farmers' supplies are already diminishing perceptibly. Transactions were still insignificant, and values of home-grown corn are quotably unchanged on the week. Barley is quiet, but unaltered. Trade is quite insignificant for maize, consumers reducing their provisions as much as possible.—*Dornbusch.*

FOREIGN CORN TRADE.

The shipments of grain from the chief exporting countries last week were as follows:—

	Wheat. Qrs.	Flour. Sks.	Maize. Qrs.	Barley. Qrs.	Oats. Qrs.

POULTRY AND PROVISIONS.

Smithfield, Saturday.—Supplies moderate, trade dull at the following quotations:—Fowls: Yorkshire, 3s to 3s 3d; Boston, 2s 6d to 3s; Essex, 2s 9d to 3s 6d; Surrey, 3s 6d to 5s; Sussex, 3s to 3s 6d; Welsh, 2s to 2s 3d; Irish, 1s 9d to 2s 3d; ditto ducks, 2s to 2s 6d; turkeys (cocks), 6s 6d to 8s; hens, 4s 6d to 5s 6d; geese, 4s 6d to 6s; country ducks, 2s 6d to 3s 6d; pigeons, 9d to 1s; quail, 10d to 1s 3d; wild rabbits, 8d to 10d; tame, 1s to 1s 3d each; Australian, 7s 6d to 8s 6d per dozen; pheasants, 3s 6d to 3s 9d; young partridges, 3s to 3s 4d; tame, 1s 9d to 2s per brace; hares, 2s 6d to 3s; leverets, 1s 6d to 2s; wild ducks, 1s 6d; pintail, 1s to 1s 3d; widgeon, 1s; teal, 10d to 1s; woodcock, 2s to 2s 3d; snipe, 6d to 10d; golden plover, 8d to 10d; black ditto, 5d to 6d; Russian capercailzie (cocks), 2s to 2s 6d; hens, 1s 8d to 2s each; blackgame, 1s to 1s 2d; partridges, 1s to 1s 2d each.

FRUIT AND VEGETABLES.

Covent-Garden, Saturday—Fair supply of greenstuffs met a quiet sale. Supplies of fruit were of fairly good extent, and met with steady support. Potatoes quiet of sale. Vegetables: Cabbages, 4s to 6s; cauliflowers, 8s to 10s per tally; beetroot, 1s 6d to 2s 6d, spinach, 1s 6d to 2s per bushel; turnips, 2s to 2s 6d; parsley, 1s to 1s 6d; leeks, 1s 6d to 2s 3d per dozen bunches; horseradish, 1s 3d to 1s 6d per bundle; Brussels sprouts, 1s 9d to 2s 3d per half-sieve; celery, 8s to 12s per dozen rolls; forced rhubarb, 1s 6d to 2s per dozen bundles; English onions, 6s to 6s 6d per cwt; Valencia, 6s 6d to 7s per case; potatoes, 45s to 70s per ton. Fruit: English apples, 3s 6d to 12s per bushel; Nova Scotian, 18s to 24s per barrel; Californian, 9s to 10s 6d per case; English grapes, 1s to 2s 6d; Channel Islands, 9d to 1s 6d per lb.; Almeria, 10s to 18s per barrel; Jaffa oranges, 8s to 10s; Denia, 10s to 16s; Valencia, 8s 6d to 12s 6d per case; pine apples, 2s to 5s each; lemons, 10s to 18s per case; English tomatoes, 4s 6d to 6s; Channel Islands, 3s to 4s 6d per 12lb.; Canary, 4s to 4s 6d per case; Redon chestnuts, 6s to 10s per bag.

POTATOES.

Goole, Wednesday.—There was a good attendance of buyers and farmers here to-day with a better demand; prices had an upward tendency. The Co-operative Company's price was 5s 9d per load of 18 stones for imperators and maerkers. Dates and giants, 6s per load; the best quality of dates made from 6 6s to 6 7s per ton; retail price, 6d per stone.

Borough, Saturday.—Heavy supplies to hand evidenced slow support; prices, however, about unchanged. Quotations:—Scotch Maincrops, 80s to 90s; Reading Giants Blacklands, 45s; Blacklands Up-to-dates, 45s to 50s; Lincoln silts, 60s; Gartons, Blacklands, 45s per ton.

Spitalfields, Saturday.—Market heavily supplied, and with no improvement in demand, business at about late prices ruled extremely slow. Quotations:—Best Lincoln Up-to-dates, 60s to 70s; Blackland ditto, 45s to 50s; Wisbech ditto, 50s to 60s; Scotch ditto, 60s to 65s; Scotch maincrops (grey soil), 70s; Lincoln maincrops, 80s to 90s; Reading Giants, 45s to 50s; and Blackland Gartons, 45s per ton.

HOPS.

Worcester, Saturday.—During the past week the inquiry for hops has improved, and resulted in a very fair amount of business being done. Choicest samples have been in request, and useful copper hops have also sold freely. At market to-day buyers were ready to give late rates but some holders would not give way, and still ask more than current prices. Several sales resulted of choice, medium, and cheap hops.

Worcester, Saturday.—At our new market to-day there were few growers offering their hops, but a fair quantity has been sold since our last market. The demand is for the best qualities, which are very limited; but for good useful sorts there is also a fair inquiry, and where growers will accept current prices, a fair business has been done.—PERCY AND CO.

THE BALTIC.

Wheat cargoes have been a very quiet trade. Sales have included Californian at 30s. 9d., Blue Stem at 30s. 9d., Walla Walla at 29s. 9d., South Russian Winter at 30s. 3d., Roumanian at 27s. 6d., Argentine at 29s. 9d., Australian at 30s., No. 1 Northern at 30s. 6d., and White Kurrachee at 30s. per quarter.

Maize cargoes have been a reactionary market, and weak holders have suffered rather severely. Money, however, is fairly cheap, so that there is a determined resistance to decline on the part of many of the leading houses. Sales included Argentine at 22s. 9d., Odessa at 22s. 3d., Salonica at 24s. 3d., Caucasian at 23s. 6d., Turkish at 23s. 6d., and American at 25s. 6d. per quarter.

Barley is 3d. lower for cargoes of Californian, which has changed hands at 24s. 9d. per quarter. Feeding barley has made 18s. 6d. for Odessa, and the same price for Roumanian.

Oats have been irregular, but closed weak. The sales comprise White Libau at 19s., Roumanian at 17s. 3d., South Russian at 18s. 6d., Black Swedish at 22s. 3d., and fine heavy New Zealand at 25s. per quarter.

Other cargo sales of the week comprise Roumanian rye at 22s. 6d., white Calcutta peas at 31s., Calcutta linseed at 51s. 6d., Argentine linseed at 48s. 3d., brown Cawnpore rapeseed at 38s. 3d., and Smyrna dari at 23s. per quarter. There have been two cargoes of Egyptian cottonseed sold at £6 6s. 3d. per ton on passage.

Cargo arrivals January 1st to 11th include five wheat, one maize, and one linseed. The arrivals in the same period of 1901 were six wheat, five barley, and one linseed.

Review of the British Corn Trade

DURING THE PAST WEEK

Written exclusively for the Mark Lane Express.

Wheat is growing uncommonly well, and farmers are pleased at seeing a thick, vigorous, and regular plant. Like the British Army, all we want is to see a little more of it. The year's average price, which was below seven-and-twenty shillings, sufficiently explains the declining acreage. The Argentine crop is turning out rather well, but the price realised at Mark Lane does not encourage increased cultivation, and there is a pause in the development of Argentine agriculture. In Australasia two colonies only have good wheat crops, and the large exports of 1901 will hardly be repeated. In America rapid alternations of severe cold and thaw are bad for the autumn-sown grain, and the same news comes from Germany. The Danube and the Black Sea are extraordinarily free from ice for January, and shipments go on briskly. Twenty-four hours may, however, bring a complete change in this respect, and no trade calculations can be built upon the basis of open ports in Russia or Roumania in January, February, March, or even April. A very remarkable feature of 1901 has been the development of Roumanian trade; the following return is therefore well worthy of attention. The Bulgarian exports, for which no returns are yet available, have also been larger than usual.

ROUMANIAN SHIPMENTS IN 1901.

Qrs	Wheat.	Barley.	Oats.	Maize.
Jan.	277,000	22,000	—	281,000
Feb.	354,000	121,000	—	241,000
March	55,000	50,000	—	13,000
April	172,000	58,000	—	169,000
May	288,000	203,000	—	410,000
June	128,000	50,000	—	1,108,000
July	19,000	20,000	—	603,000
August	161,000	15,000	—	360,000
Sept.	275,000	100,000	10,000	309,000
Oct	428,000	105,000	129,000	159,000
Nov.	513,000	400,000	265,000	190,000
Dec	430,000	94,000	118,000	428,000
Total	3,100,000	1,290,000	522,000	4,325,000

The shipments from La Plata in 1901 have been fair of both wheat and Indian corn. But they cannot be called excessive of either staple.

ARGENTINE TRADE IN 1901.

	Wheat. Qrs.	Maize. Qrs.
January	180,000	62,000
February	496,000	43,000
March	870,000	123,000
April	601,000	144,000
May	446,000	527,000
June	542,000	805,000
July	195,000	888,000
August	186,000	1,077,000
September	23,000	550,000
October	75,000	266,000
November	62,000	285,000
December	64,000	173,000
Total	3,746,000	4,553,000

Supplies on passage to the United Kingdom on 11th January are returned as follows:—

	1902.	1901.
Wheat, quarters	2,455,000	2,202,000
Barley, quarters	715,000	484,000
Maize, quarters	925,000	872,000
Beans, quarters	8,000	6,000
Flour, sacks	384,000	456,000

The wheat includes a large quantity of Californian, and not inconsiderable consignments from America. Australasia, and India. Both Russia and Argentina are represented by much smaller quantities than usual. The barley includes 190,000 qrs. of Russian and Roumanian, 460,000 qrs. of Californian, and 40,000 qrs of Turkish. The maize is mostly round and yellow corn. Very little flat is on passage. The beans, for the most part, are coming from Egypt, and the flour, as usual, is mostly American.

Imports of the week were heavy of maize, moderate of wheat and barley, fairly good of oats and flour. The total supply of breadstuffs was as follows:—

	Quarters.
English wheat	78,000
Foreign wheat	233,000
Foreign flour	130,000
Total	441,000

These supplies were about 126,000 qrs. below estimated current requirements.

Stocks of British wheat and of imported bread stuffs thus compare with a week ago:—

Qrs.	11 Jan.	4 Jan.
British	3,778,000	3,856,000
Foreign	2,827,000	2,953,000
Total	6,605,000	6,809,000

The imports of cereals in 1901 thus compare with recent years:—

	Breadstuffs. Qrs.	Barley. Qrs.	Oats. Qrs.	Maize. Qrs.
1901	23,746,000	6,259,000	8,357,000	11,231,000
1900	23,334,000	5,030,000	7,487,000	12,212,000
1899	23,002,000	4,919,000	5,715,000	14,467,000
1898	22,418,000	6,912,000	5,795,000	13,793,000
1897	20,631,000	5,278,000	5,859,000	12,358,000
1896	23,017,000	6,203,000	6,031,000	11,974,000
1895	24,816,000	6,157,000	4,954,000	7,956,000
1894	22,344,000	8,375,000	4,811,000	8,275,000
1893	21,877,000	6,396,000	5,017,000	7,673,000
1892	22,306,000	3,998,000	5,662,000	8,256,000
1891	20,692,000	4,891,000	5,960,000	6,259,000

It is only on a ten-years' comparison that the larger movements of the trade can be accurately measured. Wheat and flour imports appear to have attained a remarkably steady position. Barley imports in 1901 were larger than in the two preceding years, but smaller than in 1898. Oats seem to be a growing trade. Maize made a most remarkable advance in 1896, since when the trade has not done more on the whole than sustain the important increase in business then effected. The stocks of grain in London and Liverpool thus compare:—

	London.	Liverpool.
Wheat, qrs.	243,000	303,000
Barley, qrs.	133,000	70,000
Oats, qrs.	582,000	17,000
Maize, qrs.	46,000	158,000
Flour, sks.	399,000	43,000

London remains more than ever the capital of the oat trade, while Liverpool keeps its primacy as our chief port for maize.

There are very few price changes from a week ago. The weather has been against purchasing, and the advancing tendency expected to make itself manifest with January was dependent on the prevalence of ordinary winter rigour.

THE BALTIC, 1 p.m.

STATE OF TRADE.

Wheat cargoes are not a good sale, but prices are about maintained. Maize has opened 3d. lower for round and yellow. Barley and oats share in the general dullness.

BUSINESS DONE.

WHEAT.—Californian, 30s 6d, on passage; Walla Walla, 29s 6d, on passage; Australian, 30s 6d, on passage; Russian Winter, 29s 6d, on passage; Argentine, 29s, February shipment; No. 2 Red Winter, 29s 6d, February shipment; No. 1 Northern, 30s 3d, on passage; Fine Manitoba, 31s 9d, prompt shipment.

MAIZE.—Roumaniah, 22s 6d, May shipment; Russian, 22s 6d, on passage.

BARLEY.—Azoff, 19s, on passage; Odessa, 18s 9d., on passage.

OATS.—Konigsberg, 20s, prompt shipment; New Zealand, 24s, prompt shipment.

BEANS.—Egyptian, 31s, prompt shipment.

BUCKWHEAT.—Russian, 24s. prompt shipment.

COTTONSEED.—Egyptian, £6 15s 3d, prompt shipment.

Manitoba's Crop Yields for 1901,

The results of the last season in Manitoba are given in the bulletin issued by the Provincial Department of Agriculture at Winnipeg. With regard to the wheat crop the bulletin says that the average yield for the province is now given as 25.1 bushels per acre, and a total crop of 50,502,085 bushels. The Eastern district suffered most from too heavy straw, and heads only partly filled. The yield increased westward to the boundary of the Province, and was particularly heavy in the North-Western District. In the Rapid City district and westward and along the line of the Manitoba and North-Western Railway a wonderful crop, averaging 30 bushels to the acre, was garnered. The oat crop, although on the whole a good crop, was not up to expectation in many districts. Early sown oats are reported A 1, but late oats were very heavy in the straw, and in some districts rusted badly, so that the grain from these fields is light. A number of fields were thinned out badly by cut worms. The barley crop was generally reported as one of the best ever grown in the Province; heavy yield, and fine, plump berry. The Province has been specially free from any disastrous hailstorms. A few districts suffered slightly from the ravages of grasshoppers. Every section of the Province has been favoured this season with a bountiful harvest.

Weather Conditions.

From the time the seed was sown the conditions were most favourable to plant growth. Excessive growth put some crops partly down, and a few hot days were blamed for preventing wheat from filling properly. The ripening season, however, was almost perfect. The time of cutting satisfied everybody, and a record was made in all parts of the Province in cutting and stocking grain. Then for a month or six weeks farmers were almost in despair on account of continued wet weather, and so much grain in stock, but a change came, and Manitoba has experienced the finest of weather for threshing and marketing the great crop during October and November. A cold dip came the first day of November, stopping fall ploughing, but up to the date of issue of the bulletin (December 12th), weather conditions were most favourable for all outdoor works, and roads in splendid condition for marketing grain.

THIS DAY'S MARKETS

[FIRST REPORT.]

MARK LANE, MONDAY.

The market to-day commands a fair attendance, but the enquiry for bread stuffs is limited, and prices for English wheat are barely so good as last week. Fine No. 1 Northern American of the 1900 crop makes 32s. to 32s. 6d., new crop about 9d. lower than old. The best Australian from Victoria realises fully 31s. 3d., while there are samples of short berried New Zealand as low as 28s. 6d. Indian wheat is very scarce. Russian is dull at currencies. Argentine is scarce, pending new crop supplies. Maize is very firm for American, but Russian, Roumanian, and Turkish sorts are fully 1s. cheaper on the week, and 6d. decline may also be quoted in La Plata. The spot market for this article is much weakened by the "bear" movement on the speculative or "term" market for future delivery. Barley is quiet, there are a small number of steady buyers of Californian at 25s. to 26s., and of Russian at 19s. to 19s .3d. per quarter. The trade is expected to improve with the first touch of colder weather. Oats are rather neglected. South Russian at 18s. 6d., and Roumanian at 17s. 9d. have a certain quiet sale. The holders of English, Swedish, and New Zealand are very firm. Beans make 31s. to 31s. 6d. for samples from Tangiers, and peas 37s. for anadian. Malt is unchanged in price; there is a little more doing from last week at currencies.

(For Close of Market see foot of Column.)

CLOSE OF THE MARKET.

By Telephone, 2 *p.m.*

THE MARKET CLOSED WITH DULNESS, BUT WITHOUT DEPRESSION.

THE FLOUR TRADE.

MARK LANE, Jan. 13

There was a fair demand for country makes at 21s. to 24s., the latter price being demanded for the special brands of well-known East Anglian firms. The price of London makes was fully maintained. American flour was rather firmer on the week for the secondary types; it is an anomaly of current trade that the finest qualities should be the most difficult to sell. There were hardly any buyers of Hungarian, the prices asked being decidedly high. Australian had a small but steady sale. French flour was neglected. Bran middlings and oatmeal were all rather in buyers' favour, the recent weather having reduced the retail requirements in a noticeable manner.

LONDON TERM MARKET.

This market is held twice a day except on Saturday, when there is no afternoon call. The market is open to elected members only. No business except for future delivery is done, and the smallest quantity that can be purchased is 1,000 quarters, or 4,800 centals. The name of the month stands for guaranteed delivery (if required) on or before the last day of that month, and the following have been the prices per cental recently made :—

WHEAT.—Calls.	Jan. s. d.	March. s. d.	June. s. d.
Jan. 6 11 a.m.	6 3	6 5	6 4
4 p.m.	6 3	6 5	6 4
Jan. 7 11 a.m.	6 4	6 5	6 4
4 p.m.	6 4	6 5	6 4
Jan. 8 11 a.m.	6 4	6 5	6 4
4 p.m.	6 4	6 6	6 5
Jan. 9 11 a.m.	6 4	6 6	6 5
4 p.m.	6 4	6 6	6 6
Jan. 10 11 a.m.	6 4	6 6	6 6
4 p.m.	6 4	6 6	6 6
Jan. 11 11 a.m.	6 4	6 6	6 5
To-day noon	6 4	6 5	6 5

The "bear" movement in maize continues, and spring delivery was obtainable this morning at 4s. 8d. per cental.

The Term Market standard wheat is No. 1 Northern Spring American sold on the Duluth certificate. Other sorts of wheat can be bought at the above prices plus or minus agreed difference between the other sort and the standard quality. Quotations are by the "true hundredweight" or cental of 100 lb. We do not give fractions of a penny per cental. The maize quoted is fair average quality from the United States.

The deposit required from members of the Term Market has been fixed at £50 minimum and 1s. per quarter margin on any purchases above 1,000 quarters.

The Term Market (while the "Baltic" is rebuilding) is temporarily situated at the Great Eastern Hotel, No. 190, Bishopsgate-street, ground floor.

GRAIN AND FLOUR FACTORS' REPORTS.

Offals.—Bran at the moment is rather slow sale and tendency of prices in favour of buyers.—GREENHILL BROS. (Belfast).

Flour.—In view of strong cables from America spot flour is being quoted 6d. to 1s. per sack higher; there is, however, but little response so far from buyers. Values on spot are as follows: 1st Spring Patents, 24s. 6d. to 25s. 3d.; 2nd Spring Patents, 23s. 6d. to 24s.; American Winter Patents, 24s. 6d. to 25s. 3d.; Extra Fancies, 22s. 6d. to 23s.—GREENHILL BROS. (Belfast).

Flour.—Values are again 6d. per sack higher, and there is a fair trade passing in winter wheat grades. Grain: Round and flat Indian corn are depressed owing to heavy shipments and arrivals. Oats and oatmeal are in buyers' favour. Oilcake firm. Pease, beans, and barley are quiet. Millstuffs: Bran and thirds steady.—MCKINNON AND MCDONALD (Glasgow).

Arrivals are small of both wheat and flour. Trade firm; prices fully supported. Maize been lower for round; flat unchanged. Barley quiet; prices unchanged. Oats dull and 3d. per quarter cheaper.—COVENTRY, Mark Lane.

Flour firm at an advance of 6d. over the price of this day week. Forward business impracticable, owing to the prohibitive prices asked from the mills.—T. S. MEDILL AND SONS.

SEEDS.

London, Monday.—Messrs. John Shaw and Sons, Seed Merchants, of Great Maze Pond, Borough, London, S.E., report a fair all-round business now doing. English red cleverseed offers more freely, and choice samples of same are readily placed, but inferior qualities are more difficult of sale. Fine parcels of alsyke and white are scarce, and realise high rates. Trefoil, meantime, keeps steady, whilst the recent advance in perennial and Italian ryegrasses is well maintained. Tares are more inquired for, but the long prices asked restrict the demand. Linseed somewhat favours buyers, but mustard and rapeseed are unchanged. Canary and hempseed are both dearer. The late unseasonably mild weather curtails the consumption of blue peas and haricot beans. The Board of Trade returns give the imports for the last month into the United Kingdom, of clover and grass seeds as 44,912 cwts, value £93,704, as against 29,280 cwts, value £60,736, for December, 1900.

FEEDING STUFFS.

Mark Lane, Monday.—Linseed Cakes.—The tone of the market has distinctly improved during the last few days. Country dealers have shown more inclination to operate at present prices, but with fairly heavy accumulation of foreign, values, although firm, are not quotably dearer. Russians sell steadily, and are unchanged in price. Americans are still obtainable at last week's prices. Calcutta made in bags remain relatively cheap, with quotations unchanged. English are the turn dearer, and crushers now ask 2s 6d per ton over last week's prices. Cotton Cakes.—There is a fairly active demand, probably owing to the low figures at which these cakes are obtainable, but with a considerable quantity in second hands, values remain quiet, best Egyptian offering at last Monday's prices, and English 1s 3d per ton dearer. Decorticated are in more request and slightly dearer, and meal slightly easier. Rape cakes dull, East India offering at 5s per ton less money. Maize germ meal.—Both American and English are scarce and without change. Rice meal.—Some steamer parcels of Rangoon afloat offer at £5 1s 3d to £5 2s 6d, which is also the price asked for January and February shipments, while landed lots are unchanged in price :—

ROBERT AND JOHN HEWETSON.

CATTLE.

Metropolitan Market, Islington.

Monday, Jan. 13th, 1902.

	British.	Total.	Jan. 14th, 1901.
Beasts	1530	1,530	1,500
Sheep and lambs	8,470	8,470	7,760
Calves	20	20	—
Pigs	—	—	130
Milch cows	45	45	50

Quotations per 8 lbs. (sinking the offal).

ENGLISH.	Inferior. s. d.	Second. s. d.	First. s. d.
Beasts	2 8	4 0	4 9
Sheep	3 4	4 10	5 6
Lambs	5 6	6 0	6 8
Calves	3 0	4 8	5 0

Milch cows, per head, £15 to £22 10s.

British arrivals include as follows:—Scotland, 102; Eastern Counties, 588; Midland, Home, and Western Counties, 707; Devon, 30; Ireland, 103.

In the beast market to-day, compared with Monday last, there was an increase of 100 head, chiefly from Scotland, Ireland, and Norfolk. Trade was of a slow nature, but late rates were maintained. Fat cows, being in excess of the demand, were slow of sale, even at a reduction of 2d per 8lbs. On the other hand, fat bulls, being shorter, remained firm.

The following are top quotations per 8lbs. (sinking the offal) :—

	To-day.	Jan. 14th, 1901.
Scotch	4s 8d to 4s 9d	4s 7d to 4s 9d
Devons	—	4s 6d to 4s 8d
Herefords	4s 6d to 4s 7d	—
Norfolks	4s 6d to 4s 8d	4s 6d to 4s 8d
Runts	4s 4d to 4s 6d	—
Lincolns	4s 4d to 4s 6d	4s 4d to 4s 6d
Irish	4s 2d to 4s 4d	—
Fat cows	3s 8d to 3s 10d	3s 6d to 3s 8d

In the Sheep Market there was a decrease of 1,030 in the number present. For wether sheep trade was firmer at late rates; best quality ewes, being short in number, made more money. The few good lambs on offer sold readily. The supply included 300 Scotch and 4,390 from eastern counties.

Undermentioned quotations are at per 8lbs. (sinking the offal), and are for the best of each class penned :—

	To-day.	Jan. 14th, 1901.
7½ to 8-st. Downs	5s 4d to 5s 6d	5s 8d to 5s 10d
9-st. ditto	5s 2d to 5s 4d	5s 6d to 5s 8d
10-st. Half-breds	4s 10d to 5s 0d	5s 2d to 5s 4d
12-st. Lincolns	4s 6d to 4s 8d	4s 10d to 5s 0d
10-st. Down ewes	4s 0d to 4s 2d	4s 4d to 4s 6d
11-st. Half-bred do.	—	4s 0d to 4s 2d
5-st. Down lambs	6s 6d to 6s 8d	—
6-st. Half-bred do.	5s 10d to 6s 0d	—

Calf trade nominal. No pigs on the market.

Central, Monday.—Good supplies; trade slow. Beef carcases, 3s 10d to 4s; hindquarters, 4s 4d to 4s 6d; roastings, 5s to 5s 8d; sheep, ewe, 2s 6d to 2s 10d; wether, 3s 10d to 4s 2d; hindquarters, ewe, 4s to 4s 4d; wether, 5s to 5s 4d; pigs, large, 3s 8d to 4s; small, 4s to 4s 4d.

ST. IVES (HUNTS), Monday.—Beasts, 223: sheep, 1,515 pigs, 380. Beef, 7s. 6d. to 8s. 3d.; mutton, 7s. 7d. to 9s. 4d., pork, 6s. 6d. to 7s. 3d.; sows, 5s. 6d to s. 6d. Fat beasts brisk trade; stores slow; fat and store sheep middling; fat and store pigs good. Milch cows fair prices, £14 to £22.

FOREIGN CATTLE

Deptford, Monday.—Beasts, 1,203. There was a fair average supply of beasts for a Monday's market, consisting entirely of shipments from the United States, trade for which was of a very slow nature at a slight decline on Monday's currencies. The best on offer to dress about 720lbs made 4s 6d per 8lbs, offal given in; second quality, 4s 3d. Sheep, 1,406, consisting of consignments from the United States, trade for which ruled slow, carcass butchers being in no hurry to buy. Best pens made from 3s 8d to 3s 10d per 8lbs., offal given in. On Saturday 406 States beasts, 245 States sheep, and 700 Canadian sheep were on offer. Beasts were firm in value, best making 4s 6d and occasionally 4s 7d per 8lbs. Sheep trade dull and heavy; States quoted at 3s 8d and Canadians 3s 4d to 3s 6d. The following were the numbers on offer on the corresponding day last year, with the current top rates :—

HAY AND STRAW.

Manchester, Wednesday.—Hay, 6½ to 7½d; clover, 6¾d to 8d; ditto Canadian clover, 6¾d; straw (wheat), 5¾d to 6½d; ditto (oat), 6d to 6½d per stone.

Whitechapel, Saturday.—Supplies met a fair demand at steady prices. Best clover, 95s to 110s; inferior ditto, 80s to 90s; specially picked hay, 117s 6d; good ditto, 108s; inferior ditto, 80s to 90s; mixture and sainfoin, 90s to 110s; and straw, 28s to 40s per load.

PROVISIONS.

London, Monday.—The arrivals from Ireland last week were 3,049 bales bacon, and from foreign ports 8,455 bales bacon.

The Bacon market was quiet last week, especially for all fat Irish and Danish selections, and these were easier in price. Irish ranged from 52s. to 57s. up to 63s. Danish ranged from 50s. to 57s. up to 63s., and Canadian from 46s. to 51s. and up to 56s.

The Butter market was quiet, and prices showed little alteration from previous week.

The Lard market was slightly weaker, especially for American.

Derby Horse Repository Sales.

The pocket list of fixtures to be held at the Cattle Market, Derby, issued by the auctioneer, Mr. Andrew Smith, gives the following dates and sales :—

February 5th.—Heavy and light horses.

March 26th.—Spring sale of Shire-bred mares, stallions, etc; also light horses.

May 29th.—Sale of heavy and light horses.

July 31st.—Sale of heavy and light horses.

October 1st.—16th annual sale of Shire-bred foals.

October 2nd.—Sale of Shire-bred mares, fillies, colts, and geldings.

October 22nd.—Special sale of Shire-bred foals, mares, geldings, etc.; also light horses.

December 3rd.—Sale of heavy and light horses

LIVE STOCK AND MEAT TRADE REVIEW.

(WRITTEN SPECIALLY FOR THE "MARK LANE EXPRESS.")

Trade in London.

The trade for fat beasts at Islington, both for prime and second quality, was again of a very slow and dragging nature, especially for the latter, which must be written lower in value, the former only with difficulty obtaining last week's rates. The supply consisted chiefly of consignments from the North and Midland counties, neither being up to the usual quality in consequence of the failure of the root crops. For fat butchering cows and bulls, our both market days, especially Monday, there was a good demand, rates consequently being firmer. At Deptford, markets were only held on Wednesday and Saturday, arrivals consisting entirely of shipments from the United States; here trade ruled steady, no alteration in value being noticeable; the total number on offer at both markets was 3,200, as against 3,469 during the previous week; the supply consisted of 1,550 British (increase 280), and 1,650 from the United States (decrease 549). The following were the top rates paid per 8lbs. (sinking the offal):—90-stone polled Aberdeens, 4s. 8d. to 4s. 9d.; 90-stone Devons, 4s. 6d. to 4s. 8d.; 90 to 95-stone Herefords, 4s. 7d.; 95-stone Runts, 4s. 6d. to 4s. 7d.; 100-stone Lincolns, 4s. 6d; 110-stone ditto, 4s. 4d.; 95-stone Irish, 4s. 4d; 90-stone States, 4s. 6d. to 4s. 7d.; 100 stone fat cows, 3s. 10d.; 100-stone fat bulls, 3s. 6d. to 3s. 8d. In consequence of the larger supply of sheep at Islington trade was extremely slow, notwithstanding that sellers were freely willing to accept 2d. per 8lbs. less money, this remark applying to both wethers and ewes, though the best of the latter made late rates. The few lambs on offer were soon disposed of. At Deptford the business was confined to Saturday, and was very dull; the total number of sheep penned at both markets was 11,575, consisting of 9,930 British (increase 1,870), and 1,645 American (decrease 798); best pens made per 8lbs. as follow:—7½ to 8-stone Downs, 5s. 6d.; 8-stone Scotch, 5s. 6d.; 9-stone Downs, 5s. 4d.; 10-stone Downs, 5s. 2d.; 10-stone Half-breds, 5s.; 11-stone Hampshires, 5s. 2d.; 12-stone Lincolns, 4s. 10d.; 9-stone States, 3s. 10d. to 4s.; 10-stone Down ewes, 4s.; 11-stone Half-bred ditto, 3s. 8d.; 5-stone fat Down lambs, 7s.; 6-stone Half-bred ditto, 5s. 8d. Calves numbered only 25 and pigs 120; the best of the former were quoted at 5s., and the latter 4s. 4d. to 4s. 6d.

Trade in the West.

With rather more favourable weather than we have been having of late, we are glad to note a slight revival in business in local stock markets, both in respect to fat as well as store things. Some impetus has been given to operations in fat stock in consequence of butchers having completely exhausted the supplies which they laid in prior to Christmas, whilst the improvement in the weather and the subsidence of the floods in many districts has induced a more speculative spirit on the part of many who were in no mood to buy when in many cases their land was half under water. No doubt rain was much wanted; but we should think that, with the fall there has been, the inadequacy has now been fully met—at least that is undoubtedly the case throughout Dorset, and also in many parts of Somerset, Wilts, and Hants. With a better inquiry for bullocks there, with an attenuated supply, being a decidedly improved tone as regards mutton, which has evidently touched its lowest price; at least, indications are not wanting that this is the case in this part of the country. Whilst all the better-most grades of fat beasts make 11s. to 11s. 6d. per score (or from £18 to £23 apiece for all the better weights, either in steers or heifers), with a good selling trade at the price, mutton has undoubtedly become a good deal stronger since our last report, and we consider we are quite justified in quoting prices from ½d. to 1d. per lb. better than they were—1d. in the case of the very best class of Sussex or Southdown wethers, which are again making 8d., and ewes 6½d. to 7½d., the short deliveries coming to hand at all the leading centres importing unusual buoyancy to the trade, which is matter for warm congratulation after the protracted "slump" there has been in the fat sheep market. The few house-fed lambs which are being marketed—mostly cross-breds—also attract very close attention, and the best command quite fancy prices, 10d. to 10½d. per lb., which is likely to be maintained whilst supplies continue as scarce as is the case just at present. The veal trade has also participated in the all-round improvement that is being realised, good ripe calves of medium weights making from £4 up to £6 apiece (or 8d. per lb. for the best and 7d. to 7½d. for seconds). Pigs, though not quotably dearer, are evincing more activity, especially in the lighter weights, which are again selling very freely up to 10s. 6d, if not more, though we cannot quote the ordinary runs of baconers more than 9s. to 10s. Fat sows vary in price as they do in quality, medium weights 8s. to 8s. 6d., and very coarse and heavy pigs 7s. to 7s. 6d. And as there are by no means heavy supplies on hand that we can learn of of any kind of stock for slaughtering purposes, we think that there is good reason to anticipate a better trade all round for some little time to come. As regards stores, the chief inquiry is for milch beasts, which meet a very quick sale at from 17 10s. to £21 10s. each, and cows from £14 to £17, the average for anything at all useful being better now than for some little time past. In-calvers are also very saleable, and there is now more speculation also in regard to barreners, the best of which—those really "fresh"—make up to £30 per pair, or even more, and plainer bullocks from about £18 to £22 or £23. Compared with the outlook a few weeks back the prospect is undoubtedly far more encouraging all round.

Trade in Scotland.

John Swan and Sons, Ltd., give the following as their report on above for the current week:—The number of fat cattle on offer has been rather smaller than last week. The quality, however, has been good. There has been an active demand throughout, and trade has been dearer at prices for the best class, 10s. to 25s. a head up from last week. There was an exceedingly large show of both fat cows and bulls, which had a fair trade.

The supplies of fat sheep on offer have been considerably smaller. Owing to this and a better demand on the part of the butchers, trade has improved to the extent of from 1s. to 2s. 6d. a head over the exceedingly low prices obtained for the last two or three weeks. Ewes also have made more money.

A smaller show of both fat calves and fat pigs continue to make very high prices.

In the store markets, as is usual at this season of the year, there has been very little business done.

A very small show of sheep met a fairly good enquiry at prices more in sellers' favour, to the extent of fully 1s. a head. There was also a very small and indifferent lot of store cattle offered for sale and only a few of the better-conditioned bullocks could get sold. Stirks and calves of secondary quality met no demand at all. A much larger show of milch cows than for several weeks. The best class met a fair trade at prices much similar to those current lately. Extreme top price of best cattle per live cwt. from 38s. 6d. to 41s., current from 36s. to 39s. Mutton from 6½d. to 7¾d. per lb.

Trade in Ireland.

Though there was a good attendance of buyers at last Thursday's Dublin market, an increased supply of both cattle and sheep had a depressing effect on business, which was not nearly so spirited as on the previous Thursday. For really first-class beef rates were fairly well maintained, but for the general run of beasts prices were down about 10s. per head on the week, but a clearance was effected. Prime heifer and ox beef ranged from 52s. to 55s. per cwt., and for a few extra choice animals even 58s. to 60s. was given; second quality, 46s. to 50s., and inferior 42s. to 45s. per cwt. There were 2,276 cattle offered for sale, an increase on the week of 145 head. A slightly better demand for sheep for city and north of Ireland trade was experienced, and the value of best mutton was maintained, but the heavy increase of 1,560 more sheep than last day made buyers more independent, but still they were unable to reduce late rates. Aged wethers and choice, well-finished ewes were scarce, and there was keen competition for them. Prime hoggets sold at a figure equal to what could be got for them on the London market, so shippers were not very keen on business. Best wether mutton, 6½d. to 7d. per lb.; ewe, 5d. to 6d.; inferior sheep from 4½d. to 5d. Small to medium hoggets from 27s. to 40s. each, heavy ditto 42s. to 54s. There was not much inquiry for the few house lambs on offer.

Best veal made from 7½d. to 8½d. per lb.; other descriptions not in request. For prime young springers from £18 to £21 was freely paid, but in the ordinary run of milkers not much business was done. Pig market extensively supplied, but trade sluggish, and prices receded from 2s. to 3s. per cwt. Choice light pigs from 45s. to 46s. per cwt.

The numerous and important fairs throughout Ireland during the week were poorly stocked, but the supply was quite equal to the demand, which is still very sluggish. The reverses of last season have made both dealers and graziers very timid, and buying will not be conducted on the reckless lines of last year. It is expected, however, that the outlook may be brighter in a few weeks' time. In southern markets fat cattle are scarce, and best are selling at from 54s. to 56s. per cwt. Sheep are rather scarce, too, and 7½d. per lb. is freely paid for choice wethers, while other sorts sell from 6d. to 7d. per lb.

LONDON.

Islington, Thursday.—Good supplies offered, and, as usual on this day, the bulk comprised fat bulls and rough cattle. The demand was of a steady nature, and fair sales were effected. Fat bulls, 3s 4d to 3s 8d. The market for sheep ruled dull, and trade proved quite nominal, the supply being too small to form reliable quotations. Calf trade and supply remain nominal. Pigs quiet. Neat small porkers 4s 6d to 4s 8d per 8lb. to sink the offal. Total supplies:—130 beasts, 370 sheep, 15 calves, 5 cows, and 70 pigs.

COUNTRY.

Ashford, Tuesday.—With the new year the regulations for the movement of pigs came into force, but they seemed to have little effect. Roasters fetched 10s 6d to 11s per score, and large hogs 9s 6d to 10s, while sows realised 8s per score. Beef sold readily at 10s 6d to 12s per score for the best. Small Southdown and half-bred wethers made 5s to 5s 2d, but for Kent wethers 5s was not reached in any single instance. Veal made 5s to 5s 4d for best qualities, and 4s 8d to 5s for rough calves. No store trade.

Basingstoke, Wednesday.—At Raynbird and Sons' saleyard there was a good attendance of buyers to meet a supply of 46 fat beasts, 59 calves, 453 fat sheep, 310 pigs and 59 head of dairy and store cattle, for which the following prices were realised: Fat Devons up to £25 10s; shorthorn steers £21 15s; shorthorn heifers up to £22 10s, and cows up to £17 10s; Welsh steers made £18 10s; polled heifers for Mr. J. F. Frearson £19 10s, bulls up to £17. Prime quality fat sheep realised from 44s to 56s; 12 months old ditto from 36s to 50s; fat lambs 27s and 42s. Fat ewes 35s to 42s. Rams 30s to 44s. Fat calves 60s to £5 7s 6d, small 20s to 50s. Fat hogs 70s to £5 11s. Porkers 45s to 60s, small 28s to 38s. Store pigs 8s 6d to 28s 6d. Dairy cows £8 to £22. The show of fat beasts included some prime Devon shorthorns, Welsh, and polled Aberdeens, for which there was a brisk demand and a clearance made. Fat sheep and lambs were shown in full numbers, and of good qualities, and attracted attention from local land distant buyers. A clearance was effected at slightly better figures for heavy-weight sheep, and at late full prices for young sheep and lambs. The supply of ewes was short, values inclining upwards. A large entry of dairy cattle on offer, which met a good trade at high prices. Store cattle dull. Fat calves met a fair trade at about previous quotations. Fat hogs and porkers met a good trade at the late satisfactory prices. A large entry of fat sows met a good trade. Store pigs met a fair demand. Ruling values: Prime Devon and polled beasts 7d to 7½d; ditto shorthorn ditto, 6d to 6½d; bulls, cows, and inferior beasts, 5d to 5½d per lb; best quality fat sheep, 7½d to 8½d; second ditto 6½d to 7½d.; old ewes, rams and inferior sheep, 5d to 6d per lb; fat calves, 6d to 7½d per lb; fat hogs up to 10s; porkers, 10s 6d to 12 per score.

Boston, Wednesday.—Best beef, 8s; cow beef, 7s 6d per stone; stores, of which there was a poor show, £9 to £12 10s; in-calvers, £18 to £20; heifers, £16 to £18; calves, 55s to 60s; best wether mutton, 7½d to 8d; ewes, 5½d per lb; hogs, 30s to 34s each.

Bristol, Thursday.—Fair supply of fat cattle. Trade steady at 60s per cwt. for best qualities. Moderate number of sheep. Light wethers fetched 7½d to 7¾d per lb.; ewes, 6d. About 1,000 pigs. Baconers sold at 9s 6d per score; porkers, 10s 9d.

Bury, Wednesday.—At Messrs. Simpson and Sons' auction mart, there was a good show of fat beasts for the time of year. Trade was rather better than last week for the best qualities. Hardly any store cattle shown. Large supply of fat sheep. Trade for all the best hoggets was rather better than of late. Shearlings met a dull trade. Fat ewes sold at about last week's rates. Large show of store hoggets, which sold quite as well as anticipated, many making from 36s to 38s per head. A useful lot of black-faced ewes in lamb went up to 32s 6d, and averaged about 30s per head. Large supply of pigs. Big hogs were hardly so dear on the week. Medium-sized and store pigs fetched about last week's prices.—At Messrs. Lacy, Scott and Son's auction mart, there was a fair supply of stock. Fat beasts were a good trade, at full prices. Fat cows and bulls were in request, and sold readily. Milch cows made up to £18 10s, given for those consigned by Mr. Paley; £16 15s for those consigned by Mr. Dyer. Other cows fetched from £16 downwards. Large supply of calves for weaning, and, except for the best bred ones, prices were easier. Very large show of pigs. Fat pigs were cheaper on the week, but London jointers sold well. Store pigs came to market in large numbers, but buyers from a distance were well represented, and better prices were obtainable for stores than last week.—In the general departments of the market, there were very small supplies of cattle and sheep.

Calne. FRIDAY.—Present prices for prime pigs, in lots of net less than 10, on rail within 100 miles of Calne.

Prime Stores.	Thickness of fat in any part of the Back.	Price per Sc. s.	d.
6 sc. 10 lbs. to 9 sc. 10 lbs.	2½ in. and under ...	9	6
Under 10 sc.	Not exceeding 2½ in. ...	9	0
Under 11 sc. 10 lb. ...	Not exceecing 2¾ in ...	8	6
Under 12 sc.	Not exceeding 3 in. ...		

Any pigs outside these limits at their value.—Half-truck, 12 pigs. Whole trucks, 25,—Charles & Thomas Harris & Co., Limited, Calne, Wilts.

Cambridge, Monday.—Beasts, 212; beef, 7s to 8s. Sheep, 951; mutton, 3s 10d to 5s 2d. Pigs, 155; pork, 6s to 7s. Horses, 12. Only a few store beasts shown; fat beasts, a good number to hand, and a fair trade at late rates; fat sheep, a good show, and trade not so good; stores, a few good lots, and trade fair; fat pigs, a large number to hand, and prices not so good; stores, a poor trade; hay, straw, and roots, short supplies.

Carlisle, Saturday.—On the sands there was a light supply of Irish store cattle. The attendance of buyers was small, and trade dull, useful heifers, which formed the bulk of the supply, being quoted at £10 10s to £15 10s.

Chichester, Wednesday.—There was a fair attendance to meet a moderate supply. Beef was steady at late rates; fat mutton marked a slight rise, but the store trade was still dull and quiet, though most eventually changed hands. The pig department showed a fair amount of activity, and porkers generally sold well. Good bacon pigs were scarce. The stock in market was as follows: Cattle, 381; sheep, 2,661; pigs, 706; calves, 103; horses, 15; total, 3,866. Tolls taken, £21 15s 3d.

Dorchester, Wednesday.—Good supplies came to hand, and a little better business resulted than at the previous market. Fat bullocks ruled steady, at 10s 6d to 11s per score for the best. Mutton still depressed, at about 7½d per lb for the best wethers, and ewes 6½d to 7d. Few lambs offering as yet, the general run for which was 8½d to 9d per lb. Best fat calves made about 7d per lb; seconds, 6½d; rearers, 10s to 35s. Pigs a quieter

trade, at 57s to 90s for baconers and porkers (or 10s to 10s 6d per score); heavy pigs, 8s 6d to 9s. Chickens rather dearer, at 5s to 5s 8d per couple. Good cheese very dear, at 50s to 66s for best Dorset.

Dublin, Thursday.—Numbers in market: Beasts 2,776, increase 145; sheep 5,050, increase 1,560; calves 44, increase 3. There was a weaker tendency in the cattle trade, last week's quotations for choice qualities being barely maintained, while concessions had to be made to buyers of the rough descriptions in order to effect a clearance. Quieter trade for all classes of sheep, best qualities barely making late rates; other sorts favouring buyers. Cattle, live weight (best), 31s to 34s per cwt; other descriptions, 27s to 30s per cwt. Mutton, dead weight, 5¾d to 7d per lb.—GANLY, SONS AND CO.

Hereford, Wednesday.—Bullocks and cows, 621; calves, 86; sheep and lambs, 786; pigs (fat and sows), 48; sucking pigs, 7; pigs (stores, not more than ten), 349; pigs (stores, more than ten), 95; horses, 5. Prices of stock: Best beef, 6d to 7d per lb; wether sheep, 6½d to 8d per lb; ewes, 5½d to 6d per lb; veal, 8d per lb; lamb, 9d per lb; pork, 5½d to 6d per lb; bacon, 6d to 5d per lb.

Ipswich, Tuesday.—Messrs. Robert Bond and Sons report a short supply of fat cattle, which met a sharp trade at an advance of 6d per stone. A grand Cumberland shorthorn bull realised £28. Fat sheep were forwarded in larger numbers; trade was slow, and prices ruled lower. Halford hoggets, to 53s 6d; Suffolks, to 52s 6d; Suffolk shearlings, to 53s 6d; grazing hoggets were well represented, but they were not in much request; Suffolk ewe hoggets, from 34s 6d to 30s; wethers, to 31s 6d. A good entry of calves for weaning, which sold briskly, the best making from 69s to 38s; fat calves, short, and somewhat cheaper. A capital supply of fat swine, and a large attendance of buyers, including representatives from the Midlands. A sharp trade was experienced, recent values being well maintained. Several lots of well bred store pigs forwarded; these were in request at rather more money. Grazing cattle were penned in fair numbers for the time of year; the demand was not so good as last week, and prices were a trifle lower. Fresh-calved cows and heifers were wanted, and sold well, up to £19 10s. Numbers at sales and market: Cattle, 482; calves, 47; sheep, 1,174; swine, 1,663; horses, 30.

Leicester, Wednesday.—There was a very good supply of home-bred stock at market, but a good many lots were out of condition. Trade for choice qualities was active, but inferior were very slow. Choice bullocks made 6¼d to 6¾d per lb; secondary, 5¾d to 6d; cows, 5d to 5¼d; heifers, 6¼d to 6¾d. Sheep were a large supply, and sold rather slowly at low prices, the finest qualities making 7¼d to 7¾d per lb; large sheep, 6¼d to 6¾d; and ewes, 5d to 5¾d per lb. Calves sold steadily at 7d to 7¾d per lb.

Newport, Wednesday.—Quotations were:—Best beef, 6¾d to 6¾d per lb; secondary sorts, 6d to 6¼d; cows, 5¾d to 6d; best wether mutton, 7¼d to 8d; ewes, 5¼d to 6d; lamb, 0d; veal, 6¾d to 7¼d; porker pigs, 11s 3d to 11s 6d per score; and baconers, 9s 3d to 9s 6d. A good supply of cattle and a fair lot of sheep. A clearance effected.

Norwich, Saturday.—The supply of store beasts on offer here to-day was considerable. Trade was quiet, and a complete clearance was by no means effected. Prices however, showed little change. Fat beasts, which were in moderate supply, were firm at 7s 6d to 8s per 14lb. The show of sheep was smaller than of late; keeping hoggets brought 28s to 35s per head. Fat sheep, which were offered to a fair extent, were dull at 7s 6d to 8s and 8s 3d per 14lb.

Romford, Wednesday.—Shorter supply of fat beasts; trade about the same. Best animals made 4s 4d to 4s 6d, and middlings 4s to 4s 2d per stone. Very short supply of calves; trade about the same, at 5s 4d to 5s 6d per stone. Shorter supply of sheep; trade a little better. Best sheep, 5s 4d to 5s 6d; middlings, 5s 2d to 5s 4d per stone. No stores on offer. Pig trade a little better. Small porkers made up to 4s 6d per stone.

Salford, Tuesday.—The supply of cattle was slightly in excess of last week. Trade rather slow, but late prices maintained. About the same number of sheep on offer as at last market. There was a slow demand, and prices were in favour of buyers, the top quotation being obtained only in a few cases. A smaller show of calves, and a better trade for choice quality at higher prices. Quotations:—Cattle, 4¾d to 6¼d; sheep, 6d to 8¼d; calves, 5d to 8d per lb. At market: Cattle, 2,764; sheep, 6,573; calves, 126; pigs, 47.

Sheffield, Tuesday.—Small show of milch beasts, fair demand for the best qualities, which made £18 to £22; secondary lots, £12 to £16. No pigs.

Shrewsbury, Tuesday.—Large supplies of pigs and fat cattle; trade slower generally. Quotations: Beef, 5¾d to 6¾d; mutton, 7d to 8¼d; and veal, 6¾d to 7¾d per lb; porket pigs, 9s to 10s; bacons, 8s 6d to 9s per score; cows, with calves, up to £20 15s; hay, up to £5 5s; swedes, up to 18s 3d per ton. Number offered: 817 cattle; 51 cows, with calves; 915 sheep; 81 calves; 76 fat, 210 porket, and 555 store pigs.—(Signed) B. R. CROXTON, Markets Inspector.

Spalding, Tuesday.—A better show of beef, and a very good demand; best fully 8d per stone. A good show of store beasts, but a dragging trade, except for the choicest lots. In the sheep market a small show and trade slow, making up to 7¼d per lb.

Stockton, Wednesday.—There were on offer 152 cattle, 206 sheep, and 221 pigs. Rather fewer cattle of the best quality, and trade was firm at 7s 9d to 8s per stone; rougher kinds, 6s 6d to 7s; calves, 6d to 8d; young sheep, 7¼d; ewes, 5d to 6d; tups, 4d to 5d per lb.

Thame, Tuesday.—The opening sale of the New Year is generally one of the largest till the grazing season commences, and Tuesday's sale was no exception to the rule, there being a large entry of all kinds of stock, of capital quality, which met with a ready and brisk sale, and a clearance was quickly effected at even better prices than the previous week, the best quality beef making quite 5s per stone. Mr. Bond's sale comprised 77 fat beasts, 247 fat sheep and store tegs, 73 fat and weaning calves, 199 fat pigs and stores, and 2 horses. Prime bullocks made £17 to £22 10s; fat heifers, £14 to £22 12s 6d; fat wethers, 48s to 52s 6d; fat tegs, 42s to 47s; fat ewes, 35s to 42s; store tegs, 27s to 31s 6d; fat calves, £3 10s to £5; cow calves, 23s to 60s; bull calves, 21s to 48s; fat hogs, 8s 6d to 10s per score; store pigs a better trade.

Wakefield, Wednesday.—An average show of sheep, with a slow sale. Small animals made 7½d to 7¾d per lb; and other sorts from 5d to 7¼d. Beef was dearer; the top price was fully 6¾d; other qualities varying from 5d to 6½d per lb. Numbers: Beasts, 1,278; sheep, 3,356.

Wolverhampton, Wednesday.—There was a fair supply of beasts and sheep, but trade was quiet. Only a few calves were offered, and they were in fair demand. Quotations: Beef, 5d to 6¾d per lb; mutton, 6½d to 8¼d per lb; veal, 6½d to 8d per lb; pigs, bacon, 9s per score; porkets, 10s 6d to 11s per score; sows, 8s 6d per score.

Worksop, Wednesday.—Good show of all kinds of stock, especially sheep. Good trade. Best quality beef made up to 7s 9d, and secondary qualities 6s 6d to 7s 6d per stone; best wether mutton, 6¾d to 7¼d; and ewes and other sorts, 5d to 6d per lb.

FOREIGN.

Deptford, Wednesday.—Beast supplies to-day amounted to 1,244, this being an increase of 1,021 head as against last Wednesday's figures, and comprised shipments from the United States. Trade ruled slow, but firm at 4s 3d to 4s 6d, exceptionally 4s 7d per 8 lb to sink the offal. 788 United States beasts were not shown.

Yorkhill, Monday.—The usual weekly sale of United States and Canadian cattle was held to-day, when there were on offer 17 animals ex Livonian (s) from Boston, 10 ex Amarynthia (s), from St. John's, and 77 by the Marina (s) from Baltimore, all of which were held over from last week, and 307 cattle landed by the Rosarian (s) from Portland (Me.). Bullocks, as is generally the case, formed the greater proportion of the total number. The cattle all round were up to the average as regards quality. There was the usual attendance of buyers, but trade was very slow, although good prices were obtained. Small, neat, well-fed beasts secured the best inquiry, and fully maintained last week's values. Secondary and heavier animals were very slow to cash. Owing to the large number of bulls on offer trade for them was very bad, and were difficult to cash. The values they received were in favour of the buyers. The deadweight quotations may be given as follows:—States bullocks, best class, medium weight, 58s per cwt., and for really choice up to 60s; secondary and heavier, 56s; bulls, best class, handy sorts, to 48s; secondary and inferior, 44s to 46s. Canadian bullocks, best quality, handy sorts, 56s per cwt., and for really choice to 58s; secondary and heavier, to 54s; and bulls made similar prices to those ruling above.

Yorkhill, Monday.—A sale of American sheep was held to-day at Yorkhill, 135 animals being offered. The consignment consisted principally of ewes, but there were also a few hoggs included. The sheep were fully up to the average, many being suitable for the requirements of the trade. The attendance of buyers was fair, but business ruled rather slow; a clearance, however, was effected. The dead-weight quotations may be given as follows:—Ewes, best class, handy sorts, 5½d per lb; secondary and heavier, 5d; lambs, best sorts, to 7½d; and secondary, to 6¾d per lb.

BUTTER.

Tuesday.—Bedale: In rolls of 24oz, 1s 3d to 1s 5d. Leeds: York lump, 15s 6d to 16s 6d per stone; long rolls, 1½lb, 1s 10d to 2s; fresh in 1lb prints, 1s 4d per lb. Danish, 112s to 117s per 112lb. Irish creameries, 106s to 110s. Colonial, 100s to 112s. Settle, 1s 2d to 1s 3d per lb. Sheffield, 1s 3d to 1s 4d per lb. Spalding, 1s per lb.

Wednesday.—Barnsley: 1s 4d to 1s 5d per lb. Boston: 1s 3d to 1s 4d per lb. Colne: 1s 3d per lb. Goole: 1s 2d to 1s 3d per lb. Ipswich: 1s 3d to 1s 4d per lb. Hereford: 1s 3d to 1s 4d per lb. Keighley: 1s 4d per lb. Kirkbymoorside: 1s to 1s 2d per lb. Knaresborough: Wholesale, 1s 6d; retail, 1s 8d per roll of 24oz. Louth: Wholesale, 1s per lb. Market Drayton: Best, 1s 2d to 1s 3d; seconds, 1s 1d to 1s 2d. Northallerton: 1s 7d to 1s 9d per lb. Stockton: 1s 2d to 1s 5d per lb. Worksop: 1s 2d to 1s 3d per lb.

Thursday.—Brigg: 1s 1d to 1s 2d per lb. Birmingham: 1s 3d to 1s 5d per lb. Driffield: 1s 1d per lb. Kidderminster: 1s 7d per lb. Penistone: 1s 4d per lb. Ripon: 1s 6d to 1s 9d per single roll of 24oz. Scarborough: 1s 5d per lb. Wellington: 1s 4d to 1s 5d per lb. Wetherby: 1s 2d to 1s 3d per lb.

Saturday.—Appleby, 1s 2d to 1s 5d per lb. Carlisle, 1s 5d per lb. Doncaster, 1s 2d to 1s 3d per lb. Grantham, 1s 2d to 1s 3d per lb. Howden, 1s 4d per lb. Lancaster, 1s 3d to 1s 4d per lb. Lancaster, 1s 3d to 1s 4d per lb. Malton, 1s 2d to 1s 3d per lb. Pontefract, 1s 2d to 1s 3d per lb. Retford, 1s 3d to 1s 4d per lb. Richmond, 1s 2d to 1s 3d per lb. Skipton, 1s 2d to 1s 3d per lb. Stokesley, 1s 3d to 1s 4d per lb. Whitby, 1s 2d to 1s 3d per lb. York, 1s 3d to 1s 4d per lb.

EGGS.

Tuesday.—Bedale: 9 or 10 for 1s. Leeds: Yorkshire, 16s to 17s 6d per 120; Irish, 12s 6d to 15s; Danish, 10s to 12s; Austrian blues, 8s 3d to 9s; ditto reds, 6s 9d to 7s. Settle: 9 or 10 for 1s. Sheffield: 7 or 8 for 1s. Spalding: 11 for 1s.

Wednesday.—Barnsley: 7 or 8 for 1s. Boston: 10 or 11 for 1s. Colne: 2s 8d per score. Goole: 9 and 10 for 1s. Hereford: 10 per 1s; wholesale, 10 to 12 per 1s. Ipswich: 7 or 8 for 1s. Keighley: 7 for 1s. Kirkbymoorside: 10 or 11 for 1s. Knaresborough: 9 or 10 for 1s. Louth: 12 for 1s. Market Drayton: 9 or 10 for 1s. Northallerton: 8 or 9 for 1s. Stockton: 6 or 7 for 1s. Uttoxeter: 2s 2d to 2s 4d per score. Worksop: 2s 2d to 2s 4d per score.

Thursday.—Birmingham: 7 and 8 for 1s. Brigg: 11 to 12 for 1s. Driffield: 10 or 11 for 1s. Kidderminster: 7 for 1s. Penistone: 8 for 1s. Ripon: 8 to 9 for 1s. Scarborough: 6 for 1s. Wellington: 8 for 1s. Wetherby: 9 or 10 for 1s.

Saturday.—Appleby, 8 or 9 for 1s. Berwick, 1s 8d per dozen. Carlisle, 7 or 8 for 1s. Doncaster, 9 or 10 for 1s. Grantham, 10 or 12 for 1s. Howden, 11 for 1s. Lancaster, 7 to 8 for 1s. Malton, 10 for 1s. Pontefract, 8 for 1s. Retford, 1s 10d to 2s per score. Richmond, 8 and 9 for 1s. Skipton, 6 to 8 for 1s. Stokesley, 8 or 9 for 1s. Whitby, 8 and 9 for 1s. York, 7 or 8 for 1s.

COLONIAL DAIRY PRODUCE.

London, Friday.—Butter: The demand for Australian and New Zealand butter continues to improve, although there were signs of weakness a day or two ago, but some of the large agents remained firm and the tone recovered. It would not surprise anyone if a rise of 2s took place next week. Values meantime remain unchanged since last week, except in special cases 108s is made. In the north of England New Zealand butter is closely approaching Danish in price. Choicest Danish in Liverpool yesterday was sold at 110s and 112s; choicest New Zealand, 106s and 108s. The Copenhagen Committee has left the official quotation unchanged, and it remains at 14s 6d below last year. On the spot Danish butter is 18s below that period, while Australian and New Zealand is only 8s below. Cheese: There is a good steady demand for Canadian and New Zealand cheese, and for the transatlantic variety there has been an advance of 1s per cwt on the week. New Zealand remains unchanged.—W. WEDDEL AND CO.

CHEESE.

Glasgow, Wednesday.—There were a few fresh arrivals of cheese, but little business was done, as holders were asking more money, which buyers were reluctant to give. Cheddars and Dunlops were quoted from 50s to 48s per cwt. There was a fair trade passing in late-made Canadian cheese at steady prices. New Zealand parcels of good quality are now coming to hand.

Newport, Wednesday.—Quotations: Caerphillies, 54s to 60s; fancy dairies, 62s to 64s; Derbys, 61s to 63s; doubles, —s to —s; truckles, 64s to 68s; and Cheddars, 54s to 65s. There was a small supply of best cheese, with a good trade.

FEEDING STUFFS.

Hull, Tuesday.—Linseed: The arrivals are 2,218 qrs from Boston, 12 qrs Harlingen, 637 qrs Konigsberg, 1,750 qrs Libau, 5,546 qrs New York, 525 qrs Riga, 100 qrs Rotterdam, 21 qrs San Nicolas; total, 10,809 qrs. The market shows a moderate recovery on the week. Calcutta, spot, 52s 6d nominal. River Plate, 46s 6d asked shipping or shipped; 46s asked Dec.-Jan., 45s 9d paid; 44s 9d paid Jan.-Feb. American, 52s 6d spot; no business doing for shipment. Baltics, practically unchanged. Cottonseed: With heavy shipments and good supplies here the market continued to give way, and down to £6 3s 9d accepted spot and passage, but there is a steadier tone again with buyers at the price to-day; January, £6 5s, which taken last week up to March, but £6 6s 3d now the value these months. Oils: Exports for the week ending 31st December, 1901.—Linseed oil: 11 America, 5 Holland, 1 Italy, total, 17 tons. Cotton oil: 30 Austria, 48 Belgium, 24 Denmark, 47 France, 105 Germany, 289 Holland, 2 Norway, 90 Sweden; total, 635 tons. The market is steady, and not much doing. Linseed oil: 27s 9d spot, 26s 4½d Jan.-April. Cotton oil: 21s 3d spot, 21s 4½d Jan.-April, 22s buyers May August; crude, 20s spot, 20s Jan.-April, 20s 6d May-August. Rape oil: Jamba naked, 24s spot; 1st quality naked, 24s 6d spot.

London, Thursday.—Linseed.—Owing to large shipments and cheaper offers from La Plata, prices have declined during the week, but the market closes firmer owing to a strong American inquiry in La Plata. Spot 51s, afloat Calcutta to London 51s, January 50s 6d, April-June 46s 5d. La Plata December-January 47s 3d, January-February 46s 3d. Hull steadier. La Plata shipping or shipped 48s 9d, December-January 47s, January-February 46s. To the Continent, Bombay, January-February 52s, February-March 50s, March-April 49s 3d, March-May 49s. Calcutta December-January 51s 6d, April-June 47s 3d. La Plata, December-January 47s 6d, January-February 47s. Linseed oil continues quiet and inactive on the spot, but forward positions are firmer. We quote spot in pipes £29, barrels £29 5s, January-April £28, May-August £26 10s. Hull spot naked £28, January-April £27, May-August £25 10s. Linseed cakes are quiet. London made, £7 15s to £8 ex mill; American Westerns, £7 5s to £7 7s 6d; Russians, £7 10s to £7 12s 6d. Cotton cakes are steady. London made £4 11s 3d to £4 13s 9d. Rapeseed is quieter. To London we quote: Yellow Cawnpore, January-February, 40s 6d; Brown Cawnpore, 38s 9d. To the Continent Yellow Guzerat December-January, 42s 6d. Yellow Cawnpore January-February 40s 6d, Brown Cawnpore, November-December 39s, Brown Calcutta 38s 9d. Ferozepore, November-December 39s. Jamba, February-March to Hull, 29s 9d.—THE PRODUCE BROKERS' COMPANY, LIMITED.

WOOL.

London, Friday.—Fleeces S. Dn. Hggs., £7 to £8 10s; half-bred hoggs, £6 to £6 10s; half-bred wethers, £5 to £6; Kent fleeces, £5 to £6; South Down ewes and wethers, £7 to £8 10s; Leicester do, £5 to £5 10s. Colonial—per lb.—Vic.—Fleece super, 6½ to 7d; scoured good, 1s 7½d to 1s 8½d; scoured average, 1s 6d. to 1s 7d; greasy average to fair, 10½d to 11½d; N. S. W. scoured average, 1s 2½d to 1s 3d; greasy average, 8d to 8½d; S. Aus., greasy average, 6½d to 6½d; N. Z. scoured average, 1s 4d to 1s 5d; greasy average, 8d to 8½d; Cape, scoured superfine, 1s 5d to 1s 6d; fleece average, 6¾d to 7½d; greasy average, 5d to 6d. Natal scoured, 1s to 1s 1d; greasy average, 6d to 6¾d. Crossbreds—Grs—Vic. good to superfine, 10½d to 11½d; New Zealand fine, 8d to 9d; New Zealand medium, 4½ to 4¾; New Zealand coarse, 3¾d to 4¼d.

MANURES.

Liverpool, Friday.—There is more inquiry for nitrate of soda, and, owing to the strong statistical position, holders show rather a disposition to advance values. Sulphate of ammonia of 24 per cent. test offers at £11 5s to £11 7s 6d per ton. Liebigs guano testing 8 to 9 per cent. ammonia and 34 to 35 per cent. phosphates offers at £5 15s to £6 per ton. Bone meal and kainit command late rates and are more inquired for, as also basic slag; but so far the home demand for superphosphate of lime is quiet. Considering the mild open weather for this period of the year, there is a fair demand for feeding stuffs, and the advanced prices seem likely to be maintained owing to the shortage in the American maize crop and the greater consumption of oil cakes in America. The following are the rates at which business is transpiring in this market:—Nitrate of soda, best quality, *i.e.*, guaranteed 95 per cent., pure, in bags, £9 10s per ton; East India bone meal, in bags, £4 2s 6d to £4 5s 0d per ton; kainit, prime, 23 per cent., in bags, £2 7s 6d to £2 10s per ton; palm nut cake, prime, in bags, £5 12s 6d per ton; linseed cake, American thin oblong, prime, in bags, £7 12s 6d to £7 16s 3d per ton; linseed cake, English, prime, in bulk, £8 10s to £8 15s per ton; linseed cake, foreign, prime, soft and oily, in bags, £8 5s per ton; cottonseed cake, N.A., decorticated, prime, in bags, £7 3s 9d to £7 7s 6d per ton; cottonseed cake, English, decorticated, prime, soft, in bags, £7 10s to £7 12s 6d per ton; cottonseed cake, English, undecorticated, prime, in bulk, £4 15s to £5 per ton; cottonseed (crushed 20/25 per cent. oil, prime, in bags, £7 5s per ton; maize germ meal, prime, in bags, £6 5s to £6 7s 6d per ton; rice meal, Rangoon, as imported, in bags, £5 10s to £5 12s 6d per ton; Indian meal coarse to fine grinding, prime, in bulk, 13s 6d to 14s per 240lb; linseed, fine bold feeding, in bags, £3 5s to £3 7s 6d per qr 416lb; D.N.S. superphosphate of lime, guaranteed, 25 to 27 sol., in bags, £2 5s to £2 7s per ton, at the producing depots; D.N.S. superphosphate of lime, guaranteed, 30 to 31 sol., in bags, £2 10s to £2 12s per ton, at the producing depots; superphosphate of lime, guaranteed 35 to 36 sol., in bags, £3 to £3 2s per ton, at the producing depots; basic slag, prime quality, guaranteed, 30 to 35 per cent. phos., in bags, £1 12s to £1 13s per ton, at the producing depots; basic slag, prime quality, guaranteed, 35 to 40 per cent. phos., in bags, £1 14s 6d to £1 15s 6d per ton, at the producing depots; basic slag, finest quality, guaranteed, 38 to 45 per cent. phos., in bags, £1 17s to £1 19s per ton, at the producing depots.—H. JONES LANGAR AND CO.

STOCK AND SHOW NOTES.

By Herdsman.

Sir George Macpherson-Grant has forwarded me a copy of a small catalogue of his Ballendalloch bulls. They number twenty-seven, and all are of the choicest pedigree, many of them being of the highest individual excellence. With the exception of five calved in December, they were calved at the beginning of last year, their sires being the well-known Bion (11,454), Prince Ilo (12,869), Prince Inch (13,844), Black Peter (14,145), and Eblito (14,306). Some of the animals are offered for sale by private treaty, and it is intended to dispose of the others at the Perth, Aberdeen, and Inverness spring sales. Further particulars may be had on application to Mr. McGilchrist, Home Farm, Ballendalloch.

The Brentnor and Lydford Pony Society has decided to hold this year's show on August Bank Holiday at Lydford Junction, the entries closing on July 9th. Mr. J. N. Jackman, of Burnville, Tavistock, is the honorary secretary.

The concluding sales of pure-bred cattle in the United States were brisk, good prices being realised. At the sale on the 10th and 11th ult. of Herefords—some bred by the late Mr. K. B. Armour—£141 was given for Phœbe, this being the highest price. The average obtained for the whole of the animals disposed of was £67 10s.; the average for 90 females being £69 15s., and for 20 bulls £57 10s. At the sale of shorthorns bred by Mr. C. A. Saunders £365 was given for Grand Nerissa II., while £150 was fetched by the imported roan cow Lady Bell V. The average obtained for 49 animals was £46. In spite of a raging snowstorm, Mr. C. D. Bellows had a fairly successful sale of shorthorns at South Omaha, Nebraska, on the 18th ult. Fifty-nine head were sold for £2,556, an average of £46 10s.

The prize-list has now been issued for the Royal Dublin Society's Spring Show, which is to be held at Ball's Bridge on Tuesday, April 15th, and three following days. £2,270 is offered in money prizes, and £1,400 in cups and specials, whilst £4,000 is offered in 269 Government premiums for bulls, making the total value of prize-money over £7,500. In addition the Department of Agriculture and Technical Instruction for Ireland is prepared to distribute a large number of premiums for bulls and boars. The Government premiums for bulls are awarded on the condition that each bull shall serve, during the season 1902, not less than 20 cows in the case of yearling bulls and bulls calved in 1900 on or after September 1st, or 50 cows in the case of bulls, calved in 1900 before September 1st, at a service fee of 1s. for each cow, including all charges. Each cow must be the property of a farmer, the aggregate valuation of whose holding or holdings does not exceed £100 per annum. The term "farmer" is to be understood to mean a person who derives his means of living from farming.

The premiums will, as far as practicable, be divided as follows between the different breeds, viz.:—156 premiums for shorthorn, 66 for Aberdeen-Angus, 36 for Hereford, and six for red-polled bulls; and five premiums of £8 each for Kerry or Dexter bulls of any age. The value of the premiums for bulls other than Kerry or Dexter is £15 for those calved on or after September 1st, 1900, and £10 for those calved before that date. In the distribution of bulls by the Royal Dublin Society, regard will be had, as far as possible, to whether or not a county to which the bull is proposed to be sent contributes aid under the provisions of Section 16, Sub-section 6, and Section 19, of the Agriculture and Technical Instruction Act, 1899. No bull having been awarded a premium by the Department in 1902 will be eligible for a premium from the funds administered by the Royal Dubin Society.

Under the scheme of the Department of Agriculture and Technical Instruction for Ireland for encouraging improvement in the breeds of cattle or swine, a large number of premiums for bulls and boars will be granted throughout the country. Such animals as are selected for premiums by the judges appointed to officiate for the Royal Dublin Society will be provisionally approved by the Department for such premiums as may be applied for at this show. Breeders may offer their animals for these premiums without being charged any additional entry fee. Copies of the Department's scheme can be had on application to the Secretary, Department of Agriculture and Technical Instruction for Ireland, Upper Merrion Street, Dublin.

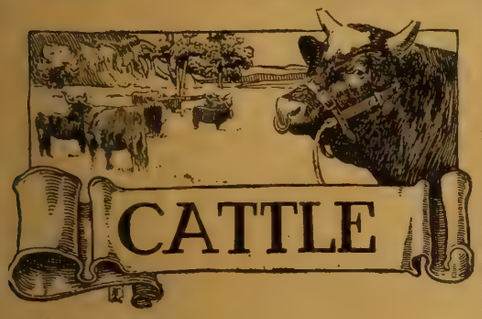
Above we give an illustration of a POLDERS COW, a description of which breed is given on another page. The animal shown above won the champion prize at the Paris Exposition of 1900, the exhibitor being M. G. Wydenes, of Iwisk, Holland. Our illustration is reproduced from the *Journal a' Agriculture Pratique.*

In comparing the Society's class prizes with those offered last year I noticed a few alterations, but no very striking change. In the cattle section the only alterations are as follows: In the class for Hereford bulls calved in 1901 on or after April 1st, the first prize is reduced from £10 to £8, the second from £8 to £5, the third is £3 instead of £5, and the fourth £2 instead of £3; in the Aberdeen class for bulls calved in 1900 on or after September 1st, the prizes are £10, £8 and £5, as compared with £15, £10 and £8 last year; in the extra stock section a first and second prize of £3 and £2 respectively are substituted for a silver medal; and in the milking test the sums offered are £15, £10, £5 and £3, against £20, £15, £10 and £5 last year. The prizes and classes for pigs are exactly the same as in 1901.

The agricultural horses classes make a welcome re-appearance, for they were left out last year, and with the exception of the horse-and vehicle parade no heavy or agricultural horses were shown. I notice that the hackney colt or filly class is omitted, but a class for mules 14 hands and over is added, the first prize (presented by the Right Hon. Lord Ardilaun) being £8, and the second £3. Last year there was a class for asses, and two entries were received, but neither put in an appearance at the show. Still, the Society has continued the class and increased the prizes, Lord Ardilaun offering a first of £10 and the Society a second of £5, the corresponding prizes last year being of the value of £3 and £2 respectively. Harness horses are catered for on the same lines as in 1901; whilst in the polo pony section a bending competition is added, the first prize being £10, second £7, and third £3.

The various champion and challenge cups, cups, and special awards offered last year are, with but one exception, again put forward for competition, the exception being the hackney stallion challenge cup, which was won outright last year by Mr. Frederick Wrench, he having won it on three different occasions. There is, however, one important alteration, namely, the Queen Victoria Cup, value £100, and the Leinster Cup, value £150—two perpetual challenge cups—are offered for the best group of Aberdeen-Angus cattle, whereas in 1901 they were for Herefords. This is another striking instance of the great growth in popularity in Ireland of the Aberdeen-Angus breed. The entries close as follows:—Stock, dairy produce, &c., close finally Thursday, March 13th; harness horses, hackneys, and polo ponies, single fees, March 13th; double fees, March 22nd; jumping competitions, close finally, single fees, on Tuesday, April 8th; implements, machinery, close finally February 24th. Entry forms, &c., may be had of the Agricultural Superintendent, Leinster House, Dublin.

Messrs. Ransomes, Sims, and Jefferies, Ltd., Orwell Works, Ipswich, have been appointed by Royal warrant manufacturers of agricultural and horticultural machinery to his Majesty King Edward VII.



Irish Tenants' Objection to Paying Rent—At Roscommon Quarter Sessions on Wednesday, after granting over a hundred ejectment decrees on the Defreyne estate, near Castlerea, where the tenants have refused to pay rent until they get a reduction of 6s. 8d. in the pound, the same as the neighbouring tenants on the Dillon estate, County Court Judge O'Conor Morris made a strong protest against the combination in opposition to paying rent. There had been, he said, between 360 and 370 ejectments granted on the Defreyne and Murphy properties. He could not shut his eyes to the fact that, though virtually the tenants defended the cases, it was the organisation behind them. He trusted those who were responsible for the government of the country would give their attention to it. The so-called system of land purchase was an iniquitous system, which was sufficient to expose every landlord to the non-payment of rents. He hoped the attention of the Legislation would be called to the subject before it became too extended.

SPENCER'S
COD LIVER OIL FOR CATTLE.
Calf Brand.

The Best and Cheapest article for rearing Calves, being a natural substitute for Cream. Equally good for all other stock—a medicine and food combined. Far better and cheaper than Feeding Meals.

Write for booklet giving full particulars to the Manufacturers:—

ISAAC SPENCER & CO.,
HULL.

The Transport of Cattle.

On the last Monday of 1901 there were, amongst a consignment of cattle to Deptford belonging to Armour and Co., one bunch of 25 Hereford heifers, which attracted universal admiration, not for size, but for their almost perfect shape, condition, and quality, says the *Meat Trades' Journal*. When killed they presented carcasses free from bruise or blemish of any kind, and as ripe as if they had just left their stalls a few hours. While this is practically such an every-day occurrence as hardly to call for special notice at Deptford, it is a matter that offers serious grounds for contemplation to those concerned on this side in the transit of live stock. When one considers the length of the journey by rail and steamer that these heifers made, we must admire the method, care, and intelligence which directed their travels. In the first place, they were railed a considerable distance from their feeding-place to the Union Stock Yards in Chicago; thence, after two or three days, they were sent on by rail to Boston, close on 1,000 miles; from there they were shipped on board a steamer, and after a voyage much longer than usual, they arrived safely at Deptford, terminating a land and sea voyage of fully 4,000 miles. Surely this is an object lesson to British and Irish farmers and graziers, and also to the railway and steamship managers of the United Kingdom.

It is a matter of common knowledge to Metropolitan dealers that cattle from Norfolk and other home-grazing counties are always more or less bruised, arriving in a sadly deteriorated condition, considering their comparatively short journey by rail. With regard to stock from Ireland, although no doubt some improvement has been effected since the trade demanded a Government inquiry a few years ago, yet much still remains to be done, and no one thinks of buying either Irish stores or fat cattle without reckoning a certain amount for bruises, etc. This ought not to be the case, and if farmers and feeders were only a little more determined and less careless of their own interests in the matter of transit, we believe a much-needed improvement would speedily be initiated.

At the present moment, owing to this laxity and indifference on the part of agriculturists, the railway and cross-channel shipping companies simply do what they like with stock, as they are fortified by an iron-clad consignment note that legally relieves them from all and every possible liability. Recent proceedings have disclosed very fully that railway companies will cheerfully go to law and spend £1,000 rather than admit a just and equitable claim for loss. These are facts our agriculturists must be made more fully aware of, and they should also use that influence they possess both in and out of Parliament to remedy this great evil.

Particulars of Transactions in Store Stock.

(Reported to the Department of Agriculture and Technical Instruction for Ireland.)

The fair at Thurles, Co. Tipperary, held on Tuesday, was a small one; demand for cattle suitable for shipping purposes, and a good many sold. Small and backward stock sold slowly, and a considerable number failed to find purchasers. Fair supply of springers, which sold well. Prices—Calves, 2nd class, £3 5s. to £4 15s.; 3rd class, £2 15s. to £3; yearlings, 1st class, £8 5s. to £9; 2nd class, £5 17s. 6d. to £7 15s.; 3rd class, £4 10s. to £5 10s.; two year olds, 1st class, £12 to £12 12s. 6d.; 2nd class, £9 to £11; springers, 1st class, £15 10s. to £18; 2nd class, £12 10s. to £15; 3rd class, £9 10s. to £10. Small supply of lambs, for which there was fair demand, but all were not sold. Prices—Lambs, 1st class, £1 7s. 6d. to £1 12s.; 2nd class, £1 2s. to £1 7s. Young pigs, 8 to 10 weeks old, sold at from 20s. to 24s. each.

American Pedigree Cattle Sale in 1901.

The last year was a splendid one for breeders of pedigree stock in the United States. Colonel F. M. Woods, the well-known auctioneer, in the course of a review in the "Breeders' Gazette" (Chicago), states that he "never knew a year when buyers were as discriminating as during the one just past. The time has come that good pedigrees will not sell them unless the individuals are right, but I can recall quite a number of instances where the word 'imported' has helped moderate animals to sell too high. This remark applies more particularly to animals brought over from Canada than those from over the ocean. The demand for choice specimens of bulls has been extra good, the demand for medium ones, fair, and for common to poor ones never so bad."

The offerings during the year have been large, several dispersal sales and increased imports from this side of the ocean having helped to swell the total of animals to be disposed of. In spite of this, bidding has never once flagged, and buyers have always been present to take the beasts at sometimes sensational, and always remunerative, prices.

The highest prices obtained during the year were given for shorthorns, an imported cow, Missie, fetching £1,200, and another imported animal, Lord Banff, £1,020. Herefords came next in the list of big prices, a home-bred cow, Dolly 2nd, fetching £1,000, the next price being £400 paid for a bull, Beau Donald 33rd, of the same breed. Equal money was paid for a Galloway imported bull, McDougall 4th of Tarbreoch, while £340 was paid for an imported Angus cow.

The following figures show the averages obtained by these and other breeds:—

Breed.	No. sold	Total. £	Avrge. £ s.
Shorthorns	4,045	227,258	56 10
Angus	894	49,635	55 10
Herefords	1,855	91,661	48
Red Polls	79	3,642	45
Polled Durhams	243	10,541	43
Galloways	68	2 823	41 10
Total	7,214	385,514	53 10

The Dutch Polder Cattle.

The rearing of fat cattle is an industry which is steadily growing in Holland. During the past twenty-five years the number of cattle raised has increased by 200,000 head, although the area of pasture land devoted to grazing has not been added to to any material extent.

The lands which are now used for the purpose of raising dairy cattle were at one time covered by the sea, or else so low lying as to be constantly inundated and practically useless. By means of raising dykes and cutting canals these lands have been drained, and have now become pasture land of a quality suitable for feeding dairy cattle. The breed special to these districts are Polders, which derive their name from the lands they feed on.

The Polder cattle are high in the legs, with a black and white coat, thin narrow head, and arched neck. The horns are short and flat, and they have a fine skin and well-developed udder. They are not of much use for fattening purposes, but are in the front rank as dairy cattle.

According to the district in which the cattle are raised, the milk is consumed, or else made into butter or cheese. In the provinces of Utrecht and of Holland cheese is made, but in Frise, Drenthe, and Overyssl butter-making is the staple industry. For this purpose the milk produced by the cattle fed on the Polders is particularly suitable, as it is very rich in fat, owing to the rich pasture land the cattle feed on and the particular breed raised.

Seven Cows Burned to Death.—At Banbury on Monday night, a fire broke out at some cow-sheds in which were housed seven milking cows, the property of a local dairyman named Morgan. When the fire brigade arrived the animals were all dead, having been roasted alive.

Bullock in a Butter Market.—While the Boston butter market was in full swing on Wednesday a runaway bullock dashed into the building, upsetting the stands and scattering their contents and the stallholders in all directions. A large quantity of butter was damaged, and hundreds of eggs were broken, whilst several people had narrow escapes. The bullock afterwards rushed across the market-place into the grounds of the Session House, where it was shot.

The London Horse Societies' 1902 County Show Schemes.

The various London horse societies will this year again give medals at county shows, and below we give some particulars concerning the offers of the Hackney Hunters' Improvement and Polo Pony Societies.

The Hackney Horse Society's scheme provides for the offer of £10 redeemable gold medals for hackney stallions and mares, silver medals without any restrictions for shows which do not offer enough money in prizes to qualify for a gold medal, and £5 redeemable gold harness medals for mares and geldings not less than 15.2 hands exhibited in single harness. The amount of prize money necessary to qualify for this medal has hitherto been £100, but to secure the distribution of a larger number the limit has been reduced to £50, thus placing it within the reach of most of the shows in the country.

The Hunters Improvement Society offer gold medals for hunters brood mares (with a special concession to one-day shows), and silver medals for hunter fillies, geldings, and qualified hunters; while they offer a special silver medal for hunter yearling colts. The particulars of each scheme are appended, and particular note should be taken of the conditions of the offer, for in some cases they are different with each year.

At any associated county show, or associated show of two or more days' duration, where a minimum amount of £25 is given in prizes for brood mares in hunter classes, the society will offer a gold medal, or £5 and a bronze medal, under the following conditions:—For the best hunter brood mare by a thoroughbred or registered hunter sire (in foal to, or with foal at foot by, a similarly qualified sire), not having previously won the society's gold medal as a brood mare in 1902, which, if not already entered, must be registered within a month of the award in the Hunter Stud Book, possessing a certificate of soundness from hereditary disease. In the case of mares entered as "in foal," a further certificate of foaling must also be lodged with the secretary of the Hunters' Improvement Society, before the award will be confirmed.

If the judges select a brood mare whose entry for the Stud Book was lodged before the date of the Associated Society's show, the prize will be increased to a gold medal and £1, or £5 and a silver medal.

At any associated one-day show, where a minimum of £20 is given in prizes for brood mares in hunter classes, the society will offer a gold medal, or £5 and a bronze medal, under the conditions specified above.

At any associated show where a minimum amount of £50 (not including jumping prizes) is given in prizes in hunter classes, the society offer a silver medal for the best hunter filly (by a thoroughbred horse or registered hunter sire) not exceeding three years old, and not having previously won the society's silver medal as a filly in 1902, which, if not already entered, must be registered within a month of the award in the Hunter Stud Book, possessing a certificate of soundness from hereditary disease. If the judges select a filly whose entry for the Stud Book was lodged before the date of the Associated Society's show, the prize will be increased to a silver medal and £1.

At any associated show where a minimum amount of £100 (not including jumping prizes) is given in prizes in hunter classes (the fillies competing in classes distinct from the colts and geldings), the society will offer two silver medals, under the following conditions:

(1.) For the best hunter filly (by a thoroughbred horse or registered hunter sire), not exceeding three years old, not having previously won the society's silver medal as a filly in 1902, which, if not already entered, must be registered within a month of the award in the Hunter Stud Book, possessing a certificate of soundness from hereditary disease.

(2.) For the best hunter gelding (by a thoroughbred horse or registered hunter sire), not exceeding three years old (foaled in 1899, 1900, or 1901), not having previously won the society's silver medal as a gelding under this scheme in 1902,

whose dam, if not already entered, must be registered within a month of the award in the Hunter Stud Book, possessing a certificate of soundness from hereditary disease.

If the judges select a filly whose entry for the Stud Book was lodged before the date of the Associated Society's show, or a gelding, whose dam's entry similarly complied, the prizes will in each case be increased to a silver medal and £1.

At any associated show the Council will offer a silver medal for the best hunter mare or gelding of any age, bred as follows:—By a thoroughbred or registered hunter sire, out of a registered mare or a mare entered for registration in the subsequent volume of the Stud Book.

If a mare is selected, both she and her dam, if not already entered, must be registered within a month of the award in the Hunter Stud Book; if a gelding is selected, the dam must comply with such conditions before the award will be confirmed. No animal may take more than one medal under this scheme in 1902.

At any associated show, providing prizes amounting to £10 in a class for yearling hunter colts, fillies, or geldings, the society will offer a silver medal for the best hunter colt, by a thoroughbred or registered hunter sire, out of a mare registered in the Hunter Stud Book, or entered for registration in the subsequent volume, possessing a certificate of soundness from hereditary disease. No colt may take more than one silver medal under this scheme in 1902. Award must be completed within a month of the date of associated show.

It should be mentioned that in each case the certificate of soundness from hereditary disease has to be signed by the local society's appointed veterinary inspector (who must be a member of the Royal College of Veterinary Surgeons), after his examination on the show ground. Only prize-winners will be eligible for the medals, those getting reservers and lower awards being debarred.

The Polo Pony Society offer during the current year, to any associated society offering £10 in money prizes in a class or classes for polo ponies (not including prizes for bending races), a silver medal for competition at its annual show. For the best polo pony brood mare registered or eligible for registration in the Stud Book. The conditions are as follows:—

(1.) Height in such polo pony classes not to exceed 14.2, and this height to be distinctly printed in the description of each polo pony class, while the height of all winners tendered for registration must be confirmed by Hurlingham certificate, or that of a qualified veterinary surgeon. (2.) No pony to be awarded a silver medal which has in the same year taken one of the Polo Pony Society's gold medals (Royal, Dublin and London Shows included). (3.) No pony to be eligible to take more than one silver medal during any one year. (4.) If not already entered in the supplement or registered in the Stud Book, the entry of the winner must be duly lodged with the Polo Pony Society. (5.) All brood mares to have foal at foot or to foal in 1902) by a thoroughbred, Arab, registered, or entered sire.

The society also offer two silver medals to any associated society offering not less than £15 in money prizes, in a class or classes for polo ponies (not including prizes for bending races), for (1) the best polo pony brood mare registered or eligible for registration in the Stud Book. (2.) For the best polo pony mare registered or eligible for registration in the Stud Book, or best polo pony filly, one, two, or three years old (to be shown in hand).

As to the conditions, it may be stated that 1, 2, 3, and 4 are precisely the same as those given above, and 5 as applying to brood mares.

To any associated society during the current year offering not less than £20 in money prizes in a class or classes for polo ponies (not including prizes for bending races) the society offers three silver medals as follows:—

(1.) For the best polo pony stallion registered or eligible for registration in the Stud Book, or best polo pony entire colt, two or three years old. (2.) For the best polo pony brood mare registered or eligible for registration in the Stud Book. (3.) For the best polo pony mare registered or eligible for registration in the Stud Book, or best polo pony filly, one, two, or three years old (to be shown in hand).

The conditions are precisely the same as in the preceding scheme.

The forms of application for the Hunters' Improvement and Polo Pony Societies' medals can be had of the secretary, Mr. A. B. Charlton, 12, Hanover Square, London, W., and they have to be returned not later than April 1st next.

Reading College.—The Court of Governors of Reading College have elected the Lord Lieutenant of Berks (Mr. J. Herbert Benyon) President of the College, in the place of the late Lord Wantage. A fund of £1,000 a year for five years has been raised to augment the existing income. Lady Wantage, Mr. Benyon, and Mr. Alfred Palmer have each contributed £250 a year to this fund.

SHEEP.

The Trade in Wool During 1901.

In their annual review of the wool trade during the past year Messrs. Helmuth Schwartze and Co., wool brokers, of Moorgate Street Buildings, London, E.C., state that the past year represents in the woollen trade and industry a period of convalescence. The formidable losses caused by the heavy fall in values in 1900 had led to a more or less chaotic state. Wool and its manufactured products had, during a large part of that year, become practically unsaleable, or saleable only in very limited quantities, and the supplies in the Central London Market had, to prevent utter collapse, to be cautiously doled out to the trade, importers becoming the holders of stocks, instead of dealers and manufacturers. Consumption had become contracted to such an extent that the holding back of supplies on a large scale produced absolutely no effect, and it almost looked as if wool were no longer wanted or had been displaced by other materials. All this has in the past year been gradually brought back to normal conditions. What was held back in 1900 has swelled, and swelled largely, the supplies in 1901; but, though of Colonial wool alone close upon 600,000 bales more were offered to the trade than the year before, it has, notwithstanding the strained conditions of credit, all been absorbed without difficulty, showing that the contraction of requirements in 1900 was abnormal and temporary, and that the power of consumption of the article had remained unimpaired. The heavy industrial losses were met by financial reorganisations, and the feeling of confidence, shaken to its foundation in 1900, has insensibly and gradually returned in the course of the past year and become fairly re-established in the minds of the trade.

Compared with the two turbulent preceding years, the past twelvemonth presents, as far as Australian merino wool is concerned, an appearance of perfect calm. There are price fluctuations, upwards and downwards, but they are small, and the average level of values remains much the same. The condition of the trade, too, seems to remain the same. It may be described as never very good in the way of buoyancy or high profitableness, but as always good in the sense that manufacturers were well employed and had no difficulty in obtaining contracts.

The picture which the market for cross-bred presents is a totally different one. Here—excepting the comparatively small group of fine qualities—the weakness is intense, and the fall in values seems interminable. It amounts for the coarser descriptions to 30 to 35 per cent., and reduces them and kindred River Plate and domestic wools to an altogether unprecedentedly low level.

We give in the following the cost per lb. clean of a few representative descriptions of wool, both merino and cross-bred, at the end of the past four years:—

					Australian Crossbred		
	Pt. Phillip Good	Adelaide Average	B. Ayres Average	Cape Short Washing	Fine (Super)	Medium	Coarse
December,	d.	d.	d.	d.	d.	d.	d.
1898	21	18½	17	15	16	11	9
1899	33½	31	26½	24	25	16	12½
1900	19½	17	14½	13½	15	11½	9½
1901	21	18½	15½	14	16	8	6½

It will be seen that after the great upward and downward movements of 1899 and 1900 Colonial merino wool and the finest cross-bred have returned to much the same level they occupied at the end of 1898, the time, that is, before the perturbation took place. Medium and coarse cross-breds, on the other hand, are 25 to 30 per cent. cheaper than at the close of 1898, and compared with the high point of 1899 they have fallen to about half their value. The reason for this immense decline is mainly the large increase in the production of these wools.

While the production of wool at the three chief sources of supply has receded about 6 per cent. its composition is so altered, that cross-bred presents an increase of 50 per cent., and instead of standing at 31.7 per cent., now counts for nearly half of the whole, and includes, moreover, a much larger proportion of coarse wools than was the case in 1895. It seems natural that a great decline in value should accompany so considerable a growth. At the same time, the impression remains that the fall has run its full course, and some indications of a rally have shown themselves during the last few weeks.

Considering the financial strain under which the woollen industry has laboured, and considering also that the export business has remained stagnant, and that the American demand for wool and goods, which used to give so great an impetus to trade, has continued absent, the result of the year cannot be called unsatisfactory. The industrial profits may indeed be only moderate, and the heavy losses of 1900 but very imperfectly repaired, but the general feeling in the trade is much more reassured, and the market is brought back to sound and normal conditions.

The fluctuations of merino wool were within moderate compass, and at the end of the year Australians were mostly 10 per cent., Capes only slightly higher than in November, 1900. River Plate stood 5 to 7 per cent. above the close of 1900. Fine Australian cross-breds were, if anything, slightly dearer, but medium and coarse cross-breds 30 to 35 per cent. cheaper. Among lustre wools Alpaca was about 10 per cent. higher, but Lincoln hogs and Mohair were lower; for the bulk of English long wools, for Peruvian, and for most of the low wools, East India excepted, the depreciation is enormous.

The average per bale—£10½—is the lowest on record, and compares with £11 in 1895. This is entirely due to the exceedingly low prices of cross-breds, which realised on the average of last year fully 30 per cent. less than in 1895, while the value of merinos was still 10 per cent. higher than the average of 1895. Based on last sales' rates the value per bale is also £10½, or the same as in November, 1900, against £19 in November, 1899. The total average value of the last two clips was only £21 millions, against about £25½ millions on the average of the preceding eleven years.

The total deliveries of Colonial wool for Europe and America are 585,000 bales more—2,052,000 bales, against 1,467,000 bales—but they are still below the period 1892—1897. The sales in London amounted to 1,361,000 bales (1,269,000 Australasian and 92,000 Cape), against 728,000 bales (697,000 Australasian and 31,000 Cape) in 1900, leaving still a fair-sized stock, viz., 43,000 bales—mostly cross-bred wools. The direct purchases amounted to 691,000 bales (549,000 Australasian and 142,000 Cape), against 739,000 (652,000 Australasian and 87,000 Cape) in 1900. The shares of the English, Continental and American consumption were 47½, 49½, and 3 per cent., against 42, 54, and 4 per cent. in 1900, showing an unusually large proportion falling to the share of the English consumption.

The imports into the principal European ports of Extra European wools (including Turkish wools, Mohair, Alpaca, and Camels' hair) for the calendar year show an increase of 436,000 bales, but, notwithstanding the great reduction in the preceding year, they are smaller than in any year from 1892 to 1899. This is partly due to the large falling off in sundry foreign wools. Last year only the imports of Mohair and Punta Arenas were larger, while those of all the other principal descriptions were smaller. The total deliveries are 3,023,000 bales, against 2,187,000 bales in 1900, but if the two years are taken together the average of 2,605,000 bales will still remain far below the figures from 1891 to 1899. The stocks of Colonial wool comprise about 43,000 bales held over wools in London, against 133,000 bales in 1900. The stocks of "other sorts" are reduced in nearly all descriptions.

The quantity left for home consumption is large, and has only been exceeded in 1898. The total stocks in ports at the end of 1901 amounted to 69 million lbs., against 126, 50, 63, and 63 million lbs. in the four preceding years. Taking this into consideration, the quantity at the disposal of the home trade in 1901 was 598 million lbs., by far the largest total on record, against 426, 536, 568, and 490 million lbs. in the four preceding years. To this great increase of 172 million lbs. the Colonies contributed about 120 and the River Plate about 24 million lbs. Taking the last two years together it will however be found that the average was less than in the two or three preceding years, while the stocks of domestic and imported coarse wools in the interior are probably larger than usual.

The value of exports shows a reduction of 10 per cent., and is the smallest since 1862. Only mohair and alpaca yarns show an increase, while the falling off affects every other description of woollen manufactures. The exports to Canada, India, and China were fairly well maintained, but all other countries took less, particularly Germany, South America, and Japan.

Although merino wool had weak moments in the past year, there was yet a general feeling that it was in a really safe position; and it is probable that a greater improvement in prices than actually took place would have resulted, had it not been for two considerations. One was the impaired purchasing power of the trade and the consequent enforced absence of any strong speculative movement; and the other the very great disparity in the value of merinos and of cross-breds, which latter, though in the lower grades a totally different article, yet to some extent compete with or influence fine wools. Both these considerations are likely to continue in force in the present year, and for that reason too sanguine expectations would probably be out of place. But in view of the absence of large stocks in the hands of the trade, and of the fact that even with a moderate increase in the production this year's supplies must necessarily fall short of those of 1901, we think it is not too much to say that the outlook is satisfactory, and the present position of the article a sound one; sound in the case of merino wools on account of their moderate supply, and in that of cross-breds on account of their cheapness.

SOCIETIES.

Highland.

A meeting of the directors and the annual general meeting of the Highland and Agricultural Society took place at 3, George IV. Bridge, Edinburgh, on Wednesday, Sir Ralph Anstruther presiding at both meetings. At the meeting of directors the following special prizes for the Aberdeen show this year were intimated:—By Shropshire breeders, £10 for pens of cross-bred lambs got by a Shropshire ram; by Oxford Down Sheep-Breeders' Association, £10 for pens of cross-bred lambs got by an Oxford Down tup; by Mr. Howatson, of Glenbuck, £10 for best five black-faced shearling tups; and £14 for black-faced shearling tup best adapted for producing stock to yield early maturity mutton, irrespective of wool value. It was agreed to offer Highland pony prizes for the best stallion, three years old or upwards, not exceeding 14.2 hands, and for the best three-year-old mare. A special prize of £10 for the best in these classes was intimated from the Polo Pony Society. Before recommending any premium for trials of thrashing machines the committee preferred to have an investigation of improved mills at present or soon to be at work in farms throughout Scotland, and to learn from the farmers their experience of difficulties. The committee was continued, with power to make this investigation. On the motion of Sir James Gibson Craig it was agreed to hold the 1904 show at Perth.

Mr. John Speir, Newton, moved the following resolution:—"That the directors of this society invite the council of the Royal Agricultural Society of England to co-operate with them in arranging a conference with the principal botanists, so that some recognised method of testing seeds and tabulating the results may be adjusted and adopted by the botanists." He suggested that the two national societies should do for botanists what the Chemical Society had done for chemists, namely, to have one standard way of doing this work. He moved that it be remitted to the Science Committee. Mr. Cross, Knockton, seconded. The resolution was adopted.

Annual Meeting.

There was a large attendance at the annual meeting, at which sixty-seven new members were elected.

Sir James H. Gibson-Craig, the hon. treasurer, gave in the financial report. The total receipts for the year amounted to £11,233, and the expenditure to £10,145, leaving a balance of £1,087. In view of the fact that the show of last year fell to be held at Inverness, where the show has hitherto resulted in a substantial loss, the directors anticipated that the society's income for the year would not have been equal to the outlay. Fortunately, however, the Inverness show of last year was so successful as to do something more than pay its own expenses, and largely on this account the directors have been enabled to add a sum of £2,000 to the society's invested capital (applause). They had now held eight shows under the management of Mr. Macdonald, and only one of them had been a loss.—The report was approved.

In the course of a report on the Inverness Show Mr. Cameron, Balnatsyle, stated that the receipts of the show exceeded the outlay by about £100, a pleasing contrast to a loss of £1,088 in 1892, of £838 in 1883, and of £1,401 in 1874. This was all the more gratifying when it was remembered that the amount offered in premiums last year was nearly £900 more than the sum offered in 1892.

Forthcoming Shows.

Mr. A. M. Gordon, convener of the local committee, reported that arrangements were progressing satisfactorily for the Aberdeen show on the 15th of July. The Town Council had, as in former years, met the society handsomely, agreeing to give a free site, subscribing £100 to the local fund, and providing a free supply of water. A handsome list of premiums had been prepared for the show, the sum offered in prizes from the society's own funds exceeding £2,380, and being about £470 more than the sum offered by the society at the Aberdeen show in 1894.

Sir James H. Gibson-Craig, convener of the Shows Committee, reported that for the show of 1903 an admirable site had been secured on the old racecourse at Tinwald Downs, Locharbriggs, Dumfries. The Town Council had resolved to contribute £75, and it was hoped the support from the district would be, as usual, liberal. In 1895 the sum of £1,701 was raised locally.

The SHORTHORN STEER shown above is FLOWER BOY, sire Cabin Boy, 66,766, dam Flower Girl, exhibited at the Smithfield, Birmingham, and Norwich Fat Stock Shows last year by Miss Alice de Rothschild, who was also its breeder. At the Smithfield Show Flower Boy won first prize in the class for steers of its breed over two and not exceeding three years old, the £25 silver cup for the best shorthorn, and was reserve for the best steer or ox in the show. At Birmingham he only got a second prize, but at Norwich he won a first, and was reserve for the best ox or steer in the show. His age on December 1st was 2 years 11 months 1 week 6 days, whilst his weight at Norwich was 18 cwt. 2 qrs. 6lb.; and at Smithfield exactly 6 lb. less.

District Shows.

Mr. Elliot, Hollybush, submitted the report on district competitions, showing that in 1901 grants of money and medals had been given in 296 districts. The total expenditure under that head amounted to £452. For the current year the directors proposed the following grants:—Under section 1: Eighteen districts for grants of £12 each for cattle, horses, and sheep, and eight districts in intermediate competition with a grant of three silver medals to each. Under section 2: Twelve districts for grants of £15 each for stallions; special grants of £40 for Highland home industries; £20 to Kilmarnock Cheese Show; £5 to Shetland; and £3 each to Orkney, East Mainland, West Mainland, and Sanday, Orkney; thirty districts for two medals each; the usual medals at ploughing competitions; and sixteen districts for two medals each for cottages and gardens—making the total sum offered £588, against £452 awarded in 1901.

Veterinary Adviser Suggested.

Mr. Johnston, of Sands, proposed the following motion:—"That a permanent veterinary inspector to the society be appointed, as the present system is unsatisfactory to exhibitors, and that this meeting recommend the appointment of Principal Owen Williams, of the New Veterinary College, Edinburgh, to the post of veterinary inspector to the society as filled by his late father, Principal Williams." In speaking to the motion, he said that after the death of Principal Williams the directors had resolved not to fill up the vacancy, but to rely on a local veterinary inspector at the different places where the show was held, and he did not regard that system as at all satisfactory. They all knew that local veterinary surgeons were naturally inclined to be lenient towards their own clients, and to give the benefit of the doubt to animals that might belong to people who patronised them. What they wanted was an impartial referee who held a high position in the veterinary world. He had had professional experience of Professor Owen Williams for the last twenty years, and he had always found him a most experienced, capable, and fearless judge, and one who could be thoroughly trusted. He thought the directors were incurring a serious responsibility in having a different inspector each year to examine the stock exhibited at their national show.

Mr. Skirving, Niddry Mains, seconded, but thought Mr. Johnston might have left it to the directors to appoint any man they wanted.

The Chairman justified the action the directors had taken on the death of Principal Williams in unanimously agreeing not to fill the place, but to leave the matter open, so that they should be able to consult upon special veterinary points any recognised expert upon the subject, and get the very best opinion they could.

Mr. A. M. Gordon spoke to the same effect.

It was subsequently decided by a large majority to remit the matter back to the directors with full powers.

Mr. Johnston's motion was withdrawn.

Improving Upland Pastures.

Mr. Ferguson, Pictstonhill, reported that the experiment carried on jointly by the society and the West of Scotland Agricultural College, with the assistance of the Board of Agriculture, whose object was the improvement of upland pastures and the measurement of the success attending the means employed by noting the increase of the number of sheep the various plots were able to carry, and the quality of the mutton produced, had now passed the preliminary stage, and the results had justified the opinion of the committee that a preliminary gauging of the natural fertility of each plot on each of the three stations was not only expedient, but essential to the success of the experiment. At each of the three stations—Boon, Sunderland Hall, and Naemoor—20 acres had been fenced off, and divided into five plots of four acres each. They had been grazed by sheep during the past summer, and these had been regularly weighed at proper intervals, with the anticipated result that considerable differences in the productiveness of the various plots had been detected. Had the committee begun to treat the plots in various ways without this preliminary year's grazing, during which the plots had nothing done to them, the differences due to the natural fertility of the plots would have been regarded as due to the different treatment they had received, and the results could only have been misleading. The treatment the plots were now to undergo was the following:—One plot would be left in its natural state as a blank experiment to serve as a gauge for the remainder; one plot would have fed upon it a certain amount of oilcake; and on the remaining three plots there would be applied basic slag, basic slag and kainit, and, lastly, superphosphate, preceded by an application of lime. These were the top-dressings which, in the opinion of the combined committee of the society, the college, and the Board of Agriculture, were most suitable to apply, and likely to elicit the most useful information. The experiments were under the immediate charge of local committees, familiar with the farming of the districts, and interested in the investigation.

Professor Wallace pointed out, with regard to the experiment at Tibbers, in Nithsdale, that it was a small area of hill grasses, and they all knew that hill sheep would not thrive in a small area.

The Rev. Dr. Gillespie said the experiment in question was under the care of the West of Scotland Agricultural College and a local committee, and he asked that they should suspend their judgment until they saw the results.

Forestry.

Sir Robert Menzies moved that the grant of £50 to the lecturer on forestry in the Edinburgh University be continued for the current year. He also reported that the next examination for the society's certificate in forestry would be held, in accordance with the new regulations, in April, 1903. The success which had attended their first exhibition of forestry at the Inverness show had, he said, induced the Royal Scottish Arboricultural Society to arrange for a similar display at Aberdeen this year.

The Education Depatment and Agriculture.

The Rev. Dr. Gillespie reported, on behalf of the Education Committee, that at the examination

1, ESSEX STREET, STRAND, LONDON, W.C.

held at the Dairy Institute, Kilmarnock, in the first week of October last, for the national diploma in dairying, there were eleven candidates, of whom two obtained the diploma. The directors recommended that a grant of £60 be given for the current year to the Glasgow and West of Scotland Agricultural College, in aid of the expenses in conducting the Kilmarnock Dairy School. He congratulated Scottish agriculturists on the establishment of three colleges—at Edinburgh, Glasgow, and Aberdeen. Great advance had been made in the higher education.

Etomologist's Report.

The annual report from the society's entomologist, Dr. R. S. MacDougall, was presented, and stated that a good many complaints of insect attacks had been received during the past year, the fine weather having favoured the development and multiplication of insect life. Attacks by the following insects were investigated and reported upon, viz.:—(1) On agricultural crops—diamond-backed moth, turnip moth, and the granary weevil; (2) on fruit and fruit trees—strawberry beetle, raspberry moth, apple blight, and the small ermine moth; (3) on trees—the pine beetle, the pine weevil, the pine tortrix moth, the larch moth, and the wood wasp. Dr. MacDougall had continued his investigations regarding the disease which did so much damage amongst swedes two years ago, especially in the south-west of Scotland. He had proved that the disease was caused by bacteria. From cultures prepared from diseased plants, he had experimentally produced the disease in healthy turnips. Although the bacteria were not able to invade a perfectly sound turnip, they gained entrance by a wound, such wound being in many cases caused by insect attack. In turnips grown in three widely separated districts, Dr. MacDougall found at work grubs which, on being fed and bred up to the adult stage, produced flies, which, so far, remained undetermined. They were certainly new to Britain, and it was believed might be new to science.

Professor Wallace thought the disease had been imported in bad seed some sixteen years ago, and he suggested that there should be some inquiry to ascertain if that was the case.

On the motion of the Chairman, a vote of thanks was awarded to Sir Ralph Anstruther for presiding.

The Pen of Black-faced Mountain Sheep illustrated above is that which won the £10 silver cup for the best pen of mountain sheep and a first prize at last year's Smithfield Club's Show. These animals were bred and exhibited by Mr. John McDowall, Girdstingwood, Kirkcudbright, N.B., and on December 1st were 1 year 7 months and 2 weeks old, whilst their total weight was 5 cwt. 3 qrs. 23 lb.

Dairy Trade and Can Protection.

A Council meeting of the Dairy Trade and Can Protection Society was held at their registered offices, 57-58, Chancery Lane, on Wednesday, F. Ramsay, Esq., in the chair.

The minutes of the last meeting were read and confirmed. The reports of the Working Committee were presented, and after the comments of the President, were unanimously adopted.

The Chairman of the Law and Parliamentary Committee (Mr. J. T. Horner) then brought forward a further consideration as to the Departmental Committee's report on Preservatives and Colouring Matters, and quoted the evidence given before the Departmental Committee of the late Dr. Bond, and Dr. Bell, of Glasgow, and also that of Mr. James Brierley, which decidedly showed that a preservative with boron basis was perfectly harmless, and proposed that the objections of the society to the abolishing of the use of so harmless a preservative in milk should be forwarded to the President of the Local Government Board.

The Can Exchange Report was then read by the Secretary, which showed that 278 cans and 28 churns had been recovered during the month of December, and the delivery consisted of 145 cans and 16 churns to their owners. The Secretary also mentioned an amusing incident that had lately taken place as to recovering churns. It appeared that he asked a certain railway company to forward from the country eight railway churns belonging to one of the members, sending labels addressed to him at the Exchange. This they undertook to do in the early part of December, and after waiting a considerable time he wrote to the company, asking what had become of the churns. The reply was that instructions had been given for them to be sent. After some days elapsed, and the churns not arriving, he wrote again, when he received a reply that the churns had arrived, but they could not be found. Subsequently he discovered six had been taken away by the owners, who acknowledged receipt, and two had been taken away from the country station by someone.

The analysts, Messrs. Redwood and Hailes, reported that during the month of December they had received direct from members of the society 120 samples of milk, eight of which were found to be of poor quality, and 38 adulterated. The inspector collected 136 samples from various stations during the same period, six of which were of poor quality and 15 were adulterated.

The reports on a number of complaints of the loss of churns and cans were then read, and although not the whole of the property had been recovered, the major portion had. One or two important cases of the loss of churns which had only arrived a few hours before the meeting were left in the Secretary's hands for enquiry.

Warwickshire Farmers.

A dinner in connection with the Warwickshire Farmers' Association was held at Nuneaton on Wednesday, at which the secretary (Mr. Rowland) presented a report as to the amount of work that had been done since the start of the association, nine months ago. He stated that they had now nine branches, and a membership of 600, of whom 444 had already paid their subscriptions. The largest branch was Coventry, with 152 members, Nuneaton coming next, and being followed by Coleshill and Alcester respectively. The receipts had amounted to £209 1s. 11d., of which £149 6s. 2d. had been expended. A provisional committee had been formed during the week of the Coventry Farmers' Dairy (Limited), to which the farmers could send their milk, and it was the intention, if the trade would not buy at their price, to go direct to the consumers. Six of the branches had taken up trading on co-operative lines.

The association had succeeded in getting Captain Fife, of the Remount Department, to hold a sale at Coventry, at which twelve horses were sold for good figures, and an assurance had been given that the association should be kept acquainted with the requirements of the Army authorities as to horses. He contended very strongly that the association was not intended as a rival to the Warwickshire Chamber of Agriculture, and in answer to a statement made at the last meeting of that body that the people at the head of the association affairs were all landlords, he pointed out that the Executive Committee, which consisted at present of thirty-two members, was wholly composed of farmers.

Several other speakers very strongly condemned what they termed the anti-landlord feeling that permeated the Chamber of Agriculture

Stockton Chamber.

The thirteenth annual dinner of the Stockton Chamber of Agriculture was held at Stockton on Wednesday, Mr. J. T. Wilson presiding over a company of about 70, which included Mr. A. E. Pease, M.P., the Mayor of Stockton (Alderman J. Richardson), Captain Lilley (Billingham Hall), Mr. Thomas Appleby, and Professor Middleton.

The Chairman gave the Royal toasts, and was followed by Alderman A. G. Rudd, who proposed "The Army, Navy, and Reserve Forces," to which Major Smith and Surgeon-Major Blandford responded. Alderman J. W. P. Page gave "The Houses of Parliament," to which he coupled the name of Mr. A. E. Pease, M.P. for Cleveland.

Tax on Imported Wheat.

In responding, Mr. Pease said that whatever their political opinions might be they must agree that the large landlords were the best landlords. As legislators he did not think the House of Lords did as much as it might do for the prosperity of agriculture. With regard to the Lower House, he rather imagined that it did not stand at the present moment as high in the estimation of the public as it had done in former years. He believed that, something like their War Office, it was subjected to a good deal of criticism at the hands of members of all parties. If the House of Commons was to blame for its present condition the cure was with the people. There were measures of small importance which they ought to expect from even the present House of Commons, and he was glad to know that the chambers of agriculture and the Central chamber had put three or four measures of a minor character prominently upon its programme, and there was no reason why those small measures should not be passed into law at an early date. There was, for instance, the bill for compensation for damaged crops received by the sparks from locomotive engines, also the measure to amend the law of trespass on agricultural land, and another to amend the law with regard to boundary fences. He was a Free Trader, and took up his present position in the special circumstances of the hour, and the needs of the nation, when he said that, in his opinion, it was perfectly justifiable for the purposes of war taxation to levy a reasonable duty upon the importation of wheat, such as 1s. registration fee per quarter. That would yield an enormous revenue, and would not be appreciably felt by the working classes. It would be a tax which would fall evenly over all the population who, having supported the Government in the way they had, should bear some share of the burden. (Applause.)

Councillor T. Speck Walker, J.P., submitted "Success to Agriculture," to which Professor Middleton replied.—"Success to the Chamber" was proposed by Mr. T. Appleby, who expressed the opinion that the agriculturist interest was by far the greatest interest in the country. He sincerely trusted that pressure would be brought to bear upon the County Council to provide an experimental farm.

The President, replying, said for the most part the land in Stockton district was of a strong clay-like nature, and during the past 40 years the farmers had had to change altogether their methods of farming. What used to be a wheat-growing district was now changed. Farmers, fortunately, had been able to adapt themselves to circumstances, and had so changed their methods until dairying had become the chief industry amongst them.

The concluding toast, "The Donors of Prizes and Judges," was proposed by the President and responded to by Messrs. C. Robinson and I. C. Bainbridge.

Woodbridge Horse Show.

There was a large attendance at a meeting of the members of the above society at Woodbridge, on Thursday, under the presidency of Mr. Alfred J. Smith.

Mr. Alfred J. Smith, Major A. W. Cobbold, and Mr. S. Toller were unanimously elected chairman, vice-chairman, and auditor respectively. The list of members of the committee was revised, the name of Mr. E. F. Quilter being substituted for that of Mr. Lionel Digby, who had left the neighbourhood. On the motion of Major A. W. Cobbold, seconded by Major R. J. Carthew, it was decided that the prize list for the show to be held on March 31st should remain as last year, so far as those given by the society were concerned, and that the secretary (Mr. G. Shipman) should write to the donors of special prizes, and that the result of their replies should be reported at another meeting, to be held that day fortnight.

By Hordeum.

Seed-Barley.

The time has come when good barley growers have to begin thinking about what they mean to do this year, so far as they have it in their power to control events. In the direction of a farm there is so little that is merely mechanical and can be taken for granted, so that every step has to be taken as circumstances permit. It rarely happens that anyone can be quite sure of what he will do. But this need not lead to a general policy of drifting, or, worse still, to the adoption of no policy at all. It is wiser to mark out a clear common-sense line and follow it as closely as practicable. For instance, it is not possible to say to-day when sowing can commence, but it is distinctly useful to give the matter careful attention, and if a really good seed bed is open for use at an early date, to have the seed ready to sow, and get it in.

Early Sowing is Good

nineteen times out of twenty. One of the clearest and most constant lessons taught by the experience gained at the Brewers' Exhibition is to gain the superior advantages that so continually fall to samples got in early, and to try to avoid the loss to late ones.

It is quite time to determine what varieties of grain will be used, and to secure the supply. Some men use their own grain, and seldom or never change stock. Others buy tail-corn from a neighbouring maltster, and there are yet more who hold that all a man need do is to get a small, light, healthy barley at a pound (20s.) a quarter, with 20 to 30 per cent. more grains in a bushel than if big, fat, round-berried barleys are sown that ought to be made into malt.

A good many men—and, happily, the number is rapidly increasing—who persistently buy selected seed from a first-class seedsman of repute, and give up to eighty shillings (80s.) per quarter for it. In some notable instances this is not the highest price paid by good, sound, level-headed men of business, who know their business and make it pay.

Fine Quality Seed

is absolutely necessary, and it cannot be too carefully dressed and cleaned from every defect. It is not merely necessary that seed should grow, but it must grow freely, regularly, and free from all rivals and pests. Only good, regular, even seed can do this, but it need not necessarily be big grain. A very noteworthy instance of this occurred last year, when the heaviest sample of the year grown in Kent was raised from a thin, light, Norfolk barley that only weighed 54lb. to the bushel. But it was a regular, healthy grain, and the change of soil and climate just suited it.

A practical question has often been raised as to the desirability or otherwise of

Steeping Seed-Corn,

This has been done with the view of securing the more uniform absorption of water than can occur in the soil, and also, in most instances, to add sulphate of copper or some other similar antiseptic. It is somewhat significant that of the samples so treated sent up to the Brewers' Exhibition half obtained prizes, and further information is much needed. Another question of almost precisely the same type is the use or otherwise of kiln-drying or sweating grain prior to sowing. It is generally admitted that maltsters find this process a desirable one, and the cost and labour are fully justified. But there is this difference: the growth on floor in a malthouse is a totally different thing to vegetation in an open field; the difference of hours in the one case is of more influence than days or even weeks in the other.

Sweating may and does lead to even sprouting in a malthouse, but it has not yet been demonstrated that it is of use in the field. Here, again, however, there is one thing about which no uncertain sound need be made. If sweating is adopted it should be done at once, if it is not already finished, for

Sweating needs Mellowing.

or the subtle influences that arise from storage after kiln-drying. To sweat grain just immediately prior to use is never so good as giving it time to mellow, and nothing has, thus far, been suggested to show that the experience gained by maltsters is not applicable to open germination of the grain.

Of much more importance than any of the above questions is the selection of the fields for barley-sowing, and the right consideration of the actual effects and possible influences of the preceding crops, and the manures used in the production of the same.

One of the most curious results of the use of artificials in barley-growing is becoming apparent when two varieties are used in successive crops or years, or where some good type is employed, when with the previous crop none had been added. One has only to turn up the facts as at present recorded to see this, and as it is opening out a lot of new possibilities all good barley growers who like to satisfy themselves on some points instead of getting all their information from the experiences of others may so regulate their cropping and manures as to help in determining the truth.

Arsenic in Beer.

A joint committee of the Society of Chemical Industry and the Society of Public Analysts have prepared a report on the question of the arsenical poisoning of beer. After an examination of various methods, the committee recommend that of Marsh-Berzelius. This test is recommended as one of such extreme delicacy that, with quantities of about twenty grains, it will give an indication of one part in seven million parts of arsenious oxide. The committee do not suggest any limits for quantities of arsenic which may be regarded as permissible, but they express the opinion that limits should officially be fixed by the Royal Commission or otherwise.

Agricultural Imports.

The following is an account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week ended Jan. 7, 1902, together with the quantities imported in the corresponding week of the previous year :—

"Pure Butter."—At the North London Police Court on Friday Frank Ward, a shopkeeper, of Sidworth Street, Hackney, was summoned by the Hackney Borough Council to answer a charge of having sold as pure butter an article to which the Public Analyst certified an addition of 94 per cent. of foreign fat, this consisting of cotton seed oil.—Mr. Williams, solicitor to the Borough Council, called evidence to show that the "butter" in question was purchased at the defendant's shop as "shilling butter," and it turned out that the stuff was only worth about 4d. a pound.—Mr. Fordham: It is a shocking fraud—a shocking fraud? Selling stuff nearly entirely composed of cotton seed oil is wicked, and the defendant is fined £10 and £2 2s. costs.—The defendant: This is my first offence, sir.—Mr. Fordham: It is an exceedingly bad case, and I am not quite sure that I ought not to have you fined £20. You will pay £12, or go to gaol for a month.

HOPS.

By Lupulin.

Looking Backward.

The retrospect of the past year can hardly be otherwise than unsatisfactory to the majority of our people, whatever their station or occupation in life. Commencing in the dark shadow cast upon the land by the death of our revered and venerable Queen, each month of 1901 has brought its anxieties and sorrows to every class. "The harsh and boist'rous tongue of war," has unceasingly reminded us of the drain upon our national resources, both material and financial. Our trade has been seriously depreciated, while our taxes and other charges have increased. The invasion by American capitalists threatens our commercial future, and agriculture, formerly the accredited source of our national strength and prosperity, has suffered to such an extent that we are compelled to admit that the period has gone when the British farmer

"Might, free from trouble, pass his days
In his own way, and pay his rent with praise,"

for his calling is on the whole unremunerative, and consequently productive of more trouble than comfort. I have no desire to pose as a confirmed pessimist, for I know "'tis not for mortals always to be blest," and being of a sanguine inclination, I would rather look forward to possible brightness than meditate upon the cloudy atmosphere by which we have been enveloped. Nevertheless, it is my duty to present a faithful chronicle, and I much regret that my experience in the section of agriculture with which I am especially connected does not justify me in presenting an attractive sketch of

The History of our Industry in 1901.

The market opened in January last with a fairly healthy tone, which was maintained for a short time, but as we advanced into the following month demand relaxed, and merchants showed such anxiety to clear their stocks that keen competition in selling to consumers resulted, causing general reduction of quotations. The close of February was marked by tendency towards lower prices, which was further accentuated in March. It was expected that the destruction of some thousands of pockets in the burning of Messrs. Horsley's warehouse would have given strength to the trade, but this occurrence did not affect the course of events, and a loss of value to the extent of 15s. to 20s. per cwt. was the final issue of the operations of the month. Throughout April and May similar dulness prevailed, with but little relief, and reference to my notes made during the three following months shows that, apart from exceptional and brief revivals of demand, there was no appreciable variation in the downward slide, which became more rapid as the estimates of the new crop became more reliable.

The Growth of the Bine.

was promoted from the commencement by favourable climatic conditions. The older roots wintered well, and the younger plants were healthy and sound. Bright dry weather in April enabled farmers to get on with their preliminary cultivation, and though the start of actual growth was late, the early shoots being checked by cold winds in May, good progress was evident by the end of that month. The increase of heat in June assisted the gardens, but a rather long drought, and the appearance of fly created some anxiety. The natural vigour of the bine, however, overcame all obstacles, and rapid progress was evident, which continued throughout the following month, although the aphis blight was persistent, and washing was necessarily practised in all districts. About the middle of July forecasts of a heavy yield were made by outside observers, but were emphatically rejected by growers. I then ventured to point out that the production of large crop would certainly be prejudicial to the market value, and suggested that if such a result were probable an agreement should be arranged to limit the picking. My remarks were scouted as "nonsensical," but events have proved that all growers would have been benefited had they taken my words as worthy of at least a little consideration. The weather continued to suit the hops "down to the ground," and up to the top. The bine increased in height and strength, the laterals were freely pushed out, the barr appeared in abundance, and, despite the constant presence of fly, every garden promised well. Indeed, as the close of the growing season approached it appeared more than probable that the second yield of 1899 would be equalled and perhaps surpassed. Thus we arrived at the September harvest time, when a fresh attack of blight upon the cones, the running of mould in many gardens, and the almost universal premature ripening of hops, created the expectation that the weight gathered would be substantially reduced. Urgent advice to abstain from picking any but sound coloury hops was circulated amongst the planters; some of them acted upon it, but too many were heedless, with the

result that the market was speedily burdened with large quantities of very inferior stuff, and the prospects of a profitable trade were ruined. When the official estimates were published they confirmed our fears by stating that we had produced no less than 649,387 cwts., which is practically on a par with the crop of 1899.

It is therefore not surprising that growers have suffered very seriously. The large proportion of poor hops has pulled down the value of all descriptions, so that even choice samples have been sold at much under their real worth, while the range of prices of the lower sorts, which are lower than those of any previous season, demonstrate the folly of the policy which has led to such disastrous results. The market has drifted, throughout the concluding months of the year, from bad to worse, only providing satisfaction for brewers, who have readily absorbed the main part of the crop, to their present and future profit.

Continental Reports.

show that the course of trade has followed similar lines to our own, save that throughout the year the value of hops at Nuremberg and other great centres has been much in excess of our market prices, and that consequently international business has been limited. Belgian hops might have found a larger outlet with us if the qualities had been more acceptable. The indications of all Continental markets at the holiday suspension were in favour of higher prices in the New Year. It is hardly necessary to trace the history of the growth of the crop in Germany, Austria, and other districts. The great results were, with the exception of Bohemia, unfavourable as to quantity, and not very satisfactory in the point of quality. Bohemia produced a full crop of generally excellent hops, which have commanded very high prices throughout the season, and even the lower qualities from Baden, Alsace, Wurtemberg, Hallertau, Franconia, etc., have been taken over freely by consumers, and at good figures, as they became aware of the general deficiency of the yield.

America.

Having but scanty information as to climatic influences during the growth in 1901 I confine my survey to the practical issue that has been evolved since the opening of the season's trade in September last. Owing to a report that the Pacific coast crop would exceed average, the early days of the trade were marked by extreme dullness, but as soon as reliable information came to hand it was seen that the yield of every hop-growing State would be limited, so that the total was not expected to exceed 220,000 bales. A month later, when the picking was about half-completed, this estimate was reduced to 200,000 bales, the most important falling off being in Washington and Oregon. The consumption in 1899 was officially stated to be 193,883 bales; it is certainly not less at the present time, and as very few hops are imported it will be seen that the 1901 crop leaves hardly any surplus for exportation. Steadily but gradually the local markets have hardened, and the business of the year closed with a firm tone, and anticipation of higher rates in the early future.

Imports and Exports.

Our imports of foreign hops from all sources were much less during 1901 than they have been for several years. The total quantity received was 116,042 cwt., of which America sent us 73,660 cwt., and other countries 43,382 cwt. The details which make up the last-mentioned figures are not yet available, but judging from past experience we may reckon that Belgium was our chief source of supply, followed in succession by Germany, Holland, and France, with small shipments from Russia. To demonstrate the shortage of imports in 1901, it is wise to compare them with the three previous years, which were 198,494 cwts., 180,233 cwts., and 244,136 cwts. respectively. Our exports were substantially increased during last year, being 17,796 cwt. of English and 4,906 cwt. of foreign produce, thus amounting to 22,702 cwt., and showing a balance against our market of only 93,340 cwt., which is about half of the corresponding balance for 1900. Foreign competition has been, therefore, reduced to an unimportant point as regards quantity, while the prices realised for imported hops, being above the average currency of our own produce, have further minimised the influence exercised thereby. We export hops to Sweden, Denmark, Germany, Holland, and in small quantities to U.S.A., but our chief customers are our own Colonies, where English growths are most in favour.

Colonel F. J. Justice, agent for Lord Tredegar's Monmouthshire estates and Glamorgan farm estates, was found dead in bed at his house, Craig-yr-Hoel, Castletour, near Newport, on Thursday morning, heart disease being apparently the cause of death. He was at the Cardiff rent audit on Monday, and in Newport on Wednesday, so that his death was totally unexpected. The deceased gentleman was colonel of the 2nd Volunteer Battalion South Wales Borderers.

Mr. Colston, M.P., on Agricultura Questions.

The prizes awarded at the Chipping Sodbury Fat Stock Show and Sale held on December 10th were distributed by Mr. Edward Colston, M.P., on Tuesday last. At the dinner Mr. Colston proposed the toast of the day, namely, "Success to the Chipping Sodbury Fat Stock Show and Sale," and in doing so said that he rejoiced to hear the show and sale were so good in quantity as well as quality. He was told that the prices realised, if not so good as those who were selling would like, were very fairly satisfactory. He congratulated those who initiated the show last year, and said it was worthy of all support and encouragement. He hoped their success would stimulate others to do likewise. He sincerely wished he could tell them that agriculture generally was in a prosperous condition. For years past it had been going through a very sad period of depression. He thought they might, notwithstanding, congratulate themselves that farmers had more heart and more hope now than they had before. The feeling of goodwill and sympathy between those who owned and those who cultivated the land was, he believed, never better and never stronger than at the present time. Of course it was impossible to prophesy as to the future. He read that 50 years ago that little country, Denmark, was in a very parlous condition as regarded agriculture, but, owing to the extraordinary energy of the people, and to the fact that farmers there had combined science with practice, and had improved their methods and system, a different condition of things obtained in that little country. He hoped that with all the experience farmers in England had, and with the resolution and energy which we with reason boasted of, we should in future be able to keep our hearths and home together, as our forefathers had done in the past. He hoped they would see a fair return for the capital invested.

Agricultural Rates Department.

The Agricultural Land Rating Act had been extended for a further period. Those who were opposed to the land cast this in their teeth, and called it a charitable dole to the landlords, tenants, and those connected with the land. He repudiated any suggestion of the kind. This Act was a fair act of justice towards the land, and its object was to relieve burdens which had been so unfairly and unduly pressing upon the land for many years. Those burdens ought to have been removed many years ago, when the Corn Laws were done away with. So far as he knew, very little of the benefit of that Act had come to the landlord, except, of course, that landlords necessarily benefited from increased prosperity on the part of the tenants. Tenants had had their fair share of benefit from the Act, and agricultural labourers had had their share by improved wages during the last few years.

Compensation for Farm Labourers.

Speaking of the Workmen's Compensation Act, he said he thought those present, as practical men, would agree with him that in these days, when it was so difficult to keep men upon the land, any well-considered measure of Parliament which improved the lot of men and made them more contented, and inclined them to remain on the land and feel they were cared for by Parliament and their employers, would have their cordial welcome and support. There was a time, a few years ago, when it was supposed to be impossible to extend the boon of the Workmen's Compensation Act to the agricultural labourer owing to the great expense. But insurance companies had looked into the matter and offered such terms that employers had been able to extend this advantage to their workmen at a very small cost to themselves. With the extended use of machinery accidents must necessarily happen from time to time, and it was a great and reasonable satisfaction to them, and others situated like them, to know that at small cost to themselves they could confer great advantages on their men.

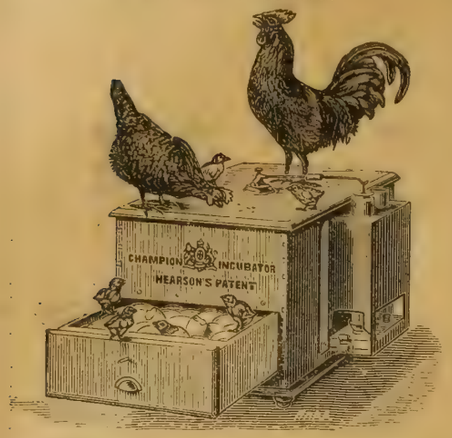
Education.

Referring to the question of education, he said he knew that as a body farmers had always been reputed to be against education. He confessed, when he saw the results of the Education Act of 1870 in the rural districts, he was not surprised at it, because they well knew that their older men, who had never had the benefit of education, such as prevailed now, were certainly more skilled labourers than the younger generation. He thought they would agree with him that the education which the children of the elementary schools in the rural districts—he was speaking of the purely rural schools—received was too literary and too bookish. What they wanted was to interest the children in the soil, and try to keep them in the rural districts when they grew up to be young men, and men full of growth and stature. France had been inclined to take the wind out of their sails, and had set them an people were waking up, and they now realised that they must make education in the rural districts of a more practical character (hear, hear). example. After many years had passed English They wanted to interest the children in the soil and in their surroundings. They must not only move with the times, but they must introduce a system of education in the agricultural districts of a more practical character (hear, hear).

The point he wanted to make was that they should interest children of tender years in the elementary principles of agriculture. They might be taught the nature of animals, plants, and the soil, the air, the water, and everything around them. If opportunity were given they might be taught some practical application of the knowledge as well as the theory. Many teachers were already well qualified to teach such things as he had mentioned, but they would be still more competent if they had opportunities of attending agricultural colleges, so many of which had opened lately. For some years past in France education of the character he had indicated had been made compulsory in the rural districts. They did not want compulsion in England; nevertheless, they must move with the times and grasp the situation. They should realise that children in the past had not had that kind of education which best fitted them for their work (hear, hear). It had been more of a character that enabled them to go away and become clerks. What they wanted to do was to keep their children in the country districts, and if their education were made a little more practical than it had been in the past they might succeed (hear, hear).

Another important question was their

Food Supply in Time of War.



They all knew that the proportion of wheat grown in this country was very small compared with the quantity consumed. True, their Navy was the finest the world had ever seen. They knew that European nations hated England with a deadly hatred, and nothing would give them greater pleasure than to form some gigantic combination against this country. Even if they were not successful in sweeping the British fleet from the seas, it was certain that a great many corn ships would be taken, the price of corn would go up, possibly a panic would ensue, and great scarcity would result (hear, hear). Although they spent enormous sums on the Navy and in strengthening their defences, the forts were not victualled. They needed to have some reserves of corn, so that should bad times come they might have something to fall back upon. If any disaster overtook the fleet it would not be necessary for a foreign nation to land a single man to force this country to surrender, for the people would be starved into submission. He thought the question was of such vital importance that the Government ought to endeavour to deal with it.

Mr. Jefferies, a Hampshire member of Parliament, had put forward a project which seemed eminently practical from a national point of view. It was not to preserve wheat in granaries and storehouses, which would cost enormous sums to build, but to preserve it in the stack for twelve months. Farmers, however, must be paid for doing that—it must be made worth their while to do it. It was suggested that they be paid 2s. a quarter for loss on capital, 2s. for loss through vermin, and 1s. for keep, making 5s. in all. If four millions of quarters were thus preserved for twelve months it would give the country a little breathing time, although it would not keep the people for very long. The cost of that would be a million a year.

Regarding the method of meeting the cost, Mr. Gladstone took off 1s. registration duty on corn. The Chancellor of the Exchequer told them that that 1s. duty, which most people did not know existed, and would not affect the price, would at the present time produce £2,225,000 a year. If that was again put on there would be a million of money for the purposes he had named, and the remainder for any other object—a sum which would be very acceptable just now. He did not think it would raise the price of wheat. He thought it would be better for the people generally to make some little sacrifice than to run the risk of a great national disaster and ruin occurring (hear, hear). If they ever got into the position he had suggested—and it was possible—this country would have to pay an enormous indemnity, which would cripple the nation for generations. He thought that the Government might be asked to look into the matter.

The Trustees of Guy's Hospital have decided to dispose of their South Lincolnshire estates of 6,000 acres. They are first offering the farms to the existing tenants at a valuation, one-third of the purchase money to be paid down, and the balance during thirty years. The trustees have other offers, but are giving the first refusal to the tenants. The value of the land is said to be about £30,000.

Eggs and the Egg Trade.

By A. NEWPORT.

(Copyright.)

(Continued from page 31.)

Irregular Supply.

You will all agree that this country has a fair number of eggs from March to September, but from October to February they are very scarce. There is not much profit to be got out of eggs when they are so plentiful, and when profits might be made, no eggs. To some extent this is being remedied, but by blending we risk the whole trade. To show how irregular the supply is, I can quote from what occurred to me last March. During that month I had to reply to offers amounting in the aggregate to 30,000 eggs per week, and with but very few exceptions, I replied that we were getting elsewhere all new wanted, but should be glad to hear from the writers this October. This October came and I had one offer only, asking what we were giving. I quoted the current price, but he has never sent any eggs.

I don't know how this appeals to you, but I give my view of it. Say I'm a retailer in a large business. I must have eggs for my customers all the year round. What am I to do for the 50,000 a week that we want at this time of year? You English producers can't supply me, or if you could, they wouldn't come at a price that all my customers can pay. So I am forced into the foreign market, and if I deal of a factor all through the light season, he naturally has some claim on my orders when eggs get cheaper. If I don't study him, where will I be next winter? Again, when does the English egg-grower come to me? In the spring, when he outruns the local demand. He must dispose of his wares somewhere, so he tries me. This goes on till the light season approaches, the consignments getting less and less, and one day he writes me saying his birds have stopped laying. Yes, they have stopped laying for *me*, because he finds the local prices are as good as mine, and they can clear him. You don't blame the man—but where am I? I know, too, where he will be when he tries to unload his burden on my shoulers next spring. This is where the foreign agent gets the advantage—he will always find you eggs if you will pay the price.

Quantity.

I say English eggs are not obtainable in anything like quantity. This is a fault. To some people two or three hundred seems a lot; to others, a dozen cases represents a huge quantity; but in the trade such figures are nothing at all. London alone requires millions every week. Can anyone here tell me where I could at this moment find 10,000 genuine English new-laids? Would you, or is there a man in this country who would undertake to book me a supply all the year round of 10,000 per week? No! And yet I could to-morrow morning order ten times ten thousand in each of the following: French, Austrian, Styrian, Russian, Hungarian, Galician, Danish, Italian, and Morocco, and they would be delivered the following day.

It is no uncommon thing for one Russian house that I know of to have an order for three hundred cases at once; and they would be used up in a week by the manufacturing firm placing the order. It would be a revelation to you, I am sure, to visit such a place as Willow Walk depot, to see the stacks made of cases of eggs, each as big as a house, and dozens of stacks. Surely this will give you some idea of the London egg trade, and it is all the result of collection from a multitude of small producers.

Now for just a word of advice. I speak as one not only interested in the egg trade, but as an egg-producer for profit. If you want to make the best thing possible out of English new-laid eggs, get your chickens early in the year, force them along, and make them lay all the winter. Then, when the glut of eggs arrives, kill them off and send to market. They will fetch a fair price as old hens in March, and you are relieved of the anxiety of an overburden of eggs, and can devote all your land and energies to raising pullets for the next autumn and winter laying. There is profit to be made from winter eggs, but in spring and summer they are more trouble to lots of people than they are worth. It is not within the province of my lecture to instruct you how, and under what conditions, winter eggs can be obtained. I can do it—I have to—and what I can do others also can manage. The great factors are, get the pullets early hatched, of good constitution, bred from good layers, and properly fed.

The Rearing of Chickens.

During January, February, and early March, while the weather is cold, it is important that during the time the hens are sitting they should be taken off the nest every day and fed. This is where many people make a great mistake. They have an idea if the hens sit properly things must be going on all right. Now, this is not always the case. In cold weather fowls require a great deal more to eat to keep up the warmth of the body. It often happens when hens are sitting they go off their appetite, and eat but very little. Now, when that is the case it is impossible for the birds to impart proper heat to the eggs; instead of the latter being from 100 degrees to 103 degrees, many of them are down to 70 degrees and 80 degrees, particularly the outside ones, such as those under the wings.

Those poultry-keepers who hatch eggs by incubators should take particular care to keep them the proper temperature, as near as possible to the heat of those under a hen. There is not more than one in a hundred who gives this subject sufficient thought.

If the hen does not eat properly it is well to mix a little soft food, and put down her throat—say, about four tablespoonfuls of barley meal, with one teaspoonful of roup powder to three hens. If that is done one or two mornings the owner will find he will not have much more trouble with the hens if they are healthy. When the birds eat well, all they require is good food, such as barley and Indian corn. They are the best grains in cold weather for sitting hens, as they contain a good deal of fattening and heating material.

Many poultry-keepers put young chickens in a greenhouse when they are first hatched out, thinking to bestow a little extra care upon the young birds, and should the weather keep cold they keep the chickens there for weeks. This is altogether a mistake. If chickens are kept under glass they require plenty of fresh air, and on no account should there be any hot pipes running through the greenhouse, that is if the hen is with them.

In nineteen cases out of every twenty where people attempt to rear chickens under glass, they have cramp and go off their feet. The toes become crooked, and they lose the use of their legs. Other people will put them in a stable or barn, and keep them there for a long time. In that case the difficulty is after they have been kept in a warm, sheltered place for a time, and are then put out in the cold, damp atmosphere, one-third, or very often a half of them will get congestion of the lungs.

When they are put in an open shed, and are sheltered from the wind and rain, or in large coops, they are accustomed to the outer air, and very few die. The Sussex, Surrey, and Kent people, who rear for the London markets, hatch out in September, October, and the early part of November, and bring up thousands of chickens, and they lose comparatively very few.

Chickens should never be kept under cover, where the outer air does not get to them, more than from three to seven days; if so they become delicate. In the early part of the season it is the best and safest plan to have a hen in a coop, and there should be moss peat about two inches deep in the bottom of the coop. In all cases it is well to nail a small piece of board inside, so that the hen does not scratch the peat out. It is even better to use granulated peat for the bottoms of the coops, as there are no hard pieces in this to hurt the feet of the little chickens.

The peat should be two inches thick, and be stirred up with a small hand rake every third day. If it becomes wet with rain or snow, it should be removed. Dry road dust is frequently used by those who live in the country for their coops, and this answers well. In the spring and summer months a supply should be collected and stored in a covered shed.

When hatching with incubators, care should be taken not to over-crowd the foster-mothers. Not more than 35 chickens should be put in one rearer, and a less number is better, as they overcrowd, and get on top of each other for the warmth, and the weaker ones frequently get suffocated. Early-hatched chickens which are cooped with their mother should have their liberty on fine, bright days, and when it is windy, the small

OR THEIR AGENTS IN ALL PARTS OF THE UNITED KINGDOM.

runs which we have frequently referred to as useful should be securely hooked on to the coops, so that there is no danger of the birds getting too far away from the coops, and being unable to get back.

The hen should always be cooped during the winter and early spring. This course is adopted for two reasons—if she has her liberty she takes the birds too far, and when she is cooped she broods her chickens more frequently, and shows that quiet treatment of her little brood so essential to the well-being of the birds, and which is much to be preferred to the roaming habit. After the chickens have partaken of food and water in their small run they run back to their mother, who opens her wings for them to shelter under at once. Where a nice wood or sheltered plantation or hedgerow is available, it is a good plan to allow the hen one hour's liberty with her little brood just in the middle of the day, when it is fine, as the exercise will do the bird good, as well as the chickens. Coops should have bottoms in them early in the season, as when these are adopted and well covered with peat or dust, the birds' legs are kept quite dry, and the risk of cramp is lessened.

The majority of poultry-keepers fully realise the importance of giving their young birds sharp grit, but there are still some who omit to do so. Young chickens require to get the full benefit of their food in order that they may make headway, and in order that this may be achieved, some sharp material is very necessary, so that assimilation of the food takes place at once. Sharp, but very fine grit, made of broken flint, is the best that can be given. When the stones are broken for grit for fowls this should be sieved, and the fine kept out for the chickens.

Mr. Wyndham, Chief Secretary for Ireland, speaking on Saturday afternoon at Belfast, declared himself emphatically opposed to any scheme of compulsory land purchase, and added that the Government had no intention of introducing a Bill to compel Irish landlords to sell or Irish tenant farmers to buy their holdings. He would, however, next session introduce a measure to simplify and facilitate the transfer of land in Ireland. As to the present agitation in Ireland, it was a ridiculous one.

Wharfedale Chamber.

The annual meeting of the Wharfedale Chamber of Agriculture was held at Otley on the 3rd inst., Mr. J. Bailey, of Riddlesden Hall, presiding, at which the principal business was a discussion as to the continuance or dissolution of the Chamber. The accounts presented showed a credit balance of 12s. 6d., as against an adverse balance of £1 4s. 3d. last year.

Mr. Francis Darwin, in proposing that the Chamber be continued, said he did so because there was a necessity for it. A theoretical as well as a practical knowledge of farming was required by any man engaged in the culture of land. Just as Lord Rosebery had said that the politics of 1892 were different from those of 1901, so the farming of the past was different from that of the present. He said that with all humility, as he had only been a farmer seventeen years. The competitors of the Wharfedale farmers in the past were Knaresborough, Pateley Bridge, Wetherby, and such places. Now they included Denmark, France, the United States, and even Siberia. In order to voice their grievances the farmers must have some body to which they could appeal, and the Chamber of Agriculture was exactly that body. He had been a farmer for seventeen years, and during that time had lost £117 15s. 4d., but he had got an immense amount of amusement, he had gained a large amount of information, and was now able to estimate the feelings of the cultivators of land. When he commenced farming he charged himself 22s. an acre, and had since risen the rent to 27s. Starting with sheep-breeding, he lost the first male, first by its disappearance, and, after it was discovered, it was killed by another sheep. Scotch cattle were then tried, but though they were lovely animals in the field when the sun was shining on their backs, they did not look quite so lovely in the balance-sheet. (Laughter.) From a farmer's point of view, they were useless. Welsh cattle were similarly a failure. He then tried Herefords, which always looked ready for the butcher, but which the butcher would rarely look at. Later he tried Devon cattle and Jersey, but was not able to make any of them pay. He did not purchase any Guernseys, as he had an unfavourable report from a relation in that island. Last of all he tried half-bred Irish, and these were the only ones on which he could make a profit.

Mr. M. D'Arcy Wyvill seconded the motion, and stated that Mr. R. W. Hanbury, President of the Board of Agriculture, had accepted an invitation to speak in the Otley Division.

Other speeches followed, and the proposition to continue the Chamber was carried unanimously.

Mr. F. H. Fawkes was elected president, and Mr. James Bailey vice-president.

Contagious Diseases of Animals.

RAILWAY ANNOUNCEMENT.

LONDON AND NORTH WESTERN RAILWAY.

General Manager's Office,
Euston Station,
London, N.W., January, 1902.

DOG, POULTRY, PIGEON, &c., SHOW, TO BE HELD AT LIVERPOOL, JANUARY 28th, 29th, and 30th, 1902.

For the convenience of Exhibitors at the above Show, the London and North Western Railway Company will arrange the running of Special Through Vans for the conveyance of Dogs, Poultry, Pigeons, &c., to Liverpool, on Monday, January 27th, by the Trains leaving

London (Euston) ... ... at 2.45 p.m.
Carlisle ... ... at 1.40 p.m.
Birmingham (New St.) ... at 2. 0 p.m.
Shrewsbury ... at 11.25 a.m. 3.55 p.m.

These will be in addition to the Vans running regularly on the Through Trains to Liverpool.

Consignments from the Branch Lines, and from Nottingham, Peterboro', Oxford, Cambridge, &c., will be placed in these Vans at the various Junctions, thus ensuring direct transit to the Exhibition.

The Show closes at 5 p.m. on January 30th.

Arrangements will also be made for the return of the Traffic in Through Vans direct from Liverpool (Lime Street) at the close of the Show, and Exhibitors wishing to avail themselves of these facilities are requested to order their consignments "Per London and North Western Railway."

The London and North Western Railway Company have a Night Service of Trains from Liverpool to all parts and Exhibitors desirous of having their Exhibits returned by these Trains should so mark on the backs of the address labels issued by the Show Committee.

Consignments of Poultry and Pigeons travelling by the L. & N. W. Ry. will be conveyed free of charge between Lime Street Railway Station and the Exhibition.

The Company's representatives will be at the Show to answer inquiries with regard to the arrangements for the return journey. All information can be obtained of Mr. ROBERT TURNBULL, Superintendent of the Line, Euston Station, London; or from the Company's District Superintendent, Mr. C. H. DENT, Lime Street Station, Liverpool.

FRED. HARRISON, General Manager.

WILLIAM COOK & SONS,

Established 1880.

Originators of the Orpington Fowls and Ducks, and reliable breeders of every class of Poultry for exhibition and utility purposes, can always supply Fowls, Ducks, Turkeys, and Geese at reasonable prices.

We have at present some very fine 1901 early-hatched Cockerels and Pullets for sale, including all varieties of Orpingtons, all Leghorns, Minorcas, Barred and Buff Rocks, all Wyandottes, &c., &c. Cockerels from 6s. 6d. each for crossing, from 10s. each for pure breeding, and 21s. upwards for exhibition purposes. Pullets at same prices. Over 3,000 Cups and Prizes won by our Firm. All birds sent on approval. INSPECTION INVITED.

Advice given gratis. For full Price List of Stock Birds, Eggs, Foods, Appliances, Medicines, &c. (with "Hints on Poultry Keeping"), apply to our ONLY English address:—

S. P. & S. "SAFE & SURE"
VETERINARY SPECIALITIES.

PATENT DUPLEX LAMBING AND FARROWING FORCEPS.

No breeder of Sheep or Pigs can afford to be without them, as they repay trifling cost tenfold first time used.
To Masters of Hounds, &c., will be found equally invaluable for Bitches, and *this size of dog generally.* Approved of by eminent veterinary authorities; hundreds were sold last season, and gave great satisfaction.

"INVICTA BLACK MIXTURE."
For exhaustion and after-pains in foaling, calving, and lambing. A powerful Anodyne and Anti-spasmodic for Gripes, Fret or Colic in Horses; Tonic, Alterative, and Astringent in Scour or Diarrhœa, Dysentery, and Debility in Horses, Cattle, and Sheep. 1s. 9d. per bottle; 1 doz. case, £1.

"VIRIDOLIN" (Regd.).
A powerful Antiseptic for dressing in lambing and calving. Extensively used as a general healing agent for wounds of every description in all animals. Invaluable for Humours in Cows' and Ewes' Udders, &c. 2s. and 5s. per bottle; or ½-dozen 2s. bottles in case, 10s. Ointment may also be had, 2s. 6d. and 3s. 6d. per pot.

"RED ANODYNE EXTRACT."
For Inflamed Udders in Cows and Ewes it is invaluable. For Cows and Ewes in difficult parturition, it stops Heaving and prevents Gangrene or Mortification. Used both for external use as a lotion, and for internal administration. 2s. and 5s. per bottle. Special instructions for use in lambing and calving on 5s. bottle.

"YELLOW DRENCH" (for Sheep).
For Chills, Colds, Fevers, Red Water, Costiveness, Cleansing after Lambing, Swollen Udder, &c. In packages, 1 dozen, 3s.; 6 dozen, 17s.; and 12 dozen, 33s.

"FLOCKMASTERS' FRIEND" LAMBING CHESTS.
Complete, £1 11s. and £3 2s.

BIBBY'S "CREAM EQUIVALENT" for CALVES.
An Ounce of Fact is worth a Ton of Theory.
A STRIKING FACT.
In our Spring number of "Bibby's Quarterly" we reproduced the photographs of two groups of Calves which are now being reared at the Hornby House Farm, Bedale, Yorks, by his Grace the Duke of Leeds.
One of the groups is being fed on New Milk and the other on Separated Milk and "Cream Equivalent."
We asked our readers to tell us which of these groups were fed on New Milk, and 707 Farmers, Farmers' wives, their sons and daughters competed for a small prize which we offered to those who guessed correctly.
445 selected the "Cream Equivalent"-fed Calves as having been fed on New Milk.
We think the above striking FACT speaks volumes for "Cream Equivalent."
The "Cream Equivalent" can be had at 15s. per cwt., carriage paid to nearest station.
SOLE MANUFACTURERS:—

FEEDING STUFFS AND THEIR PRICE ON THE MARKETS.

Man is a stubborn animal, particularly over his food. The scientist may indicate what his ideal diet should be and doctors may prescribe his meals as they do his medicine. But the scientists are left deploring his "invincible ignorance," and physicians are proverbially "in vain." Many of his familiar health troubles might be avoided if he would get in the habit of using brown bread at one meal a day; other troubles are due to his habit of eating too much meat in proportion to green vegetables. Nor is he a wise user of fruit; few Englishman at least eat enough fruit, except a small minority, who eat far too much of it. Man won't be advised, cannot be driven, and is altogether a problem to producers of food for his use. But with animals it is another story. A great deal can be done towards feeding them in a scientific manner, and even foods which they do not take to naturally may be rendered palatable by condiments. Habit gradually introduced will also effect much. Calves in Iceland pass from milk to such little grass and hay as can be procured, but this is too expensive a dietary to be kept up for long. Gradually the use of dried fish is introduced, and eventually it becomes the main food. In a similar manner several entirely foreign products, such as maize, dari, and locust beans have long since won their way into the most extensive acceptance. With this almost indefinite extension of the feeders' and owners' choice there arrives a state of things in the market for feeding stuffs which is in striking contrast to the wheat trade. Wheat may easily show a gradient of only half a crown per quarter on the year, profits are cut exceedingly fine, and there is a permanent tendency towards an equilibrium.

But the trade in barley, oats, and maize, in beans, peas, pari, millet, &c., is unstable. There is not a week in the year wherein vigilance in securing the profitable bargain may not be rewarded. The buyer who wishes to make his live-stock pay well must watch the market value of not one, but a score of articles. Nor can he leave everything to a factor. He must be perpetually adjusting his purchases to the health and needs of his animals as well as to the market fluctuations. Thus if a feeding stuff of neutral action on live stock becomes scarce and dear he must see if he cannot replace it by a combination of cheaper feeding stuffs which are so balanced in the ration that constipation and relaxing actions are employed to neutralise each other. There are, of course, the further questions of whether it is wanted to fatten stock rapidly or to more gradually build them up, and if whether the work they have to do or the climate they have to stand makes some particular article well worth a high price by reason of its stimulating power. There is even such a thing as keeping live stock in good spirits over crises of work or weather.

Thus it will be seen that the buyer of feeding stuffs needs to be particularly alert, ready and well informed. No man can afford to neglect his agricultural paper nor take his eye off the markets for long. The supplies of particular articles are often quite moderate, and only to hand for a comparatively brief period. The belated buyer sends up his order only to find that the staple is no longer obtainable. Even in the more stable articles, such as maize, feeding barley, oats, and pulse, the fluctuations are far more marked than in wheat, and the supply far less regular.

During the past year the feeding stuffs which have been uniformly dear have been oats, linseed, and cottonseed. Maize was cheap up to August, but has since then risen

somewhat sharply. Rye, on the other hand, was dear in August, but is now cheap and worthy of attention. Tares since midsummer have been dear and rather hard to get, fine Scotch and German gores hardly obtainable in England. Lentils were extremely dear early in 1901, but they are now much more moderate in price.

A useful feeding stuff, Persian barley, came to hand during the summer at 17s. to 18s., and was recommended to our readers. Those who did not buy then cannot get a ton of it now without the greatest difficulty. What Persia had to spare seems to have been shipped, and there is no reply to orders for fresh shipments. Smyrna beans, South Russian beans, Indian peas, and Syrian dari are other examples where the intelligent buyer not only did well, but secured a practical monopoly. There is no fresh supply for the time being. The case of course, has its other side. Locust beans, which a year ago were rather dear, may now be obtained, ground, kibbled and also whole, on more reasonable terms. Buckwheat, both Russian and French, has come down in value, and is now tempting in price. As nobody knows how much more may be forthcoming, and as the total crops of the article all were large, and looks as if those who bought now at 24s. to 25s. per quarter would stand to do well.

The great item of our expenditure on feeding stuffs is for maie, which has cost us thirty-eight millions sterling in three years. This is a formidable sum to go out of the country, as does every penny of it, spent as it is on a cereal which will not ripen in England. At a half-penny per pound maize is indeed difficult to undersell, but there ought to be large areas of uplands and of bleak, unprofitable soils which, being held at a nominal rental, would pay to grow oats, even if only thirty bushels per acre were secured in lieu of the usual forty off fair soil. The rise in the price of oats in 1901 cost the country over a million sterling beyond the cost in 1900 for foreign sorts. And farmers participated in the rise by reason of the advance of their own produce, and the total sent abroad included fair cheques to Canadian, New Zealand, and Australian fellow subjects. It is a curious thing about maize that though Australia, India, and the Cape could grow all we need, scarcely anything comes from our own colonies.

TREASURES OF THE SOIL AND AIR.

Tapping the nether strata of soils to bring uppermost for utilisation latent fertility must be deemed as important for the interests of farming as accumulating nitrogen from the atmosphere by the nodules of leguminous plants. In either case manure is obtained for nothing, and the cultivator realises unearned increment. Consequently the system Mr. Elliot, of Roxburghshire, has found so remunerative for the past fifteen years, and which he has described in the December number of *The Journal* of the Board of Agriculture, ought to recommend itself very much to the consideration of all in search of economic farming, the more so as it requires no great outlay of capital, either of labour of specie, to set it going, and is as well adapted for the struggling dairyman or sheep-farmer, who finds it difficult to earn a living, as for the farm capitalist who owns pedigree stock. In fact, the system appears well calculated to be a perfect boom to the large section of farmers who suffer greatly from the two gigantic evils, low prices for corn and labour scarcity, for it is that of substituting for modes of cropping, which require frequent corn growths and harassing labour applications, one in the carrying out of which two in ten years suffices, these being wholly manured for by accumulated vegetable matter. This is stored in the soil by the pasture-layer having remained unbroken for six years, during the whole of which time deep-rooting plants have been busily employed in tapping the lower depths in search of latent wealth. Mr. Elliot states in the article referred to that after his land has been in pasture for that period he finds that he can grow four good arable crops, two or corn, and the others roots or green fodder crops, and that the only manure they receive is a little phosphate artificial for turnips.

His chief deep-rooting plants are, however, two not commonly cultivated or, indeed, esteemed very much by those who have professed to teach the arts of agriculture in modern times. They are chicory and burnet, of both of which Arthur Young wrote in highest terms, yet, strange to state, we look in vain for them in the catalogues of our modern seedsmen. But if more effective than any other plants in the performance of the invaluable service of making the earth give up her mineral treasures for the uses of farming, their inclusion in an occasional pasture-seeding ought not to be omitted. Lucerne, sainfoin, red clover, and giant cow grass all have the same property of sending their roots deep down to obtain nutriment from nether strata, they being one and all fitted with lengthy tap-roots for the purpose, but none of them are so well adapted to perform the work if associated with grasses in a pasture as when cultivated by themselves. Mr. Elliot's two plants are more hardy and better adapted for the poorer soils, and it appears to be in this that their peculiar excellence for working his system lies.

When either lucerne, sanfoin, or red clover can be grown, not only is the same useful work carried out effectually of utilising previously latent soil fertility, but their nodules at the same time attract and absorb nitrogen, owing to which most marvellous instances of land improvement and immense increments of fertility have been experienced. Red clover, being a biennial, does not remain long enough to raise the fee simple value of estates, as both lucerne and sainfoin have often done, but in a single year the former is well known to produce root development sufficient for the sustenance of a crop of wheat, often a heavier one than a wheat crop manured with dung. Unfortunately, owing to clover sickness, this valuable plant is not grown more than once in a dozen years on the generality of soils, while for some cause or other, neither lucerne nor sainfoin are grown to a hundreth part the extent theorists declare they ought to be. From the days of Jethro Tull to those of Arthur Young, and ever since, they have been strongly recommended, but the areas devoted to them have always been exceedingly small compared to the extensive ones of several foreign countries. Probably climate has something to do with it in the case of lucerne, while sainfoin always fails when the subsoil is a stiff clay.

Naturally the supposition might be entertained that as Mr. Elliot's method of culture only differs from the long-term pasture, short-term tillage system by being specially invested with two deep-rooting plants, and that one has been proved to be the very best yet propounded for remedying the two gigantic evils of the times—low corn prices and dear, scarce labour—that it would be eagerly welcomed everywhere, especially as it promises by the deep-rooters to accumulate vegetable matter enough to manure the corn crops gratuitously which they would grow by the new system. Yet very much is it to be doubted if such will be the case. The long-term pasture system has always been more or less exemplified, and when wheat commenced to tumble down, and depression in the acutest form was experienced, there was, as may be supposed, some extension of it, and the Earl of Leicester and others gave practical demonstration, by adopting it on large farms, of what was possible to be done, together with the advantages likely to accrue. Solely as the result of adopting this system, there was a reduction of the staff of labourers, on the Holkham Home Farm of 879 acres, from 22 to 12, and 18 horses were found sufficient for the reduced tillage, whereas 34 were employed before. Further, although Lord Leicester had nothing to do with any coarse, hardy plants, such as chicory and burnet, which the schools despise, and confined his deep-rooting ones to the respectable cocksfoot, tall fescue, timonthy, and alsike clover, the fact was stated in the leading journals in 1895, and, indeed, made public by the Royal Commission on Depression, that when the Holkham occasional pastures, after remaining unbroken for a lengthy term of years, are returned to tillage, the Earl finds that "he can grow four remunerative crops, two of roots and two of corn, without the application of any manure whatever." So that evidently the self-same advantages which Mr. Elliot claims to be so intimately resultant from his system were obtained long before.

As this has been the case, what right have we to expect that farmers generally will more readily adopt the long-term, occasional pasture system any more readily or generally than they did in 1895 after Mr. Martin J. Sutton had set forth its high value so thoroughly before the Farmers' Club? The reason the leading arable sheep farmers do not adopt it is from a fancy that their lands would get foul thereby, their impressions having been falsely derived by having experienced this when the layers of annual clover and grasses have been kept even a second year. If these men refused to listen to the truth then, we may rest assured they will be no more inclined to do so by being advised to carry out the object with the aid of two plants so-called scientific men pronounce to be weeds. But for all that, it by no means follows that Mr. Elliot's system is not the very one best calculated to redeem the mass of struggling, middle-class farmers from depression, and perhaps ruin. The majority have no sufficient capital to establish the pedigree herds, flocks, and studs by which the higher class of farmers get their chief returns, but they possess dairy cows and ordinary flocks which it would be profitable for them to increase by the adoption of the long-term pasture system. And lest they should harbour any fears respecting the despised chicory and burnet, they may be assured that Arthur Young declared that there was no plant so advantageous as chicory for light-blowing sands or for poor soils generally, while Pitt, in his "Survey of Staffordshire," written for the old Board of Agriculture in 1796, asserted that cows preferred burnet to clover, that it was one of the very best plants he knew to form part of a cow pasture, and that one of his neighbours, the owner of a very large dairy herd, would that year have sowed 10 cwt. of the seed if he could have obtained it. One of Arthur Young's correspondents assured him that in a scorching summer drought his burnet grew as vigorous as if it got frequent showers of rain, while all neighbouring pastures were burnt up. Also that it grew so strongly in winter, and gave such early feed in spring, that it was more reliable to grow burnet instead of turnips for sheep in spring.

The recent death of Mr. E. Yeld, of Endale, deprives the Hereford breed of cattle of one of its best-known and ablest supporters. For something like a quarter of a century the Endale herd has occupied a foremost place, and by the excellence of the bulls especially, which it has disseminated over the country and sent abroad, it has been largely instrumental in improving the quality and advancing the fame of the West Midland variety. Of the late Mr. Yeld's success as a breeder of first class cattle some idea may be gathered from the fact that he bred over 200 prize-winners.

By a Man of Mark Lane.

A conference on old-age pensions, convened by the Trades Union and Co-operative Union Congress, was held at the Memorial Hall, Farringdon Street, E.C., on Tuesday and Wednesday. Several motions were submitted, and some carried, but the following resolution was adopted on the second day as summing up the business of the conference:—This conference urges upon the Government the necessity of establishing a national system of old-age pensions which shall be universal in its application to all citizens, male and female, on attaining the age of 60 years, the pension to be at the rate of at least 5s. a week, and that the entire cost of such a scheme be contributed by the State, and met entirely by means of Imperial taxation; and that the Parliamentary Committees of the Trades Union and the Co-operative Congress be requested to take such steps as may seem most desirable to work jointly in bringing the results of this conference to the attention of the Government and the country generally, including the promotion of an Old Age Pensions Bill in Parliament.

Colonel Brookfield, M.P., was present at the annual dinner of the Frant Farmers' Club, held on Tuesday, and in the course of an interesting speech said that at the present time there were symptoms which might well call for action on the part of statesmen, one of the most serious being the decreasing area of land under cultivation for corn crops and the country's increasing dependence upon foreign countries for supplies. They were learning fast all sorts of lessons from the colonies, and attention should be paid to some system of agricultural protection. Although he did not see any immediate prospect of legislation coming to the rescue, there were various useful measures to be considered, which would benefit agriculture. Perhaps, however, farmers should place more value upon technical education. He knew there were strong prejudices against it, but he thought scientific measures were necessary if the British farmer was to compete with the world.

The receipts on account of revenue from April 1st, 1901, when there was a balance of £5,596,918, to January 11th, 1902, were £93,573,733 against £84,943,545 in the corresponding period of the preceding financial year, which began with a balance of £3,517,047. The net expenditure was £155,581,182, against £144,074,015 to the same date in the previous year. The Treasury balances on January 11, 1902, amounted to £4,611105, and at the same date in 1901 to £1,704,028.

The agricultural correspondent to the Labour Department of the Board of Trade, on information contained in 242 returns, reports that agricultural labourers were, generally speaking, regularly employed during December. Casual labourers, however, in many cases lost some time owing to unfavourable weather. There was in many districts but little demand for extra men, farm work being in a forward state owing to the open weather during the autumn. The weather in the early part of the month was favourable for outdoor employment, such as ploughing, threshing, hedging, and ditching, &c. During the latter part of the month, however, rain, snow, or frost interrupted field work for a time, but in wet weather work under cover was generally found for the regular men, and in frosty weather threshing, manure carting, and wood-cutting were proceeded with.

I have received during the past week a copy of the second general memorandum on the rice crops of the season 1901-2 in Bengal, Madras, and Burma, issued by the Government of India Statistical Department on December 21st. In Bengal the season was not wholly favourable for the autumn rice. From April to August the rainfall was unevenly distributed, and in July was deficient almost everywhere. General and copious rain fell in September, but in October the rains ceased abruptly. The area sown was 7,160,600 acres, which is slightly larger than last year's area, but about 4 per cent. below the average. Taking 87 per cent. to represent the probable yield, the gross quantity of cleaned autumn rice may be estimated at 45,769,400 cwt., as compared with 44,630,400 cwt. last year.

For the winter rice the season was more unfavourable. The abrupt termination of the monsoon in September, for there was very little general rain in October, did great injury to the crop, and in all the Bihar districts where the rainfall in June was also very deficient it is a failure. The weather was seasonable during transplantation, and the area sown extends to 28,727,200 acres, as compared with 28,474,400 acres last year, and an average for the seven previous years of 30,911,800 acres. The yield which was estimated in October to be 95 per cent. of a normal crop is reduced to 75 per cent., which will amount to about 237,439,100 cwt., as compared with 263,591,600 cwt. last year, and an average for the previous seven years of 303,549,800 cwt.

In Madras the reports of the areas sown up to the end of November in raiyatwari villages give almost the same comparative results as those summarised two months ago in the first memorandum. The total area of 5,351,700 acres is almost normal and practically the same as the area reported for the same period of last year. The estimates, which in the aggregate give a yield of 87 per cent. of the normal, indicate a crop varying from fair to good.

The first forecast of the wheat crop for 1901-1902 issued by the North-Western Provinces and Oudh Department of Land Records and Agriculture, giving particulars of the crop in the district up to December 15th last, states that during the months of July and August rainfall was sufficient for all agricultural requirements, but in the next two months it was deficient in the Meerut division and in parts of Agra and Rohilkhand. In these tracts moisture was not sufficient at the time of sowings, which in most places were effected with the aid of irrigation; the area under wheat will consequently be below the normal. In the rest of the province there was sufficient moisture at the time of sowing, and the wheat area is expected to come up to the normal. Germination is reported to have been good, and prospects are hopeful so far, but depend on winter rainfall. There has practically been no rain in the last six weeks, and it is now urgently required everywhere; irrigation is being done where practicable.

The same Department has also issued on the same date its first forecast of the linseed and rape seed crops, in which it is stated that the autumn rains in the latter half of the season were insufficient in the Meerut division and in parts of the Agra and Rohilkhand divisions—tracts where winter oil-seeds are not, however, largely grown. In the rest of the provinces, where these crops are important, conditions were favourable, and the crop was generally sown in time. Germination has been good, except in very dry lands, where it is poor. Prospects are good so far, but everything depends upon winter rains, which are urgently wanted. The area is likely to slightly fall short of the normal area.

In Burma the area reported under rice in the fourteen principal districts is estimated to be 6,461,649 acres, an increase of 152,616 acres, or 2.4 per cent. over the area cultivated last year. The crop is reported to be in good condition in all districts, and the outturn is expected to be slightly above the normal. The surplus available for export is estimated to be 2,200,000 tons of cargo rice, equivalent to 37,288,135 cwt. of cleaned rice

By a Lobbyist.

I apprehend that no reader of this column is disappointed with the King's Speech. It does not contain even the most distant allusion to agriculture. Our interest may be as far apart from the anxieties of his Majesty's Government as the esoteric theories of Buddhism. In the speeches which we have had delivered during the week agriculture and its necessities have never been mentioned. Of course, in some degree this was to be anticipated, because of the more lurid issues that have intruded themselves upon the public attention. But the painful fact remains that, at least on Friday, the legislators were able to give attention to problems which had not a tithe of the immediacy of the agricultural problem. Can it be said that the question of conceding local self-government to Wales has a greater significance than have the necessities of the great traditional interest of the country? The one simply embodies a mere academic grievance; the other is a vital, actual, supreme fact. The worst is that this is not an incident; it is symptomatic. Parliament, as at present constituted, is indifferent to the necessities of agriculture; and it is useless to conceal this.

At the commencement of each session I generally reflect, as far as it is possible, the purpose and intention of the rural M.P.'s. In the last few days I have pursued a different plan. I have sought to obtain some idea of the intention of urban M.P.'s towards agriculture. I was sorely disappointed. I did not find a single member for any of the great centres who was not, in a more or less degree, astounded that agriculture should dare possess any grievances. It may suit the electoral purpose of the Radical politician to declare that the Rating Act was a conspiracy to put money only into the pockets of the landlords; but in the lobby of the House of Commons he holds this same Rating Act to be a fulfilment of every duty which Parliament may owe to the farmer in the next ten years. As a fact, he thinks infinitely more of that measure than he does of the Agricultural Holdings Act. I doubt, indeed, that he gives the economic significance of that measure a single thought. You see the Rating Act is assumed to be a more or less financial transaction—it takes money out of his purse, and this to him is the supreme consideration.

There is one section of town members who, I now recall, did reveal a certain oblique interest in agriculture. This was the representatives of the great northern centres, but this interest was entirely confined to a desire to know the amount of vigour and determination which the agricultural M.P.'s are likely to associate with the agitation in favour of the Pure Beer Bill. Of course, there is not a single northern member of significance, be he Radical or be he a Tory, who is not prepared to vote against the Bill. The strange fact is that men who have for years been suspected of dallying with Protection now shake their portentous heads over this measure "because, my dear sir"—so they assure you—"it smacks of Protection." "If once," said a Tory who, in the days when Fair Trade was a possible policy, was among its most strenuous advocates, "if once we begin to protect the farmer in this connection, we shall have to concede the entire principle of

Protection." "Are you," he added, turning to me, "prepared to tax the food of the people?" I am compelled to confess that I was too astounded at the audacity of the man and of his proposition to reply. I perceived, however, that the incident provided a significant evidence of the influences which are to be brought into operation against this Bill. Men—honest men, too—are prepared to play the hypocrite, in a modest fashion, to secure its defeat.

Of course, you have a right to ask me if the rural M.P.'s are not possessed by some purpose directly affecting agriculture? In the fight at Saffron Walden and Andover the further amendment of the Agricultural Holdings Act was a distinct ambition of the candidates, and orators waxed earnest over it. Was there no reference to the subject in the lobby during the prophetic anticipations of the legislators? One or two local Chambers of Agriculture have been concerned over the ineffectiveness of the Board of Agriculture, and have suggested steps for giving it a more practical character. Was nothing suggested during these speculations as to the methods to be adopted for clothing the present skeleton machinery with pulsating flesh? Well, I must perforce answer each of these questions in the negative. The Agricultural Holdings Act and its reform, the Board of Agriculture and its reform, were subjects which apparently never suggested themselves for a moment to the mind of any rural legislator until I, with more or less delicacy, intruded them. I am bound to say that in one or two cases my interposition was treated with petulance. The attitude of more than one member may be described in these sentences: "Why refer to the unpractical? If we brought any of these questions forward the House, in its present temper, would simply laugh at us? Why should we be laughed at? Is it not wiser to wait a more serene time?" That serene time is always arriving, and is as far distant as the Kalends.

I may be asked if these men have no conception of the advantage of Parliamentary agitation. I am bound to say that, so far as I could see, they had none. They do not comprehend the value of the old Parliamentary method of continually pegging away. Their view is rather that if their object be unpopular they should at once abandon it. If you advise them that this means an assured non-success they laugh at you. "Why," asked a southern M.P. of me, "make yourself a nuisance to the House and to your own whips?" This gentleman—who is, by the way, the representative of one of the most characteristic agricultural constituencies in the country—does not comprehend that it is only by making yourself a nuisance that you can achieve your purpose. The way to success in Parliamentary life is by offending conventionality. If you conciliate them, or even seek to conciliate them, you invariably fail. The purpose of this paragraph is to indicate that not only, so far as I can judge, have the rural Parliamentarians no purpose; they have no ambition.

There was one significant statement made to me in the lobby by another southern M.P. which I carefully present to my readers. "Why should we," said he, "do that which we are not asked to do? There is no popular force behind the questions upon which you ask us to agitate." He added that he had in his constituency a local Chamber of Agriculture, which met with regularity and which was representative of the best brains in the agricultural class of the district. "True," said he, "they have considered the question as to whether the Agricultural Holdings Act Amendment Act goes far enough, and, thanks to you, they have brought themselves to the belief that the Board of Agriculture lacks vitality; but they have never preferred a request to me that I should adopt any specific attitude towards either the Bill or the Board. Am I altogether wrong in assuming that they do not desire any action to be taken?" Will local Chambers of Agriculture heed this declaration? Of more importance, will the Central Chamber heed it? These bodies seem to be satisfied with chewing the dry remainder biscuits in the groves of Académe.

IN PARLIAMENT.

The King's Speech.

On Thursday, His Majesty the King, who was accompanied by the Queen, opened the second session of his first Parliament in full state, the ceremonial being the same as when His Majesty opened the first session in February last. Their Majesties drove in the State coach drawn by eight cream-coloured horses, being preceded by the Officers of State and members of the Household in State landaus, each of which was drawn by six horses with positilions. At the heads of the horses walked grooms in Royal livery and Household Cavalry and Yeomen of the Guard escorted the procession. The route, which was by the Mall, the Horse Guards, and Whitehall, was lined with troops, and large crowds assembled, and gave their Majesties an enthusiastic reception. When the King and Queen arrived at the House of Parliament they were received at the Victoria Tower by a procession of pursuivants, heralds, and the great officers of State, and the King having robed, the procession, with the King and Queen, went to the House of Lords, through the Victoria Gallery, where a brilliant company of peeresses and privileged persons had assembled to see the pageant. After the King had read his Speech in the House of Lords their Majesties returned through the Victoria Gallery, and, having re-entered the State coach, returned to Buckingham Palace, being again loudly cheered by the spectators in the streets. The Prince and Princess of Wales, who had preceded their Majesties to Westminster, were in the House of Lords during the function.

The following is the full text of His Majesty's speech, which was delivered in a voice clear and strong, and was heard in every corner of the chamber.

My Lords and Gentlemen,

Since the close of the last Session of Parliament I have had the happiness to welcome back the Prince and Princess of Wales on their return from their lengthened voyage to various parts of my Empire. They have everywhere been received with demonstrations of the liveliest affection, and I am convinced that their presence has served to rivet more closely the bonds of mutual regard and loyalty by which the vigour of the Empire is maintained.

My relations with other Powers continue to be of a friendly character.

I regret that the war in South Africa has not been yet concluded, though the course of the operations has been favourable to our arms.

The area of the war has been largely reduced, and industries are being resumed in my new Colonies. In spite of the tedious character of the campaign, my soldiers have throughout displayed a cheerfulness in the endurance of the hardships incident to guerilla warfare, and a humanity, even to their own detriment, in the treatment of the enemy, which is deserving of the highest praise.

The necessity of relieving those of my troops who have most felt the strain of the war has afforded me an opportunity of again availing myself of the loyal and patriotic offers of my Colonies, and further contingents will shortly reach South Africa from the Dominion of Canada, the Commonwealth of Australia, and from New Zealand.

On the invitation of the King of the Belgians, an International Conference on Sugar Bounties has recently reassembled at Brussels. I trust that its decision may lead to the abandonment of a system by which the sugar-producing Colonies, and the home manufacturers of sugar, have been unfairly weighted in the prosecution of this most important industry.

I have concluded with the President of the United States a Treaty, the provisions of which will facilitate the construction of an inter-oceanic canal under guarantees that its neutrality will be maintained, and that it will be open to the commerce and shipping of all nations.

I have concluded a Treaty with the President of the United States of Brazil referring to arbitration questions relative to the frontier between my Colony of British Guiana and Brazil. I have much pleasure in stating that the King of Italy has consented to act as arbitrator.

In my Indian Empire the rainfall has been less abundant than was desired, and the continuance of relief measures, though on a less extensive scale than in the past year, will be necessary in certain parts of the Bombay Presidency and of the adjoining Native States. I anticipate a further improvement in the methods and efficiency of famine relief in the future from the labours of the Commission who have recently reported.

The death of Abdur Rahman, the Ameer of Afghanistan, has been followed by the accession of his son and appointed heir, the Ameer Habibulla, who has expressed his earnest desire to maintain the friendly relations of Afghanistan with my Indian Empire.

Gentlemen of the House of Commons,

The Estimates for the service of the year will be laid before you. They have been framed as economically as a due regard to efficiency renders possible, in the special circumstances of the present exigency.

My Lords and Gentlemen,

Proposals for the co-ordination and improvement of primary and secondary education will be laid before you.

A measure will be introduced for amending the administration of the water supply in the area at present controlled by the London Water Companies.

A Bill for facilitating the sale and purchase of land in Ireland will be submitted for your consideration.

Measures will be proposed to you for improving the law of valuation, for amending the law relating to the sale of intoxicating liquors and for the registration of clubs, for amending the patent law, and for sundry reforms in the law of lunacy.

I pray that, in the consideration of these important questions, you may have the guidance and blessing of Almighty God.

FOREIGN AND COLONIAL

The Dairying Industry in Manitoba in 1901.

The season of 1901 has been the most successful season in the history of the dairy industry of Manitoba. The conditions throughout the season in that part of the Province lying west of the Red River have been most favourable for the production of butter. The pasture came on early in the season, was abundant and good, and the plentiful supply of rains kept it in splendid condition until the creameries closed in the latter part of October and early in November. The increase of dairy butter has been 31 per cent. over last year, and the average price has remained about the same, showing a correspondingly large increase in the net value. The output of creamery butter has made a most phenomenal stride, showing an increase of 96 per cent. over last year. The average price is about 1 1-5 cents lower than last year, but the net value has largely increased. There have been few drawbacks to creamery industry, and the general report throughout the season has been most gratifying. There has been very little increase in the output of cheese, and the average price has been a little over 1½ cents below last year. The conditions in the cheese districts of Manitoba were such as to diminish the flow of milk during the entire season, which is the only accountable reason, the bulletin says, for not showing a greater increase. The quality and make of cheese have greatly improved, and less complaints have been received from this year's work of any year in the past history of this industry. A steady growth is predicted by all by interested in the dairy industry for the coming season, and a tendency is noted in this direction throughout the entire Province.

Reports are unanimous in stating that the past season has been one of the best on record in the Province for hay and for haying. The heavy rains in the month of June induced a remarkable growth of the finest quality. Cutting commenced about July 15th, and, though many of the lower meadows were at that date too wet to cut, they dried later. As a result, not only the usual meadows have been mown, but many higher areas that in ordinary seasons are too dry to produce a crop of the native grasses.

French Agriculture.

The French Ministry of Agriculture has just published its annual statistics showing the yield of agricultural produce for the year 1900.

The book contains tables showing the crop production in France for the last ten years. The surface sown in 1900 to wheat was 17,160,175 acres and the yield was 315,454,920 bushels. Meteil, which is mixed wheat and rye, produced 8,833,412 bushels upon an area of 501,400 acres; rye 3,549,450 acres, with a yield of 57,444,750 bushels; barley 1,892,982 acres, with 39,584,380 bushels; oats 9,853,550 acres, with a crop of 242,852,280 bushels; buckwheat 1,506,452 acres and 22,449,974 bushels; maize 1,352,977 acres and 21,545,315 bushels, and potatoes on an area of 3,774,745 acres. The surface devoted to the cultivation of sugar beet is higher for the year 1900 than it has been during the decade dating from 1891.

The number of animals on the farms at the end of December, 1900, was as follows:—Horses, 2,903,063; mules, 205,002; asses, 356,239; cattle, 14,520,832; sheep, 20,179,561; goats, 1,557,925; pigs, 6,740,405.

The book also contains tables showing the imports and exports and agricultural statistics of foreign countries.

Acreage and Produce of the Irish Crops in 1901.

The Department of Agriculture and Technical Instruction for Ireland has issued a report showing the extent in statute acres and the produce of the crops in Ireland for the year 1901; also tables showing the average yearly extent under the principal crops, and the average produce thereof in the ten years 1891-1900, and beekeeping statistics for the season 1900. The report is written by Mr. W. P. Coyne, Superintendent of Statistics and Intelligence Branch of the Department, and he points out that as he is looking forward to having all the available details regarding agriculture in Ireland in 1901 fully arranged and submitted early in the coming year in the annual detailed report on agricultural statistics, he has not in the present statement gone much beyond some general observations on the crop returns of 1901, as compared with those of 1900, and the average of the preceding ten years.

The report being an interesting one, we give below some extracts from it.

Acreage Under Crops.

Comparing the extents under the chief cereal crops in 1901 with those for 1900, we find a decrease of 10,887 acres, or 20.2 per cent. in wheat; a decrease of 5,715 acres, or 0.5 per cent. in oats; a rather notable decrease of 12,462 acres, or 7.2 per cent. in barley; and a decrease of 406 acres, or 3.6 per cent. under rye. In green crops, potatoes decreased by 18,758 acres, or 2.9 per cent.; turnips decreased by 8,100 acres, or 2.7 per cent.; and mangel wurzel and beet root increased by 8,654 acres, or 12.6 per cent. In other crops, flax increased by 7,991 acres, or 16.8 per cent., following an increase of 35.6 per cent. in 1900 as compared with 1899; the area for hay from clover, sainfoin, and grasses under rotation increased by 9,950 acres, or 1.6 per cent.; and the area for hay from permanent pasture or grass not broken up in rotation, increased by 2,927 acres, or 0.2 per cent. Compared with the average acreage for the ten years 1891-1900, mangel wurzel and beet root showed an increase of 22,274 acres, or 40.4 per cent., and permanent pasture or grass not broken up in rotation an increase of 34,235 acres, or 2.2 per cent.; but each of the other chief crops exhibits a decrease in the extent devoted to it, the decrease in wheat being 11,155 acres, or 20.6 per cent., in oats, 94,251 acres, or 8.1 per cent., in barley, 8,784 acres, or 5.2 per cent., in rye, 1,614 acres, or 12.8 per cent., in potatoes 65,620 acres, or 9.4 per cent., in turnips 15,422 acres, or 5.1 per cent., in flax 8,936 acres, or 13.9 per cent., and in clover, sainfoin, and grasses under rotation, 14,098 acres, or 2.2 per cent.

The following table shows the average yearly extent of land under the principal crops in the ten years 1891-1900, and the extent in 1900 and 1901 respectively:—

Crops.	Average yearly Extent in the ten years, 1891-1900. Statute acres.	Extent in 1900. Statute acres.	Extent in 1901. Statute acres.
Wheat	54,089	53,821	42,934
Oats	1,193,586	1,105,050	1,099,336
Barley	170,318	173,986	161,534
Bere	234	177	150
Rye	12,615	11,407	11,001
Potatoes	700,941	654,079	635,321
Turnips	305,181	297,859	289,759
Mangel wurzel and beetroot	55,183	68,803	77,457
Flax	64,378	47,451	55,442
For hay—			
Clover, sainfoin, and grasses under rotation	631,428	607,380	617,330
Permanent pasture or grass not broken up in rotation	1,527,027	1,558,335	1,561,262

Rates of Produce of the Crops.

Coming to the question of the rates of produce per acre of the crops, we find, on comparison with those of 1900, that the rate for wheat rose from 16.7 to 18.3 cwts.; for oats from 15.8 to 16.2 cwts.; for barley from 16.0 to 18.0 cwts.; for bere from 14.1 to 14.4 cwts.; for rye from 12.8 to 13.7 cwts.; for potatoes from 2.8 to 5.3 tons; for turnips from 14.9 to 16.9 tons; for mangel wurzel and beet root from 17.2 to 18.8 tons; for flax from 34.3 to 38.3 stones; while the rate for hay from clover, sainfoin, and grasses under rotation fell from 2.2 to 2.1 tons; and for hay from permanent pasture or grass not broken up in rotation, from 2.5 to 2.2 tons.

Comparing the average rates of produce per acre in 1901 with the mean rates for the ten years 1891-1900, we find the following increases in 1901:—Wheat from 16.8 to 18.3 cwts., oats from 15.2 to 16.2 cwts., barley from 17.1 to 18.0 cwts., bere from 13.6 to 14.4 cwts., rye from 12.8 to 13.7 cwts., potatoes from 3.7 to 5.3 tons, turnips from 14.7 to 16.9 tons, mangel wurzel from 15.7 to 18.8 tons, flax from 28.8 to 38.3 stones (an increase of 33.0 per cent.). There is a decrease for hay from permanent pasture or grass not broken up in rotation from 2.3 to 2.2 tons; while the rate for hay from clover, sainfoin, and grasses under is the same for both periods.

The total estimated produce of wheat in 1901 was 787,568 cwts., being 12.6 per cent. under the produce for the preceding year, and 13.3 per cent. under the average for the ten years 1891-1900; the total quantity of oats was 17,782,956 cwts., being 1.5 per cent. more than the produce in 1900, but 1.8 per cent. below the average for the ten years 1891-1900; the quantity of barley was 2,915,498 cwts., being 4.9 per cent. over the produce in 1900, and 1,238 cwts., or 0.04 per cent. over the average for the ten years 1891-1900; bere yielded 2,164 cwts., against 2,501 cwts. in 1900, and an average of 3,174 cwts. for the ten years 1891-1900; and the produce of rye was 150,354 cwts., being 2.6 per cent. over that for the preceding year, but 6.4 per cent. below the average for the ten years 1891-1900.

The total produce of potatoes was 3,372,214 tons, being 83.1 per cent. greater than the yield in 1900, and an increase equivalent to 30.8 per cent. as compared with the average produce for the ten years 1891-1900. The turnip crop was 4,884,301 tons, being 10.3 per cent. above the produce in 1900, and 8.9 per cent. above the average for the ten years 1891-1900; and the total quantity of mangel wurzel and beet root was 1,449,266 tons, being 22.1 per cent. more than in 1900, and 66.5 per cent. over the average for the ten years 1891-1900.

The yield of flax was 13,267 tons, being 30.3 per cent. over the produce in 1900, and 16.2 per cent. over the average quantity for the ten years 1891-1900.

The produce of hay from clover, sainfoin, and grasses under rotation was 1,306,687 tons, showing a decrease equal to 4.4 per cent., as compared with the quantity in 1900; and the quantity of hay from permanent pasture and grass not broken up in rotation was 3,433,055 tons, being 10.8 per cent. under the quantity of such produce in 1900. The aggregate quantity of hay under both headings (4,739,742 tons) is 474,226 tons (or 9.1 per cent.) below that for 1900, and shows a decrease equivalent to 2.0 per cent. as compared with the average produce for the ten years 1891-1900.

The Potato Crop.

In 1880 a special return to Parliament was made as to the acreage under each variety of potato, their yield, and their liability to disease at that time. Since that period an annual return has been made of the acreage and yield of each variety of potato in Ireland, which has been published as part of the agricultural statistics; that for 1901 is given in the report under notice. A table of the acreage under each of the principal varieties of potatoes planted in 1901, shows that 66.4 per cent. of the acreage consists of Champions, leaving only 33.6 per cent. for all other varieties—the percentage of some of these being so small as to be barely appreciable when put into figures.

The "Champion" potato was first introduced in quantity into Ireland in the year 1880, after the failure of the potato crop in 1879. Since that year it has constituted the main potato crop of the country, but from 1891 to 1900 the proportion under Champions showed a gradual decline from 79.7 per cent. to 66.1 per cent. In 1901, however, the proportion shows a slight increase to 66.4 per cent. In the counties of Dublin, Kildare, and Wicklow, and in the following Ulster counties, viz.:—Antrim, Donegal, Down, Londonderry, and Tyrone, there is less tendency to rely on Champions than in the other counties of Ireland.

The potato crop of 1901 stands out as a remarkably good one in yield. We must go back over half a century to find any season in which the estimated produce was so high as 5.3 tons per statute acre. Not till we reach the year 1849, in fact, in which year an estimated yield of 5.6 tons per statute acre is recorded, is this year's potato crop rivalled. It comes out in sharper contrast, inasmuch as the yield of the crop of 1900 was the fifth lowest in a period of twenty years. The average yield per ton per acre of potatoes for the whole of Ireland in each year for the period 1882-1901 is shown in the following tabular statement:

Years.	Tons.	Years.	Tons.	Years.	Tons.
1882	2.4	1889	3.6	1896	3.8
1883	4.3	1890	2.3	1897	2.2
1884	3.8	1891	4.0	1898	4.4
1885	4.0	1892	3.5	1899	4.2
1886	3.3	1893	4.2	1900	2.8
1887	4.5	1894	2.6	1901	5.3
1888	3.1	1895	4.9	Mean	3.7

Bee Keeping.

The inquiries made in the preceding fifteen years relative to the extent to which bee-keeping is followed in Ireland, and the degree of success attained in this special branch of rural economy, were repeated last year with reference to the season of 1900.

According to the returns received, the quantity of honey produced in 1900 was nearly double the average quantity for the preceding ten years. It was, however, 16.4 per cent. below the quantity for the year 1899, the returns for which showed an increase of 41.7 per cent. as compared with the quantity in 1898.

The quantity of honey produced was 623,559 lbs.; of this 143,368 lbs. were produced in the province of Leinster; 211,821 lbs. in Munster; 155,962 lbs. in Ulster; and 112,408 in Connaught. Of the 623,559 lbs., 403,207 lbs. were produced "in hives having movable combs," and 220,352 lbs. "in other hives." It was stated that 260,074 lbs. was "run honey," and 363,485 lbs. "section honey."

The number of stocks brought through the winter of 1900-1901, amounted to 33,171; of which 16,754 were in the hives having movable combs, and 16,417 in other hives. According to the returns collected there were 6,743 lbs. of wax manufactured in 1900, of which 3,394 lbs. were from hives having movable combs, and 3,349 lbs. from other hives. The returns received in 1900 gave the quantity of honey produced in 1899 as 745,692 lbs.; the number of stocks brought through the winter of 1899-1900 as 31,045, and the quantity of wax manufactured in 1899 as 4,873 lbs.

Trade in Feeding Stuffs.

In the course of their annual circular, issued on Wednesday, Messrs. H. Jones Langar and Co., of 12, Exchange Station Buildings, Tithebarn Street, Liverpool, make some remarks on the trade in various feeding stuffs during 1901. With regard to oilcakes, they state that throughout the past year there has been little variation in price, the higher values being generally maintained with few exceptions, in fact, latterly they have improved to the extent of 5s. to 10s. per ton, and there does not seem any likelihood of an early declension. The causes that have contributed to the strong position of the markets are the prevailing high prices of seed, a serious deficiency in the American maize crop, and the increased consumption of cotton cakes in America, curtailing the exports of that article. For some considerable time past, the consumptive demand in Great Britain cannot be said to have been an active one, but there has been no accumulation of stocks, the imports being on a reduced scale, and since the New Year opened more disposition is evinced to purchase, which, when colder weather sets in, it is only reasonable to expect will be stimulated.

Linseed cakes are rather quiet, but firm at £7 10s. to £7 15s. for fair to prime American, £8 5s. to £8 7s. 6d. for prime soft and oily River Plate, and at £8 10s. to £8 17s. 6d. per ton, in bulk, according to make, for English productions. Decorticated cotton cakes move somewhat freely into consumption, Americans at £6 15s. to £7 for inferior hard descriptions, £7 2s. 6d. for good ordinary, and £7 3s. 9d. to £7 6s. 3d. for the choicest brands of new season's make, with prime new meal at £6 18s. 9d. to £7. English makes of decorticated cotton cake are preferred by some users on account of the softness, and sales are transpiring at £7 7s. 6d. to £7 12s. 6d., whilst English undecorticated finds buyers at £4 15s. to £5, in bulk, according to make. Recently, palm nut cake and meal advanced 10s. per ton, but are cheap at £5 12s. 6d. and £5 15s. respectively, at which sales are transpiring.

Crushed linseed (pure linseed meal) maintains late rates owing to the high value of seed, but at 18s. to 20s. per cwt. it is better value than many calf foods now on the market at same price. The high values of linseed are maintained, and screened feeding qualities, of which the offerings are limited, realise 63s. to 66s. per 416lbs. for good to bold seed.

The American Potato Market

The following extract from an article in the "Chicago Herald" will be read with interest by potato growers:—"It is asserted that four-fifths of the potatoes reaching New York for consumption during the last three weeks have come from Europe. The people of New York, no doubt, prefer imported tubers stamped 'Grown in Ireland,' but the rest of the country does not want to be ruined by the pauper potatoes of Europe. When the Dingley Tariff Bill put a duty of 25 cents a bushel on potatoes, it was thought that the wall was amply high enough to protect our infant potato patches from the pauper products across the seas. But potatoes from Ireland, Scotland, and Belgium are climbing over the tariff wall in a manner that threatens to prostrate home industry. If this flood of potatoes could be kept out long enough, the farmers who are lucky enough

to have planted a good acreage could market all they have at from 4 dol. to 5 dol. a barrel. Potatoes can be bought in Europe, however, for 70 cents a bushel. After paying the duty on them, they can be landed on the pier at New York for 1 dol. 70 cents a barrel. This is a great thing for people who eat potatoes, but statesmanship should not concern itself about the consumer; the producer must be protected from the products of cheap foreign labour."

Co-operative Farming in Scotland.

The committee of management of the Dunfermline Co-operative Society, who lease a farm at Urquhart, near Dunfermline, have issued a statement showing that the profits on the farm proper for 1901 amounted to £260, and on the dairy department the profits were £1,333 14s. 9d. The following table shows the profits and losses on the farm and the dairy from the beginning of the lease:—

	Farm.		Dairying.
	Profits.	Losses.	Profits.
1893	£181 16 3½	—	—
1894	97 10 0	—	£551 0 7½
1895	—	£181 2 10½	865 14 6½
1896	240 1 5½	—	385 8 5½
1897	37 10 8	—	590 3 10
1898	337 10 0	—	632 1 8
1899	—	619 14 8	709 17 1
1900	—	103 0 11	1,154 17 6
1901	260 0 0	—	1,333 14 9

In 1898 the balance to the good on the farm proper was just such as to allow 4½ per cent. on the capital invested; in 1899 and 1900 nothing was allowed for interest on capital invested; in other years 4½ per cent. was deducted. Although a loss is brought out on the farm for some years, it is scarcely fair to speak of it as a loss. A good profit is brought out each year on the dairying, and the dairy may be spoken of as a department of the farm.

PRACTICE WITH SCIENCE

Sir W. Hart Dyke on Technical Education.

Sir William Hart Dyke, Bart., M.P., ex-Minister of Education, was the chief guest at the Yorkshire College Governors' dinner, held at the Hotel Metropole, Leeds, on the 9th inst., and in proposing the toast of "The Future Prosperity of the Yorkshire College," made some interesting remarks concerning the education problems. At the outset of his speech, Sir William said that some years ago he had the pleasure of distributing the prizes at the College, and in those days the institution had no little title to admiration, it had a good name and was rewarded by those who in the county sacrificed so much for its benefit. From that time to now, he noticed, the progress of the College had been steady and continuous; and we could say of it to-day that as a great educational institution it was yearly making a serious impression on the splendid trades and industries with which it was closely identified. Such colleges represented a great national necessity, and being a national necessity should receive greater national support in the future than in the past. The scheme with which the Yorkshire College was identified was a great educational scheme. A happy combination of colleges appealing to a degree-granting University was, in his opinion, a system that bore the impress of common sense; moreover, it had this advantage: it had well stood the test of time and experience.

There was no doubt that Parliaments and Governments had been far too niggardly in their dealings with universities and colleges. A paltry sum of £25,000 for twelve universities was, he thought, ridiculous. When he considered the enormous sums paid by the taxpayers—aye, and by ratepayers also—it seemed perfectly absurd how paltry the sum was that was given to these universities. He believed he was right in saying that in the current financial year the educational budget amounted to about nine millions of money. But whether it was nine or thirteen millions—he was told it was thirteen—it was perfectly childish to assert that a proper demand for a university system such as they sought to establish in Yorkshire, or would have to establish, would be met by such a paltry sum as that at present received. He could only say that Sir Francis Powell and himself would do their best when the Estimates were considered to draw the attention of the Government to the present state of things.

The reports of the Yorkshire College contained a record of nothing but success. The numbers of day students spoke for themselves, increasing as they had done from 218 to 783. But they showed also that while the demands on the College were hourly increasing, the stress and strain upon its resources were increasing also. So far as he could see the curriculum was admirably suited to a thoroughly industrial county like Yorkshire. There was not one possible industry or manufacture in the county to-day, he believed, which did not come within its meshes. One part of the curriculum in which he was deeply interested was that concerning the teaching of scientific and practical agriculture. Speaking as an unfortunate agriculturist, he was not so foolish as to believe that they were going to revivify agriculture by the better and more practical teaching of agriculture. In the south-eastern counties of England they were going through a difficult period with regard to the supply of labour, but for two years past he had been chairman of a committee that had as its object the re-modelling of the teaching in the schools of the district—not, of course, dropping the most important subjects, but at the same time teaching the scholars everything they could with regard to rural and farm life—everything, in short, that tended to take their minds to country and rural life rather than to the towns. These efforts had been attended, he was glad to say, with great success. As one who had advocated this system in and out of Parliament, it was a great pleasure to him to come down to Yorkshire and see in their College such an excellent course of scientific agriculture, a splendid laboratory like theirs, and such practical work as he found they were doing on their model farm. It was most satisfactory to him to think that in their different ways they were combining to make some real change for the lasting benefit of the agricultural community in this country.

Proceeding, Sir William said he had friends on both sides of the House of Commons, and there were many who were anxious to deal with this great problem of education without party bias of any kind and without prejudice; men on both sides were eager to go to the root of the question, and co-ordinate education in a way to lead to the taking of University degrees. How long were we to be the only country in Europe whose educational system was to be so muddled and chaotic? It was surely time that we ought to have some great comprehensive measure capable of satisfactorily dealing with this great question. He had himself, some years ago, introduced a measure that afforded an opportunity of satisfactorily dealing with the question of general secondary education, but that opportunity was not seized. He was, he confessed, frightened, and he turned his horse away in another direction. Now some people talked of technical instruction as if it was something apart from the general course of education. He considered that technical instruction ought to be regarded as a necessary part of all thorough education, for in his opinion a technical instruction that did not combine a good general education spelt failure.

While it was true that Germany, France, Switzerland, and America were ahead of our own country in respect of technical instruction, it must be remembered that these countries had spent much more money on the general education of their youth, that they had spared no effort in the promotion of the thorough and deep education of their people. We had a long lee-way to make up. What the measure of the Government was likely to be he was not going to say that night. He had not the slightest idea of what their scheme was. There were two great elements, however, with which any satisfactory measure must be borne in mind. The first was the demand on behalf of the voluntary schools for assistance. That voluntary system must be kept up As taxpayers we would have charges heavy enough to pay in connection with the South African war and in other ways without being called upon to provide the millions that would be required to take over the voluntary schools of this country.

In Parliament and out of Parliament religion and rates had been badly mated for thirty years. In the second place there was to be considered the desire of advocates of School Boards to the effect that if there was to be an application of rates to voluntary schools there must be some public representation in regard to these schools. The way out of the difficulty was a policy of give and take. The West Riding County Council had, he noticed, decided that while they were agreeable to take on secondary education, they were not prepared to be saddled with the management of elementary schools. That was an intelligible position to take up. To my mind, said Sir William, there is only one way to satisfactorily settle the question. We must be firm on the point; the Government must introduce a Bill not for the benefit of a party but for the good of the country, and if they give their supporters to understand that their measure must be supported, it will become law. With the sinking of party feeling the Government could not but carry an educational measure worthy of the nation. There must be evidence of self-sacrifice on both sides. It was no use School Board people declaring that they alone must be considered, and if Church people were to preserve their schools they must be prepared to make some sacrifice with regard to the management of their schools. Let us have sacrifice on both sides, and then we shall satisfactorily settle this great problem, because we shall approach it in a proper spirit.

The Carriage of Milk in Unfastened Churns.

Dr. A. E. Harris, Medical Officer of Health for Islington, has issued a report on the carriage of milk, which contains many points of interest to those engaged in the milk trade. In almost every prosecution for the adulteration of milk taken against the large vendors the defence of warranty is raised, but in addition the defendants nearly always declare that the milk was sold as it was received from the farmer. "When, however, the latter is appealed to, he declares," says Dr. A. E. Harris, "and I think generally truthfully, that he has not tampered with it, and had sent it to London just as it came from his cows—pure milk, with all its cream. The inference, therefore, naturally arises that it had been tampered with on the railway, an event which I believe to be of very rare occurrence. There could, however, have been no tampering with the churns if they had been locked or sealed. When the vendors or consigners are asked in court why they did not seal or lock their churns, they invariably declare that the railway companies will not allow them to do so, as it would interfere with the examination, the measuring, or the weighing of the contents.

'In studying the evidence of the Departmental Commission on Milk, I find that this statement is absolutely incorrect, for in a letter dated May 29, 1899, the Assistant Secretary of the Board of Agriculture enquired of the Railway Companies' Association through the Board of Trade if it was their practice to require milk churns to be unlocked, and if in consequence the consigner is unable to take any precautions to prevent persons tampering with their contents, and in reply was informed by the Railway Companies' Association, in a communication dated October 12, 1898, and signed by Sir Henry Oakley, that 'senders have been for a long time allowed to send milk in sealed cans, the companies accept the declaration of the senders at to the quantity conveyed, no extra charge being made; the only condition the companies require to be fulfilled is that the tare weight of the cans shall be stamped on the outside of the can, so that in case of doubt the quantity of milk within the churn can be approximately ascertained by allowing 10¼lb. for each gallon of milk declared. It does not appear to the companies that there is any difficulty in the senders protecting themselves against alleged loss of milk in transit by sealing, padlocking, or otherwise fastening the cans.'

"This correspondence is of the greatest importance, as it altogether disposes of the consignors' and vendors' contention. If, hitherto, this contention has been made in ignorance of the railway regulations, then the sooner such ignorance is dispelled the better. I therefore suggest," continues Dr. Harris, "that a communication be addressed to each milk vendor in Islington who receives milk by rail advising him to get it delivered to him in sealed, padlocked, or fastened churns; at the same time enclosing a copy of the correspondence laid before the Milk Committee, and cautioning him that if hereafter his milk should be found adulterated and a prosecution follow, that fact that he has not availed himself of the permissible means to protect the milk supply while in transit will be urged against him, although he may produce a warranty, and that the court will be asked to say that he has been guilty of contributory negligence. I would further suggest that the railway companies carrying milk for Islington purveyors should insist, not only in the interests of their servants, who are practically looked upon as the delinquents, but particularly in that of the public, that all cans sent to them for delivery shall in future be locked, sealed, or fastened."

The medical officer adds that he has not the least doubt that, if the railway companies refused to carry milk in unfastened cans, the adulteration of milk would be much checked, and the unfortunate farmer would cease to be so frequently, and often undeservedly, made the scapegoat for the large wholesale milk vendors in London and elsewhere. This statement is based on the fact

that out of 562 milks arriving at the G.N.R. Station, Finsbury Park, from farmers, only seven were found on analysing to be adulterated.

Cheshire Farmer's Protest Against a Cowsheds Order.

A meeting of the members of the Stockport and District Farmers' Club was held on the 10th inst. for the purpose of discussing the new regulation recently adopted by the Bramall Urban District Council, by which cowsheds in the district are to be provided with 1,000 cubic feet of air-space per cow.

Lord Newton, who presided, said, in his opinion, the space was somewhat large, and he might almost say it was an extortionate demand. He had been assured that such a demand as 1,000 feet had not been insisted upon in any part of the world, and if this experiment were to be tried he very much preferred that it should be tried somewhere else than in his own immediate neighbourhood. The milk trade was a very important industry throughout Cheshire, and it did not do to light-heartedly propose what really would be a severe burden upon that particular industry. He asked the gentlemen of the Bramall Council to reflect seriously, and, if necessary, he thought steps ought to be taken to restrain those gentlemen in the course they were taking.

He did not believe it was the object of the Local Government Board that such stringent measures should be enforced. He thought it entirely contrary to the spirit of the administration of the Local Government Board. Many persons thought if the regulation of 1,000 cubic feet were insisted upon they would have no cows left, because they would in all probability die. If local authorities were going to make this sort of revolution to hamper the milk-producing of Cheshire, he asked them to consider the agricultural produce all round. There was milk and butter from abroad, but what did we know about that produce? It seemed to him the height of absurdity to insist on regulations of this kind when they did not attempt to deal with other articles of consumption from abroad.

A formal resolution in opposition to the regulation, stating that "not more than 600 cubic feet should be insisted upon," was carried.

Bath and West Cheese School.

The fifth draft (weighing over three tons) of this year's cheese, made during September and October, at the Cheese School carried on by the Bath and West and Southern Counties Society for the Somerset County Council, at Hambridge Farm, near Taunton, has just been sold to Messrs. Hill Bros., of Evercreech, at 66s. per cwt. of 112lbs.; 6,670 gallons of milk made 7,798 lbs. of green cheese, which, when sold, weighed 7,297 lbs., showing a shrinkage of about 6½ per cent.

Cheques and Post Office Orders payable to WILLIAM A. MAY, 1, Essex Street, Strand, London.

SUBSCRIPTION RATES:—United Kingdom, one year, 15s.; six months, 7s. 6d.; the Colonies and Abroad, 17s. 6d. per annum.

Agricultural Imports and Exports.

The Trade and Navigation Returns for 1901, issued last week by the Board of Trade, contain particulars of agricultural imports and exports, which, although set entirely in tabular form, afford interesting reading to all connected with the greatest industry, and below we give some facts compiled from these Returns. First of all, we may mention that the total value of living animals for food imported last year was £9,400,033, as compared with £9,622,319 in 1900, or a decrease of £222,286; but the articles of food and drink imported showed a considerable increase in value, the total being £210,545,167, as against £205,320,617 in 1900. Strangely enough, the exports varied in the same way as the imports, the value of exported live animals decreasing, and that of articles of food and drink increasing. In 1900 the value of living animals exported amounted to £901,843, or £159,344 more than last year, the figures for articles of food and drink being: 1901, £14,884,915, and 1900, £13,621,755, or an increase last year of £1,263,160.

As regards the quantity of the various agricultural items imported and exported, we have compiled two tables from the Returns, and they will show at a glance how last year's trade compared with that of 1901 and 1900. The following table shows the quantity of the chief agricultural imports:—

* Denomination changed from bushels to cwt. in 1900.

The above table speaks for itself, but we may draw attention to the fact that the greatest increase is shown by barley and oats, over a million and a half quarters more of the former cereal being imported last year than in 1900 and 1901; whilst the increase in oats is a little under a million quarters when compared with the quantity imported in 1900, but considerably over two million quarters more than in 1899; whilst wheat shows a slight increase. The quantity of maize imported last year was over a half a million quarters less than in 1900, and two million and a half quarters smaller than the quantity received in this country during 1899. As to the importation of live animals, it will be noticed that we have received fewer cattle, sheep and horses than in the previous two years; but the quantity of dead meat imported has increased to the extent of nearly a million cwts. when compared with the figures of 1900, and even more than that amount when comparing those of 1899.

Below we give a table showing the quantity of the various exports of British and Irish agricultural produce so far as enumerated in the Returns. Other agricultural items were also exported from this country, but they were merely imports re-shipped, and need not be given here. From the following table it will be seen that the exports of live horses, cattle, sheep and pigs, all show a disappointing and considerable decrease compared with the two previous years. A larger quantity of butter was exported in 1901 than in either 1900 or 1899, but cheese show a decline, as does also wool. The quantity of provisions, including meat, is not given, but the value shows an increase of close on £500,000 against 1900, and even more than that when compared with the figures of 1899:—

	1901.	1900.	1899.
	No.	No.	No.
Horses	27,661	30,038	33,701
Cattle	1,629	2,742	2,979
Sheep and Lambs ..	2,754	4,934	7,586
Pigs	392	435	938
Other Animals ..	68,077	75,642	56,381
	Cwts.	Cwts.	Cwts.
Butter	11,116	10,510	9,936
Cheese	9,259	9,345	9,758
Provisions (including meat) ..	£ 1,815,212	£ 1,385,639	£ 1,096,059
	Lbs.	Lbs.	Lbs.
Wool, Sheep & Lambs	20,232,300	24,928,800	22,627,800
	Cwts	Cwts.	Cwts.
Hops	17,736	14,999	11,310
Bran and Pollard ..	1,209,090	811,172	—

In conclusion, we may mention that the total value of agricultural imports last year was £197,250,411, as against £191,680,797 in 1900, and £184,701,776 in 1899; whilst the value of the agricultural exports for the three years was as follows:—1901, £19,689,238; 1900, £15,884,742; and 1899, £18,225,039. It will be seen that the value of the imports in each of the three years was considerably over £150,000,000 more than that of the exports.

GARDEN.

Although we have experienced a slight spell of wintry weather of late—the frost was quite severe on two or three mornings this week—yet it does not appear to have "come to stay," and already there are indications of a return to milder weather, a fact for which I, for one, am (or shall be) devoutly thankful.

One of the next things to be thought of in the vegetable garden is the planting-out of the autumn-sown onions and lettuces, which should always be done some time during February, if possible. For the former, choose a piece of good ground in an open and sunny position, and trench it two or three spades deep, adding a liberal dressing (more or less according to the previous condition of the soil) of good, half-decayed manure. Where the land is light the manure should be of the most substantial description obtainable, some good farmyard "muck" being about the best thing, or cow or pig-manure may be employed. Use a little lime also, as this always tends to consolidate light soils. Heavy ground should be dressed with old hotbed or mushroom-bed manure, leaf soil, etc., and some burnt earth, wood-ashes, or anything of the kind is always useful; this should be applied on or near the surface.

When finished, tread or roll the plot down to a firm condition, rake the surface to an even level, and then set out the plants carefully, using a dibber, and placing them about 6 inches apart, with a foot between the rows. With ordinary care these will make very large and fine bulbs.

The lettuce plants, from seed sown in a frame in October, as directed at the time, should have a sheltered and sunny border, of fairly light and rich soil. Place them 8 inches to 12 inches apart, according to the variety, and keep a sharp look out for slugs.

Weather permitting, make a good sowing of peas as soon as possible, choosing a warm and sheltered position, of course. Any of the numerous good first and second early varieties, dwarf or tall, may be employed, and on light land in particular they will thrive and crop better if got in now, or shortly, than much later on. The best way to sow on comparatively narrow south borders is to place one or two rows of tall kinds at the back, and one or two of a dwarfer kind in front, the rows running east and west, naturally. Otherwise, sow in parallel rows running north and south, as usual. At the same time, get in a few rows of broad beans. I like the Seville Longpod best for this batch.

Any autumn-sown peas that are now through the ground should be lightly moulded, protected from cold winds by means of some evergreen twigs, and from slugs by an occasional sprinkling of soot or lime.

Prepare ground for planting out the forced rhubarb roots shortly, also the sets of sea-kale a little later on.

In light, warm soils, some sweet peas also may be sown now. These usually do best in well-manured trenches, placing the seed a few inches below the general level, but not covering them with more than an inch or so of soil at first. Or a number of 5in. pots may be sown, placing about a dozen seeds in each; raise them in any gently-warm house or frame, near the glass, and when 4in. to 6in. high turn out into good soil in the open.

The Cultivation of Maize.

Sir,—The very valuable information you have given in your issue of the 6th inst. in regard to maize may yet, I think, be extended. Maize, of all plants, appears to be best suited to give a succulent food from the silo. This and its abundant yield give it pre-eminence—placed in the silo it cannot be until it ripens. Is your correspondent of opinion that with any variety of maize this ripening may sufficiently be expected to make the use of the American silo advisable? Should he inquire of Messrs. Garton, I believe he will learn that for years they have experimented to find a maize which will mature in England, and without success. If this be so it may be better that attention should be turned to other crops which may give a succulent feed from the silo, such as tares. An entirely trustworthy communication from America says, "The aim of progressive dairymen in the United States is to get protein at the lowest possible cost, the other food ingredients being in excess here. And feed as succulent a ration as possible, and the best and cheapest succulence will without doubt be obtained through the medium of the silo. But we have been very slowly awakening to this fact. Remember our winters in Northern Iowa are very tedious, and the summers usually hot, and sometimes droughty."

I wish, Sir, you would give your readers your opinion as to which crop or crops are most likely to provide a succulent feed when placed in the American silo, crops giving an abundant yield, such as maize and tares. As regards the use of maize as a forage crop, your correspondent does not appear to be in agreement with Mr. Gilbert Murray, who, in Vinton's Agricultural Almanac, 1902, p. 59, speaks of the plant as containing a large percentage of water, as being poor in albuminoids, and of little feeding value. Your correspondent is in agreement with many in being of a contrary opinion, and yet we look to Mr. Gilbert Murray for a sober judgment.

Yours obediently, J. D.

Jan. 14th, 1902.

The Apple Orchard.

Sir,—I am rather pleased to read 'An Advocate of the Plantation System's" letter in your journal of 13th inst., because it gives me opportunity to dispose of another lion in the way coming forward to prevent, or at least to retard, efforts to retain at home, to fructify in our countrymen's pockets, the million a year sent out to import apples from abroad.

It would seem from the "Plantation Advocate's" letter that he has been moved by the proposals of the advocate of "the apple orchard" for the immediate extension of apple culture on turf land, to so decidedly oppose as even to advise that the spade should be put into the orchards now on grass land, and that the turf be dug in and the land put into small fruit and vegetable cultivation.

This would be market garden cultivation at once; but before anyone should be deluded to follow this advice he would do well to consider what is involved in it. First, a capital four times larger would be needed than for orchard culture on turf land, and the industry could only be carried out successfully within a radius of a to-and-fro journey in a day of a great town where there is an assured sale of perishable, soft produce. Also, it would be necessary to success that the market gardener should have had and have a thorough practical knowledge—not soon acquired—of selection for growing, and the packing and the marketing by himself of the produce, and always with unremitting supervision of the workmen in all details. Now, considering that the land near towns is already nearly all occupied, and rents consequently high, I do not think apple culture could be much advanced on the "plantation system," but the apple orchard on turf land could, and if the pasture is properly grazed, and the trees occasionally nourished by the filtration of surface manuring, and duly tended with the little trouble needed, fruit as fine and abundant will be yielded from it as by land under plantation cultivation, and the cash result far greater Further, the plantation business is all care, ceaseless, exacting, soiling labour. The orchard on pasture land comparatively Arcadia.

Yours truly,

THE AUTHOR OF "THE APPLE ORCHARD."

Jan. 16, 1902.

Our Food Supplies in Time of War.

Sir,—During the past seven years you have kindly published letters of mine on the above question.

The war in South Africa has aroused public interest on all questions of warfare.

Amongst others the above is receiving attention from the man in the street.

Kindly allow me to review a few points in connection with the question.

Bread to feed the masses during a naval war is of as much importance to us as ammunition. About four-fifths of our bread comes from abroad.

It is too well known abroad that we have a weak spot in our food supplies, and that will receive the chief attention of our enemy. Hostile fast cruisers, using the coal of their prizes to fill their bunkers, could greatly harass vessels laden with food for us.

It is doubtful whether we have enough cruisers to act as scouts for our fleet.

It would be easy for secret agents abroad to give information as to the sailing of food-laden vessels.

Exporters would be likely to demand payment before they allowed any food to leave their country, and thus might be pleased to hear that a cargo of food had been lost, as any they had to export would be increased in value. The price of wheat would rise greatly, even were no corner formed.

The insurance against war risks would be very high, and necessarily the price of any food that reached this island would be enormous.

The poor would suffer greatly, and hunger would be fighting for our enemy more effectually than any armed force, and, although our Navy might be victorious wherever they were able to meet the enemy, without doubt a bitter cry of anguish would go up from our starving people for food and peace, and our Government might be helpless to resist a shameless peace.

England has so long been blessed with peace that we are apt to forget the lessons learned by our forefathers, who were never so foolish as to depend for food upon others, who might later on become hostile.

The right, the natural, and, I contend, the only way for us to obtain or secure reserve of food is by encouraging an increased production of food in the United Kingdom, then at all times the reserve will be automatically replaced.

Some forty years ago we were practically self-supporting in the matter of food; but now much of our land that formerly produced wheat is practically waste land.

The fact is, the position has come about by depending on outside sources for food instead of producing most, as formerly.

It appears no better remedy to solve the question has been placed before the country than what I suggested about seven years ago, that is, a bounty on home-grown wheat to counteract the loss on production. Then we should soon be producing six months' supply, and were this kept for six months in ricks we should commence each year with one year's supply in the country—six months' in our rickyards and six months in our wheat fields. Many of our able-bodied would find remunerative work on the land, and thus live under healthier conditions than in our slums. Much money would be kept in the country that is now going abroad for imported food, and we need much money to pay for the war. Since bounties on production tend to decrease the price of an article, and import duties tend to increase it, it follows bounties and import duties on wheat can be so arranged as to return our farmers 40s. per quarter for producing and storing wheat without any increase in the price of bread. By such means the foreign producer would pay the bounty for the use of our markets, and the nation would be secure from famine and surrender in time of war.—

Faithfuly yours, THOMAS G. READ.

8, Holles Street, Cavendish Square,
London, W., Jan. 13th, 1902.

Professor of Agriculture at Cambridge.—At Cambridge University on Wednesday, Mr. Thomas H. Middleton, B.Sc., professor of agriculture at Durham College of Science, Newcastle-on-Tyne, was elected to the Professorship of agriculture, vacant through the resignation of Mr. W. Somerville. The stipend is £800 per annum.

The Waterloo Mills Cake and Warehousing Company, Limited, of Hull, the manufacturer of the celebrated "Waterloo" feeding cakes, have recently issued a blotting-pad and calendar for 1902. Like the one they gave last year, it is nicely got up and printed, and, in addition to being very serviceable, will be an ornament to any desk, either at the business place or at home.

MONDAY (Jan. 13).—Fine and dry weather prevailed over our Islands, and the conditions had generally become much more settled. Slight rain was measured in the morning, as the result of the fall in the preceding twenty-four hours, at several places in the North and West, but no rain occurred during the day. The winds were generally light from between North and East, but a North-West gale was still blowing in the North Sea. A decided fall of temperature had occurred over the whole country, and there was a sharp frost during Sunday night in the Northern, Eastern, and central portions of the Kingdom. The mid-day temperatures were everywhere much lower than of late.

TUESDAY (January 14th).—Fine and cold weather prevailed over our Islands. An anticyclone, or region of high barometer readings, embraced the whole of the United Kingdom, and the winds were generally light from between north and east. A further fall of temperature was experienced, and the thermometer was everywhere below the average for the time of year. Sharp frost was experienced during Monday night in most parts of Great Britain, and at Penrith the thermometer in the shade fell 24 degrees below the freezing point. In parts of England the midday temperatures scarcely rose above 32 degrees.

WEDNESDAY (January 15th).—Fine weather was prevalent over our islands, but there was a good deal of cloud and mist in different places. Rain was measured in the morning, as the result of the fall since the previous day, at a few of the Northern stations; but the conditions had for the most part remained dry. A cyclonic disturbance was passing eastwards to the North of Scotland, and under its influence the wind had generally shifted to the westward, while its force had considerably increased in the North. Temperature had risen briskly in Scotland and in the North of England; but the weather still remained cold over the Southern portion of the kingdom.

THURSDAY (January 16th).—The weather was generally cloudy and dull over our islands, but scarcely any rain was reported. A further rise of temperature had occurred; and in the Northern and Western districts the readings were considerably above the average for the time of year. The barometer was still very high. The anticyclone, which had been situated over the United Kingdom had moved somewhat southwards, and had its centre over the Bay of Biscay. The wind was chiefly westerly, under the influence of lower barometer readings in the extreme North, and a gale from the North-West was experienced on the coast of Norway. The weather was fine in London, and the mid-day temperature was forty-seven degrees.

FRIDAY (January 17th).—Fog or mist was very prevalent over England, but no rain fell, and there was none reported for the preceding twenty-four hours, except in the extreme north. The weather also continued dry in nearly all parts of Western Europe. The barometer had fallen somewhat, but the readings were still high over the United Kingdom, and the conditions continued anti-cyclonic over the southern portion of the kingdom. The winds were chiefly between south-west and west, and they were for the most part light. The temperature varied considerably in different parts of the country, but the weather was generally warm for the time of year.

SATURDAY AND SUNDAY (January 18th and 19th).—The weather continued fine in most parts of our islands during these two days, although rain again fell at several places in Scotland. The type of weather continued anti-cyclonic, but the barometer was decidedly falling on Sunday, apparently under the influence of disturbed weather in the Atlantic. The wind had again become south-westerly, and it was increasing in strength over the northern and western portions of the kingdom. A slight frost occurred over the central parts of England on Saturday morning, and during the succeeding night the frost was rather keen in the central and eastern districts, the sheltered thermometer registering twenty-one degrees at Dungeness. On Sunday the temperature in London rose to forty-four degrees.

Berkshire.

The weather has been very changeable, but at the same time not very hindering for farm work, for when it was too frosty for ploughing it was a good time for carting manure, and therefore we may consider that work is in rather a forward state. Although it has been mild at times, we have had some extraordinarily sharp frosts, but we do not see that the roots are damaged. The wheat looks fairly well, but not gay, and the late plantings have been a long time coming up. Rye, vetches, and trifolium all look well, and the young grasses appear to be a fair plant. It has been a bad time for the pastures, which have not been of much service for the cattle for some time; consequently great inroads have been made on the hay and straw, and considering the short crop grown last year it is no wonder that it is getting both scarce and dear. There is a good inquiry for cattle, as beef has been selling well. Sheep have done well, and lambing has commenced in many places, and we hear the lambs fall strong and healthy, with no great loss among the ewes; but as regards the trade, we can tell but little about it, as there are no fairs at the present time, but dealers are about picking up lots when they can get the offer. The swine fever order has paralyzed the pig trade, and bacon hogs are selling at rather lower prices. The price of wheat continues very low, but there is a steady demand, and it will probably be dearer later on, for with the continual reports of gluts of wheat in America it must be remembered that their population is increasing very fast, and that they must have food; and another noticeable fact is that the tide must be turned, as we have tithe 10s. per cent. higher than last year. Labour is more plentiful, as the military fever has a little died out, and those who come home are not very eager to go back to South Africa.—J. L. (January 16).

Cornwall (West).

We have had very fine weather this month, which has helped on all farm work. Wheat is looking fairly well. Very few lambs about yet. Beef selling fair, about 56s. cwt. Hay scarce, price about £5 per ton, which will pay the farmer better than feeding cattle. Straw also scarce, and worth about 50s. to £0s. Cows, calves, and store cattle selling very well. The early brocoli crop is now being cut and sent to market, and prices are fair, very much better than last year, and the growers are expecting a fair season, which all want badly, and hope to have. Seed potatoes have been dear, and there will be a decrease in the acreage planted. Narcissus are now being sent away from the hothouses, and are selling fairly well. The labour question is not so acute here as in many places, and enough can be had for all work.—F. C. (January 16th).

Herefordshire (North).

We are entering on a new year, which, I hope, may be more fruitful than the last, hops being the only good crop of the season, and they are almost worthless, too many being grown by nearly one-half, and yet they keep coming over the water to compete with ours. Very few growers have sold out, and still the brewers see mfull; they may be used perhaps instead of moss litter. All kinds of stock seems healthy and doing well. The dry seasons always suit them. The general work on the farm is forward, and some are busy hauling out dung and preparing for the spring-planted. Several farms are changing hands, but they seem taken; not many remain on landlords' hands. All corn grown in this district is used with the stock.—W. H. (January 17).

Hunts.

The New Year has opened very favourably for the occupiers of heavy land and low meadows, of which this county furnishes a considerable proportion. The frosts have been keen, but not unduly sharp, so that the ploughs have done much grand work, and the calls on the fodder supply have not been excessive. Much of the land for spring corn has been ploughed, and is now in good form for working as soon as the season for such work approaches. Both the quality and quantity of the barley suffered last year from the wretched condition of the land and the late period at which much of the seed corn was committed to the earth. We should have to go back to the year 1893 for a similar unfortunate and unprofitable season, so far as spring corn is concerned. Live stock continue healthy, and have generally made good progress at comparatively little cost for extra keep. The crop of mangolds was a good one, whilst kohl rabi were by no means bad, and the straw, though short and thin on the ground, was harvested in very fine condition. The extreme price of feeding stuffs, compared with the value of wheat, has not therefore been so severely felt by farmers as they feared might prove to be the case.—AMATEUR (January 16).

Somerset.

This first month of the New Year should find the farmer taking stock and balancing up the doings of 1901; this should disclose the state of affairs, whether it be a profit, or it may be a loss, on the year's working, and is material help in forming plans for the future. One spends an evening amongst his neighbours and hears of wonderful returns from such and such a crop, or it may be from a different outlet for milk or make of cheese, and almost makes up his mind to go in for that in 1902; but in asking himself next day whether he should adopt the system, so many considerations have to be taken into account that they get bewildering, and it often ends in going on in the old routine, hoping that this year will give more rainfall, and consequently more grass, than the last, for in this district that is all important, as arable land lately has been so reduced and grass land extended that the rearing of stock, the production of beef, and dairy produce, is the chief aim of the farmer, and here I would remark that the placing of an import duty on corn and cake would do the farmers hereabouts more harm than good, for were they to look up their accounts for foreign feeding stuffs they would doubtless show a much greater expenditure on these heads than all the income from corn sold off the farm. Your excellent weekly report on "Trade in the West," sets out the values of the various kinds of stock in such detail that it is unnecessary to go into that, but I would like to point out that, as very few of us have farmyard manure enough to give the grass land a dressing, that artificials should be used, whether it be slag, or bone meal, or super, as is most suitable to the soil. They are all cheap enough to a man who will go about their purchase in a businesslike way by buying with a guarantee, paying cash, and taking the liberal discount from makers' or dealers' list prices, as they are usually fixed on the self-protecting basis of heavy expenses of procuring orders, long credit, and possible bad debts.—R. B. (January 15th).

Somerset.

There is not much doing on the farm just now to call for special mention. The weather continues all one could wish, both for getting on the work and also helping to save the hayricks. All growing crops are looking strong and healthy; there has been just frost enough to check unseasonable vegetation. Very few lambs have yet made their appearance, but ewes are in capital condition. Live stock generally is healthy and doing well. The demand for good beef has been the feature of the Christmas trade; this still continues, but mutton is and has been rather slow to sell. Newly-calved cows sell well, but the trade in store cattle will hardly open up until another month, when there is a probability that the demand will be good for grazing purposes. There is and has been a ready sale for milk during this winter, but the short hay crop, dear labour, and dear feeding-stuffs leave a small margin of profit.—C. P. (January 17).

Suffolk (East).

The winter so far has been very dry and mild, and peas and beans and also oats and barley are being drilled on lighter lands. The old rule of not putting your spring corn in till the land was warm seems to have given way to the one of drilling any time after New Year, when it will do well. Wheat generally is up a good plant, and looking green and well, and winter beans look strong. Beef and mutton sell fairly well, and pork keeps a good trade. Corn prices are about the same, peas, beans, and oats being rather more saleable. Potatoes seem overdone in the big towns at present; disease also is a good deal noticeable. Parliament has just met again; why they do not work more than about six months in a year I should like to know; but no one supposes they will do any good for agriculture; but some hope they will do no harm; but still farmers as a body can hardly complain, for they neither ask them to do or not to do anything.—H. P. Y. (January 17).

Sussex (Mid).

Walking about yesterday I was surprised and pleased to see how much better the young seeds look than I expected to see them looking back to the end of last harvest, when the plants required looking for carefully. The clovers look more promising than the trefoils. Wheat on the whole looks fairly well where not sown too thickly, which is the case on some fields. Winter beans and tares, too, look well. Beasts are doing well in yards. There is abundance of mangold and swedes, and no anxiety is felt about winter keep. More anxiety has, until recently, been felt on account of the scarcity of water; every drop having to be carted from a brook for the use of all cattle and horses for several weeks.—F. C. C. (January 18).

Foreign Prospects.

FRANCE.—The wheat crop continues to present a satisfactory appearance, but colder weather to check the growth of weeds would be appreciated. The wheat market both in Paris and in the provinces continues quiet; farmers' offers are moderate, but quite equal to millers' demand.

BELGIUM AND HOLLAND.—Early in the week colder weather was experienced. The markets have taken their complexion from American advices. Yesterday Antwerp closed quiet but steady, quotations showing no marked change on the week.

GERMANY.—Stormy weather, with snow in the north, has not been detrimental to the autumn-sown wheat and rye crops. Berlin, after fluctuations, was yesterday about 3d. per quarter lower on the week for term wheat, and the turn dearer for spring rye. Hamburg reports quiet trade at easier prices.

RUSSIA.—Except in north-eastern districts, snow has disappeared. Heavy rains fell in the north, while in the south no rain has fallen for some time—the season is unusually mild. The inland markets opened firm after the holidays.

HUNGARY.—Weather is considered too mild, and snow is desired, in expectation of frost. Budapest reports a quiet trade at about last week's quotations.

ITALY.—In northern provinces wheat is growing well, much rain has fallen in Tuscany and other districts, but the crop has not suffered injury.

SPAIN.—The growth of the wheat crop is checked by very cold weather.

UNITED STATES.—The weather is somewhat unfavourable for the growing wheat, but not much injury is as yet apparent. The country is still firmly holding wheat, but the tone is somewhat easier for maize, although the movement has not much increased.—*Dornbusch.*

Agricultural Imports.

The following is an account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week ended Jan. 11, 1902, together with the quantities imported in the corresponding week of the previous year :—

	1901.	1902.		1901.	1902.

The directors of the Colonial College, Hollesley Bay, Suffolk, announce that they have appointed Mr. Walter J. Malden, A.S.I., late Professor of Agriculture at Downton College, and since Principal of the Uckfield Agricultural College, to be Principal of the Colonial College, in succession to the late Mr. Robert Johnson, recently deceased. Mr. Malden will commence his duties at the Colonial College at the opening of the ensuing term, on the 1st February.

CORN MARKETS.

LONDON.

Mark Lane, Monday.—Malt: The trade continues quiet. Barley: Both grinding and malting remain firm. Wheat: Unchanged. Oats: Quiet at last week's prices. Maize: 3d to 6d per qr cheaper. Flour: 6d per sack dearer.—NIXON, GOWER, AND CO.

Mark Lane, Wednesday.—English wheat remains scarce, and quotations show no alteration. Whites ranged at 29s to 30s 6d; reds, 28s 6d to 30s per qr delivered. Of foreign arrivals off coast continue light. American about unchanged. Russian sorts are still considered too dear for this market, and is scarcely offered. Indian still extremely scarce. The market for flour retains firmness, despite only a slow consumptive trade. Town households still fixed at 23s 6d per sack, and whites 3s more. Grinding barley without improvement. Useful types of English malting continue steadily supported, fine ranging up to 40s, while attention continues a good deal centred upon parcels suitable for spring seed sowings between 28s and 30s. There was a rather steadier tendency for Russian oats during the fore part of the day (forced sales having now ceased), but rates were not quotably altered. American remains out of supply. English firm and scarce. Garton's spring sown, 2 s 6d 42lb. Grey winters, weighing the same, 23s to 23s 6d; and Black ditto, 23s 6d to 24s. Flat maize remains practically exhausted on spot, and nominal at 27s ex quay. Round corn at the last reduction. The market for imported beans and peas has lost none of its stability.

Mark Lane, Friday.—There was nothing of interest stirring at to-day's market, and, while breadstuffs moved steadily, feeding stuffs were occasionally against the seller, the attendance being limited. English wheat continues to come up very slowly here, but the markets in the country are sufficiently supplied. Whites, 29s to 31s 6d; reds, 28s 6d to 30s per qr, delivered. American descriptions 3d easier since last Friday. Flour maintained, although slow. First patents quoted up to 24s 6d; ordinary ditto, 23s 9d ex store; second patents of the Guinea Gold type, 22s. First bakers, 19s to 20s ex store. Cascadias, 21s 9d ex store. English unaltered. Town households, 23s 6d; whites, 26s 6d per sack, delivered to the baker. Top price town made, 28s net. No. 1 household, 23s 9d cash per sack at the mill door. Whole meal, 174s per ton. Australian patents, 20s to 20s 6d per 280lb ex store. Of feeding stuffs, grinding barley neglected, and again easier to buy. English malting well maintained for all useful specimens, fine commanding up to 40s; foreign steady; Californian, 25s to 28s. Oats steady, with a better tendency since Friday last, but quotations of Russian are much the same. American descriptions remain out of supply; New Zealand, supported in value, at 25s to 26s per 384lb ex store; English scare, and sellers have no difficulty in securing full rates; gartons, 23s 6d, 42lb; grey winters, 23s to 23s 6d; black winters, 23s 6d to 24s, 42lb. Scotch oats, weighing the same, 23s to 23s 6d. Flat maize, nominal, with next to nothing here on spot; mixed American, 27s ex granary. Round corn generally again rather easier in tone since last Friday. The market for imported beans and peas was again very firm, being poorly supplied, and Canadian white peas are difficult to be had, even at 27s ex granary.

COUNTRY.

Ashford, Tuesday.—Wheat at 28s to 30s for both white and red descriptions of good quality. Foreign grinding barley advanced 6d on the week, being quoted up to 22s per qr, while Mazagan beans rose 1s to 34s for best samples. Other descriptions of corn remained unchanged, and flour was quoted from 23s to 28s per sack.

Banbury, Thursday.—Wheat, red (new), 28s to 29s per qr; beans (old), 37s to 39s per qr; oats, 17s to 20s per qr. Trade very quiet at late rates.

Birmingham, Thursday.—The market was well attended, but trade generally was quiet. Foreign wheats unchanged to 3d cheaper, and English wheat unaltered at 11s to 11s 3d per bag. Maize unchanged, round realising 23s 6d to 23s 9d per qr. Grinding barley, 18s to 19s 3d per qr. Sharpness English oats without change, and English beans 14s 6d to 14s 9d per bag.

Braintree, Wednesday.—A fair supply and a good trade. Prices: Red wheat 27s 6d to 28s, and white 29s to 30s per qr. Barley short, samples selling from 28s to 30s.

Bristol, Thursday.—Trade has continued quiet during the past week. At our market to day English wheat was in good supply, being somewhat lower in value. Foreign unchanged. Barley, 3d to 6d lower; maize, 9d to 1s lower; Oats, 3d decline. Flour remains unchanged in price.—GRACE BROTHERS.

Buston, Wednesday.—A small market. Wheat, 28s 6d; grinding barley, 23s to 23s 6d; oats, 20s to 21s 6d; peas, 32s to 33s; barley, 34s 6d; new maize, 24s; old maize, 25s 6d.

Bury, Wednesday.—Wheat, with only a moderate supply, was firm, at last week's prices. Reds and whites, 28s 6d to 30s per qr. Barley: There was nothing new to note in the trade. A fair consumptive demand continues for all useful malting parcels, running from 28s to 33s per qr. Fine parcels are getting scarcer, but are no dealer; grinding corn firm. Beans and peas were firm, also oats, but maize was a trifle easier at 24s 9d to 25s per qr for new round corn.

Cambridge, Saturday.—During the week, notwithstanding that supplies have not been too abundant, wheat has had to give way 6d per qr., whilst spring corn has remained quite as dear. At this market to-day there was a very fair supply of wheat, and farmers could only sell at 6d per qr. less money. Red, 28s to 29s; and white up to 29s per 504lb. Spring Corn sparingly offered, clean lots fit for seed commanding better prices.

Carlisle, Saturday.—Fair supply of oats in our market to-day; quick sale, at late rates. New, 20s 6d to 22s 6d per 336lb; old, 23s to 23s 6d per 336lb.—THOMAS ROBINSON.

Chester, Saturday.—The demand for English grain was well maintained, and free prices were asked for all kinds. Quotations:—Wheat, white and red, 4s 4d to 4s 6d per 75lb.; malting barley, 3s 8d to 3s 9d per 60lb.; grinding barley, 3s 3d to 3s 6d per 84lb.; beans, 5s 6d to 5s 8d per 80lb.; oats, new, 2s 10d to 3s 1d; old, 3s 4d to 3s 6d per 46lb.; Indian corn, 13s 3d to 14s 6d per 240lb.

Chichester, Wednesday.—Small attendance and quiet market. Wheats were steady without change, and a similar remark applies to feeding stuffs. Flour was unaltered at 24s per sack.

Colchester, Saturday.—Moderate supply of wheat, dull trade, prices as last week. Beans, peas, and oats steady.—FRANCIS AND CO.

Crovdon, Thursday.—White wheat, 25s to 31s; red ditto, 28s to 30s. Malting barley, 28s to 36s; grinding, 22s to 24s. Oats, 19s to 22s. Beans, 31s to 33s. Peas, 29s to 31s. Trade for wheat remains quiet at last week's prices; oats firm, beans and peas remain the same.

Faversham, Wednesday.—White wheat, 29s to 31s; grown ditto, 28s to 30s. Malting barley, 28s to 35s; Grinding ditto, 23s to 26s. Black oats, 21s to 23s; white ditto, 21s to 24s. Beans, 34s to 38s. Grey peas, 33s to 34s.

Glasgow, Wednesday.—There was the usual attendance at our market. Wheat and flour quiet trade, with prices about unchanged. Mixed corn quiet, and 3d per 280lb cheaper. Grinding beans and Canadian pease quiet, but steady. Foreign oats quiet and unchanged. Home oats dull and easier. Barley quiet. Bran and thirds firm, but small trade. Oatmeal slow, and prices easier.—GIBSON AND CLARK.

Ipswich, Tuesday.—Wheat: Holders were trying to make a small advance at the opening of the market, but were unsuccessful, and the business done was only at last week's full prices. Reds and whites worth about 29s 6d per 504lbs delivered at Ipswich. Barley: Supply smaller, trade for useful malting samples steady on the week. Maize about 3d per quarter lower, at 23s 6d to 29s per quarter for new round corn. Other feeding corns firm. Linseed cakes rather dearer.

Leeds, Tuesday.—With moderate shipments and firmness in the leading Continental markets, America's decline fails to have much influence on the trade, beyond temporarily checking the demand. Indian and American wheats are rather easier on the week, other descriptions unchanged; malting barley steady; maize 6d lower; beans and oats unchanged.—DUNNS AND CO.

Leeds, Friday.—Slow demand for both English and foreign wheats at about Tuesday's prices, with, if anything, the turn in favour of buyers. Flour also the turn easier. Beans, peas, oats, barley, and maize without change.

Leicester, Saturday.—Fair attendance, with moderate supplies of home-grown wheats, but only fine samples in request, and prices easier at 28s to 31s per 36st. Malting barley steady. Grindng barley quiet. Fine oats very firm.

Lewes, Tuesday.—New white wheat, 29s to 30s; new brown ditto, 28s to 30s. Malting barley, 32s to 35s; grinding ditto, 20s to 24s. Oats, 20s to 24s. Beans, 35s to 38s. Peas, 32s to 35s per qr.

Lincoln, Friday.—Shorter supply, and prices rather easier. Best samples, 29s on rail, and up to 30s delivered. Small supply of barleys; malting from 27s to 32s per qr., grinding, 22s to 23s. Oats and beans firm at later rates, and maize 6d lower on the week.

Liverpool, Friday.—The market has had a fair attendance, but wheat is in moderate demand, a quiet business being put through, prices holding steady at ¼d below last Tuesday for all descriptions; white wheats nearly exhausted. Flour: American grades are quiet and meeting a limited inquiry, prices being 6d per sack lower; Hungarian, owing to a combination of millers who are restricting the output, and in consequence of the high prices ruling in Austria-Hungary for wheat, has led to an advance of 1s per sack. The Liverpool Millers' Association make no change in their quotations, with a quiet trade. Maize: Old mixed, owing to extreme prices, is rather neglected, and shows ¼d loss from last market day. European in moderate request, but prices are generally ¼d to 1d lower. Plate, prime old, is in good demand, and fully maintains last market-day's quotations. Barley: Malting is quiet, with only very occasional sales, prices unchanged; feeding slow, and the turn lower. Beans: Firmly held at recent quotations. Peas: Steady, with fair inquiry at late rates. Oats: Firmly held with only a moderate inquiry at Tuesday's prices for English; foreign sorts are in favour of buyers, but no change is made in quotations. Oatmeal: Steady, but meets a slow demand at quotations. Oilcake has had only a moderate inquiry, and is steadily held at last market-day's prices.—SEGAR AND TUNNICLIFFE.

Maidstone, Thursday.—Very slightly improved tone in the wheat trade to-day, and the full cost of last week secured. In other grain but little business passing, barley and oats barely being former terms. Round maize is decidedly cheaper; flat is too scarce to go down in price much. There is not any alteration in rye, tares, brank, hemp, lergum, or millet.

Manchester, Thursday.—The tendency in most sections has been in favour of the buyer. English wheat is less firmly held than seven days ago, and buyers are able to do better in foreign sorts also. Flour moves quietly at a decline of 6d per sack. Oats and barley are quiet without material change. Peas and beans are nominally steady. Indian corn repeats late rates, but there is no weight of trade going on.

Newcastle, Saturday.—The demand for wheat at our to-day's market was limited, without, however, any change in values. Maize slow sale and favouring buyers. Beans tand peas unaltered. Scotch oats 3d to 6d cheaper on the week. Foreign oats quiet at late rates. No enquiry for barley.

Newport (Mon.), Wednesday.—Quiet market and little business doing. Wheat was unchanged, maize easier than last week, and other grains unaltered. Mill offals scarce and 5s per ton dearer.

Northampton, Saturday.—A lifeless market. Supply and demand inactive. Quotations about the same as last week, with a downward tendency. White wheat, 28s to 29s; red, 27s to 29s; barley, 26s to 32s; grinding barley, 21s to 24s; oats, 19s to 22s; fine old, 25s; beans, 32s to 40s; flour, 21s to 22s; fine, 24s.

Norwich, Saturday.—There is no new feature in the wheat trade to-day, with prices same as last week. Barley in larger supply, with a firm trade at late rates. Fine weather prevails, with night frosts. Wheat, red, 28s 6d to 29s per qr, weight 63lb per imperial bushel. Corn Inspector's return for the week ending January 13th, 1902:—Wheat, 3,313, 27s 2¾d; barley, 10,954.1, 28s 4½d.—J. ARTHUR MILLS.

Nottingham, Saturday.—Wheat, moderate supply; millers bid 6d less, but holders were firm. Barley, less offering, and values were well maintained. Oats and beans, both firm.—ROBERT HUBBLE.

Peterborough, Saturday.—There has been more wheat offering to-day and a slow trade, with prices occasionally 6d cheaper. Barley in small supply, and held for more money. Oats firm, at fully late rates.—THOMAS HILL AND SON.

Plymouth, Thursday.—Moderate attendance, but business very dull. Maize, barley, and oats, slow trade, prices of last week. Wheat, very firm.—ORLANDO DAVIS AND CO.

Reading, Saturday.—The attendance in the Exchange to-day was much larger than usual, and business showed a decided improvement in point of quality. Wheat did not come to hand very plentifully, and in cases where the quality of the corn did not attain a good standard, selers had to be content with a fall of 6d per qr. on the week. Barley sold very well, recent quotations being fully maintained, while oats changed hands readily at last week's figures.

Ripon, Thursday.—We have to report a better attendance, but a slow trade. Maize and English wheat show a downward tendency. Wheat, English (new), 29s to 30s; ditto foreign, 29s to 33s; barley, grinding, 22s 6d to 23s 6d; ditto malting, 26s to 31s; oats (new), 21s to 24s; round maize, 24s to 27s per qr; beans, 1s per stone.

Romford, Wednesday.—Wheat trade firm, at 6d advance on last week's prices. Not much on offer. Red wheat, 28s to 28s 6d; white wheat, 29s to 30s 6d per qr.

Rye, Wednesday.—White wheat, 27s to 29s; red ditto, 27s to 29s. Black oats, 18s 6d to 25s; white ditto, 19s 6d to 25s; winter ditto, 20s to 22s. Tick beans, 33s 6d to 36s. Grey peas, 32s to 34s.

Sheffield, Tuesday.—A larger supply of wheat, and former prices asked. A good attendance, but buyers would operate only at a small reduction. Beans, peas, and Indian corn as before. Quotations: Wheat, white, 30s to 31s; ditto red, 30s 6d to 31s per 504lb; oats, new white, 21s 6d to 22s 6d; ditto, new black, 20s to 21s per 336lb; peas, grinding, 32s to 34s; ditto, blue, 53s to 80s; beans, Egyptian, 35s to 36s per 504lb; ditto, English, new, 37s to 37s 6d per 532lb; barley, grinding, 21s 6d to 22s; ditto, malting, 28s to 32s per 448lb; Indian corn, small, 25s to 26s; ditto, American mixed, 27s 6d to 28s per 480lb.

Spalding, Tuesday.—There was a slight fall in the value of wheat, which was quoted at 28s 6d. Small supply, and a slow trade. Oats firm. No quotable alteration in the value of other articles.

Stamford, Friday.—Wheat was fairly well represented, and there were a good many samples of barley. Wheat, 28s to 29s; barley, 27s to 30s for finest quality; new oats, 22s to 24s; old, 26s 6d; beans, 30s to 35s.

Stockton, Wednesday.—There was a very small show of farmers' wheat, which made 30s to 31s per qr. The demand for foreign wheat, which has shown an improving tendency since the previous market, evidenced a slight falling off in view of the relapse in America, and prices remained unchanged on the week. Oats and maize 6d lower. No malting barley showing.

Sunderland, Saturday.—Moderate supply of wheat, which sold at about last week's prices. Barley in good demand, and rather dearer. Oats quiet. Arrivals, coastwise, oats, 1400 qrs; foreign, nil.—E. and F. RICHARDSON.

Wakefield, Friday.—On to-day's market there is only a nominal demand for both English and Foreign wheat, at about last week's rates. There is a fair supply of barley, which meets with a slow sale, at lower prices. Maltsters being heavily stocked, are holding off. Feeding stuffs unaltered, with the exception of maize, which is 6d per qr lower.—MICHAEL SANDERSON AND SON, LIMITED.

Wakefield, Friday.—It is a remarkable fact that the American decline this week has practically only affected the option markets, the trade maintaining its firm attitude, and with the exception of a slight reduction in American and Indian wheats, prices on the week are unchanged, the tone to-day being decidedly steadier. Barley supply falling off; the lower descriptions still meet a fair demand. Maize, 6d lower; oats and beans quiet.—DUNNS AND CO.

Winchester, Saturday.—A fair supply of wheat offering on our market to-day, for which we had a quiet but firm trade, at fully last week's prices. Barley in fair request, best samples making more money. Oats steady, with more inquiry, late rates easily maintained. Maize 6d cheaper. Flour, consumptive demand at 22s to 23s 6d.—FEAR, COLEBROOK AND CO., LTD.

Wisbech, Saturday.—Wheat steady at 28s to 29s per qr; oats, 21s to 24s; barley, 22s to 30s; beans, 35s to 38s.—JAMES FLETCHER.

Wolverhampton, Wednesday.—There was a quiet market, the following being the quotations:—Wheat, new, 12s 6d to 13s per 216lb, Kansas 6s 3d per cental; oats, old 15s 6d to 16s, new 12s 6d to 13s 6d; beans, old 15s 6d to 16s 6d, new 14s 3d to 14s 9d per 196lb; barley, 31s to 32s per 448lb; maize, 26s 6d to 27s per 480lb.

Worksop, Wednesday.—Moderate attendance and small show of grain. White wheat, 28s to 29s; red wheat, 26s to 28s; grinding barley, 25s to 26s; white oats, 21s to 27s to 28s; best malting barley, 28s to 32s; secondary, 23s; black oats, 19s to 21s; maize, 27s to 28s per qr.

York, Saturday.—Fair show of grain,, and wheat was rather more freely offered. Sellers asked rather more money, which somewhat checked trade. Best samples made 30s per 35 stones. Far show of good samples of barley, which met rather a slow trade, buyers being more inclined to purchase medium sorts, which were scarcer. Finest barley, 30s; medium, 27s to 28s per 32 stones. Oats were a better show than last week, and prices were well maintained. Feeding stuffs keep firm.

FOREIGN.

Hamburg, Saturday.—Weather changeable; since yesterday it is unseasonably mild. Trade quiet, in sympathy with foreign markets; but holders in general make a stand against any material reduction in values. Supples, except those of maize, are falling off, and there is no accumulation of stocks in this country. The imports into Hamburg during this week amounted to: 2,179 tons wheat, 3,766 tons rye, 1,796 tons barley, 9,991 tons maize. Hard winter wheat No. 2, on the spot and for prompt shipment, is selling at 29s to 29s 3d; Barbetta is held at 29s 9d per 480lb; Walla Walla, on the spot and March June delivery here, 29s 6d to 29s 9d, 29s 9d per 500lb., ex ship at Hamburg. Rye in better demand; 9 15-20 South Russian is selling at 23s per 480lb c.i.f., March-April shipment. There is some demand for fine malting barley at 23s to 30s, but offers of such are getting scarce; good middling quality of Bohemian is held at 31s; Saale, at 33s to 35s; fine Saale, scarcer, at 35s to 39s; Helstein and Mecklenburg, 26s to 28; fine Moravian and Stovakian, 37s to 38s per 448lb f.o.b., 60-61 Ko.; South Russian barley meets a slow sale at 18s to 18s 6d per 400lb c.i.f. Hamburg. Prices of maize are slightly lower. The eastern parts of Germany get supplies by rail from Russia and Roumania, and in the Elbè districts the consumption is much restricted by the high prices. Mixed is held at 25s 3d; Odessa and Danubian, at 21s 3d to 22s; River Plate, May-June shipment, at 20s 9d per 480lb c.i.f. Hamburg.—JOHN TATLOCK.

Paris, Wednesday.—The features of the provincial exchanges for native wheat have undergone no material modification. Farmers continue to ofier very moderately, disdaining up to the present to listen to all advice to take advantage of actual rates, which are assuredly very remunerative. So that in spite of the dulness ruling in wheat in yesterday's market, holders who have of late been paying high prices for their grain in the provincial exchanges, endeavoured to maintain their currencies, and only with great reluctance were induced to grant any abatement from last week's values. Millers on their part were still hesitating to purchase, in view of the dull tone of the *Marche de Paris* and the difficulties encountered in the disposal of their product. Dealers and bakers in fact still evince a certain reserve, and are content to sell from day to day without manifesting any inclination to engage in forward transactions. Consequently trade was very restricted in its movements. Quotations are as follows:—Choice red, 37s 10d to 38s 3d, ordinary 36s 11d, and white 37s 10d to 38s 9d per 480lb. The market was quiet at the opening and closed unaltered at the following prices:—Jan. 28s 2d to 28s 5d, Feb. 28s 5d to 28s 8d, March-April 28s 11d to 29s 2d, March-June 29s 2d to 29s 5d, and May-Aug. 29s 5d to 29s 8d per 280lbs. Farmers' and traders' offers for rye are most reduced, so that prices were held at a slight advance in the majority of the provincial exchanges, and when buyers found some suitable lots they did not hesitate to pay 6d per qr advance on last week's rates. Here prices were nominally unaltered with, however,

rather more sellers; buyers offered 27s 5d, but no sellers under 27s 10d per 480lb Oats show no variation in any direction, and are not so scarce as might have been expected; but, however, are very dear; but this may be explained from the fact of there being great wants to satisfy. Here to-day transactions were still insignificant, and values of home grown about 4d per qr dearer on the week. Grey Beauce, 24s 8d to 24s 11d; white, 24s 1d to 24s 4d; red, 24s 4d to 24s 8d; black, from the Central provinces, 25s 3d; small Picardy, 25s 3d to 25s 6d. Offers of barley are still limited, good descriptions being wanting, and show no appreciable change on the week. There are sellers in Beauce for the North, and Belgium at 6f. to 16f.50 (23s 3d to 23s 11d). Choice sorts are held at 16f.50 to 17f. (23s 11d to 24s 8d). Here trade was slow, at the following rates:—Malting sorts, 16f.75 to 17f. (24s 3d to 24s 8d); grinding, 16f.50 to 16f.75 (23s 11d to 24s 3d); feeding, 15f.50 to 16f. per 100 kilos (22s 6d to 23s 3d per 400lb).—*Dornbusch*

FOREIGN CORN TRADE.

The shipments of grain from the chief exporting countries last week were as follows:—

	Wheat. Qrs.	Flour. Sks.	Maize. Qrs.	Barley. Qrs.	Oats. Qrs.
United States	375,000	88,000	20,000	90,000	—
Russia	160,000	—	20,000	—	105,000
France	—	5,000	—	—	—
Austria-Hungary	—	5,000	—	—	—
Roumania	210,000	—	180,000	10,000	10,000
Argentina	—	—	20,000	—	—
India	30,000	—	—	—	—
Australasia	—	—	—	—	—
Miscellaneous	20,000	10,000	20,000	20,000	10,000
Total	795,000	108,000	260,000	120,000	125,000

THE BALTIC.

Prices for wheat cargoes are 3d. lower from the 14th, and the demand is not good for any kind. Sales have included Californian at 30s. 6d., Walla Walla at 30s., Australian at 30s. 9d., Manitoba at 30s. 6d., No. 1 Northern American at 30s., white Kurrachee at 29s., and No. 2 Hard Winter American at 28s. 9d. per qr. Holders of Argentine new crop ask 30s. for February shipment, but buyers are not forthcoming.

Maize cargoes are 6d. cheaper for round and 3d. for yellow, but flat are as dear as a week ago. Sales include Odessa at 21s. 9d., Galatz at 21s. 9d., Novorossisk at 21s. 6d., Roumanian at 22s., American at 26s., and Argentine at 23s. per qr. on passage, 21s. 3d. April shipment.

Barley is 3d. lower for all cargoes. The finest brewing barley from California makes 26s., the ordinary standard Californian 24s. 3d. A cargo of each has sold at these terms. Odessa feeding barley has made 18s. for three cargoes, and Azoff on passage 18s. 9d. for two cargoes.

Oats are temporarily out of favour, but those firms have probably done well who have secured a Roumanian cargo at 17s., white Libau at 17s. 9d., and white Konisberg at 19s. 9d. A cargo of Calcutta white peas for April shipment fetched on Saturday 31s. per qr.

Arrivals at ports of call last week included six wheat cargoes and one cargo of maize. The wheat cargoes were three Californian and three Australian; the maize cargo was Argentine. The chief business continues to be done for direct ports.

IMPORTANT TO FARMERS.—The best farm account books are WEBB'S PRACTICAL FARMER'S ACCOUNT BOOK, with preface by Clare Sewell Read, 70th edition, 6s. and 7s. 6d. post free. JARROLD'S IMPERIAL FARM ACCOUNT BOOK, 3s. 6d. JARROLD'S FARM LABOUR BOOKS, 2s., 2s. 6d., and 4s. 6d. List of Game and Dairy Account Books post free of JARROLD and SONS, 10 and 11, Warwick Lane, E.C.—[ADVT.]

Review of the British Corn Trade

DURING THE PAST WEEK

Written exclusively for the Mark Lane Express.

The principal crop advices of the week are from Argentina. Of our own fields there is nothing fresh to say. The land needs more moisture in the subsoil for most forms of vegetation, but wheat, with its special adaptation to a thirsty climate, is an exception. It is of almost ideal promise at the present moment. In Argentina the wheat surplus available for exportation is now put by tolerably trustworthy authorities at four million quarters, against four and-a-half millions last season. The wheat shipments of 1901 from Argentina to Europe were 3,745,000 qrs. only, but Brazil always takes about 250,000 qrs. There were small consignments to the Cape.

The American winter wheat is of under average promise, but the area sown has increased by some 1,717,000 acres, an increment which will suffice to balance an appreciable diminution in the yield per acre. The crop of 1901 was definitely returned in the annual Bureau Report, published on 11th January, at 14.8 bushels, against a decennial average, 1891-1900, of 13.3 bushels. It is something to begin the year with an American Government decennial average; for that is exactly what we have hitherto lacked. The monthly Bureau Reports (which seem to be in the hands of separate officials) compare the growing crop with "an ideal good crop," commonly reckoned at about fifteen bushels for the whole of the Republic, but actually varying with each separate State.

Wheat prices at the six chief markets of the international trade thus compare:—

	15 Jan.	8 Jan.	1 Jan.
	s. d.	s. d.	s. d.
London	28 2	27 1	28 3
New York	30 6	30 0	28 3
Paris	37 9	37 5	38 0
Berlin	37 3	37 6	37 6
Buda-Pesth	33 9	34 0	33 6
Antwerp	28 0	28 9	29 6

The above figures are reduced to English money for quarters of 480lb. The actual ordinary London price to-day is 29s. 8d. per 504lb., the Mark Lane buyer declining in quite 99 per cent. of his transactions to recognise the Government decision that 480lb. is the proper quarter of trade. The term market from its opening has used the cental or true hundredweight.

The rise in prices at New York should go far to balance the depressing effect of increased supplies of wheat on passage. The shipments from Atlantic ports seem bound to fall off. The French markets are not bidding for wheat as yet, for 37s. 9d., less 12s. 3d. duty, means 25s. 6d. only, and London bids 2s. 8d. more than this. Berlin's 37s. 3d., less 10s. duty, is equal to 27s. 3d., but as 28s. is paid at Antwerp, it is difficult to see what is to cover the cost of rail or even sea transit further east. The inland position of Berlin makes it ordinarily a rather dear market.

Supplies on passage to the United Kingdom include the following quantities of wheat:—

	Qrs.
Californian	1,680,000
American	360,000
Argentine	70,000
Russian	60,000
Indian	80,000
Australian	180,000
Other Countries	48,000
Total	2,488,000

The increase from New Year's Day is 138,000 qrs., and is chiefly due to the large shipments from California.

Of articles other than wheat there are afloat:—

18 January.	1902	1901.
Flour	405,000 sacks	480,000 sacks.
Maize	830,000 qrs.	500,000 qrs.
Barley	725,000 qrs.	520,000 qrs.
Beans	5,000 qrs.	7,000 qrs.

The maize is mostly Russian and Roumanian, the barley Californian, Roumanian, Russian, and Turkish; all the beans are African. Of the flour, 310,000 sacks are coming from Atlantic ports, 40,000 sacks from California and Oregon, 30,000 sacks from Hungary, and 25,000 sacks from other countries, chiefly Australia and South Russia. We do not get flour as yet from Argentina, despite the numerous new mills started at Buenos Ayres and Rosario.

The returns of landed values, though belated, are important. They indicate that the agricultural and rural interests are still steadily losing ground.

ANNUAL LANDED VALUES.

1879	£64,133,000
1883	£62,549,000
1886	£58,154,000
1900	£52,814,000

The fall of £12,000,000 in thirty years is eloquent of only too much. It shows that all the rural districts are suffering, and indicates in what direction a relief of taxation is most urgently called for.

PRODUCE OF A PENNY ON THE INCOME TAX.

1870	£1,474,000
1880	£1,847,000
1890	£2,141,000
1900	£2,364,000

The general wealth of the country, as shown in these figures, is still increasing, and the non-rural industries can bear a greater burden than in 1870 with less effort. The corn trade, of course, feels the withdrawal of capital from rural concerns, and the markets are none of them what they used to be when the three chief cereals were all paying their way. The New Year thus far has shown no sign of reversing the position from 1901. The price of wheat and of barley was decidedly unremunerative at Christmas, and it has not mended since. The weather has been the chief cause of the dulness, but there has also been a collapse in grain holding at Chicago, which has reacted unfavourably on the British exchanges. Oats keep up at a good value at all markets.

The following figures show how much money is going year by year out of the country for foreign bread stuffs and feeding stuffs:—

FIVE YEARS EXPENDITURE ON FOREIGN CORN.

(In Millions of Pounds Sterling.)

	1897.	1898.	1899.	1900.	1901.
Breadstuffs	32.9	37.6	33.0	33.3	33.4
Maize	9.2	11.3	13.0	12.3	12.3
Barley	4.6	6.8	5.0	5.1	6.2
Oats	4.0	4.4	4.2	5.2	6.3
Total	50.7	60.1	55.2	55.9	59.2

The rise of £3,300,000 in our outlay in 1901 is not a satisfactory sign, but the figures of the past year are not excessive in any separate article except oats. We get our wheat cheaper than in 1898, our maize cheaper than in 1899, our barley cheaper than in 1898. But oats cost more than in any previous year.

Supplies of bread stuffs last week were:—

		Qrs.
English	Wheat	120,000
Foreign	do.	232,000
do.	Flour	180,000
	Total	532,000
	Wants	567,000
	Surplus	25,000
Stocks 11 Jan.		2,827,000
Stocks 18 Jan.		2,852,000

The reserves of wheat in farmers' hands are put at 3,658,000 qrs.

Imports of spring corn, etc., included 345,000 rqs. of maize, 90,000 qrs. of barley, and 130,000 qrs. of oats. The receipts of barley and oats were below the average, but those of Indian corn were greatly in excess of the mean.

The wheat shipments of the week have shown an increase, but a decline in the total of flour shipped makes the total of all breadstuffs very much what it was for the first week of January. Maize shipments indicate that South-Eastern Europe is still sustaining "the burden and heat of the day." Of barley and of oats the total shipments are considerably under an average.

The quantity of linseed now on passage to the United Kingdom is 100,000 qrs., as compared with 80,000 qrs. a year ago. The price of Indian new crop linseed for May shipment is 46s. 3d., against 44s. at this time last year.

There are 14,000 qrs. of rapeseed now on passage, a quantity much in excess of our expectations in 1901. The price offered for brown Calcutta is about 37s. per quarter.

Cotton seed is dearer for February shipment than for prompt delivery, a somewhat curious state of affairs. On the 18th there were 39,000 tons on passage.

Indian shipments of sesame for 1901 were about 1,782,000 cwt., as compared with 1,532,000 cwt. in 1900. The French are the chief buyers of this serviceable Indian seed, which fetches a price at present somewhat above what most English houses are prepared to bid. However, its value is approved by the analysts, and, like sunflower seed, it is probably a "coming" article on the market.

Buyers should make the present occasion one for acquiring the bye-products of the mill, as the decline in price since Christmas is very material. Russian pollard at four guineas per ton is certainly tempting, as are Hungarian middlings at five guineas.

The sales of British produce at the 196 statute markets since the beginning of the cereal year have shown an average price of 26s. 7d. for wheat, 26s. 5d. for barley, and 18s. 4d. for oats; sales amounting to 1,164,462 qrs. of wheat, 2,568,545 qrs. of barley, and 380,345 qrs. of oats. Sales in all these cases exceed those of the corresponding period last year.

THIS DAY'S MARKETS

[FIRST REPORT.]

MARK LANE, MONDAY.

The cheapest sorts of wheat to-day were 62 lb. Red English and short-berried New Zealand, each of which were in some cases obtainable at 28s. per quarter. Sound 63 lb. English commanded 30s., Californian 39s., and the finest old American up to 33s., which was top-price. The trade was quiet, the mild weather being adverse to the retail demand. There was not a very good attendance. Maize was again rather lower for Russian sorts. Scarcely any Americans offered, a change from the last decade, which perplexes buyers. Argentine was the turn lower, but supply was not large. Barley was occasionally a little lower for the common Russian kinds, but other values were unchanged. There was a little more doing in malt, some very fine lots of English being on offer. Oats were steady. The samples from S.E. Europe were offered at about 18s. per quarter, while the finest New Zealand touched 30s. Some lots weigh 400 lbs. per quarter. Other sales included some extremely fine malt at 45s., and some Morocco beans at 31s. per quarter.

CLOSE OF THE MARKET.

By Telephone, 2 p.m.

THE MARKET CLOSED THE TURN IN BUYER'S FAVOUR GENERALLY.

STOCKS IN THE CHIEF PORTS.

	1st Jan., 1902.	1st Jan., 1901.
Wheat, qrs.	1,234,000	1,434,000
Barley, do.	850,000	657,000
Oats, do.	792,000	403,000
Maize, do.	450,000	461,000
Flour, sks.	915,000	917,000

THE FLOUR TRADE.

MARK LANE, Jan. 18.

The liberal offers of country flour at 21s. for good roller whites made the market dull for London whites at 25s. Few of the American firms asked more than 23s., even for their finest brands. The market for good Australian at 20s. 6d. was very fair. There was only a small sale of Hungarian, but 30s. was paid for best grades. The flour trade as a whole was not better from the dull business of the 13th, but as fog made the 17th a *dies non* for fine flour (requiring a good light for selection), there was more done to-day than on either the 13th or 17th.

Midlothian oatflour made as much as £18 per ton, but the trade in oatmeal and flour is not really brisk, except when there is a spell of cold weather established. We speak, of course, of the southern markets. Milling offals were again rather lower on the week. The flour market closed with a certain substratum of firmness, as several big firms hold more stiffly than last week, but the high temperature reduces bakers' enquiries.

Maize has opened to-day 1d. per cental lower for futures; 4s. 8d. per cental is accepted, and 4s. 7d. is often the best bid.

LONDON TERM MARKET.

This market is held twice a day, except on Saturday, when there is no afternoon call. The market is open to elected members only. No business except for future delivery is done, and the smallest quantity that can be purchased is 1,000 quarters, or 4,800 centals. The name of the month stands for guaranteed delivery (if required) on or before the last day of that month, and the following have been the prices per cental recently made:—

Wheat.—Call.	Jan. s. d.	March. s. d.	June. s. d.
Jan. 13 11 a.m.	6 4	6 5	6 5
4 p.m.	6 4	6 5	6 5

Jan. 18 11 a.m.	6 3	6 4	6 4
To-day noon	6 3	6 5	6 5

POTATOES.

Goole, Wednesday.—The market here to-day was practically the same as last week. The co-operative price was 5s 9d and 6d per load. Best up-to-dates made 56s to 57s per ton. Retail price, 6d per stone.

Borough, Saturday.—Arrivals were again of good extent, and in excess of buyers' requirements, the demand showing no sign of expansion, while the tendency of values ruled against holders. Quotations:—Scotch Maincrops, 80s: Reading Giants Blacklands, 45s; Blacklands Up-to-dates, 45s to 50s; Lincoln silts, 60s, Gartons Blacklands, 45s per ton.

Spitalfields, Saturday.—Market heavily supplied, and a depressed tone prevailed. Quotations:—Best Lincoln Up-to-dates, 55s to 65s; Blackland ditto, 45s to 50s; Wisbech ditto, 55s to 60s; Scotch ditto, 60s; Scotch maincrops (grey soil), 70s to 75s; Lincoln maincrops, 80s to 90s; Reading Giants, 45s; and Blackland Gartons, 45s per ton.

GRAIN AND FLOUR FACTORS REPORTS.

Milling offals are firmer, co-middlings being in good demand at 2s. 6d. per ton advance.—JOHN BAWCOMB & Co., Mark Lane.

Wheat prices on the spot to-day show little alteration from those of last Monday, the intervening depression having been generally recovered. C.i.f. sellers hold firmly, in sympathy with the American markets. Maize, in consequence of heavy arrivals, is 6d. lower, but there is a steady trade at the reduction. Oats steady and unaltered. Barley 6d. lower. Flour shows little or no change.—W. T. WOOD & Co., Mark Lane.

Wheat. Small arrivals. Trade firm at full prices. Flour. Heavy arrivals. Prices unchanged. Maize dull. Prices unchanged. Barley 3d. per quarter lower. Oats quiet. Unchanged in values.—COVENTRY, Mark Lane.

Flour.—Trade to-day has been very quiet, but a steady tone has prevailed, and prices are unchanged on the week.—T. S. MEDHILL & SONS.

Flour.—The tone has been easier during the last few days, and to do business prices require to be shaded. Grain: Indian corn, flat and round, are fully 6d. per boll lower. The demand for oats and oatmeal is off at present. Pease and beans meet a retail trade. Barley quiet. Oilcake slow. Mill-stuffs: Bran and thirds steady.—MCKINNON AND MCDONALD (Glasgow).

Offals: Bran continues in moderate demand; prices unchanged.—GREENHILL BROTHERS (Belfast).

Flour.—The demand for spot flour has further declined, and buyers are more disposed to hold off purchasing, in view of American reports of the wheat market, since last week. Values on spot are as follows:—1st Spring Patents, 24s. 3d. to 25s.; 2nd Spring Patents, 23s. 3d. to 23s. 9d.; American Winter Patents, 24s. 3d. to 25s.; Extra Fancies, 22s. 3d. to 22s. 9d.—GREENHILL BROTHERS (Belfast).

FEEDING STUFFS.

Mark Lane, Monday.—Linseed cakes:—There is only a limited quantity of foreign on offer, for which there has been a steady trade during the past week, and values have an upward tendency. Americans are unchanged in price. Russians remain scarce, and the turn dearer at £7 10s to £7 12s 6d. Calcutta-made in bags find buyers at £7 15s. London-made are again held for a further slight advance of about 2s 6d per ton. Cotton cakes:—There have been no fresh arrivals of foreign, and with a fairly active demand prices are fully as dear, best Egyptians in bags making last week's prices, while English are unchanged. Decorticated are in good request at last week's prices for Yazoo and Crescent brands, but meal may be bought on rather better terms at 1s 3d per ton less money. Rape cakes:—Quiet. East India unchanged. Maize germ meal:—Very little offers either in American or English, and quotations are 2s 6d per ton lower on the week. Rice meal:—Rangoon in warehouse sells quietly at £5 5s, while for shipment last week's prices are asked:—

—PINNOCK BROS., 30, Mark Lane, E.C.

London, Monday.—Linseed cake:—There is practically no change since this day sen'night. In spite of the small trade, prices are firm, owing to advance in linseed and strength of markets abroad. Cotton cakes are a steady trade at last quotations. Decorticated cakes and meal firm, and unchanged. Linseed slowly creeping up. Spot Calcutta 1s 6d up on the week. New crop is 2s dearer from the lowest. English linseed cake, £8 to £8 2s 6d, ex mill; American Calcutta linseed cake, £7 15s to £—, ex quay; ditto Western linseed cake, £7 5s to £7 10s, ex quay; Russian oil cake, £7 10s to £7 17s 6d, ex quay; Calcutta-made cake, £7 17s 6d, ex warehouse; decorticated cotton cake, £6 12s 6d to £6 17s 6d, ex quay; decorticated cotton meal, £6 15s to £—, ex quay; London-made cotton cake (best), £4 12s 6d to £4 15s, ex mill; Egyptian cotton cake (in bags), £4 12s 6d to £—, ex quay; Burton desiccated ale grains (bags included), £5 7s 6d, on rail, Burton; Russian linseed in bulk, per 416lbs, 53s to 58s, ex warehouse; Calcutta linseed in bags, per 410lbs, 54s, ex warehouse; American linseed in bulk, per 416lbs, 53s, ex warehouse.—ROBT. AND JOHN HEWETSON.

HOPS.

London, Monday.—Messrs. W. H. and H. Le May report there is rather more business passing in most descriptions of English hops at the extremely low prices now ruling, consumers taking the opportunity to stock up.

CATTLE.

Metropolitan Market, Islington.

Monday, Jan. 20th, 1902.

	British.	Total.	Jan. 21st, 1901.
Beasts	1,440	1,440	1,330
Sheep & lambs	8,160	8,160	6,380
Calves	5	5	—
Pigs	20	20	100
Milch cows	50	50	40

Quotations per 8lbs. (sinking the offal).

ENGLISH.	Inferior. s. d.	Second. s. d.	First. s. d.
Beasts	2 8 ..	4 0 ..	4 9
Sheep	3 4 ..	4 10 ..	5 6
Lambs	5 10 ..	6 6 ..	7 4

Milch cows, per head, £16 to £23.

British arrivals include as follows:—Scotland, 105; Eastern Counties, 598; Midland, Home and Western Counties, 574; Devon, 40; Ireland, 123.

In the beast market to-day there was a fair average supply, both in number and quality. The arrivals from Ireland were more than the previous week, and Scotch and Norfolk about the same, with a few choice Herefords. Trade ruled slow. Late rates were, however, upheld. Best quality cows being short in number, made more money. On the other hand, fat bulls less. Rough cattle very unsaleable. A clearance is doubtful.

The following are top quotations per 8lbs (sinking the offal):—

	To-day.	Jan. 21st, 1902.
Scotch	4s 8d to 4s 9d	4s 6d to 4s 8d
Devons	4s 7d to 4s 8d	4s 6d to 4s 7d
Herefords	4s 5d to 4s 6d	.. ..
Norfolks	4s 6d to 4s 8d	4s 6d to 4s 7d
Runts	4s 5d to 4s 6d	.. ..
Lincolns	4s 4d to 4s 6d	4s 2d to 4s 4d
Irish	4s 4d to 4s 6d	4s 2d to 4s 4d
Fat cows	3s 10d to 4s 0d	3s 4d to 3s 6d

In the sheep market there was a decrease of 310 in the number penned compared with Monday last. Trade for both wethers and ewes were extremely dull; a clearance is not expected. A few choice Southdowns sold well at an increase in value. For lambs there was a steady demand, these being soon cleared at from 2d. to 4d. per 8 lbs. more money. The supply included 230 Scotch and 4,320 from Eastern counties. Undermentioned quotations are a tper 8 lbs. (sinking the offal), and are for the best of each class penned:—

	To-day.	Jan. 21st, 1901.
7½ to 8st. Downs	5s 4d to 5s 6d	5s 8d to 5s 10d
9-st. ditto	5s 2d to 5s 4d	5s 6d to 5s 8d
10-st. Half-breds	4s 9d to 4s 10d	5s 2d to 5s 4d
10-st. Yorkshires	—	—
12-st. Lincolns	4s 7d to 4s 8d	4s 10d to 5s 0d
10-st. Irish	—	—
10-st. Down Ewes	3s 11d to 4s 0d	4s 2d to 4s 4d
11-st. Half-bred ditto	3s 9d to 3s 10d	3s 10d to 4s 0d
5-st. Fat Lambs	7s 2d to 7s 4d	7s 10d to 8s 0d
6-st. Half-bred ditto	6s 10d to 7s 0d	7s 4d to 7s 6d

Pig trade not worth noting.

Central, Monday.—Moderate supplies; trade slow. Beef carcases, 3s 11d to 4s 2d; hind-quarters, 4s 4d to 4s 6d; roastings, 5s to 5s 8d. Sheep—Ewe, 2s 8d to 3s; wether, 3s 8d to 4s; hind-quarters, ewe, 3s 8d to 4s; wether, 5s to 5s 4d. Pigs—Large, 3s 8d to 4s; small, 4s 4d to 4s 8d.

Liverpool, Monday.—There was a smaller supply of cattle in market to-day. Demand slow, and prices in favour of buyers, except for best quality sheep, shown in smaller numbers. Trade quiet at late rates:—Beef, 6½d to 5¼d per lb; mutton, 8d to 5d per lb. At market 1,541 cattle, and 4,879 sheep.

St. Ives, Monday.—Beasts, 229; sheep, 234; pigs, 263. Beef, 7s 6d to 8s 3d; mutton, 7s 7d to 9s 4d; pork, 6s 6d to 7s 3d; sows, 5s 6d to 6s 6d; fat beasts brisk trade; stores slow; fat and store sheep middling; fat and store pigs good trade; milch cows fair; prices, £14 to £22.

THE BALTIC, 1 p.m.

STATE OF TRADE.

Wheat cargoes are rather down on the week, but except for Pacific sorts 3d. down, are no worse from Saturday. Maize is 3d. down for future shipment, but is steady for cargoes on passage. Oats are higher for futures, but barley is dull for all dates.

BUSINESS DONE.

WHEAT.—Californian, 30s, on passage; Walla Walla, 29s 3d, on passage; Red Walla, 29s 6d, prompt shipment; Australian, 30s, on passage; Manitoba, 30s 3d, January shipment; No. 2 Hard Winter, 29s, on passage; White Kurrachee, 29s 9d, March shipment; Red do., 29s 3d, March shipment.

MAIZE.—Galatz, 21s 9d, April shipment; Salonica, 23s 6d, on passage.

BARLEY.—Caucasian, 18s 3d, on passage; Kustendje, 18s 3d, on passage; Californian, 24s, on passage.

RYE.—Roumanian, 22s 6d, prompt shipment.

OATS.—Swedish, 22s 6d, prompt shipment; Gothenburg, 19s 3d, prompt shipment; South Russian, 17s, prompt shipment; Roumanian, 7s 3d, prompt shipment.

PEAS.—Indian White, 31s, April shipment; Indian Queen, 25s 3d, April shipment.

LINSEED.—Calcutta, 53s, arrived.

COTTONSEED.—Egyptian, £6 8s 9d, on passage.

FRUIT AND VEGETABLES.

Covent Garden, Saturday.—Fair supplies of greenstuffs were available, and evidenced a moderate sale. Potato trade slow. A fair supply of fruit was available, and, with a sustained demand, a generally steady business was effected. Greenstuffs: Cabbages, 5s; cauliflowers, 6s to 8s per tally; beetroots, 2s 6d to 3s; spinach, 1s 6d to 2s per bushel; carrots, 2s to 2s 6d; turnips, 2s to 3s; parsley, 1s 6d to 2s 6d; leeks, 2s to 2s 6d per dozen bunches; horseradish, 1s 3d to 1s 9d per bundle; forced rhubarb, 1s 6d per dozen bundles; English onions, 6s 6d to 7s per cwt; Valencia, 7s 9d to 8s per case; potatoes—Maincrops, 75s to 80s; Reading Giants, 40s; Blacklands, 40s; Up-to-dates, 50s to 55s; Gartons, 40s per ton. Fruit: English apples, 4s to 12s per bushel; Nova Scotian, 15s to 25s per barrel; Californian, 8s to 10s per case; English grapes, 1s to 2s 6d per lb; Almeria, 12s to 18s per barrel; Denia oranges, 9s to 15s per case; pineapples, 1s to 5s each; bananas, 6s to 12s per bunch; lemons, 7s to 17s per case; Redon chestnuts, 5s to 10s 6d per bag.

LIVE STOCK AND MEAT TRADE REVIEW.

(WRITTEN SPECIALLY FOR THE "MARK LANE EXPRESS.")

Trade in London.

At the Metropolitan Cattle Market, Islington, the supply of beasts, compared with the previous week, showed an increase of 160, owing to larger consignments from Scotland and Ireland; arrivals from the Midland Counties were, however, smaller, so far as fat beasts are concerned, trade was practically confined to Monday, and was of a decidedly slow nature, late rates being with difficulty maintained, a clearance not being effected. Middling descriptions were not only lower in value, but more difficult to dispose of; fat butchering cows were in steady request by country buyers, but the number on offer being too large, lower rates by fully 2d. per 8lb. had to be accepted. Fat bulls were short in number, and sold freely to rather better advantage. At Deptford, markets were held on Monday, Wednesday, and Saturday, the supply, which consisted entirely of shipments from the United States, numbering 941 more than during last week. Here trade ruled firm and steady, both in regard to tone and value. The total number offered for sale on both markets was 4,301 (previous week 3,200), consisting of 1,710 British, and 2,591 from America. The following were the top rates paid per 8lbs., sinking the offal:—90 stone polled Aberdeens, 4s. 9d.; 90 stone polled Norfolks, 4s. 7d. to 4s. 8d.; 80 stone Devons, 4s. 8d.; 95 stone runts, 4s. 6d.; 95 stone Irish, 4s. 4d.; 100 stone Lincolns, 4s. 4d. to 4s. 6d.; 90 stone States, 4s. 6d. to 4s. 7d.; 90 stone fat cows, 3s. 8d. to 3s. 10d.; 100 stone fat bulls, 3s. 6d. The trade for wether sheep at Islington opened rather firmer on the chief market day of the week, but finished off dull and heavy, with no alteration on Thursday, on which day but few transactions were recorded. Good ewes were in steady demand, and made late rates, but below this grade business was rather forced. A few lambs were on sale, and met with ready buyers. At Deptford, with no supply on Saturday, trade on Monday and Wednesday was slow, there being so little competition; rates, nevertheless, were unaffectd. Best pens of sheep made per 8lbs. as follows:—7½ to 8 stone Downs, 5s. 6d.; 8 stone Scotch, 5s. 4d.; 9 stone Downs, 5s. 4d.; 10 stone ditto, 5s. 2d.; 10 stone half-breds, 4s. 10d. to 5s.; 12 stone Lincolns, 4s. 8d.; 8½ stone States, 3s. 8d. to 3s. 10d.; 10 stone Down ewes, 4s. to 4s. 2d.; 5 stone fat Down lambs, 6s. 8d.; the total supply consisted of 11,598, of which 9,210 were British, and 2,388 American (United States). Calves only numbered 30, best quoted at 5s. per 8lbs. Pigs totalled 50, and met with less enquiry; best small breeds made 4s. 6d. per 8lbs.

Trade in the West

The markets, with only fair deliveries of stock, which are by no means in excess of requirements, keep in a fairly healthy condition, and generally prices are pretty well maintained, the principal exception being in respect to mutton, and once more business has dropped back into the old groove, and there seems but very little indication of a revival. This is much to be regretted, as it is bound more or less to affect the price of other fat stock, though fat bullocks just now are meeting a very good sale up to 11s. per score, which is an outside figure, except for anything very special. Most of the beef now coming out makes about 10s. to 10s. 6d., which is the ordinary run, though plenty is sold from 9s. to 10s. for fat cows or contract bullocks. Still, the trade is by no means unsatisfactory, and graziers have not a great deal to complain of, though at the price they have now to pay for barreners, there is no very great margin for profit. The returns for mutton are one of the most disappointing features of the market. In very few instances is 7d. exceeded for well-conditioned wethers, while plenty is obtainable at from 6d. to 6½d. per lb., good quality ewes. A general range for wethers just at present is from 46s. to 54s. each, and ewes 40s. to 50s. There is only a moderate number of lambs as yet offering, and these are mostly cross-breds, which sell from 34s. to 42s. (or 9d. to 9½d. for the best). The veal trade has improved a trifle, but it is only in very rare cases that 8d. is touched; the bulk of the business passing is done from 6½d. to 7½d. per lb., good calves making £4 to £6 10s. each. The supplies at most of the markets are freely bought up, a considerable proportion of the younger calves being bought for rearing purposes, for which there is a wide range in values, according to the size, in some cases 40s. and over is paid, whilst in others as little as 15s. or 14s. for very young animals. Pigs continue to market very satisfactorily for all classes. The smallest weights in porkers make up to 10s. 6d., and nice quality baconers 9s. to 10s.; whilst sows for slaughtering may be quoted from 8s. to 8s. 6d. for medium size, and 7s. to 7s. 6d. for very coarse lots. In stores attention is principally absorbed by milch beasts, for which there has been a very general inquiry throughout the past week, at from £16 to £21 10s. for the better class of young bllocks, cows, though wanted, scarcely finding so much favour. Barreners are also selling very well, at from £18 to £28 per pair.

Trade in Scotland.

John Swan and Sons, Limited, give the following as their report on the above for the current week:—The number of fat cattle on offer this week has been large, and the general quality good. An active demand has been experienced, and prices have been well sustained with a good clearance. Sheep have been shown in very large numbers. Those adapted for the London market made previous prices, but for nice shop sheep and good quality ewes a shade more money has been realised. A few fat lambs have been selling at from 40s. to 43s. Pigs and calves in moderate numbers, and making, if good, very high prices. There were scarcely any store sheep in the market, and the few met a quiet trade. For the time of year there was a large supply of store cattle, many of them of an indifferent class. Anything in a forward condition met a good inquiry, and got easily sold. All others neglected, and a considerable number left over. A full supply of milch cows, the best class of which met a dear market at prices similar to last week.

Trade in Ireland.

With a shrinkage of over 200 head of cattle, and a full attendance of buyers, business in last Thursday's Dublin market was more animated, and the drop of the previous Thursday wiped off, so far as choice heifers and bullocks were concerned, as there was a keen demand for beasts of a well-finished description. For half-meated rough cattle, which are still largely in evidence, there was a very sluggish demand and cautious buying, so that last week's drop in price was barely maintained. One particularly fine lot of bullocks were taken by an English buyer at £22 a head, or about 2¾d. per lb. live weight.

Best ox and heifer beef made from 54s. 6d. to 57s. 6d., and extra good 58s. to 60s. per cwt.; second-class beef, 45s. to 52s.; and coarse from 40s. to 46s. per cwt. Trade in all classes of sheep opened dull, but improved as the day wore on. For choice wethers and ewes there was a pretty keen competition between local butchers and the North of Ireland buyers, and in consequence these classes changed hands at prices slightly in advance of last day. Hoggets of all weights dragged heavily, as the cross-Channel trade was practically nil. Rough sheep were a drug, and did not clear. Choice wether mutton, 6½d. to 7d. to 6¼d. per lb.; do. ewe, 5½d.; inferior sheep, 4½d. to 5d.; light weight hoggets, 30s. to 42s. each; heavy do., 44s. to 54s.

Limited supply of veal, choice calves making from 7½d. to 8½d. per lb. One very fine calf had 10d. per lb. refused for it, and was afterwards sold by hand at a high price. There were 2,558 cattle and 5,434 sheep in the market, being a decrease of 218 cattle, and an increase of 384 sheep on the previous week. Dairy cattle were in limited supply, and choice springers scarce, the top price being about £20. There was a big shrinkage in pigs, and a full attendance of buyers, making prices a shade firmer, with a brisker trade. Nice light weight pigs made from 46s. to 48s. pr cwt., coarse from 32s. to 38s. per cwt In the country fair there is a disposition to sell store cattle very cheaply, probably in consequence of scarcity of keep, hay bringing £5 a ton in most parts.

Beef meets with rather a dragging sale, the general price being from 50s. to 54s. per cwt., but for choice beasts as much as 56s. is paid, and it does not appear likely to go any higher. Mutton, generally, is about ½d. per lb. cheaper at the principal fairs. It is of interest to know that Canadian store cattle are now practically as dear as Irish, so that there is not much fear of congestion from that quarter for the present.

COUNTRY.

Ashford, Tuesday.—Beef sold fairly well at 10s 6d to 11s 6d per score for prime qualities, 10s to 10s 6d for secondary sorts, and 9s to 10s for cows and rough steers. Mutton was again cheaper, small neat downs and half-breeds making 5s to 5s 2d per 8lb; Kent wethers, 4s 4d to 4s 6d; and barrens, 3s 4d to 4s.

Basingstoke, Wednesday.—At Raymond and Son's saleyard there was a good attendance of buyers to meet a supply consisting of 42 fat beasts, 45 calves, 422 fat sheep, 266 pigs, and 51 head of dairy and store cattle, for which the following prices were realised:—Fat shorthorn steers made up to £21 15s; heifers, £19; cows, £17; Devon heifers, £15 5s; young polled Angus steers, £18; Welsh steers, from Colonel Ives, made up to £19 10s; fat bulls in good demand, the best making up to £20 10s; fat calves, 80s to £5 5s; small, 20s to 50s; fat hogs, 70s to 85s; fat porkers, 48s to 62s; small, 30s to 45s; store pigs, from 15s 6d to 21s 6d; dairy cows, up to £21; prime quality fat sheep and lambs realised from 44s to 52s 6d; twelve months old ditto, from 29s to 49s 6d; fat ewes, from 33s to 45s; rams, 30s, 36s, and 44s. There was a satisfactory clearance of the supply of fat beasts, and good prices realised. The supply of fat sheep and lambs was not heavy, and trade ruled slow, with the exception of prime quality young sheep, which commanded late rates. With a good all-round trade, an easy clearance was made of the milch cows and heifers on offer at advanced prices. Store cattle continue a dull trade. Fat calves show no alteration from last week. Fat hogs and porkers met a slight reduction from the previous high prices. Fat sows, however, continue in request. Store pigs realised more money, with more inquiry. Ruling values:—Prime Devon and polled beasts, 7d to 7½d per lb; shorthorn ditto, 6d to 6½d per lb; bulls, cows, and inferior beasts, 5½ to 5½d per lb; best quality sheep, 7½d to 8½d per lb; 2nd ditto, 6½d to 7½d per lb; old ewes, rams, and inferior sheep, 5d to 6d per lb; fat calves, 6d to 7½d per lb. Fat porkers, 10s to 11s 6d per score; hogs, up to 10s per score.

Boston, Wednesday.—Best beef, 7s 9d to 8s; cow beef, 7s to 7s 6d per stone; stores, £12; in-calf heifers, £18 to £20; heifers, £17 to £19; calves, 55s; best wethers, 8d; ewes, 5½d to 6d per lb; hogs, 36s to 38s each.

Braintree, Wednesday.—Trade for beef much improved; for mutton moderate, and for pork high. Average prices:—Beef, 5s per stone of 8lbs; mutton, 5s ditto; pork, 11s to 12s per score. Numbers penned: Beasts, 32; fat sheep, 130; hogs, 76; milking cows, 6; calves, 22.

Bristol, Thursday.—Fat cattle in fair supply to-day; trade ruling steady at 60s per cwt for best animals, and 54s to 56s for secondary qualities. Sheep pens were well filled, but demand moderate, light wethers realising 7½d to 7¾d per lb.; and ewes, 6d. Large number of pigs offered, baconers making 9s 6d per score, and porkers 10s 9d to 11s.

Bury, Wednesday.—There was a very good supply of fat beasts, the quality being better than during the last fortnight. With a good attendance of buyers, a better trade prevailed for all the best-quality animals. Short supply of store beasts. Good supply of fat sheep, the quality being hardly up to the average. Good trade for all the best finished hoggets, at a trifle more money than last week. Shearlings and fat ewes fetched about late rates. Several lots of store hoggets found buyers at the low rates now prevailing. About 200 black-faced ewes, in-lamb, made 43s 6d to 35s per head, averaging nearly 40s. Good supply of pigs, for which there was a sharp trade at more money for all descriptions, there being fresh purchasers from distant counties. Several heavy sows were penned. Prices reached up to £9 12s 6d per head.

Calne, FRIDAY.—Present prices for prime pigs, in lots of not less than 10, on rail within 100 miles of Calne.

Prime Stores.	Thickness of fat in any part of the Back.	Price per Sc. s.	d.
6 sc. 10 lbs. to 9 sc. 10 lbs.	2½ in. and under	9	6
Under 10 sc.	Not exceeding 2½ in.	9	0
Under 11 sc. 10 lb.	Not exceeding 2¾ in.	8	6
Under 12 sc.	Not exceeding 3 in.		

Any pigs outside these limits at their value.—Half-truck, 12 pigs. Whole trucks, 25.—Charles & Thomas Harris & Co., Limited, Calne, Wilts.

Cambridge, Monday.—Beasts, 373; beef, 7s to 8s. Sheep, 809; mutton, 3s 10d to 5s. Pigs, 521; pork, 6s to 6s 6d. Horses, 12. A few lots store beasts, but met a slow trade. Fat beasts, a fair number to hand; trade about as usual. Fat sheep, a large show; trade not so good. Stores, only a few lots to hand. Fat pigs, a large number shown, and prices not quite so good. Stores rather slow. Hay, straw, and roots, a fair quantity to hand, and prices fair all round.

Carlisle, Saturday.—The supply of Irish cattle was again small, but rather larger than a week ago. The bulk of the animals were heifers, of a useful description, and there were a few stripping cows included. The attendance was meagre and trade dull. The smaller heifers were quoted at £8 10s to £11 5s, and the best sorts at £13 10s; stripping cows, £12 10s.

Dorchester, Wednesday.—The markets having once more assumed their normal character, yesterday witnessed a return of the business activity which characterised the trade prior to Christmas, and with a really brisk trade prevailing, good prices ruled throughout. Fat bullocks were a very firm trade, at from about £15 10s to £19 (or 10s 6d to 11s per score). Fat calves in rather better request than of late, at from £4 to £5 17s 6d each (or 7½d per lb); seconds, 40s to 75s; and rearers, 16s to 33s. Pigs were in good demand, at 60s to 85s for porkers (or 10s to 10s 6d per score); baconers, 90s to 105s (or 9s to 9s 6d); sows, £5 to £7; stores from 46s down to 16s. The mutton trade was a trifle better than for some time past, wethers making 43s to 53s (or 8d per lb), and ewes 39s to 48s (or 7d to 7½d); lambs, 32s to 40s (or 9d).

Dublin, Thursday.—Numbers in market:—Beasts, 2,558; decrease, 218; sheep, 5,434; increase, 384; calves, 39; decrease, 5. Prime finished cattle sold well at last week's full rates, but a slower tone and weaker prices prevailed for rough and unfinished sorts. More life in the sheep department at last week's full rates. Cattle—Live weight (best), 31s to 34s 6d per cwt. Other descriptions, 27s to 30s per cwt. Mutton—Dead weight, 5d to 7d per lb; extreme, 7½d per lb.—GANLY SONS AND CO.

Hereford, Wednesday.—Bullocks and cows, 533; calves, 43; sheep and lambs, 895; pigs (fat and sows), 45; sucking pigs, 33; pigs (stores, not more than ten), 289; pigs (stores, more than ten), 97; horses, 4; colts, 2. Prices of stock:—Best beef, 6d to 7d per lb; wether sheep, 6½d to 8d per lb; ewes, 5½d to 6d per lb; veal, 8d per lb; lamb, 9d per lb; pork, 5½d to 6d per lb; bacon, 4d to 5d per lb.

Leicester, Wednesday.—Very full consignments of home-fed bullocks. Buyers and dealers were well represented, and trade ruled brisk for choice qualities at very firm quotations. Choice bullocks, 6½d to 6¾d; secondary, 5¾d to 6d; cows, 5d to 5½d; heifers, 6¼d to 6¾d per lb. Sheep were a large supply, and exchanged hands more freely at 7¼d to 7¾d for light weights; large sheep, 6½d to 6¾d; ewes, 5¼d to 6d; calves, flat at 7d to 7½d per lb.

Newport, Wednesday.—At this market yesterday the general advance in beef which has taken place throughout the country was fully maintained. The supply of beef was not quite so large as recently, but mutton was more plentiful than last week. Brisk trade in beef, but the mutton trade was dull. Quotations:—Beef, best, 6¾d per lb; secondary ditto, 6¼d to 6½d per lb; best wether mutton, 7½d to 7¾d per lb; ewes, 5½d per lb; pigs, porkers, 11s to 11s 3d per score; ditto bacon, 9s to 9s 6d per score.

Norwich, Saturday.—The supply of store cattle here to-day was small, but prices showed no improvement in the moderate business effected; if anything, the turn was in favour of buyers. Fat beasts, which were offered to a fair extent, were firm at 7s 6d to 8s per 14lb. There was no great number of store sheep on offer, but trade continued inactive at about former terms. Fat sheep moved off at 7s 6d to 8s and 8s 3d per 14lb. The weather has continued open in Norfolk during the week, with frost at night.

Romford, Wednesday.—A short supply of fat beasts; trade a little better. Best animals 4s 6d to 4s 8d, and middlings 4s 2d to 4s 4d per stone. Calves very short supply; trade better, at 5s 6d to 5s 8d per stone. Sheep in average supply; trade slow. Best sheep, 5s 2d to 5s 4d; middlings, 5s to 5s 2d per stone. No store beasts on offer. Pig trade a little better; fair supply.

Rye, Wednesday.—Number of entries: Sheep and lambs, 750; fat beasts, 34; calves, 7; pigs, 8. Heifers and steers fetched 4s 4d to 4s 6d; cows, 3s to 3s 6d; maids and wethers, 4s 8d to 4s 10d; calves, 4s to 4s 4d; pigs, 4s to 4s 4d.

Salford, Tuesday.—There was an increase in the number of cattle penned to-day. Owing to the better keeping weather a good trade was experienced, and

prices were in favour of the seller. The supply of sheep was larger, but notwithstanding this there was a better demand, and sellers were able to obtain ½d per lb advance on last week's prices. About the same number of calves as at last market. Choice quality was rather scarce and in good demand at last week's full prices, but other kinds were slow of sale. Quotations:—Cattle, 4½d to 6½d; sheep, 6d to 8½d; calves, 5d to 8d per lb. At market:—Cattle, 2,708; sheep, 8,276; calves, 124.

Sheffield, Tuesday.—An average supply, and a very fair business. Best lots, £20 to £24; secondary, £15 to £18.

Spalding, Tuesday.—An unusually small show of fat beasts, and a good trade. Best quality, to 8s; cow beef, 7s 6d per stone. There was also a small show of store beasts, and a quiet trade. Cows sold well. Sheep were a small show, and prices were well maintained; best mutton, to 7½d per lb.

Stockton, Wednesday.—There were on offer 151 cattle, 375 sheep, and 203 pigs. A small supply of best cattle made 7s 9d to 8s, while rougher kinds sold at 6s 6d to 7s per stone; sheep, 7½d; ewes, 5d; tups, 4d per lb.

Thame Market, Jan. 14th.—There was a good supply of stock at market, and trade on the whole was firm, but mutton ruled in favour of buyers. Beef and veal met with keen competition, the latter making 5s 6d per stone. Mr. Bond's sale comprised 62 fat beasts, 170 fat sheep, 56 fat and weaning calves, and 150 fat and store pigs. Fat bullocks made £17 to £19 10s, fat heifers £14 to £23 2s 6d, fat wethers 44s to 49s 6d, fat ewes 35s to 44s 6d, fat tegs 40s to 45s, fat calves £5 to £5 13s, cow calves 24s to 50s, bull calves 12s to 45s; pigs, 10s per score. Stores a good trade.

Wakefield, Wednesday.—The official numbers showed an increased supply in every department. There was a good attendance of butchers and buyers, but they held back for a time and prices ruled rather in their favour. There was only a light show of Irish cattle, most of the stock coming from Scotland and the North of England. The bulk of the cattle was of a rather rough character, and really good animals were difficult to obtain. There was a pretty fair demand for best quality, and dealers obtained 6¾d per lb for this class. The average price paid was 6¼d, while other inferior sorts could be purchased at 5d to 6¼d per lb. A slow business was done in dairy cattle; superior animals, £16 to £22 10s; inferior, £11 to £15. A dragging trade was experienced in laying-off cows, which made £11 to £16; calving cows, £13 to £21 10s each. A capital trade was done in fat calves; best, 7½d; other sorts, 6d to 8d per lb. The increased supply of sheep made trade of a sluggish character. Nice small young sheep were the best to sell, and for a number of the best 7¾d pas paid, but 7½d appeared to be the general price obtained. Strong sheep met with a moderate sale at 6d to 7d per lb, but ewes and tups were difficult to dispose of at 5d to 6½d per lb. There was a good attendance at the pig market, and a fair business was done. Store pigs, 30s to 50s; porkers, about 7s per stone of 14lb.

Wolverhampton, Wednesday.—Beasts a fair supply, moderate trade; sheep, none offered, calves, small supply, fair demand. Beef, 5d to 6¾d per lb; mutton, 6d to 8½d per lb; veal, 6d to 8d per lb; pigs, bacons, 9s 6d per score; porkets, 10s 6d to 11s per score; sows, 8s 6d per score.

Worksop, Wednesday.—Fair show of stock, and good trade. Best beef, to 7s 9d; secondary, 6s 6d to 7s per stone; best wethers, 6½d to 7d; ewes, 5d to 6d per lb.

FOREIGN.

Deptford, Wednesday.—Beast supplies to-day amounted to 670 head, which is 566 less than shown on Wednesday last, and consisted of shipments from the United States. Trade ruled firm at 4s 4d to 4s 7d. 982 United States sheep sold very slowly at 3s 6d to 3s 8d per 8lb to sink the offal.

Yorkhill, Monday.—At the usual weekly sale of United States and Canadian cattle held to-day there were on offer close on 450 animals, the majority of which were bullocks. Taken as a whole, the animals were fully up to the average quality, many of the bullocks being prime beasts and very suitable for the trade. Trade for small, neat, well-fed beasts was exceptionally good, and showed an improvement on that ruling on the previous Monday. The demand was keen and the prices ruled high. Bulls were rather slow to cash, but they also showed a slight improvement. Secondary and heavier animals met a good trade, and were sold at satisfactory prices. The dead-weight quotations may be given as follow:—States bullocks, best class, medium weight, 60s per cwt, and for really choice up to 62s; secondary and heavier animals made from 54s to 58s; bulls, best class, to 48s; secondary and heavier, 46s to 47s; inferior, down to 44s. Canadian bullocks, best quality, medium weight, to 58s, and for really choice up to 60s per cwt; secondary and heavier, 54s to 56s; and bulls made similar prices to those ruling above.

Yorkhill, Monday.—A sale of American sheep was held in the morning, when there were penned in the sheds 145 sheep landed by the Sarmatian (s) from Portland (Me.). They were principally cross Down and half-bred hoggets, but there were also a number of ewes included in the consignment. There was a larger attendance of buyers than usual, and trade was of a much better character than that ruling last week, and the demand was brisker for all classes at advanced prices. The deadweight quotations may be given as follow:—Ewes, best class, to 6d per lb; secondary and heavier, down to 5d; cross Down and half-bred hoggets, to 7½d; and secondary and heavier, to 7d.

BUTTER.

Tuesday.—Bedale: In rolls of 24oz, 1s 4d to 1s 6d per roll. Gainsborough: 1s 3d per lb. Leeds: York lump, 15s 6d to 16s 6d per stone; long rolls 1½lb, 1s 10d to 2s; fresh in 1lb prints, 1s 4d per lb; Danish, 112s to 116s per 112lb; Irish Creameries, 106s to 110s; Colonial, 100s to 112s. Settle: 1s 2d to 1s 3d per lb. Sheffield: 1s 3d to 1s 4d per lb. Spalding: 10d to 11d per lb. Stone: 1s 3d to 1s 4d per lb.

Wednesday.—Barnsley: 1s 2d to 1s 3d per lb. Boston: 1s 2d to 1s 3d per lb. Colne: 1s 2½d per lb. Goole: 1s 2d to 1s 3d per lb. Hereford: 1s 3d to 1s 4d per lb. Keighley: 1s 4d per lb. Kirbymoorside: 1s per lb. Knaresborough: Wholesale, 1s 4d; retail, 1s 6d per roll of 24oz. Market Drayton: 1s 2d to 1s 3d per lb. Market Weighton: 1s 1d per lb. Masham: 1s 5d to 1s 6d per roll of 24oz. Northallerton: 1s 5d to 1s 7d per roll of 24oz. Stockton: 1s 2d to 1s 4d per lb. Worksop: 1s 2d to 1s 3d per lb.

Thursday.—Brigg: 1s to 1s per lb. Driffield: 1s per lb. Birmingham: 1s 3d to 1s 5d per lb. Kidderminster: 1s 2d per lb. Penistone: 1s 4d per lb. Ripon: 1s 4d to 1s 8d per single roll of 24oz. Scarborough: 1s 3d per lb. Wellington: 1s 3d to 1s 4d per lb.

Friday.—Derby: 1s 3d to 1s 4d per lb. Easingwold: 1s 2d to 1s 3d per lb. Grimsby: Danish, 112s to 114s per 112lb; Dutch, 110s to 112s; Canadian, 100s to 104s. Lincoln: 1s 1d to 1s 3d per lb. Otley: 1s 7d to 1s 9d per roll of 24oz. Whitchurch: 1s 2d to 1s 3d per lb.

Saturday.—Appleby: 1s 2d to 1s 4d per lb. Berwick: 1s per lb. Carlisle: 1s 3d to 1s 5d per lb. Doncaster: 1s 2d to 1s 3d per lb. Grantham: 1s 2d to 1s 3d per lb. Howden, 1s 2d per lb. Lancaster: 1s 3d to 1s 4d per lb. Malton: 1s 2d to 1s 3d per lb. Pontefract: 1s 4d per lb. Retford: 1s 3d to 1s 4d per lb. Richmond: 1s 3d to 1s 4d per lb. Skipton: 1s 2d to 1s 3d per lb. Stokesley: 1s 2d to 1s 3d per lb. Whitby: 1s 2d to 1s 3d per lb. York: 1s 3d to 1s 4d per lb.

EGGS.

Tuesday.—Bedale: 9 or 10 for 1s. Gainsborough: 9 or 10 for 1s. Leeds: Yorkshire, 15s 6d to 16s 6d per 120; Irish, 12s 6d to 14s; Danish, 10s to 12s; Austrian blues, 8s to 8s 6d; do reds, 6s 9d to 7s. Settle: 9 or 10 for 1s; Sheffield: 7 or 8 for 1s. Spalding: 11 or 12 for 1s. Stone: 8 for 1s.

Wednesday.—Barnsley: 7 for 1s. Boston: 10 or 11 for 1s. Colne: 2s 8d per score. Goole: 10 and 11 for 1s. Hereford: 9 to 10 for 1s. Keighley: 8 for 1s. Kirbymoorside: 11 or 12 for 1s. Knaresborough: 8 or 9 for 1s. Market Drayton: 9 and 10 for 1s. Louth: 12 for 1s. Market Weighton: 11 for 1s. Masham: 11 for 1s. Northallerton: 8 or 9 for 1s. Stockton: 7 for 1s. Worksop: 2s to 2s 4d per score.

Thursday.—Birmingham: 7 to 9 for 1s, Brigg: 11 or 12 for 1s. Driffield: 11 or 12 per 1s. Kidderminster: 9 for 1s. Penistone: 8 for 1s. Ripon: 9 or 10 for 1s. Scarborough: 8 or 9 for 1s. Wellington: 9 to 11 for 1s.

Friday.—Derby: 9 and 10 for 1s. Easingwold: 11 to 12 for 1s; Austrian, 7s 2d to 8s 6d per 120; Styrian, 7s 5d to 10s 6d; Egyptian, 4s 10d to 5s. Lincoln: 10 to 12 for 1s. Otley: 9 or 10 for 1s. Whitchurch: 8 and 9 for 1s.

Saturday.—Appleby: 8 to 10 for 1s. Berwick: 1s 8d per doz. Carlisle: 7 or 8 for 1s. Doncaster: 9 or 10 for 1s. Grantham: 9 or 10 for 1s. Howden: 12 for 1s. Lancaster: 8 for 1s. Malton: 10 for 1s. Pontefract: 9 and 10 for 1s. Retford: 2s. to 2s 2d per score. Richmond: 9 for 1s: Skipton: 6 or 7 for 1s. Stokesley: 9 or 10 for 1s. Whitby: 8 or 9 for 1s. York: 7 or 8 for 1s.

COLONIAL DAIRY PRODUCE.

London. Friday.—The demand for Australian and New Zealand butter continues good, and prices are virtually unchanged on the week. "Choicest" makes 104s to 106s, with special brands at 107, and "finest" 98s to 102s. The Copenhagen Committee has reduced the official quotation by 4 kroner, and the top price is now 92 kroner against 103 kroner last year at this time. For a long time until just lately the Committee fixed the quotation with discretion, and confidence in the decisions of the Committee was almost universal. Lately, however, the Committee has exhibited such erratic ratiocinations that no one would be surprised at anything it might do, and all confidence in it has been lost. About a month ago Danish butter was selling at 118s, and Australasian at 106s. Danish has fallen steadily since then, and now stands at 108s, while Australasian remains where it was at 106s. Cheese: The demand for Canadian cheese in London continues good, and prices have advanced another shilling per cwt. "Choicest" brands are selling at 51s and 52s, the greater portion at 51s, but there is a good business at 52s. New Zealands have not made more than 50s.—W. WEDDEL AND CO.

CHEESE.

Chester, Wednesday.—The farmers brought in about 20 tons of cheese, and there was a good attendance of buyers from Lancashire, Yorkshire, and the Midlands. The demand was sharp, and an excellent clearance was made. Both coloured and uncoloured lots of fine cheese quickly changed hands at prices ranging from 65s to 71s per cwt, while medium qualities realised 55s per cwt. and upwards.

Glasgow, Wednesday.—The high prices sought have checked sales; the wholesale dealers are giving it out that the supplies yet to come to the market are small. The trade, having moderate stocks, are choosing to work these off before they buy. Cheddars and Dunlops are quoted from 50s to 58s per cwt. There is a quiet business doing in Canadians and New Zealands.

Newport, Wednesday.—There was a fair attendance, but only a short supply. Prices were:—Caerphillies, 54s to 62s; fancy dairies, 64s to 66s; truckles, 64s to 70s; Cheddars, 60s to 65s; Derbies, 61s to 63s.

FEEDING STUFFS.

Hull, Tuesday.—Linseed: The arrivals are 140qrs from Catania, 25qs Harlingen, 750qrs Libau, 50qrs Messina; total, 965qrs. Firm but inactive. Calcutta, 53s 6d spot and passage. River Plate, 48s 3d sailed; 1st to 20th January, 47s 6d; January, 47s; February, 46s. Cottonseed: The market has not shown much activity since our last, but prices ruled steady last week with a moderate business done on spot, passage and January at 26 6s 3d, but with large arrivals there is an easier tone again with sellers at £6 5s spot and near, which most obtainable January, £6 7s 6d nearest Feb.-March. Oils.—Exports for the week ending 7th January, 1902.—Linseed oil: 2 Germany, 5 Holland, 30 India, 2 Norway; total, 39 tons. Cotton oil: 5 Austria, 92 Belgium, 18 Denmark, 35 Germany, 110 Holland, 3 Sweden; total, 263 tons. The market is quiet. Linseed oil: 28s spot, 27s Jan.-April, 25s 9d May-August. Cotton oil: 21s 6d spot, 21s 6d Jan.-April, 22s 6d May-August. Crude, 20s 3d spot, 20s 3d Jan.-April, 21s May-August. Rape oil: Jamba naked, 24s spot; 1st quality naked, 24s 6d spot.—KEIGHLEY MAXTED AND CO.

London, Thursday.—Linseed: The firmness recorded at the close of last week has continued and prices have advanced. Spot Calcutta to London 52s 3d, passage 51s 9d to 51s 6d, January 51s 3d, March 47s 9d, April-June 46s 6d. La Plata December-January 47s, January-February 46s. Hull steady, La Plata shipping or shipped 47s 6d, December-January 47s, January-February 45s 6d. To the Continent, Bombay, January-February 52s 9d, February-March 51s, March-May 49s 3d. Calcutta December-January 51s 6d, April-June 47s. La Plata December-January 47s, January-February 46s. Linseed oil has been very quiet during the early part of the week, with lower prices ruling, but closes firmer. We quote spot in pipes £28 15s to £29, barrels £29 5s, January-April £28, May-August £25. Hull spot naked £27 15s, January-April £26 17s 6d, May-August £25 15s. Linseed cakes: Quiet. We to-day quote London made £7 15s to £8 ex mill, American Western £7 5s to £7 7s 6d, Russian £7 10s to £7 12s 6d. Cotton cakes steady, London made £4 11s 3d to £4 13s 9d. Rapeseed continues quiet. To London we quote Yellow Cawnpore January-February 40s 6d, Brown Cawnpore 38s 9d. To the Continent Yellow Cuzcut December-January, 42s 9d, Yellow Cawnpore January-February 40s 6d, Brown Cawnpore November-December 38s 9d, Brown Calcutta 36s 9d. Ferozepore, November-December 38s 9d. Jamba, February-March to Hull 29s 9d. Cottonseed quiet, with rather easier tendency. Spot London £6 7s 6d, afloat £6 7s 6d, January £6 7s 6d, February-March £6 8s 9d, April £6 10s. Hull, depressed for spot and near, but closes firmer, owing to very heavy arrivals; spot £6 3s 9d, January £6 5s, February-March £6 7s 6d. Cargoes January-February £6 10s, March £6 12s 6d. Bombay to Hull is held for £4 8s 9d January.—THE PRODUCE BROKERS COMPANY, LIMITED.

WOOL.

London, Friday.—English—per pk. 240lb.—Fleeces S. Dn. Hggs., £7 to £8 10s; half-bred hogs, £6 to £6 10s; do. wethers, £5 to £6; Kent fleeces, £5 to £6; South Down ewes and wethers, £7 to £8 10s; Leicester do, £5 to £5 10s. Colonial—per lb.—Vic., Fleece super, 1s 5d to 1s 7d; scoured good, 1s 7½d to 1s 8½d; scoured average, 1s 6d to 1s 7d; greasy average to fair, 10½d to 11½d; N. S. W., scoured average, 1s 2½d to 1s 3d; greasy average, 8d to 8½d; S. Australian, greasy average, 6½d to 6¾d. N. Z., scoured average, 1s 4d to 1s 5d; grease average, 8d to 8½d; Cape scoured super, 1s 5d to 1s 6d; fleece average, 6¾d to 7½d; greasy average, 5d to 6d. Natal, scoured, 1s to 1s 1d; greasy average, 6d to 6¾d. Crossbreds—Grs—Vic, good to super, 10½d to 11½d; New Zealand fine, 8d to 9d; do medium, 4½d to 4¾d; do coarse, 3¾d to 4¼d.

MANURES.

Liverpool, Friday.—The strong statistical position of nitrate of soda has had the effect of advancing values fully 7s 6d per ton, and prime quality realises £9 17s 6d per ton on the spot. Sulphate of ammonia of 24 per cent test is about £11 7s 6d per ton. Basic slag continues in active request, and there is an increased inquiry for bone meal. At present the demand for kainit and superphosphate is quiet. Oil cakes are unchanged in values, and in moderate request at the subscribed:—Nitrate of soda, best quality, *i.e.*, guaranteed 95 per cent. pure, in bags, £9 17s 6d per ton; East India bone meal, fair to prime, in bags, £4 1s 3d to £4 6s 3d per ton; kainit, prime, 23 per cent., in bags, £2 7s 6d to £2 10s per ton; palm nut cake, prime, in bags, £5 12s 6d per ton; linseed cake, American thin oblong, prime, in bags, £7 10s to £7 15s per ton; linseed cake, English, prime, in bulk, £8 10s to £8 15s per ton; linseed cake, foreign, oblong, prime, soft and oily, in bags, £8 5s per ton; cottonseed cake, N.A., decorticated, prime, in bags, £7 2s 6d to £7 6s 3d per ton; cottonseed cake, English, decorticated, prime, soft, in bags, £7 10s to £7 12s 6d per ton; cottonseed cake, English, undecorticated, prime, in bulk, £4 15s to £4 17s 6d per ton; cottonseed (crushed), 20 to 25 per cent. oil, prime, in bags, £7 5s per ton; maize germ meal, prime, in bags, £6 5s to £6 7s 6d per ton; rice meal, Rangoon, as imported, in bags, £5 10s to £5 12s 6d per ton; Indian meal, coarse to fine grinding, prime, in bulk, 13s 3d to 13s 6d per 240lb; linseed, fine bold feeding, in bags, £3 3s to £3 6s per qr, 416lb; D.N.S. brand superphosphate of lime, guaranteed, 25 to 27 sol., in bags, £2 5s to £2 7s per ton, at the producing depots; D.N.S. brand superphosphate of lime, guaranteed, 30 to 31 sol., in bags, £2 10s to £2 12s per ton, at the producing depots; superphosphate of lime, guaranteed, 35 to 36 sol., in bags, £3 to £3 2s per ton, at the producing depots; basic slag, prime quality, guaranteed, 30 to 35 per cent. phos., in bags, £1 12s to £1 13s per ton, at the producing depots; basic slag, prime quality, guaranteed, 35 to 40 per cent. phos., in bags, £1 14s 6d to £1 15s 6d per ton, at the producing depots; basic slag, finest quality, guaranteed, 38 to 45 per cent. phos., in bags, £1 17s to £1 19s per ton, at the producing depots.—H. JONES LANGAR AND CO.

HAY AND STRAW.

Manchester, Wednesday.—Hay, 6¾d to 7½d; clover, 7d to 8d; Canadian clover, 6¾d; straw (wheat), 6d to 6½d; ditto (oat), 5½d to 6¼d per stone.

Whitechapel, Saturday.—Trade ruled steady. Best clover, 95s to 110s; inferor ditto, 80s to 90s; specially picked hay, 117s 6d; good ditto, 108s; inferior ditto, 80s to 90s; mixture and sainfoin, 90s to 110s; and straw, 28s to 40s per load.

London, Saturday.—With a steadier feeling, our market is slightly better. Canadian and Dutch hays are both in better request, and make full prices. I quote—Canadian hay, 87s 6d to 90s; French and Dutch 1st cut clover, 90s to 92s 6d; French and Dutch 2nd cut clover, 90s to 92s 6d; good Dutch hay, 85s; Inferior do., 80s; good Russian hay, 90s. All these prices are per ton delivered by barge alongside.—WALTER H. PRENTIS.

POULTRY AND PROVISIONS.

Smithfield, Saturday.—A moderate demand prevailed this morning for the fair supplies on offer. Quotations:—Fowls: Yorkshire, 2s 9d to 3s 3d; Boston, 2s 3d to 2s 9d; Essex, 2s 6d to 3s; Surrey, 3s 6d to 4s 6d; Sussex, 3s to 3s 6d: Welsh, 2s 3d to 2s 6d; Irish, 1s 9d to 2s 3d; turkeys (cocks), 6s 6d to 8s; (hens), 4s 6d to 6s; geese, 4s 6d to 7s; country ducks, 2s 9d to 3s 6d; pigeons, 9d to 1s 1d; quail, 10d to 1s 2d; rabbits, 8d to 1s 2d each; Australian ditto, 7s 6d to 8s 6d per dozen; pheasant, 3s 6d to 4s; young partridges, 3s to 3s 4d; old, 2s per brace; hares, 2s 6d to 3s; leverets, 1s 6d to 2s; wild ducks, 1s 6d; pintail, 1s to 1s 2d; teal, 8d to 10d; woodcock, 2s to 2s 6d; snipe, 8d to 1s; golden plover, 10d to 11d; black, 6d to 7d. Russian—Capercailzie (cock), 2s to 2s 6d; (hen), 1s 6d to 2s; black game, 1s to 1s 2d; partridges, 1s to 1s 3d each.

SEEDS.

London, Monday.—Messrs. John Shaw and Sons, seed merchants, of Great Maze Pond, Borough, London, report a fair all-round business now doing. English red clover-seed, of which there is a good supply, realises last week's figures; but fine white, owing to its scarcity, is dearer. There is no alteration in either alsike or trefoil. Perennial ryegrasses, meantime, still tend against buyers, while full rates are demanded for French and Italian. Tares, both spring and winter, continue dear. The inquiry just now for mustard, rape, and linseed is unimportant, whilst the sale of bird seeds is likewise meagre. As regards blue peas and haricot beans, transactions are few and small.

HOPS.

Worcester, Saturday.—At market to-day several growers were offering hops, and generally asked rather more money than of late, which tended to check business, but some sales have lately been made at full prices. There are still inquiries for choice and good medium hops, and as best samples are scarce, holders hope to realise advanced rates later on.

Worcester, Saturday.—There has been a fair trade doing in hops since the opening of the New Year, principally in the better sorts, for which prices have been fully maintained. There has also been some demand for good sound lower qualities, but anything inferior remains unsaleable.—PIERCY AND CO.

STOCK AND SHOW NOTES.

By Herdsman.

The Angus Agricultural Association is in a very flourishing condition, especially financially, for at a recent meeting of the Finance Committee at Arbroth the statement of accounts submitted showed a credit balance as at December 31st last of £1,221 16s. 2d. This excludes the value of the Cobb cups and showyard fittings, amounting to close on £100. At the same meeting Mr. William Watson, Boddin, reported that, as instructed, he had called a meeting of his Montrose committee, who had agreed to recommend Friday, July 25th next, as the date of the show there, this being the week after the Highland Society Show in Aberdeen. In the circumstances, and seeing there would be no Royal Northern show at Aberdeen, it was agreed to adopt that date, and to hold the show on a Friday this year.

I would remind shorthorn breeders that the entries for volume forty-eight of "Coates's Herd Book" have to be sent in on or before Saturday, February 1st next. Forms of entry may be had on application to the secretary, Mr. E. J. Powell, 12, Hanover Square, London, W., and applicants are requested to state how many they require, both for bulls and cows, as a separate form is required for each. Whilst on the subect of shorthorns, I may mention that the Shorthorn Society has published in sheet form a list of the prizes they are offering at the various shows this year, full details of which were given in a previous issue of this journal.

A small private catalogue of the yearling bulls in the Langshott Aberdeen Angus Herd, belonging to Mr. J. H. Bridges, has reached me. The bulls number seven, and all are by first-class animals, the sires being Equerry of Ballendalloch (x,136), Maidstone (16,848), Prettyman (14,817), and Mailbag (13,637). Some of these yearling bulls will be entered for the Aberdeen Angus Show and Sale to be held under the auspices of the English Aberdeen Angus Cattle Association at Bingley Hall, Birmingham, on March 11th, and they can be seen at the Home Farm, Langshott, Horley, Surrey, by appointment. Mr. R. Pulling, The Lodge, Beddington Park, near Croydon, is agent for Mr. Bridges.

I learn that a very nice pair of middle white pigs from the old herd of Mr. Sanders Thomas, of Holywell Manor, near St. Ives, Hunts, were shipped last week by the Netherlands Steamboat Company's steamer for the chairman of the Consultatory Committee of the Agricultural Department in Holland. This is said to be the first of a series of shipments of Holywell Manor middle white pigs to Holland for the purpose of breeding porket pigs for the London market, a purpose for which they are eminently qualified.

At a meeting of the General Committee of the Royal Northern Agricultural Society held at Aberdeen it was resolved to hold the spring show this year on Wednesday, 5th March. It was agreed that a silver medal should be given for the best thoroughbred stallion in place of a £5 prize, and that the £5 prize for hackney stallions should be divided into two prizes of £3 and £2. An additional prize will be offered for swedes containing the highest percentage of feeding material, the quality to be determined by analysis. The Society will not hold a summer show this year, in consequence of the Highland show taking place at Aberdeen in the month of July.

The completion of the weekly returns for 1901 under the Diseases of Animals Acts shows that last year there were in Ireland 227 outbreaks of swine fever, two outbreaks of anthrax, five outbreaks of glanders, and two cases of rabies, one of which occurred in a dog. The outbreaks of swine fever compare favourably with those of 1900, 1899, and 1898, when they numbered 226, 322, and 321 respectively. Of rabies the cases numbered 19, 93, and 129 respectively. Glands also registers a decrease, as the respective totals of outbreaks in the three preceding years were ten, nine, and six. As to anthrax there have only been two outbreaks in each of the last four years, but in 1897 and 1896 there was no outbreak. Ireland has also been free from foot-and-mouth disease snce 1884, and free from pleuro-pneumonia since 1892.

The animal illustrated above is the DEXTER STEER BRED, and exhibited at the Norwich Fat Stock Show, 1901, by his Majesty the King, Sandringham. Its sire was Pat and its dam Tranquil, and when exhibited at the show mentioned was 1 year 8 months and 5 days old. It was shown in one of the small cattle classes, that for steers not less than 18 months, and not exceeding 3 years old, nor 10 cwt live weight, and was awarded the first prize.

Particulars of Transactions in Store Stock.

(Reported to the Department of Agriculture and Technical Instruction for Ireland.

There was but a very small supply of cattle at Dervock Fair (Co. Antrim) on Monday, but demand was better than at recent fairs. Prices: Calves, 2nd class, £3 10s. to £4 1s. 3d.; yearlings, 1st class, £8 to £8 10s.; 2nd class, £5 7s. 6d. to £7; two-year-olds, 1st class, £11; 2nd class, £8 to £8 17s. 6d.; springers, 1st class, £16 5s. to £19 10s.; 2nd class, £11 15s. to £14.

Cavan Fair, held on Tuesday, was an average-sized one for this time of year. A very dull demand was experienced for any cattle except one and a half and two-year-old heifers, bullocks not fetching more than they cost in May. Quotations: Calves, 3rd class, £2 8s. 4d. to £2 14s.; yearlings, 2nd class, £6 to £6 15s.; 3rd class, £4 7s. 6d. to £5 5s.; two-year-olds, 1st class, £11 to £11 10s.; 2nd class, £7 12s. 6d. to £10 12s. 6d.; 3rd class, £6 10s. to £7; springers, 1st class, £16 to £16 15s.; 2nd class, £13 6s. 8d. to £15; 3rd class, £9 15s. to £10 5s.

At the fair held at Roscommon on Monday there was a small supply of cattle, almost all of which were second class, but they met a good demand. First class springers were very dear. Prices: Calves, second class, £4 5s. Yearlings, second class, £6 to £7. Two-year-olds, first class, £11 5s. to £12; second class, £8 to £9 10s. Three-year-olds, second class, £10 12s. 6d. to £11. Springers, first class, £17 to £20; second class, £13 15s. to £15 5s.

The fair at Navan, Co. Meath, on Monday, was a very small one, and very few buyers attended; some nice lots of polled bullocks were sold, but nearly all the thin animals failed to find purchasers. Exceptionally few young stores, and they were nearly as dear as last year. Prices: Yearlings, first class, £8 5s. to £9; second class, £6 15s. to £7 10s.. Two-year-old, first class, £11 5s.; second class, £9 to £10. Three-year-olds, first class, £13. Springers, first class, £16 15s. to £19 5s.; second class, £12 5s. to £14.

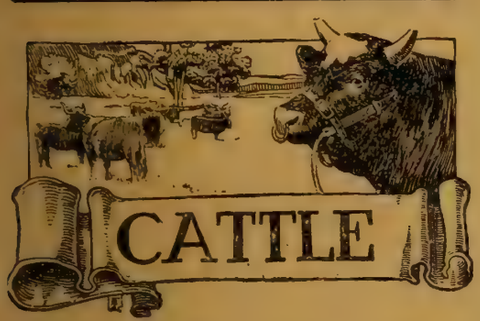
The fair at Ballinasloe, co. Galway, on the 11th inst., was a much smaller one than usual, composed chiefly of second-class cattle. Buyers were numerous, and the demand very brisk throughout, more especially for aged cattle in moderate condition. Almost a complete clearance of all classes effected at prices in advance of recent fairs. Prices:—Calves, 2nd class, £3 10s. to £4 5s.; yearlings, 2nd class, £5 10s. to £6, 3rd class £4 10s.; two-year-olds, 1st class, £10 15s. to £11 10s., 2nd class, £8 to £9 7s. 6d., 3rd class, £5 15s. to £6 10s.; three-year-olds, 1st class, £13 5s. to £14 5s., 2nd class, £10 5s. to £12 10s., 3rd class £1 5s. to £9; springers, 1st class, £15 15s. to £17, 2nd class £12 to £14. Small supply of sheep, but quite sufficient for the demand, which was slow, particularly for those unsuitable for export, and a good many remained unsold. Sheep lambs, 2nd class, 18s. to £1 1s.; over 12 and under 24 months old, 2nd class, £1 12s. 6d.; two years old and upwards, 2nd class, £1 14s. to £2, 3rd class, £1 5s. to £1 8s. Young pigs, 8 to 10 weeks old, sold at from 18s. 6d. to 24s. each.

At the fair, at Oldcastle, co. Meath, on Friday, there was a good show of cattle, chiefly second class, one and two-year-olds. Any nice animals changed hands quickly, and a fair amount of business was done. Prices: Yearlings, first class, £8 5s. to £8 7s. 6d.; second class, £6 10s. to £7 5s. Two-year-olds, first class, £10 15s. to £11 2s. 6d.; second class, £8 15s. to £10. Three-year-olds, second class, £10 10s. to £11 5s. Springers, first class, £16 10s. to £18; second class, £12 5s. to £14. Young pigs, eight to ten weeks old, sold at from 18s. to 27s. 6d. each.

Week-ends Out of Town.—More fortunes are made and more constitutions ruined in London than in any other city in the universe. The city man's great mistake is that he neglects the benefits of fresh air, which are indispensable to good health. Health is the greatest wealth, and the wisest city men are those who study their health, by spending frequent week-ends in the refreshing and invigorating air of the country. The Great Northern Railway Company offer most admirable facilities to this end by the week-end excursions which they run during the winter as well as the summer months. The company announce cheap one-day excursions on alternate Thursdays in January and February, also March 6th, to Hitchin, Royston, and Baldock, with one or three days' bookings to Cambridge; one or three days' excursions to Biggleswade, Sandy, St. Neots, Huntingdon, and Peterboro'; on alternate Thursdays in January and February, day excursions to Hatfield, Hertford, St. Albans, Harpenden, Luton, and Dunstable; on Saturday, January 25th, February 15th, and March 1st, besides week-end excursions to various principal towns in the northern counties; and three, five and eight days' excursions on Saturdays, January 25th, February 8th and March 8th to various places in Lincolnshire.

SPENCER'S

COD LIVER OIL FOR CATTLE.



Calf Brand.

The Best and Cheapest article for rearing Calves, being a natural substitute for Cream. Equally good for all other stock—a medicine and food combined. Far better and cheaper than Feeding Meals.

Write for booklet giving full particulars to the Manufacturers:—

ISAAC SPENCER & CO.,

HULL.

The Frozen Meat Trade in 1901.

In their fourteenth annual review of the past year's trade in frozen meat Messrs. W. Weddel and Co., of 16, St. Helen's Place, London, E.C., state that, speaking generally, it must be admitted that 1901 was a year of unduly high expectations, which ended in disappointment to both colonial and home dealers. The year appeared to many operators to be a less satisfactory one than it actually was, because of its general calmness after the excitement of the previous year. All the disappointment and loss arose through rates being paid in the colonies higher than at any time were warranted by the position of the market at this end, and not through any unusually low range of values prevailing at Smithfield, where prices during 1901 were well up to the average, for most classes of frozen meat. The drought in Australia caused growers there to demand prices for their limited surpluses which left no margin for exporters to work upon. In New Zealand the opinion was generally entertained that stocks in that colony were shorter than was actually the case, the light shipments made during the early part of the year lending colour to the idea. Freezing companies and speculators in the colonial markets paid extreme prices for both mutton and lamb, and found difficulty in reselling to British operators without at once facing a loss. In many instances, rather than accept that position, these highly-priced purchases were sent on to London for sale on consignment, but with unfortunate results.

The total quantities imported during the year from both Australia and New Zealand were by no means excessive; but the Australian export was most erratic, and the arrival of New Zealand shipments was not well timed, receipts of mutton and lamb in the second half of the year being much too heavy for the demand at that season. Supplies from the River Plate increased in volume steadily throughout the year, so that the belated shipments of mutton from New Zealand had to face the further disability of competing with heavy arrivals from the Argentine Republic. The war in South Africa again had some influence upon the course of the market. Large quantities of beef and mutton from Australia were delivered at the Cape, instead of being brought on to London, as would probably have been the case under ordinary circumstances; and to that extent the home market was relieved. On the other hand, the general slackening of trade throughout the country, which was so noticeable during the latter part of the year, was, doubtless, due, to some extent, to the prolongation of the war.

The Board of Trade returns prove that the frozen meat trade in 1901 was of greater magnitude than in any previous year, the weight of frozen mutton, lamb, and beef imported from all sources being 226,095 tons, as against 209,231 tons in 1900, and 201,833 tons in 1899. Over and above the heavy increase in frozen meats, the returns show that the import of American chilled beef was heavier than it had ever been before, the total receipt being no less than 159,014 tons. Seldom was there any excessive supply of home-fed meats on the market, and prices of English beef and mutton were maintained fairly steadily throughout the year. In September there was rather a heavy run of Scotch lambs on the market, and prices at that time fell to a low ebb; but this was quite exceptional, and neither home-fed nor Continental supplies, at any time during 1901, had much direct influence upon the course of values for frozen meats—certainly the market fluctuations of the two classes of meat appeared to be to a very great extent independent of each other. Extended experience only confirms the views set forth in these columns in 1896 that the importation of frozen meat has practically created an entirely new set of meat consumers in this country—largely, of course, amongst the working classes, who are in consequence very much better fed than can have been the case fifteen or twenty years ago.

Mutton and Lamb.

Except in the years 1892 and 1900, the annual increase in importations of mutton and lamb into the United Kingdom has suffered no check since the time when the frozen meat trade started twenty-one years ago. In the year just closed the normal rate of progress was fully maintained, and the highest aggregate of any previous year (that of 1899) was exceeded by 225,363 carcases. The arrivals of frozen mutton and lamb into the United Kingdom from all sources totalled 7,094,782 carcases in 1901, as against 6,433,821 carcases in 1900, the total weight being, according to the Board of Trade returns, 163,925 tons, against 152,400 tons in 1900, an increase of 11,525 tons, or 7½ per cent. Importations into Liverpool and various outports barely maintained their position in the case of Australian shipments, but further increased in volume from the River Plate. The Liverpool market again proved somewhat disappointing to shippers of Australian mutton, though Australian lambs yielded very satisfactory results. The advantage of shipping direct from Australian to British ports other than London can only be tested when pressure of supplies compels shippers to avail of the northern markets, but, so long as there is a comparative scarcity of meat, as in recent years, owing to the prolonged drought, the test is not likely to be seriously applied. The first shipment of mutton and lamb from Australia to Cardiff is now on its way, and it is confidently hoped that, for lambs especially, a fair trade will be done by shipping direct to a port in South Wales.

The importations of lamb from Australia and New Zealand together were well spread over the year, and met what is now practically an all-the-year-round demand. The Argentine trade remains insignificant, but several small shipments are at present afloat, the extra good season now being experienced making it possible to export fat lambs from the Plate.

As usual, prices during the autumn months steadily receded under the pressure of the numbers then received, and the rates ruling at Smithfield must have been decidedly unremunerative to shippers. In three years out of four the price of New Zealand lambs will be found to fall steadily after June, and exporters would do well always to bear this in mind when making their shipping arrangements. Should any rise be established in the months of November-December, the advance as a rule is based almost entirely upon the fact that supplies are practically exhausted. The volume of business actually passing at that time of year is always very restricted, and quotations, being almost nominal, are apt to be misleading.

The year was characterised by a great scarcity of prime small lambs, carcases weighing over 36lb. constituting the great majority of the import. These lambs, though of excellent quality, were rather too large for the provincial trade, and also for much of the London trade. The natural result was that light lambs commanded an unsually high premium throughout the year as compared with heavy weights, and small carcases of middling quality not infrequently realised more money than heavy carcases of prime quality.

Beef.

The total weight of frozen beef received into the United Kingdom during 1901 was 62,170 tons, as compared with 56,831 tons in 1900—an increase of 5,339 tons, the whole of which came from the River Plate. Australia shows a falling-off of 7,592 tons, and New Zealand of 5,067 tons, while the River Plate import shows an increase of no less than 17,998 tons—an addition which was in excess of the whole export from New Zealand, and also in excess of the entire quantity received from Australia. The continued exclusion of Argentine live cattle from the British markets has undoubtedly hastened this development in the export of frozen beef. Of course, the reduction in importations from Australia is largely to be accounted for by the heavy shipments made to South Africa; while in the case of New Zealand the falling-off may be traced to the high prices ruling in that colony, as the result of the over-shipments of the previous year.

Chilled Beef.

The American chilled beef trade attained still larger dimensions than ever before, the imports for 1901 totalling 159,014 tons, as against 143,361 tons in 1900. This section of the imported meat trade dwarfed all the others, bulking alone almost as largely as the frozen mutton and lamb imports from Australia, New Zealand, and the River Plate together. The companies interested in the American trade gained during the past year a firmer hold over the British markets by securing the control of additional premises on the Smithfield Market, and by re-organising their provincial distributing agencies.

The successful experiments made in 1900 induced one of the River Plate companies to further test in a practical way, and on purely commercial lines, the possibility of developing a trade by bringing to London at regular intervals during the latter half of the year a number of shipments, each consisting of about 3,000 quarters. The first of these, arriving per Danube (s) in August, did not prove to be altogether successful, the meat being of indifferent quality, and most of it slightly frozen. Prices realised ranged from 3d. @ 3⅝d. per lb. fores, and 4½d. @ 5d. per lb. hinds. The later shipments, however, were more satisfactory in respect of both quality and condition, and it is understood that these trial shipments have yielded results good enough to justify the shippers in putting more steamers into the trade. This will probably be done in the early part of 1902. The meat on average realised a premium over frozen beef to the extent of about ½d. per lb. for fores, and 1d. per lb. for hinds. The total import for 1901 amounted to 24,919 quarters.

Live Cattle and Sheep.

The principal feature in this department was the marked increase in the importation of live cattle and sheep from the United States. The quantities received from that source of supply practically filled up the gap caused in 1900 by the enforced cessation of shipments from the Argentine Republic. The total number of live cattle imported from all sources shows 494,225 head, compared with 495,134 head in 1900; while arrivals of live sheep were 381,481 head, against 382,822 head in 1900. The efforts made by Argentine exporters during 1901 to get the markets of this country re-opened to their live cattle and sheep were altogether unsuccessful, and there is at the moment no more prospect than there was a year ago of that trade being immediately resumed.

General Outlook.

The agricultural outlook for 1901 for the United Kingdom did not reveal any alteration of moment in the numbers of cattle and sheep recorded, as compared with the figures for 1900—an increase of 21,527 cattle, and a decrease of 224,942 sheep, representing changes of considerably less than 1 per cent. in each case. For ten years past the flocks and herds of the United Kingdom have remained almost stationary, while the population has increased during that interval to the extent of 3,720,000 persons.

On the whole, therefore, the utmost that can be claimed for the home supply of beef and mutton is that it has nearly maintained its volume in recent years; but it does not nearly keep pace with the growth of population, and this is the natural explanation of home-fed beef and mutton values being so well maintained, notwithstanding the fact that the importation of frozen beef, mutton, and lamb increased from 83,166 tons in 1891 to 226,095 tons in 1901.

Although the general tendency in European countries is still towards a gradual decrease in the available supplies of fresh meats, the influence of the agrarian party in each country continues to be sufficient to secure the exclusion of frozen meats. The demands of the working classes in France, Germany, Austria, and Italy for better conditions of living are, however, steadily becoming more insistent. The exports from the United States of cattle, sheep, and beef all showed great expansion in 1901. It is, therefore, of comparatively little use to endeavour to estimate the shipments in the near future on the basis of these returns alone.

Although prices may be low in America the export of cattle or beef to Great Britain goes on irrespective of that fact, provided other conditions in the States call for the relief of the local markets; while if prices are high in England, the export from the States appears to be capable of immediate expansion. The shortage in the 1901 maize crop, however, and the consequent forced selling of cattle during the past three months, have already led to a marked advance in prices of fat stock in the States. Trade there is decidedly brisk at present, and these considerations warrant the expectation that there may be some slackening in the export trade in the near future. All opinions on the subject must, however, be reserved until the real statistical position can be ascertained. Exports of chilled beef from Canada may show some slight growth, and small additions to the total supplies of meat may arrive in the form of chilled beef from the Argentine Republic; but the relation of these two factors to the trade as a whole must remain unimportant for some time to come.

A good deal of interest is being shown by the Russian Imperial Government in the development of a meat export trade to this country. Small quantities of Russian beef have come to hand in recent winters, but the quality and condition were not good enough to command en-

couraging results. Possibly with proper transit facilities and Government encouragement, a larger trade might be successfully carried on; but it is not likely to assume any importance during the next twelve months.

Further satisfactory experience has been gained in South Africa during the past twelve months of the suitability of Australian frozen beef and mutton for military purposes, and the British Government has just recently called for tenders for extensive supplies to be delivered there during 1902. These will probably be drawn mainly from Australia, and, together with the quantities to be delivered for military consumption in the Philippines and at the Mediterranean ports, must materially curtail the export from the Commonwealth to the United Kingdom.

Shrewsbury Store Stock Sale.

Messrs. A. Mansell and Co.'s first sale of store stock for the year at Shrewsbury was held on the 10th inst., and there was a fair attendance of buyers, especially from the southern counties. The sale, as usual, began with the sheep, for which there was a fair demand. Every animal, as usual, was passed over the weigh bridge, and the actual weight announced. Some of the prices realised were:—Barren shorthorns, £9, £9 5s., £9 10s.; Hereford heifers, £8, £8 5s., £8 7s. 6d.; polled heifers, £9, £11 15s., £12; cross-bred heifers, £8 7s. 6d., £9 15s., £10; Hereford steers, £11 10s., £11 7s. 6d., £9, £9 12s. 6d., £10 12s. 6d., £8 15s., £9 10s., £7 £10 15s., £10, £10 17s. 6d.; Hereford bullocks, £15 17s. 6d., £13, £11 12s. 6d., £12 5s.; shorthorns, £11 2s. 6d., £11 12s .6d., £11, £12 15s., £13; shorthorn steers, £6 12s. 6d.; cross-bred bullocks, £13 5s., £12 15s.; shorthorn heifers, £9 10s., £10 1s. 6d., £11 12s. 6d., £12, £9 15s.; black polled bullocks, £12, £8 17s. 6d.; cross-bred yearlings, £7 12s. 6d.

Contagious Diseases of Animals.

Summary of Returns issued by the Board of Agriculture for the week ending January 14, 1902:—

NOTE.—The figures for the current Year are approximate only.

New Agricultural Patents.

Specially compiled for the *Mark Lane Express* by Mr. G. D. Howard (Hughes, Son, and Co.), patent agent, 38, Chancery Lane, London, of whom all information relating to Patents, Designs, and Trade Marks may be obtained free of charge.

44.—John Neil, of Manchester, for "Improvements in machines for cutting hay, straw, and the like."

125.—Frank Tebbs, of London, for "Circular moulding cutting machine."

164.—John Lowson, of Finsbury, for "Improvements in plough handles."

Patents Sealed.

16,512.—G. Harris, of Cheddar, for "Potato diggers."

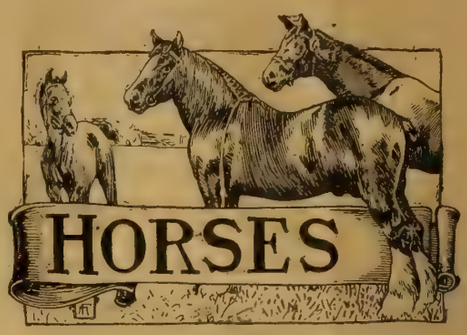
16,708.—H. Brat, of Rummelsburg, Germany, for "Food preparations."

LITERARY NOTICES.

The Ruin of Rural England.*

The decay of British agriculture is a subject that has for many years attracted a great deal of attention. Authors have frequently endeavoured to show why agriculture in this country is a decaying industry, and have also pointed out that no empire has in the past survived the decay of its agriculture. In the book before us Mr. Martin attaches perhaps too much importance to the position that the railway companies have adopted; in fact, a number of the chapters might almost be termed abuse of the great carrying corporations. We are not for a minute urging that the British farmer does obtain equality of treatment with the foreigner; but, considering that in this country free trade is supposed to reign supreme, it surely must be admitted by all thinking men that a company can handle with greater facility and at lower rates goods that arrive at a port and can be loaded straight away in the trucks than they can deal with small lots collected at various country stations. Mr. Martin has drawn up seven items which are all traceable, he says, to the decay of agriculture. It is a sad fact that the nation is reduced to dependency upon foreign countries for five-sixths of its food supplies, but we cannot agree with the author when he says, "The population are only kept in employment by continuous railway and municipal borrowings." We sympathise with Mr. Martin in his endeavour to awaken those in power to a sense of their responsibility, but we fear that such a representation of the position as appears in this volume will be put aside with but scant attention, for there is surely no greater sin than to overstate one's case in any direction.

Gardening is becoming more and more popular each year, the work being essentially a healthy one, and interesting at all times. For practical work to be prosperous, system must be used, otherwise one cannot expect to gain good results. Each year great improvements are being made in this direction, and as an example we would refer our readers to "The Culture of Vegetables and Flowers," by Sutton, a tenth edition of which has now been issued. There are over 400 pages, containing a great amount of useful and sound information, it is also splendidly printed and illustrated, and certainly should find its way into the hands of all horticulturists, amateurs and professionals alike. In its pages is a highly instructive article on the pests of garden plants, giving examples of these numerous pests; also illustrations of their life and habits, this being a subject that wants to be thoroughly studied by all gardeners desirous of success. Some interesting hints are given on the laying out of lawn and tennis grounds, and there are numerous other articles worthy of attention. The fact that this publication has reached its tenth edition is sufficient evidence of its worth. It is procurable either direct from Messrs. Sutton and Sons, Reading, or from Simpkin, Marshall, Hamilton, Kent, and Co., Limited, 32, Paternoster Row, London, E.C., the price being 5s.



It would be impossible to enumerate here all the useful information that is contained in Purdon's Almanac for 1902. This useful publication does not confine itself to the interests of the farmer and gardener, but acts as the Irish Whitaker, dealing with all public offices, matters, and men, from H. E. Cardinal Logue to the winner of the Grand National. Full postal information is given, and a complete calendar of garden and farm work. This invaluable work is published at 1s. paper cover and 1s. 6d. boards, by "The Farmers' Gazette" Office, 23, Bachelors' Walk, Dublin.

The twenty-ninth annual issue of Willing's Press Guide is as fully up-to-date and well presented as its forerunners. There are constant changes going on in the world of newspapers, and therefore all the more credit is due to the editors for the careful manner in which these changes have been noted. This publication is a model of arrangement and handiness. It is published at 1s. by Messrs. Willings, of 125, Strand, London, W.C.

Messrs. W. Fell and Co., Limited, of Henham, seedsmen and nurserymen to H.M. the King, have issued a nicely illustrated and prepared spring seed guide for 1902.

Messrs. William Davie and Co., of Haddington, N.B., seed potato growers, seedsmen, seed growers, and manure merchant, have issued a catalogue of selected seed potatoes for this year's sowing.

* The Ruin of Rural England. By J. W. Martin. Messrs. Simpkin, Marshall, Hamilton, Kent, & Co., London; 3s. 6d.

Sale of Shires at Tring Park.

The first important Shire horse sale of the present year took place on Wednesday, when Messrs Sexton, Grimwade and Beck disposed of about forty animals belonging to Lord Rothschild, at Tring Park, Tring. This made the second sale of Shires from this well-known stud, and as at the first sale there was a capital attendance of breeders from all parts of the country. As is well known, Shires from the Tring stud won numerous prizes at the principal shows last year, and Wednesday's catalogue included a number of the prize-winning animals. In fact, all the prize mares and fillies were offered, Lord Rothschild having decided not to exhibit mares or fillies this year. The bidding was naturally brisk and well sustained, although no more spirited than the quality of the animals warranted, for they made up one of the most uniformly handsome lots that have ever been seen in a sale ring. This statement is borne out by the result of the sale, the average for the forty head being a little over £217 14s, which average has only twice previously been exceeded for Shire horses, viz., at Sandringham in 1898, and at the sale of Lord Llangallock's Shires in 1900. The top figure of the sale was 750gs., which sum was paid by Mr. R. W. Hudsons for the champion mare Alston Rose, by Vulcan VII. No fewer than four other brood mares made 400gs. or over, and the lowest price obtained was 120gs., so that the 16 mares made the excellent average of £294 6s. 6d. each. The younger animals also sold well, the best prices being 410gs. by Mr. Hamer Toogood for Fortress; 360gs. by Sir J. B. Maple for Victorious Queen; 410gs. by Mr. A. Henderson, M.P., for Birdsall Stately, and 350gs. by the Marquis of Winchester for Sunset.

A full list of the animals sold, prices realised, particulars, etc., is appended:—

Show and Sale at Grantham.

The first sale of horses this year at the Lincolnshire Horse Repository, Grantham, took place on Tuesday, when about one hundred animals, comprising 60 cart horses, eight unbroken colts and fillies, and 30 hunters, harness horses, and ponies, came under the hammer. As upon previous occasions, the auctioneers (Messrs. Escritt and Barrell) offered prizes of £6, £3, and £1 for cart mares and geldings four years and upwards suitable for town work. The judging was undertaken by Mr. J. C. Fisher, of Sutton-on-Trent, and Mr. John Meakin, of Eastwood, who had some difficulty in making their awards from the 29 horses which were paraded before them, but their awards were upheld at the sale. A handsome and massive chestnut gelding, belonging to Mr. W. Fillingham, was chosen for the first place, and this animal was disposed of to Mr. Meakin for 70 guineas. The blue ribbon was given to an active and well-made mare belonging to Mr. Bagguley, of Long Bennington, which was also purchased by Mr. Meakin at 65 guineas, whilst the third prize fell to a mare belonging to Mr. B. N. Smith, of Aslackby, which was knocked down to the bid of Messrs. Chaplin and Co., of London, at 60 guineas. There was a large attendance of buyers from all parts, and a good sale resulted. The trade for cart horses was brisk, and throughout the bidding for sound animals was very spirited; but the light horses were a poor lot, and many would-be purchasers returned home empty-handed. Cart horse geldings made up to 70 guineas, and mares up to 60 guineas, broken colts and fillies selling at from 22 to 35 guineas, and harness horses up to 33 guineas.

FABIANA, the Polo Pony Filly, shown above, is the property of Mr. G. Norris Midwood, The Hut, Tabley, Knutsford, Cheshire, and was bred by Mr. R. C. Vyner, Newby Hall, Ripon, Yorkshire, her sire being Minting and her dam Fabia, by Underhand. At the Royal Agricultural Society's Show at Cardiff last year Fabiana won first prize in the class for polo pony colts, geldings or fillies foaled in 1898, not exceeding 14.1 hands, whilst in a similar class at the Polo Pony Society's Spring Show in London she only got a third prize.

How to Breed Sound Horses.*

To rear good, sound stock, you must first of all get sound parents. You cannot get blood out of stone is an old and true saying, but not more true than that sound stock must come from sound parents. You must guard against hereditary unsoundness, and, starting with the head, we have cataract, an hereditary disease not always detected. It takes an expert to spot it. Roaring is a common thing in this country, and splints, which nearly all horses have, though they do not make much difference. Ringbone is another class of unsoundness which seems to be getting more common, particularly in the heavier breeds of horses. Coming to the foot we get sidebones. These, without doubt, are a most common form of unsoundness, and about three out of every five cart horses have to be rejected on account of this disease. It is a thing which may be got rid of by judicious breeding. If you build a house on sand it is not a very wise proceeding, and if you breed a horse with bad feet you have a worthless thing. You must have bottoms if you want a foundation for good horses. The first thing is to start with good feet: you can always put tops on. Coming to the hind legs, you have spavins—very common, more so in well-bred horses; and curbs, things that cause a lot of trouble. This is an unsoundness seeming to be getting more common in the lighter breeds; while shiverings and stringhalt—seen mostly in shire horses—is not seen very largely down here. In England one of

The Chief Cause of Unsoundness

in horses is the practice of allowing stallions to travel with or without a certificate. No one on the Continent is able to travel with a stallion that has not been examined by the Government veterinary and declared sound by him every year he travels. This would perhaps be a great help to English farmers, for no doubt many of the stallions of the cheaper sort, if examined, would be found to be not very sound.

In coming to the question of mating, there are lots of things which may lead to unsoundness. Get a mare standing over in front and not too well made, and mate her with a sire of the same kind, and you will get stock with the defects emphasised, and when you want to sell him at four or five years old your customer will be advised by his vet. not to buy it. It is not an unsoundness in the sire or in the mare, but defects in the conformation of the horse will lead eventually to unsoundness. If you want good sound, healthy stock, with good constitutions, it is never a good plan to breed from old mares. It is a well-proved fact that if you want good stock you must start with young parents. Three years old is quite time enough to begin. Then you get a constitution. If you want size, you must have it in the mare; not, as people seem to think, in the sire. You get the size in the colt from the mare, and not very often the other way about.

There are many other things not really unsoundness; but to be avoided.

The Question of Feet.

for instance. There are many different sorts of feet and mostly "bad 'uns"—down here anyhow. Take the ordinary big-framed Shire horse. If you don't start with good feet on both sides you very seldom get them. If the mare has bad feet it is a poor thing to breed from here at all. Don't breed from a stallion with small feet, but from one with good big feet; and from a high barrelled mare and a deep horse, and so on. It is always better to breed from good-looking horses, for they are always easier to sell, though it does not follow that a good-looking horse is sound, or that because he is sound he must be good-looking. For carriage horses it is the fashion to mate with a thoroughbred. Sometimes you get what you want, more often you don't. What you want to avoid as far as possible are ewe necks, straight shoulders, calf knees, bad feet of any description, flat sides, light bellies, slack loins, bent hocks, and small hoofs. What you want in any class is a square horse with a leg coming out of each corner like the legs of a billiard table, and then you won't be far wrong.

You are told that horses' feet have much to do with the soil and situation. From what I have seen in many counties in England, I don't think it makes much difference. You see good sound horses in every county. It is really the mating of the sires and dams, and has little to do with the farms. You can improve the farm by putting on bone manure, and do your colts good at the same time; but you don't improve the farm very much by having a lot of horses on it. It is a great mistake to have many mares breeding on any farm. It is a well-proved fact that in a few years your stock begins to get smaller, and the constitution of your stocks begins to get weaker. It has been proved in many ways. His Majesty the King had tried to breed on a stud farm for many years without success. He changed to another farm, and soon bred the winner of the Derby. That is only one of many cases. The land seems to get stale.

Foaling.

Suppose a mare carries a foal, there are several things which may happen, and the worst is "slipping." Don't work them too heavily; especially keeping them from jerking work or work in which they are required to start alone several times with a rather heavy load. It is better not to work them right up to time, but to give them a fortnight's rest before the time of foaling. Some people believe in foaling mares out of doors, and some inside. There is a good deal to be said for both sides. From the nature of the farm buildings that I meet with in my practice in Cornwall it is an absolute necessity that foaling should take place in the open. There is scarcely a building big enough for the purpose. It is a silly thing, but too often done, for a man who has a mare that he thinks a lot of to be constantly looking at her. It is better to turn her into the field and leave her to herself. They are shy at such times, and don't like to be disturbed, though it is just as well to be handy at the proper time, so that in case anything goes wrong you can send at once for the vet. (Hear, hear.) Supposing you have your foal and the bed does not properly return, don't leave it too long before sending for the vet. Neglect at such times is the source of many diseases, and causes the loss of many mares. Give at the outside twelve or fourteen hours, and if it does not return it is time you sent for the vet. at once. If the colt is dropped in the bag and is not relieved, it will soon be suffocated.

Now, foals have diseases, and sometimes cause trouble. If they will not take the milk, the use of a little honey or treacle will sometimes induce them. If not it is better to take the milk away, put it in a bottle, and feed the colt artificially with honey or treacle on the nipple attached to the bottle. When you have a colt born it is very important that you should see that its bodily functions are capable of being properly exercised. If not you may have a great deal of trouble. In the case of navel ill it is a matter for the vet., for in nine cases out of ten you run the risk of losing your colt. He goes a bit lame, his leg begins to swell, and you tell the veterinary you think he has been trodden upon. That is a disease we call joint evil, and to cure it the navel must be disinfected during the first week or ten days. In case of rupture, generally indicated by a swelling in front of the udder, it must be attended to early.

There are some common causes of unsoundness in otherwise perfectly sound colts, due to the carelessness on the part of owners and breakers. You have, for instance, sidebones in cart colts. I think it is quite possible to work your colts without getting these "treads." If you have a valuable colt it is silly to put him in the middle of a team. It is well to put him on the outside or to put him to some other kind of work.

A Common Cause of Sidebones

is this: You see a man taking a colt out of a cart, and he unharnesses it and drops the shafts on the top of the colt's coronet. That has not to be done many times before the appearance of a sidebone. Then there are sandcracks, which are very troublesome things to get rid of when once produced. If when the colts are born you haltered them and handled them so that you could always get near them, you could look at them and notice such things on their first appearance. As a rule they are not noticed till the colt is started to be broken—say two years old. A sandcrack may then have been there for six or eight months, and has very nearly reached the coronet, and it will take six or eight months to get rid of it. If I was breeding colts I should always have them shod with tips round the toes. They would not injure the feet, and if they had sandcracks you could get rid of them better. I have seen them tried having them shod from eight to twelve

* A paper read at the annual meeting of the Probus Farmers' Club by Mr. F. L. Clunes, M.R.C.V.S.

months old, and they certainly had quite as good feet as the other colts that were left running, and they were not troubled with sandcracks or anything of the kind.

Curbs often occur in the better class of horses. I have seen colts taken to the breaker to be broken in a quite sound state; but when they have been sent home they have had one or two curbs. The colt goes to the breaker, nervous and liable to jump out of his skin at anything. He is to break it in three weeks, or he gets into trouble. Now, it is impossible for a man to break a colt in that time. The common custom I know is to put a colt in a waggon with a chain in front and one behind. The colt wants to get out, he digs his toes and heels into the ground, and chucks a curb out. This might be obviated by care on the part of the owner.

There are many

More Ways of Damaging Colts,

and one fruitful source is the working colts too soon. You work them as babies. The consequence is when they have had six or eight months' work they are cocked on their joints, their joints get round and swollen. You get twelve months' early work out of them and when you go to see them you lose two or three years' work in the difference in the price as compared with what you would have realised had you allowed them to run twelve months longer. When you send a colt to the breakers they sometimes hit their joints, and a horse has not to do that many times badly without a swelling of the fetlock, and once done it causes a lot of trouble to get rid of it. Instead of working a colt that does that till he has a bad cut you should at once have him differently shod so as to prevent it.

I have been reading a book written by Sir Walter Gilbey upon a breed of horses not bred down here, a breed which has been allowed to go out of the country altogether; but a breed which I think is the most remunerative of all—the big Hackney horse. If you want to buy a good pair of big good-looking harness horses that will move, and with dash in them, you have to go abroad for them. You cannot get them in England. When the old posting days came to an end people came over here from abroad—from France and Germany—and bought the best mares, and if you want a pair of horses of the kind to which I have referred they must be brought from France. At all your agricultural dinners someone tells you how to make farming pay, and it is generally those who have done nothing of the kind themselves, some big landowner or the worst farmer in the room (laughter). No doubt this horse ought to be bred to pay. The old original stock is in the county and in the country. In 1880 we imported into this country 9,950 horses; in 1900 that nine thousand odd had grown into 51,787. That meant a good deal in cash—about £17,000,000. That would be a nice little thing if spread over the farms of the country. There is no necessity for this. The war has not accounted for this big rise, because most of the horses were bought by the Government abroad.

How Hackneys Have Been Bred.

Sir Walter Gilbey's remedy is this: Many farmers have good big vanners—active cart mares of the type left by Blagdon Active, with size and dash and character. Mate these with a thoroughbred horse and you will have a useful horse fit to drag a carriage and use for a day's hunting, and put the next mare you get as a result of the first cross to a Hackney stallion. That is how Hackneys have been bred. The Hackney stallion is looked down upon by many with a great deal of prejudice; but in my opinion it is absolutely the best living. The Hackney is better bred than any thoroughbred at the present moment. When the Darley Arabian came over in 1702 he was the sire that the thoroughbred horses were bred from, and Danegelt, which won last year, is a direct descendant from that Darley Arabian, so that the thoroughbred is not more thoroughbred than the Hackney.

The thoroughbred has been bred solely from one point—to get over a mile or two miles as fast as he can. All his faults have increased in the meantime, and at present the thoroughbred is a weedy and miserable object to what he was a hundred years ago. The Hackney has gone on improving, and in him you have good looks, stamina, and constitution, fine action, and fast enough for ordinary purposes of travelling. The thoroughbred horse will not do any trotting, and there is no doubt this country has lost the old much-prized harness horse. Every big breeder in London says when he has to order a big stylish pair of such horses, he has to go to France to get them. They could be bred here, and it would be a good plan if some would breed a few (applause).

Fatal Farm Fire.—A serious fire occurred last Monday in the outlying districts in the valley of the Stour. Practically the whole of the farm buildings at Supperton, owned by Lord Conyngham, were burned down, and two threshing machine labourers, who were sleeping on the premises, lost their lives. Several bullocks were also burnt to death.

SOCIETIES.

Edinburgh.

The directors of the Edinburgh Agricultural Association met at Edinburgh on Wednesday, Sir James H. Gibson-Craig, chairman of the directors, presiding. The Secretary of the National Veterinary Association asked the association to consider a resolution that horses exhibited at agricultural shows should be submitted to a veterinary examination. The Chairman said a similar resolution had come before the Highland Society, but no action was taken. Unless the national societies took up the matter it was useless for local societies to interfere. The letter was allowed to lie on the table.

The Secretary of the Shetland Pony Stud Book Society intimated, on behalf of Lady Estella Hope, president of the society, a champion prize of £5 for the best pony stallion exhibited at this year's show; and medals were offered by the Hunters Improvement Society, the Hackney Horse Society, and the Polo Pony Society.

The Chairman called attention to the bad conduct of some of the persons in charge of the light-legged horses at the show during the parade after the prizes had been awarded. Two or three of the directors who officiated in the ring had, he said, been assailed with much abuse and bad language from some of those in charge of animals, and he thought something should be done to protect those gentlemen who took upon themselves so much trouble. After some conversation, in the course of which several of the directors condemned the practice of which the chairman complained, and urged that some severe punishment should be imposed on the offenders, it was agreed that, should the offence be repeated by any specified individuals, entries by the employers of such persons should be refused for future shows.

The Secretary (Mr. James Wylie) presented the draft annual report, which stated that there were now 600 members on the roll, and there was a credit balance at the end of the year of £1,481 4s. 7d.—an increase of £64 10s., against a loss the previous year of £73.

The following were recommended to the general meeting for election as office-bearers for next year: President, the Earl of Rosebery; vice-president, Sir James H. Gibson-Craig; and directors, Sir John Usher of Norton, Sir James Miller of Manderston, Mr. Liddell Grainger of Ayton Castle, Captain Hope of Bridgecastle, Mr. William Renwick, Meadowfield, Corstorphine; Mr. Gavin Jack, Swanston; Mr. John Elliot, Hindhope; Mr. F. W. Christie, Dairsie Mains; Mr. George Macmillan, Corstorphine House; Mr. Duncan Stewart, Millhills, Crieff; Mr. John Kerr, Gilmerton; and Mr. Allan, South Bridge, Edinburgh.

It was agreed to hold this year's show on Wednesday, 11th June, and that Hawkhill Recreation Grounds should again be secured, the rent being £60, or an increase of £10 on last year. A committee was afterwards appointed to revise the prize list.

Monmouthshire Chamber.

The annual meeting of the Monmouthshire Chamber of Agriculture will be held on Wednesday next, the 22nd inst., at the King's Head Hotel, Newport, commencing at 12 o'clock noon. The business consists of the usual routine at annual meetings, viz., the receiving of the reports of the council and balance sheet for the past year, election of president, council, and other officers for the ensuing year, etc.

On the same day, at 2.45 p.m., a general meeting will be held in the new commercial room of the hotel named, at which a paper on "Farming in Western Canada" will be read by Mr. J. Thomas Davies. A discussion will follow, and if time then permits a copy of a paper on the subject of "Secondary education, as affecting the rates," read by the Right Hon. Lord Harris, before the Canterbury Farmers' Club and East Kent Chamber of Agriculture, will be considered, together with copy of a resolution upon same.

Lincolnshire Chamber.

The annual meeting of the Lincolnshire Chamber of Agriculture was held at Boston on Wednesday. Mr. J. N. Sutton-Nelthorpe, Scawby Hall, in the chair. The Council's thirty-ninth annual report was presented and adopted. The various subjects which have been discussed during the year were mentioned in the report, whilst it was stated that the members of the Chamber numbered only 205, which should be increased tenfold to secure adequate recognition and influence.

Mr. Cheney Garfit was elected chairman for the year, in succession to Mr. Sutton-Nelthorpe; Alderman William Frankish was reappointed vice-chairman, and Messrs. W. B. Burtt, John Evens, J. C. Mountain, and J. M. Riggall were re-elected members of the Council for the Lincoln district.

Then followed a long discussion on rural depopulation. The debate had been anticipated by a number of branch chambers in the county, and they had passed resolutions on the subject. The Grimsby branch resolved that "provision should be made for allowing boys of twelve years of age and upwards, whose parents desire it, to work on the land, while special opportunities and provision should be made for those who wish to continue their studies either in night schools or by a continuous course of ordinary or higher grade subjects, and that the practice of rural teachers in giving instruction in agricultural subjects be extended as far as possible. This, it is felt, will assist largely in checking the depopulation of the rural districts." The Brigg branch passed the following resolution: "That the Education Act should be so modified that lads of twelve should be enabled to work partially on the farm, and thus give them an interest in agricultural work, with the idea that they would be more likely to remain in the country"; while the Boston branch were of opinion that "the only remedy that would stay rural depopulation would be an increase of the price of agricultural produce so as to enable farmers to pay higher wages."

Rural Depopulation.

The discussion was introduced by Mr. D. Cheney Garfit, of Kenwick Hall who said that the subject was a very important one, not only from the agricultural point of view, but also from the Imperial point of view. This process of village depopulation was increasing. When the present generation of elderly agriculturists was extinct it was difficult to imagine the source from which their places would be filled.

"What we require to do," he continued, "is to get the people in the country to think twice before they desert the villages for the towns. Of course the gains held out to them are in many ways very fictitious. It is held out to them that wages are at a larger rate in the towns, but we must also point out to them that the rate of living in the towns is far higher, that rents and rates are higher, and that work is far more hazardous in the town than in the country. We are already beginning to see a great number of men in the towns who are out of work." He suggested two remedies. Our present educational system, he said, was invented for the cities and not for the country, a fact which had at last been realised by Sir John Gorst. To his mind the school curriculum should contain subjects suitable for country children, and during the summer months, at any rate, children ought to be half-timers, so that they might be encouraged to take an interest in farm work. Then the Board of Education might help agriculture much more than it did. £8,000 a year was a very small amount to receive for agricultural education. For every £506 given for the encouragement of art and science only £1 was given towards agricultural education. Mr Garfit expressed his thorough agreement with the resolutions of the branch Chambers.

Mr. Sutton-Nelthorpe said that this was not the only country suffering from the gravitation of the people to the towns. In France, where he had been living for some time, the same complaint was prevalent, even in official circles. That was a very curious thing, for this reason, that the country was largely cut up by a system of peasant proprietary, and it would certainly have been thought that if anything would keep people on the soil it would be actual possession of it. As a matter of fact, it had not been found so in France. People owning a quarter or half an acre, and having attained the age of 50 or 60, complained that their sons would not go back to the land to take up their little property. They, too, blamed the educational system. And yet in France there were many of those advantages for the training of children to take an interest in country life which it was suggested should be brought more definitely into the curriculum of schools in England. In the vine districts of France vine culture was taught, and in the fruit districts fruit culture; and yet that did not bring the people back to the land.

One might suggest all kinds or remedies, but he was afraid they would come back to the hard common-sense of the Boston Chamber, that more money was wanted in the country. Although some good might be done in the matter of education, he did not think it was very much jumped at by those to whom it was offered. Mr. Hanbury recently spoken in favour of agricultural colleges, and expressed a hope that County Councils would give assistance to the Board of Agriculture and the Board of Education in that direction. In the Lindsey Division of Lincolnshire this had been tried, but the results were most disappointing. Two scholarships of £25 a year and all fees and expenses for a three years' course at the Yorkshire College were offered, and there was not a single candidate. They also offered eight scholarships for a ten weeks' course at the Midland Agriculture Institute at Kingston, in Derbyshire, and for these there were only two candidates. "It is a very puzzling question," said Mr. Sutton-Nelthorpe, in conclusion, "but I believe that the need for more money is at the bottom of it."

Mr. J. Laverack, of South Carlton said that there was not the least doubt that a good price for labour was the only thing that could induce labourers to stay on the land. The rural depopula-

PRICE 6d. (By post, 9d.)

SHOULD BE IN THE POSSESSION OF EVERY

FARMER, LAND OWNER, AND STOCK-KEEPER.

A YEAR'S RECORD OF BRITISH AGRICULTURE.

ENLARGEMENT OF THE

AGRICULTURAL ANNUAL

AND

Mark Lane Express Almanac, 1902.

Portraits of Prize-winning Animals at the Norwich, Birmingham, and Smithfield Fat Stock Shows, 1901.

PRESS OPINIONS.

"Every farmer should have a copy."—**Leicester Chronicle.**

"This popular annual, as usual, contains many articles and illustrations of great interest and value to agriculturists."—**Lincolnshire Echo.**

"The agriculturists' favourite."—**Kent Messenger.**

"Is now looked forward to by numbers of agriculturists in all parts of the Kingdom."—**Irish Times.**

"Contains a complete record of the past year as affecting agriculture, and includes illustrations and particulars of some of the principal prize-winning animals at the great fat-stock shows."—**Sunday Special.**

"Is a splendid sixpennyworth. It is well illustrated, and has a great many valuable articles besides a good deal of information compactly arranged for easy reference."—**Derby Mercury.**

"In this well-known annual we are pleased to greet an old friend. The improvement manifests itself on almost every page of the annual."—**Chester Courant.**

"A list of Agricultural Societies and the various tables and statistics, which have been so much appreciated in previous years, have been added to and brought up to date."—**Reading Mercury.**

"An assured place in the esteem of agriculturists. Profusely illustrated, its letterpress comprises excellent summaries of the agricultural events of the year and a really valuable array of articles of diverse interest, written by men who know their business and are able to present facts in an attractive guise."—**Glasgow Herald.**

"A useful publication, long popular among English farmers and breeders of fat stock."—**Scotsman.**

"It is nicely printed, well illustrated, and carefully compiled, whilst the price at which it is published places it well within the reach of all sections of agriculturists, who will find within its pages much of interest and profit."—**Western Daily Press.**

"Of great use and interest to agriculturists."—**Daily Graphic.**

"For sixpence the farmer may have an encyclopædia of agriculture, beautifully illustrated, the compilation of the most practical men in the country."—**Norfolk Standard.**

"The volume is finely illustrated, many of the photographs of rural scenes used as headpieces being especially interesting."—**Live Stock Journal.**

"This publication, which has deservedly become very popular, will in future be issued at the commencement of each year, instead of as hitherto, during the Smithfield Show week, the object being to make it a complete record of the previous year. This is an admirable arrangement, and the publication before us is as complete as it is possible to make it."—**County Gentleman.**

"The volume consists of about 250 pages, and is nicely bound and well illustrated."—**Hunts County News.**

"The statistical matter, the illustrations, and the lists of societies have been brought up to date, and the volume altogether will be a welcome addition to the library of those associated with the farm."—**Aberdeen Free Press.**

"Is as deftly edited as ever. Besides the usual information, it contains many articles on subjects of special interest to our farmers and breeders, and should thus maintain its popularity."—**Leicester Post.**

"Mr. H. Stopes, the well-known barley judge, has something to say concerning barley threshing and dressing, and his remarks will doubtless be carefully perused by barley growers."—**Belfast News Letter.**

"The volume consists of about 250 pages, and is nicely bound in a coloured wrapper, on the front of which appear, in a most artistic frame, portraits of his Majesty the King and H.R.H. the Prince of Wales."—**Kenilworth Advertiser.**

"The list of societies has been made even more complete than last year, whilst the various tables and statistics which have been so much appreciated in previous years have been added to and brought up to date."—**Hampshire Chronicle.**

"From life-like photographs—of the great prize winners at the Smithfield, Birmingham, Norwich, etc., fat stock shows, is a very important one, and will sure to be appreciated." — **Bedfordshire Mercury.**

"Is now awaited by multitudes of agriculturists."—**Liverpool Courier.**

"Is quite delightfully illustrated."—**Daily Telegraph.**

"Contains a complete record of the past year, and includes illustrations and particulars of some of the principal prize-winning animals at the great fat stock shows."—**Essex County Standard.**

"Is got up in the same attractive style as its predecessors, and contains the usual comprehensive variety of subjects."—**Farmers' Gazette.**

"Is indispensable."—**Reynolds.**

"Is looked forward to by agriculturists as a trustworthy and interesting record." — **Worcester Chronicle.**

"About a score of articles of interest to farmers are supplemented by pleasing illustrations of rural life."—**The Times.**

"The statistics, which form an important part of the work, are more complete, whilst the addition of about a dozen illustrations—reproduced from life-like photographs — of the great prize winners at the Smithfield, Birmingham, Norwich, &c., fat stock shows, is a very important one, and will sure to be appreciated."—**Leamington Spa Courier.**

"Contains numerous articles on subjects of immediate importance to farmers."—**Globe.**

"The annual will be found as useful as ever, and is one of the works which can ill be dispensed with by either farmer or breeder."—**Nottingham Daily Guardian.**

"There are reference lists, illustrations, and pages of general information, all suited to the purpose of the annual, which is neatly produced."—**Sheffield Daily Independent.**

"Looked forward to by a vast number of agriculturists in all parts of the kingdom."—**Birmingham Gazette.**

"A wealth of useful information. It is an eminently practical guide to farming and stock-keeping, and contains facts and figures relating to the farm and markets."—**Liverpool Courier.**

"Is a creditable production."—**Farm and Home.**

"Contains numerous articles on subjects of immediate importance to farmers."—**Meat Trades Journal.**

"Contains numerous articles on subjects of immediate importance to farmers."—**Dorset County Chronicle.**

"Full as ever of information useful to the agriculturist."—**Weekly Dispatch.**

"An exceedingly popular one."—**Bristol Times and Mirror.**

"Is attractively got up, has the best of paper, printing, and illustrations, and the literary contents deserve much more than a merely formal word of praise, the subjects being fairly fresh as a rule, and well treated."—**Dundee Advertiser.**

"A well-known and important book to agriculturists in all parts of the kingdom."—**Northampton Daily Reporter.**

PRICE SIXPENCE (by post, 9d.).

1, ESSEX STREET, STRAND, LONDON, W.C.

tion was beginning to react on the towns, and several young fellows were going back to some of the villages. Whether they would permanently stay was another matter. If they paid a sufficient sum they would always retain the people. But to do that they must lessen the cost of production. They should use up-to-date machinery, and as little labour as possible, but the labour should be of the best. It would be better to pay 5s. a day to a man who could adapt himself to the new conditions than half-a-crown to one who couldn't.

Lord Willoughby de Eresby, M.P., suggested that they should pass a resolution asking the Government, in framing their Education Bill, to carefully consider the needs of the rural districts. At the same time he wished it to be clearly understood that he did not hold this out as a means of getting rid of rural depopulation. If they altered the system of education they would not stop the migration to the towns, but there were certain alterations in our educational system which would be of service not only to the farmers but also to the parents of the children. He believed that in Switzerland in certain months of the summer, when there was plenty of work to be done on the farms, the schools were closed altogether, and in winter the children worked at their lessons twice as hard (laughter). He could not believe that at harvest time it could possibly hurt children to help in the fields; it would be better than being at school. The question of rural depopulation, however, his Lordship regarded as an economic one, and he doubted whether any resolutions they might pass, or any action the Government might take, would alter the state of the case. It was one of those things that moved in cycles, and he believed the time was not far distant when there would be a turn in another direction. Rents and rates in towns were high and, as far as he could see, were bound to go higher, and he regarded that as the only solution of the matter. He moved the following resolution:—

"That this Chamber ask the Government, in framing their next Education Bill, to most carefully examine into and consider the educational requirements in the country districts."

This was seconded by Mr. Cheney Garfit, and carried unanimously.

Later in the day the annual dinner of the Chamber took place, at which Mr. Cheney Garfit presided.

Newcastle Farmers' Club.

The annual meeting of the Newcastle Farmers' Club was held at Newcastle-on-Tyne on the 11th inst., Mr. J. C. Straker, M.F.H., the retiring president, in the chair. The committee reported that twelve new members had been elected during the year, the total membership being 300. The accounts showed a credit balance of £14 11s. 4d. An interesting resumé of the year's work included mention of the appointment of a Trade and Traffic Committee of the Northumberland County Council as the outcome of complaints regarding inconvenience caused to the agricultural community by the inadequate provision of facilities for the conveyance of goods and live stock by rail; also, of a resolution passed in favour of adequate legislative measures to compel brewers to use malt and hops only in the manufacture of beer. It was also stated that the hon. secretary, Mr. W. A. Temperley, desired to be relieved of his duties, and the committee had passed a resolution regretting his resignation and recording their appreciation of the valuable services he had rendered during the nine years of his secretaryship.

On the motion of Mr. W. D. Foster-Coull, seconded by Mr. J. W. Wilkinson, the report and accounts were adopted.

Mr. J. R. Carr-Ellison was appointed president of the club for the ensuing year, the name of Mr. W. A. Temperley was added to the list of vice-presidents, and the four retiring members of committee were re-elected. The election of a new secretary, it was stated in the report, will take place at a special meeting on February 1.

A hearty vote of thanks was accorded to Mr. J. C. Straker for his services as president for 1901, the proposition being made by Mr. J. Knox Lyal.

Subsequently the annual dinner of the club was held, at which a large company was present, including the Bishops of Durham and Newcastle and the Mayor of Newcastle.

North-East Somerset.

The annual meeting of the North-East Somerset Farmers' Club was held at Chew Magna, on Tuesday, Mr. E. A. Kemble presiding. There was a good attendance of members and subscribers, including Lieut.-Col. Llewellyn, M.P., and Sir Edward Strachey, Bart., M.P.

The secretary, Mr. J. Tudball, first read the annual report of the committee, in which it was stated that the balance in hand at the end of the current year was £78 16s. 7d., compared with £60 19s. 5d. on December 31st, 1900; but that there are yet many unpaid donations and subscriptions, and if these should not come to hand the above figures will prove misleading. In concluding, the committee state: "We cannot close our report without alluding to, with expressions of great regret, the loss by death during the last year of Sir J. H. G. Smyth, Bart., and Sir Edward Strachey, Bart., both of whom had been generous contributors to this club for many years."

The Right Hon. the Earl of Warwick was elected president, and the following were added to the list of vice-presidents:—The Rev. H. G. Hellier, Mr. H. B. Napier, and the Rev. R. V. S. Penfold. The committee were setrengthened by th addition of Colonel McNair (Chew Magna), Mr. J. W. Banwell (East Harptree), H. Middle (Litton), and J. E. Blair (Newton St. Loe).

It was agreed to hold the next show at Chewton Priory on the last Wednesday in August.

On the motion of Sir Edward Strachey, Bart., M.P., it was decided that the North-East Somerset Farmers' Club should apply to the Central Chamber of Agriculture for admission.

The annual dinner was subsequently held, at which Mr. J. S. G. W. Stroud, one of the vice-presidents, occupied the chair.

Mr. C. A. Kemble, who proposed the toast of "The Members of Parliament for the County," said they were always very pleased to see present at their annual meeting the members representing any part of the county, and they had with them that night two gentlemen who were vice-presidents of the club, and who were conspicuous for the interest they took in agricultural matters and their advocacy thereof in the House of Commons. (Cheers.)

Lieut.-Colonel Llewellyn, M.P., who was very heartily received on rising to acknowledge the toast, said it was really a greater pleasure to speak at a gathering like that than at a purely political gathering, and in this he was sure his friend, Sir Edward, would agree. He thought if the Government could give private members a little time a considerable amount of good might result; but there was no chance at present for a private member with an idea, no matter how reasonable or practical, to carry it into law. For instance, he could name Sir Edward Strachey as amongst those in the House of Commons who took an interest in agricultural matters, but there was no chance just now for the private member to carry a useful practical suggestion into law. One question in which Sir Edward had interested himself lately was that of milk—a question which was important to his constituents and to himself. What they would like to see was that the farmer got not only a fair return for the milk he produced and sold, but that the milk was sold to the public in the large towns in the same wholesome condition as when it left their farmyard. Parliament would assemble this week, and they were told that a good deal of time would be taken up in matters affecting the rules of procedure. He knew nothing of what was likely to be proposed, but he hoped that the alterations, whatever they might be, would conduce to the honour of the British House of Commons, the Mother of Parliaments. He would like to refer to the carrying into operation of an Act which he thought would be both useful and effective, namely, the Light Railways Act, which was passed some time ago. He was glad to say that in their neighbourhood they had already the advantage of a light railway up the Wrington Valley—a line which he would like to see come further into their neighbourhood, because the more they saw of it the more convinced they were of the advantages to the farming community of a convenient railway system. He believed the introduction of this Act would be of great advantage to the country constituencies, and as years went on he thought they would find these railways extending, so that farmers might get their produce to large centres at less expensive rates. In concluding, the gallant member said it was a pleasure for him to meet Sir Edward and other friends at a gathering of that kind. Sir Edward had exerted himself unsparingly in the cause of agriculture, and they were all glad to know that he had succeeded another Somerset worthy as president of the Central Chamber of Commerce. (Hear, hear.)

Sir Edward Strachey, Bart, M.P., endorsed the views expressed by Lieut.-Colonel Llewellyn, when that gentleman said it should be their object to make the House of Commons a more efficient machine than it was at present for discussing more fully and more adequately the wants and the needs of the nation; but he (Sir Edward) would go further, and say that he was ready to support an alteration of the rules of procedure which would make the House of Commons more independent of the Government of the day, whatever it was, and would not tend to make the Government more independent of the House of Commons than it was. He thought it was high time that the length of the speeches of some of those members who spoke on any and every subject was curtailed. This would give an opportunity for the discussion of those questions which were of interest and importance to the community, and were now put on one side for want of time. It was satisfactory to know that the President of the Board of Agriculture had promised during the next Session to give prominence to some of the agricultural questions now before the country. He would like to point out that the report of the Committee on Food Preservatives recommended that there should be no colouring matter introduced into milk. That was a question which the hon. member for North Somerset and himself had fought in the House of Commons unsuccessfully; but they now had the satisfaction of knowing that the committee appointed to consider the matter had reported that they were right, and the Government wrong, in refusing to stop the introduction of this colouring matter. He objected to preservatives of a deleterious nature being put into milk and butter. He believed that more harm was done to the legitimate butter trade by colouring margarine than by anything else, and it was an abominable fraud upon the working classes that margarine should be foisted upon them instead of butter, and it was often sold by the shopkeepers in ignorance themselves. It was kindred questions to these which the House of Commons could not consider from want of time, and it was hoped that an alteration of the rules of procedure would give time for the discussion of the questions of real good and importance. (Applause.)

The Chairman, in proposing "Success to the North-East Somerset Farmers' Club," remarked that the club had been in existence for many years, but at its formation there were not many local organisations formed to further the cause of agriculture. He thought that that club had justified its existence, notwithstanding that the prices for cattle to-day were not so good as they were years since. That was not the fault of the club, but of the times, and he was not so sure but for that and like organisations prices would be a great deal lower. He was glad to know that the club was to be affiliated with the Central Chamber of Agriculture. He hoped with the revival of agriculture that they would see an increase in the growth of corn. He did not mind saying that he was a Fair Trader, and that he should like to see a sliding scale adopted which would encourage farmers to lay down more corn land, and so keep in the country a great deal of the vast sums of money which now went out of it.

Mr. C. A. Kemble responded, and congratulated the members upon the success of the day's proceedings. He remarked that if the usefulness of the club was to be maintained the members must progress with the times. There were several ways by which interest might be sustained and good result. The practical side of farmwork might be recognised and encouraged, and amongst these might be included three essentials — thatching, hedging, and ditching.

Northumberland.

The annual general meeting of the members of the Northumberland Agricultural Society will be held at Newcastle on the 21st inst., Lord Ridley in the chair. The usual business will come before the meeting, viz.:—To receive the council's report and statement of accounts; to elect new members of the society; to fix a place and date for holding the annual show; to elect vice-presidents for the ensuing year; to elect ten members of the council, as ordered by the articles of association; to elect a finance committee of four members of the council; to elect a local committee for the purposes of supporting the society; motion by Mr. William Bell—"That the sum of £200 be set aside to provide for the continuation of the pedigree bull scheme"; motion by Mr. Robert Carr—"That the Board of Agriculture be petitioned by this society to remove all restrictions against the free importation of Canadian cattle into this country." The report of the council states that the annual revenue account shows a loss of £7 10s. 6d., the cash balance at the credit of the society now being £1,284 18s. 3d. The annual show for 1902 will most probably be held at Newcastle-on-Tyne, in which event the council advise an amalgamation with the Newcastle Horticultural Society.

Rutland.

The Rutland Agricultural Society's annual meeting took place at Oakham, on Monday. The Earl of Gainsborough, the President, was in the chair, and stated that the accounts were, on the whole, very satisfactory, for after paying expenses they had a surplus of something like £26. They had an exceedingly good show last year, the entries being numerous, while the general excellence of the exhibition was most gratifying. In gate money they established a record, the takings amounting to £53, against £43 the previous year. He believed it was £10 more than they had ever realised in one day since the show was started. One thing which he though reflected very great credit upon the judges was the fact that their expenses only amounted to £3 8s. 6d., the bulk of which went in railway expenses for one gentleman who had to come a long distance by rail. Every one of the judges came practically at their own expense, and some from a good distance, and the society was very grateful to them. They gave their time, and many must have been considerably out of pocket. The affairs of the society were

certainly very satisfactory; they were really about £24 better off than they were last year.

A few alterations were made in the list of vice-presidents, and the four retiring members of the committee. Messrs. Rowell, Painter, J. Royce, and Simpson, were re-elected. Mr. J. Littler was re-elected veterinary surgeon. Mr. D. N. Royce auditor, and Mr. Scott treasurer, and on the motion of Mr. T. Bradshaw, seconded by Mr. Adam, these gentlemen were heartily thanked for their services during the past year. Mr. Adam proposed the re-appointment of Mr. R. Healy as secretary, remarking that he had discharged his duties in a most efficient way. This was carried unanimously.

It was resolved to hold the show this year on September 4th. Other dates were submitted, but it was pointed out that shows had already been fixed for these, and it was thought advisable to have the exhibition on a day which would not clash with other societies in adjoining districts. The various classes in last year's schedule were then revised.

Mr. J. T. Bradshaw observed that if they gave £11 more in prizes in the horse section the Shire Horse Society would give a gold medal instead of a silver one. It was agreed to adopt the suggestion, and to create an extra open class for the best shire filly, three years old, the first prize to be £8 and the second £4. It was decided to insert the words "a tenant farmer" in all the classes except the open ones, after the words "having been the property of the owner."

The Chairman said he had received a letter from Sir Arthur Fludyer, asking that his prize of £5, which had hitherto been given in class 33, for the best four-year-old hunting mare, should be given to a one, two, or three-year-old horse which had not been docked. He added that Sir Arthur had an objection to horses being docked. It was decided to give Sir Arthur Fludyer's prize for the best undocked horse in classes 30, 31, and 32, the £5 prize removed from class 33 to be substituted by a similar one from the society's funds.

The Right Hon. G. J. Noel proposed an alteration in the conditions of the lightweight class, which had hitherto stated the weight should be 13 stones and under. He had heard many complaints about this, as the heavy-weight often carried off the prize. He thought it should be made to read "to carry 13 stones and under." This suggestion was agreed to. It was pointed out that on the show day many exhibitors experienced difficulty in getting their stock there in time, and it was agreed to try for one year a proposal that the time for admission be not later than eight o'clock instead of seven.

Suffolk Horse.

The Council of the Suffolk Horse Society met at Ipswich on Tuesday, Sir Cuthbert Quilter, Bart., M.P., presiding. The first business of the meeting was to select six names, to be forwarded to the Royal Society for their consideration when appointing the Suffolk horse judges.

Mr. James Toller said there was one gentleman he should like to propose who was outside the county. He referred to Mr. Sugden, of Staffordshire, and should like to see that gentleman amongst the six names sent up to the Royal.

Mr. W. Byford thought they should exercise the utmost care in making selections from localities where there might be but few Suffolks. He was, perhaps, one of the oldest exhibitors at the Royal and other shows, and he found that there was often the greatest prejudice against the Suffolks on the part of the Shire men. It behoved them, therefore, to act with the greatest care in this matter. Before they selected a fresh man they should know something about him and the locality from which he came.

Mr. Alfred J. Smith said he believed the gentleman named was a good judge of horses.

Mr. James Toller said he certainly should not have brought the name forward unless he had good authority for so doing.

The following names were agreed upon:—Mr. F. G. Cook, Mr. Sugden (Staffordshire), Mr. W. Toller, Mr. J. Sturley Nunn, Mr. D. F. Smith, Mr. W. Byford, and Mr. Godfrey Hempson.

The date of the general meeting of the society was fixed for March 18th.

The next business was to select twelve names to be submitted to the general meeting to fill vacancies on the Council. The following were selected:—Mr. A. T. Pratt, Mr. F. S. Lewin, Mr. R. Edgar, Mr. E. A. Cook, Mr. W. Whitlock, Mr. R. Eaton White, Rev. Mr. Taylor, Mr. W. Estaugh, Mr. Peter Hay, Mr. W. E. Wilson, Mr. H. Turner, and Mr. B. A. Posford.

Seven new members were elected, and Mr. R. Eaton White was made a life member of the society.

Mr. S. M'C. Macmillan, of Laighwood, near Birnam, who was known throughout Scotland as an extensive sheep farmer and an excellent judge of stock, died suddenly on Sunday morning last. Laighwood is one of the largest farms on the Atholl estate, and had been in the occupation of Mr. Macmillan for the past twenty-five years.

BARLEY AND MALT.

By Hordeum.

Sowing.

From the way the season seems working, and bearing in mind a number of the old saws, especially those that fit in with a preconceived opinion, it seems probable we may this year have the swing of the pendulum in favour of early sowing. As last year was the latest on record, we may get a little of the supposed law of compensation and see our fields ready for sowing this Spring at an early date. Whatever happens, it is certainly wiser to be ready for any contingency than to let things drift.

It is true a number of our best seedsmen try to induce their customers to order early, but it would be a distinct gain all round, and especially to the farmer, if no such inducement were needed. It is certain seed will soon be required. It is either on the farm already or must be obtained from some outside source.

Change of Seed.

has been made by so many men with satisfactory results that it seems a desirable and commendable practice. Consequently, we may take it for granted that many growers are already thinking, or soon will be, of buying as much as they may require.

Now, there are two very practical questions at the outset which can be just as well determined at once as at any other time. These are, How much? and what?

The differences in opinion as to how much barley should be sown per acre are very extraordinary. Although it is now practically impossible to find any man still sowing as much as six bushels per acre, there are still very many who use over four bushels, and there are less who use a bushel and a-half.

Countless experiments have been made for very many years past with a view to determine the best amount to use, but the answer to the question yet remains to be given. It seems such a simple thing.

How Much to Sow?

is one of the simplest experiments that any man can gain light upon for his own guidance, with a very slight amount of care or bother. Any field can be taken which is at all uniform in the character of soil, and one half can receive four or six bushels, whilst the other half can have six or eight pecks or more. From the first tillering notice can be paid to the differences, if any, right up to the time of harvest, and then if the field is big enough to carry two stacks, one side can be kept apart altogether. If not, a very small amount of trouble is given in dividing a stack before threshing and keeping the produce apart, when all differences in quality and quantity are easily determined.

It seems very certain that if good, practical farmers are satisfied with the result of sowing six pecks, that the men who use sixteen are overdoing it, and wasting seed.

After making due allowances for all differences in soil and nature of grain sown wide, so a divergence does not seem desirable. Some ingenious theorists have tried to show that the number of grains per bushel is an important factor.

Variations in Number

are much wider than are commonly supposed, but after all the widest difference does not amount in practice to three to one. But using the same seed for the experiment on two parts of the same field reduces the limit of variation under this heading to nothing. Consequently, if one side shows any gain over the other, after all factors are allowed for duly, that would seem to be the course to adopt, and it is a great pity the whole subject is not taken up on a sufficiently general scale to make the result satisfactory and definite. A much more important question really is

What to Sow?

for here, again, we find the widest differences of opinion amongst eminently practical men of sound judgment. There are many breeds and types of barley, yet each one finds ardent champions and equally dogmatic detractors. The matter is one in which the opinions of buyers and users ought to carry some weight, only one finds some classes of brewers and maltsters affected by mere prejudice to such a degree that very scant deference can be paid to their opinions.

A ludicrous instance of this occurred only a few weeks ago, when a brewer wrote to the *Field*, stating that six-rowed barleys were not approved and used by brewers, ignoring the fact that vast quantities of this very grain have been regularly imported for many years, and malted and brewed with the utmost satisfaction. Very sorry-looking stuff some of it has seemed at times, and the percentage of husk, or thick "great coat," has been very heavy, yet even in Burton itself vast quantities have been used. We have to assume, therefore, either that prejudice makes men try to cover up the facts, or they use this stuff, which is often called chicken food, without knowing its true character, and consequently their prejudice is of a very puerile type.

By Lupulin.

Home Notes.

The Borough.

Commencing with spirit as soon as the holidays were concluded, business has developed to an extent quite exceptional for the period. The absence of any choice samples has compelled buyers to be less exacting, and they have taken over many of the medium lots previously rejected, and during the past week have even bought with comparative freedom some inferior growths. Enquiries for "olds" and "old olds" have also come forward, and several transactions have taken place therein. This general activity has strengthened the tone of the market, and slight advances have been obtained for hops that have any pretension to colour and quality. With respect to the lower sorts, wanting in colour and more or less diseased, although they are changing hands with sufficient rapidity to warrant higher prices, buyers have thus far refused to advance their offers, and the range of figures at which business is doing done is so absurdly low that I hesitate to repeat it.

This season's experience is pregnant with lessons for English growers; if they do not take them to heart, and profit by them, they must be far less alive to their own interests than I suppose them to be. May I ask my friends if they have ever worked out this simple calculation? Take this year's crop at 650,000 cwts., which apparently will not realise a higher average than 40s. per cwt. The total gross value, therefore, does not exceed £1,300,000, which sum will be largely discounted by expense before it reaches the hand of growers. Supposing that instead of this large yield of inferior stuff, the supply were limited to 450,000 cwts. of well-matured, sound hops, which would realise an average of 80s.; the total money value would then be £1,800,000, showing advantage on the selling figures alone of half a million. If to this be added the saving effected in cultivating and especially in picking the smaller crop. We may safely reckon upon a total balance in favour of the industry of at least £750,000. Surely these figures are worthy of consideration. If they are incorrect, let me be put right, but if, as I believe, they contain the germs of truth, I trust my friends will accept and act upon them, and save themselves from the painful errors of the season of 1901.

The Trade in Foreign Hops

is practically confined to American growths. A consignment of 2,800 bales from Oregon, sent under the auspices of the local hop growers' association, was disposed of before the arrival of the hops at prices quite satisfactory to the shippers, and all Pacifics are readily bought at high and improving prices. It is rather hard for English growers to know that there is no difficulty in selling such hops at 80s., while our own produce is fixed at such miserable figures. But brewers want preservative strength, on the one hand, and delicate flavour on the other, and many of them are, therefore, content to pay high prices either for American or Bavarian hops, in order to secure those qualities of which our season's growth is so generally deficient. Had we the hops to offer, which would meet the requirements of consumers, there would have been no trade at all for foreign imports this season.

Foreign Notes.

Nuremberg.

After a short period of comparative inaction, which characterised the early days of the new year, business has developed, and during the past week the demand for hops was sufficiently brisk to established a very firm tone, accompanied by manifest advance in values. As arrivals have not nearly equalled the sales, the holdings of dealers have been reduced to such an extent that they are not now pressing buyers to operate, as considerable confidence is felt that much higher prices will be obtainable in the near future. Strength is, therefore, the chief feature of the market, and

---

All official reports and notices of the National Association of English Hop Growers will be printed in the MARK LANE EXPRESS, *which will also contain all current information likely to be of interes and benefit to the members of the society.*

its continuance is the more certain, as its origin is based entirely upon local requirements; the export trade being unimportant, and exercising very little influence upon the position.

Belgium.

The market is generally much firmer than before the holidays. On the Brussels Bourse values have advanced by 2 to 3 points, and the diminution of stocks in first hand is creating an upward movement of price is Alost and Papernighe. Dealers are finding more difficulty in purchasing sufficient to cover their sale contracts for January and February, as growers are very firm in their insistance upon higher prices than buyers are disposed to give. The Belgian imports for eleven months of 1981, ending Novemebr 30th, amounted to 1,487,972 kilos, being considerably deficient of the quantity imported in the same months of the previous year. As usual, the bulk of these (equal to six-sevenths of the whole) came from Germany, England contributing only a small quantity, and American hops having apparently gone out of Belgian consumption. The exports from Belgium during same period were 878,222 kilos., the largest part going to France, the shipments to England being very small. The total exports exceeded those of 1900 by about 100,000 kilos.

America.

Business in hops was necessarily limited during the holidays, and for a few days after their conclusion, but during the past week it has been resumed with vigour, and in presence of the strong home demand, values are gradually but steadily advancing. The arrival of hops at New York from September 1st to December 27th last were 49,513 bales, whereas in the same period of the previous year, 113,666 bales were received. The exports to Europe for the season present a similar striking contrast, being 44,561 in 1900, and only 22,494 bales in 1901. Careful enquiries in the hop-growing districts furnish the information that very few hops are now held by growers, the agents of buyers having been specially active during the past few weeks. The general position of affairs indicates increasing strength, and it may be concluded with comparative certainty that exports will be still further diminished, as local consumers will practically absorb the whole of the available balance of the crop.

Looking Backward.

(*Continued from page* 59.)

Parliamentary Action

during the past year has not affected the prospects of our industry to any important extent. In the early part of the session, Colonel Brookfield obtained from the Chancellor of the Exchequer an undertaking that from October 1st last, the books kept in all breweries for the information of the Officers of Inland Revenue, should include statements of the hops consumed, and also particulars of any preservatives or other substances used in substitution for or supplemental to hops. The returns arising therefrom will be valuable, in enabling us to calculate correctly our annual demand, and in regulating our supplies accordingly. The speculative estimates of consumption by which we have hitherto been guided, have, I fear, led us into error, as I am inclined to think they have been somewhat exaggerated.

The Beer Bill (the outcome of the Arsenic Scare) passed its second reading March 27th by a majority of 112, in face of the strenuous opposition of the Government. The House of Commons thus most emphatically expressed its opinion, of the necessity of further legislation for securing the purity of our national beverage; but it was admitted on all sides that the Bill was not sufficiently definite, and was practically unworkable in detail. The question was therefore shelved for the remainder of the session, and its promoters have been, in the meantime, engaged in redrafting the measure, which will be again discussed at an early date.

With reference to this subject, it may be recalled that during the period of alarm created by

The Beer-Poisoning Cases

all the materials used in brewing were investigated, and several unfounded statements were made concerning the communication of arsenic to beer by means of hops. Brewers even demanded from the traders that they should guarantee their hops to be free from the poison. The London Hop Trade Association took the matter up in earnest, and, having consulted Mr. Bryant, the eminent analytical chemist, issued a circular, quoting Mr. Bryant's letter, which declared that the accusation against hops was absolutely without foundation, and that, therefore, the traders were not disposed to give the guarantee demanded. Nothing further has since been heard of the matter; we may, therefore, safely conclude that our product is honourably acquitted of any share in the sad effects of the tainted glucose.

S.-E. Agricultural College at Wye.

This institution now occupies an important position towards the English hop-growing industry, as it is recognised as our centre of scientific investigation into the cultivation, training, and curing of our crops. The information already attained by the staff is accepted by advanced planters as most valuable, and I am therefore glad to record, that during the past year the opportunities for study at the college have been extended by the enlargement of the buildings and by costly additions to the scientific apparatus. These extensions were inaugurated in the summer by the Right Hon. the President of the Board of Agriculture, who was supported by a very numerous assembly of farmers and others interested in the college.

The annual conference of planters was held in November, and was much more largely attended than any previous similar gathering. Colonel Brookfield, M.P., presided, and the increased and more enlightened interest taken in the proceedings by the growers, proved that the days of indifference to science are rapidly passing, and that modern farmers are becoming more desirous to avail themselves of the advantages now brought within their reach.

I note that Mr. Hall, the esteemed and learned principal of the college, has visited Worcester and other hop-growing centres, and addressed several meetings on the subject of the college investigations.

The Borough Factors

have met in consultation, and have decided to issue a circular to their clients to the following effect:—"In consequence of the increased expenses incurred by factors in warehousing growers' hops, we are compelled, in order to lessen our loss, to make a charge of 4d. per pocket for receiving, weighing, and delivering on all hops sent into our warehouses for sale. In order that our commissions for selling hops may be placed on a more equitable basis, we hereby agree that every rise in price of 5s. per cwt. shall bear its proper proportion of the existing scale of commission." These resolutions will take effect from September 1st, 1902, and will, I trust, work out, on the whole, for the benefit of growers, although I am prepared to hear of some objection to the increased charge mentioned in the first paragraph.

There have been but few changes in the *personnel* of the Borough hop-traders. One defaulting member has been removed by the hand of Justice from the scene of his operations, and is now suffering the penalty of his errors. A large firm engaged in the Continental and the home trade, was compelled to consult its creditors early in the season. The offers made for the compounding of liabilities being considered unsatisfactory, it seemed probable that the business would be liquidated by the Official Receiver in Bankruptcy. I am glad to learn that this extreme course has been obviated, by the transfer of the business into the hands of another substantial house, who will unite it with their own. The general business of the past year, has been very unsatisfactory both to merchants and factors. The former were compelled by the downward course of the market to make serious sacrifices upon their early purchases, and in consequence of the low prices which have prevailed, the commissions of the latter were very unremunerative.

The Worcester Hop Fair

of September last was made notable by the revolt of the growers against an important firm, who for many years have exercised almost supreme influence over the district trade. Considering themselves aggrieved by a circular issued to brewers by the firm referred to, the growers stopped the business of the fair, blockaded the partners of the firm in their local office, and kept them prisoners during the whole of the afternoon.

My record of the events of the year would be incomplete if I did not refer to the great loss sustained by our industry in the death of

Miss Ormerod, LL.D.

This lady, whose life was devoted to the study of entomology, rendered incalculable service to hop-growers by her investigations into the origin and life history of the numerous insect pests that hinder the growth of our plants. The information she obtained was always freely placed at our disposal, and she never failed or delayed in answering enquiries or reporting on specimens submitted to her. Her published works remain as evidence of her indomitable perseverance, and their value will assist in modifying the regret with which the intelligence of her decease was received.

Another good friend to our cause has been taken from us in the person of Mr. A. J. Stanton. For many years editor of this journal, he was anxious to promote the interests of English hop-growing by making it a feature in his columns. To him is due the initiation of "Lupulin's" weekly contributions, and the writer has confidence that his efforts have not been without some good results.

In conclusion, I trust that our future will not be darkened by the clouds that have enshrouded our past, and, for the encouragement of my readers, I venture upon a classical quotation: "Sperate et vosmet rebus servate secundis," which, being freely interpreted, will read: "Live in hope, and reserve yourselves for more prosperous circumstances."

The attention of planters has been directed during 1901 to certain

New Inventions,

having for their object the better treatment of hops during the curing process. Chief amongst them, and the most novel, is the hot air drying apparatus devised by Messrs. Jones Bros., of Northington, Worcester. This arrangement approaches nearer to an ideal system of hop curing, than any that has preceded it. The absolute certainty with which the heat can be regulated, its innocuous character, and the rapidity of its action upon the hops, are features in the invention which deserve the careful attention of growers. The cost of laying down the necessary plant may perhaps interfere with its general adoption, but advanced planters will surely examine its merits. The introduction of such a system is a decided step forward on the scientific side of our industry.

Mr. Blackie, whose well-known reversible kiln boxes are appreciated by those who have tried them, has patented a modification of his system, by which he proposes to reduce the initial cost, and to render the receptacles for the hops on the kiln floor, as portable. Mr. Joseph, of Farnham, has also patented an arrangement of boxes to carry the hops to and from the drying floor, and to retain them during drying, and claims thereby to increase the heating area of the floor, and thus reduce the consumption of fuel, at the same time securing the cones unbroken. This invention has not yet gone beyond the model stage, and has yet to be tested practically.

The Associations

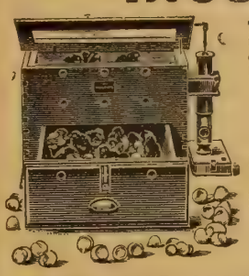
which watch over the interests of the two main sections of the industry, have been engaged in work to a greater or less extent. The Council of the N.A.E.H.G. has held several meetings, at which many important matters were discussed. The clause in the Beer Bill prohibiting the use of hop substitutes was initiated by us, and inserted into the Bill by our President. At a general meeting of growers held in September, the position of the crop and the probable course of the trade were carefully considered, and certain conclusions were expressed in a circular afterwards issued to the whole body of planters. Had the advice then given, been universally adopted, the trade would have been directed into much more satisfactory lines than we have since experienced. Unfortunately for the industry, the absence of unity and co-operation is its fatal weakness, and I earnestly trust that the forcible and painful lesson of the past season will induce our people to rally round the national flag, displayed for their guidance by our Association Leaders.

The proceedings of the London Hop Trade Association have taken an ordinary course, as no uncommon or striking circumstances have occurred to engage the attention of the members. A few, comparatively unimportant cases of settlement of disputes by arbitration have again demonstrated the superiority of such an arrangement over litigation. The existence of such a compact combination in the Borough, should, however, act as a powerful incentive to all English growers to combine in like manner for self-protection.

Death of Captain Tibbits.—It is with regret we record the death of Captain John Maunsell Tibbits, of Barton Seagrave, Kettering. The deceased gentleman, who was in his eighty-second year, was an enthusiastic and highly successful farmer and horse breeder, and his death will be mourned by many agriculturists as that of a friend. Captain Tibbits also wrote much on agriculture and horses, and was for years a valued correspondent of the MARK LANE EXPRESS. In 1858 he married Lady Hood (mother of the present peer) as her third husband, and she has thus outlived them all.

The Governors of Guy's Hospital have issued a circular to the tenants of their Lincolnshire estates, situate in the Sutton Bridge district, stating the terms upon which the hospital authorities offer to sell. Thirty per cent. of the purchase money is to be paid down at once, and the balance by such equal half-yearly instalments as shall repay principal at 3½ per cent. interest in a period of 30 years. The Governors also state that they have on two recent occasions received bona-fide offers for the purchase of the whole of the Lincolnshire estates at Sutton Bridge on a basis apparently calculated on a far higher scale than that of the present rental. Fifty-two acres of the property are let in allotments, and there are also a number of small holdings, but the tenants of these have not received the option of purchase, but a syndicate of local gentlemen interested in small holdings are taking steps to secure the purchase of the allotment land, so as to continue the existing allotments.

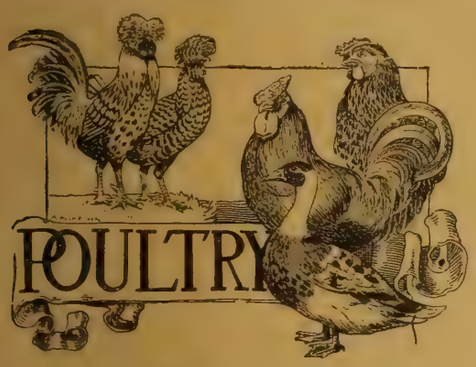
CHICKENS ALL THE YEAR ROUND
BY USING
Hearson's Patent
CHAMPION INCUBATORS.
Manufacturers by Appointment to
H.M. THE KING.



The CHAMPION INCUBATOR has now been before the world over 20 years, and has achieved a reputation which eclipses all competitors.

Address—CHAS. HEARSON & CO., Ltd.,
"D" Department,
235, REGENT ST., LONDON, W.

COVERDALE'S
Poultry Powder
The Wonderful Chicken Tonic.
It won't prevent Chickens Dying in the Shell,
BUT, once hatched, and properly fed with food containing just a sprinkling of
Coverdale's Poultry Powder,
you are assured of success. A 1/3 tin is enough for 600 chickens for a week, or 30 chickens for 20 weeks. 1/3 spent in this way might save you 15/-.
Coverdale's Poultry Powder
is not a spice, but a scientifically prepared tonic. It contains all the elements necessary for producing perfect health and condition—it is THE Powder for bringing forward young chicks. We want every Poultry-keeper to send a penny stamp for a Free Sample, sufficient for 20 chickens for two days.
Sold in Tins, 8d., 1/3, and in Bags, 3/- and 5/9, post free.
COVERDALE'S POULTRY POWDER, Ltd.,
20, Parliament Street, YORK.



AWARDED THREE PRIZE MEDALS FOR THE BEST INCUBATOR, DAIRY SHOW, 1898, 1900, 1901.
SEVEN OTHER GOLD AND SILVER MEDALS IN ENGLAND AND CONTINENT, 1901

The Largest Manufacturer of Incubators in the World.

Food-Stuffs for Poultry.*

(Copyright.)

By H. B. GREENE, M.R.C.S.

* A lecture delivered under the auspices of the Utility Poultry Clud by Mr. N. B. Greene.

If the utility poultry-keeper will only apply the same principles of the combination of the necessary constituents to the feeding of his bords he will assuredly find that, even if the food-stuffs should cost a little more (and it does not follow that they will) a very much larger profit will be secured upon the increased and improved produce obtained by adopting a rational system of feeding.

When we speak of the "nutritive ratio" of any dietary we use a term which signifies the proportion in which the nitrogenous, as compared with the carbonaceous constituents enter into that dietary. The key to successful feeding lies in the skill with which the poultry-keeper arranges the nutritive ratio of that diet and so selects his food-stuffs that each group of chemical constituents will be represented in no more nor less than the necessary proportions.

That proportion should be so adjusted that there will be one part by weight of albuminoids to 4½ or 5 parts of carbonaceous food-stuffs.

To put it more plainly, out of every 100 parts by weight of poultry food supplied in a daily ration, the percentage of the four necessary groups should be as follows:—

Nitrogenous	12 to 15 per cent.
Carbonaceous	55 to 65 ,, ,,
Salts	1 to 4 ,, ,,
Water	32 to 16 ,, ,,

Whether the minimum or maximum figures are taken in compiling a diet will depend upon such varying conditions as the breed and size of the birds, their range of liberty, the climatic conditions of their surroundings, and the amount of produce, either in flesh or eggs, which they are at the time expected to manufacture.

Every poultry-keeper's store room should contain a tabulated list of the chemical composition of all the principal poultry food-stuffs in common use, with the aid of which it is not difficult to calculate a number of diet tables to suit all conditions under which poultry are kept, and which will conform in ratio of their constituents to the standard or ideal ratio.

For example, let us suppose that we have some fowls which have gone through a laying season as well as through their moult, and are doing what members of the theatrical profession call "resting." Let us build up a suitable dietary for these birds.

The morning meal might consist of a mash made up of:—

By weight.	Nitro.	Percentage of Car.	M. Salts.	Water.	Tl.
2 parts middlings ..	36	126	10	28	200
1 part barley meal..	12	73	3	12	100
1 part meat scraps..	16	18	4	62	100
Divide by 4.....	64	217	17	102	400
Per cent. of relative materials	16	54¼	4¼	25½	100

Now, on comparing these resulting figures with the standard laid down as advisable, we find that the nitrogenous materials are in excess while the carbonaceous are deficient. For the evening meal we would therefore select a grain which will correct the difference and balance the day's diet to the requisite standard.

Such a grain is wheat, and the result will be:—

	Nitro.	Percentage of Car.	M. Salts.	Water.	Tl.
Evening meal—wheat	12	74	2	12	100
Per cent. of morning meal was	16	54¼	4¼	25½	100
Divide by 2.....	28	128¼	6½	37½	200
Per cent. of relative materials	14	64⅛	3⅛	18¾	100

in accordance with standard ratio.

Foods for Egg-Production.

But the utility poultry-keeper naturally desires his birds to do more than rest. He expects them not only to lay, but to lay often, to lay large eggs, to lay eggs rich in nutriment.

An egg is often spoken of as being full of meat, and the saying is certainly appropriate, for eggs stand in the same nutritive relation to the embryos of oviparous animals as milk does to the young of mammalia.

Both are in their way perfect foods, and both are produced under conditions which are attended by loss of strength and physical degeneration, unless the system which is parting with so much nutriment is daily replenished by a supply more than sufficient to replace the loss. What this enormous loss is can best be realised by the following facts. A pullet weighing, say 6¼ lb. will lay an egg of 2¼ oz. (average weight). If both carcase of pullet and egg be analysed and the weight of water contained in each be deducted, it will be found that the total remaining solids (albumen, fat and salts) will, in the case of the carcase, weigh 26 oz., while the same solids in the egg will turn the scale at 7-16ths of an oz. In laying each egg, therefore, the pullet parts with about 1-60th part by weight of the total solid nutriment of her own body. Hence the necessity for a compensating increase in the proportion of solids in the diet in order to supply the nutriment for egg-formation over and above that required for growth and the maintenance of warmth, and this addition to the diet can best be effected by an increase in the nitrogenous supply; for if the carbonaceous foods are given in excess, fat is laid down around the egg organs, which, by its mechanical pressure, interferes with the formation and passage of the eggs, or else congestion of the liver occurs, causing sluggish circulation in the oviduct and consequent inflammation of its walls. In either case, diminution of the egg-supply is the result. The nitrogenous ratio can be increased by including oats, clover, hay, granulated meat, cut bone or bone meal, and green food.

I am convinced there is no better grain than good, plump oats to promote laying qualities, therefore let that be the most frequently-selected of the grains, and next to that wheat is to be commended. Clover hay is used largely in America in the diet of laying hens, either freshly-cut or dried. The dry hay is chopped very fine and steeped in hot water before mixing with the soft food, or is ground into a meal.

Clover hay has a high albuminoid ratio (about 1 : 3), and is therefore a handy addition to diet when its albuminoid ratio must be increased.

Green food of any kind is another necessary addition to the diet of laying fowls, and it has been clearly proved that in confinement a given number of birds will lay more eggs when green food is added to the dietary than the same number of birds of equal age and breed, kept under similar conditions with the exception that green food is withheld, although the size of the eggs is not affected.

But the addition of meat, whether in the form of granulated meat or a chopped-up paunch, will not only produce an increase in the number of eggs laid, but size and weight of the eggs will be greater. Most of all will this be the case when freshly-ground bone is used to increase the albuminoids, and in this particular ground bone is much to be preferred to ground meat meal, as the following experiment, conducted at the West Virginia University Experiment Station, proves.

Thirty-four Barred Plymouth Rock hens and two cocks were divided into two similar lots, and fed upon the same rations of grain, meal, water, and grit, but to the diet of one lot was added dried meat meal, while to the diet of the other lot was added ground fresh bone.

The experiment commenced on October 25th, and continued for 120 days.

The results were that the lot which was fed with ground fresh bone not only laid more and larger eggs, but they increased considerably more in weight and were healthier than the meat meal lot.

(To be continued.)

The Wet Egg.

Sir,—An egg when it is laid is a wet egg (the shell is wet), and the longer you can keep an egg wet the fresher it will remain. This is a truth expounded I believe, for the first time, and has never before appeared in print. Why do we hear so much, especially through the winter months, about bad and stale eggs? We know that hens, with all their faults, never lay stale eggs; we also know, to our cost, that but few hens during the winter lay any eggs at all, good or bad! Then where do we get our stale British eggs from? We stupidly make them stale by dry storing. If all British eggs were wet stored the day they were laid, such a thing as a bad or even an indifferent egg would become a novelty, a curiosity, instead of being an everyday article of commerce. We all know that an egg becomes

stale by keeping, but let me add, by improper keeping. If an egg is kept a week it is far from fresh, if kept a month it becomes very stale, even objectionable; if kept three or four months it becomes what is termed "the egg," "shop egg," "the foreigner," "not warranted," or, to be more precise, the bad or rotten egg!

We all know what dry storing is, when we look at a lot of eggs in a shop window or upon a shelf in the farmer's larder. Wet storing is the placing of eggs the day they are laid in glass water, and leaving them there until they are sold or required for immediate use. It matters not whether they have been wet stored a week, a month, or even five or six months, they continue equally fresh and always good alike. Surely this is a matter of some importance to the British farmer, the shopkeeper, and to every housekeeper. There is one way, and only one way, of forcing our farmers and shopkeepers to practise a little care and attention on the freshness of the eggs they supply. Let all housekeepers refuse to purchase British eggs from any shop unless they see them taken wet out of the preserving pan, and let all shopkeepers refuse to take in farmers' eggs except with a guarantee that they have all been wet stored the day they were collected from the nests. There is no more trouble to wet store than to dry store, the only difference being placing the eggs in a dry box or basket in the one case, and into a bucket one-third filled with water glass in the other instance. Where, then, is the extra labour?

Lime water has, for a century or more, been used in many private families as a preservative, but water glass is far better. The American and our own agricultural experimental farms and colleges have conclusively proved that glass-preserved eggs, even after six months' storing, were as nearly equal to a "new-laid" as a preserved egg can possibly be. Eggs kept in lime water, after several months' immersion, are apt to partake of a limy flavour, and are only useful for kitchen purposes, but not for the egg cup. I can speak personally as to the efficacy of water glass, for I have just finished two nine-gallon barrels of eggs, which I so preserved last spring and summer. These eggs proved as sound and good as when I stored them nearly six months back; and, indeed, many of them, when the top was removed, retained within that "milky" matter so characteristic of an egg taken straight from the nest.

All foreign and imported eggs are of necessity more or less stale and of uncertain age, having been laid weeks, and sometimes months, before they reach our markets. But the foreigner is more alive to his own interests than we are, and already they are beginning to practise the wet storing in water glass, and unless we mend our ways the day is not far distant when the stale, dry-stored egg will become the speciality of the British farmer and shopkeeper. It took twenty years before our farmers could be induced to adopt, even here and there, the Dutch factory system, to secure a good butter of uniform quality; how many years will it take us before we shall trouble ourselves to preserve the freshness of our eggs? As water glass is now an article of commerce, and quite cheap, let us hope that a jar of it may soon become a fixture in the larder or storeroom of all householders in town and country who can appreciate a fresh egg in preference to a more or less stale or bad one.

Burbage Hall, Leicestershire.

AGRICULTURAL LAW.

Milk Churns as Measures.

A case of considerable interest to dairy farmers was heard at the Hull City Police Court on Monday, when Mr. Joseph Travis, of The Grange, Shottle, Derbyshire, was summoned by the Hull Corporation for offences under the Weights and Measures Act. Mr. H. A. Learoyd prosecuted for the Corporation, and Mr. J. O. Andrews, barrister, Leeds (instructed by Messrs. Smith and Bostock), appeared for the Derby County Dairy Farmers' Association, who defended the action.

Counsel for the prosecution stated that two summonses had been taken out against the defendant under the 25th and 29th sections of the Weights and Measures Act of 1878. Under the one section he was charged with unlawfully using a milk "churn" deficient in capacity, and under the other he was charged with using a "churn" which was not stamped. The case, he said, was one of considerable importance, as it was full of difficulties. Of technical difficulties there were none; the real difficulty arose upon what he might call the moral side of the question. The defendant, last May, entered into an agreement—or an arrangement—with Mr. Charles Riley, a wholesale milk purveyor at Hull, to supply him daily with milk at so much per gallon; and the supply continued until the end of September, the milk being sent in large vessels technically called "churns."

Now, he would prove that these churns were used as measures; that they were unjust, not verified, and unstamped. He was quite aware of the great difficulties connected with the use of these churns. They were submitted to rough usage in railway transit, and got so badly dented and delved that their holding capacity was reduced, and, as measures, they undoubtedly became unjust. There was no difficulty whatever in stamping or in verification, for which elaborate preparations had been made by the Board of Trade; as a matter of fact, during the last five years 560 churns had been verified in Hull.

Counsel then read correspondence which passed between the defendant and Mr. Riley, showing that from the 1st of June, soon after the arrangement was begun, complaint was made that the milk "measured out short," and the complaint was repeated at intervals. Finally Mr. Riley took a churn to Mr. Crane Cooper, the chief inspector at Hull, who found it deficient to the extent of three pints. The Town Clerk drew the attention of the defendant to the fact, and in reply received a letter from his solicitors, who stated that "any deficiency in the churn does not arise from wilful fraud but from rough usage in transit by rail." As the defendant evidently intended to continue the use of the churns proceedings were taken.

Evidence for the prosecution was given by Charles Riley, 10, Campbell Street, Hull, a wholesale and retail milk purveyor, who spoke as to the shortage; and Mr. Crane Cooper, the chief inspector.

For the defence, it was said that soon after the passing of the Act, the Derbyshire people pointed out to the Board of Trade that if its provisions were applied in respect to their cans it would cause a revolution in the milk trade of the county. The members of the Dairy Farmers' Association alone had over nine thousand milk cans. The Board of Trade replied to the Derbyshire authorities to the effect that no inspector of weights and measures would take proceedings unless there was evident intention to defraud. These cans or churns were not stamped in Derbyshire, where, as a matter of fact, there were no facilities in the way of apparatus for stamping them; therefore, he argued that the case was not a proper one for a conviction. Justice would be met by dismissing the defendant on payment of costs.

Mr. Shackles (the Magistrates' Clerk): The Bench has only got to decide whether this 16-gallon milk churn is unjust or not.

After further evidence had been heard, the Bench had a brief consultation out of court, at the conclusion of which Mr. Morrill (the Chairman) said the Bench were quite satisfied that an offence had been committed on each count, and a conviction must ensue. The defendant would be fined 10s. and costs in respect of the first charge, and judgment would be respited on payment of costs in the second.

The Court ordered the churn to be forfeited.

"VESTA" CREAM MEAL.

This, our latest Calf Meal, has been specially made for use with either Skim or Separated Milk, and after the first few days can be used alone.

It is very nutritious, easily digested, prevents scour, and imparts a beautiful sleek skin.

It is one of the richest milk substitutes obtainable, and fine healthy thriving calves are reared on it by the leading breeders of cattle.

It is therefore a *perfect milk substitute.*

T. GITTINS, Esq., Wrentnall Farm, Shrewsbury, says:

"I am more than pleased with your Calf Meal, I consider it excellent in every way."

BIBBY'S
"CREAM EQUIVALENT" for CALVES.

An Ounce of Fact is worth a Ton of Theory.

A STRIKING FACT.

In our Spring number of "Bibby's Quarterly" we reproduced the photographs of two groups of Calves which are now being reared at the Hornby House Farm, Bedale, Yorks, by his Grace the Duke of Leeds.

One of the groups is being fed on New Milk and the other on Separated Milk and "Cream Equivalent."

We asked our readers to tell us which of these groups were fed on New Milk, and 707 Farmers, Farmers' wives, their sons and daughters competed for a small prize which we offered to those who guessed correctly.

445 selected the "Cream Equivalent"-fed Calves as having been fed on New Milk.

We think the above striking FACT speaks volumes for "Cream Equivalent."

The "Cream Equivalent" can be had at 15s. per cwt., carriage paid to nearest station.

VALUATION AUTHORITIES.

Amongst the measures foreshadowed in the King's speech the one most interesting to farmers is probably that dealing with the law of valuation. That there is room for simplification in the method of assessment is obvious to all who have any practical knowledge of the subject.

Under the existing system in England and Wales the greater portion of the local rates is raised upon the valuation for Poor Rate. Two valuations of the same property may be made for the purposes of raising Imperial Taxes, viz., one for Income Tax and one for Land Tax, and three different valuations may in some cases be made for Poor Rate, County Rate, and Borough Rate respectively. Thus it is possible to have five different values put upon the same property, and, as a matter of fact, the valuation authorities not infrequently differ in their assessments, although in practice the Poor Rate assessment is usually accepted as the basis.

To remedy the confusion and inconvenience of so many authorities, sometimes proceeding upon different principles, and consequently conflicting with and overlapping one another, the Royal Commission on Local Taxation, in their first report, recommended that there should be only one valuation authority in each county, and that the valuation list of that authority should be the basis on which rates and taxes for all purposes should be raised. It was proposed to create a new valuation authority for each administrative county, consisting of members appointed by the County Council. Each county was to be divided into districts, and for each district a committee was suggested, composed of members of the new valuation authority and of representatives of boards of guardians, borough councils, and urban councils within the district. The district committees, in making their assessments, were to follow the directions of the county authority, and, whenever practicable, the valuation list was to be prepared by professional surveyors. Every assessment was to be revised once in five years, and the Inland Revenue were to have the right to send a representative to the meetings of valuation authority and district committees. The recommendations also included the fixing of a maximum scale of deductions, compulsory returns of rent paid, notice to ratepayers of any contemplated increase or new assessment, and a right of appeal from the valuation authority to quarter sessions, with the abolition of the jurisdiction of the special sessions.

Such in brief were the general recommendations of the Commission in reference to assessment to local rates and imperial taxes. Special provisions were suggested for Lancashire, and exceptional treatment was prescribed for special properties, such as railways, canals, mines, tramways, docks, telephones, and gas, water, and electric light works. But we are writing only of the general aspect of the subject, and must confine our remarks on the exceptions to an intimation of their existence.

Will the predicted Bill deal with valuation authorities upon the lines of the recommendations of the Royal Commission? Logically it ought to do so, as such commissions are appointed specially to collect information on the subjects referred to them, and their recommendations are the outcome of deliberate and careful consideration of the facts laid before them, and are consequently entitled to the highest respect.

We confess, however, we are sceptical whether the recommendations of the Commission will be adopted in their entirety. That they would lead to greater uniformity is probable enough; but that they would result in a saving of expense to the public, or a lessening of the friction which generally accompanies the collection of rates and taxes, we take leave to doubt. We recently had an example of a Minister being strong enough to take an independent course, when Mr. Hanbury prescribed a practical standard for milk in preference to the higher ideals of his own Departmental Committee on the subject. Who knows but that with practical, commonsense men like Mr. Long and Mr. Grant Lawson at the Local Government Board the Ministry may say that in the light of later information the recommendations which the Commission issued in 1899 require modification or adaptation to the present conditions?

In this connection it may be noticed that, although Mr. T. H. Elliott, secretary of the Board of Agriculture, signed the report as a member of the Commission, yet he appended a memorandum dissenting from the constitution of the proposed valuation authorities, and preferring to continue the present assessment committees on improved lines. He argued that under a system of County Council control there would be no sufficient guarantee for a high standard of local knowledge and practical ability on the part of those by whom the valuation lists would be revised and settled. In the formation of the necessary district committees it would be difficult to enlist the services of the men of the greatest capacity for work. The committees would possess a purely subordinate status; they would be required to act in conformity with the instructions of the county valuation authority, and their decisions would be subject to review by that body. Service upon the district committees would therefore not carry with it much responsibility or prestige, and men of the requisite character and calibre might not be willing to accept the office. Taking the system of valuation for Income Tax under Schedule A as his model, Mr. Elliott arrives at the conclusion that if full powers and influence were given to the surveyors of taxes, and if provision were made for the periodical re-valuation of property and for the supply of returns of rent and

other information by owners and occupiers, satisfactory assessments might be secured, whilst at the same time the local knowledge and experience of the present assessment committees and their officers would be available. He suggests that these assessment committees should be strengthened by the accession of the surveyors of taxes to protect the Imperial Revenue on the one hand, and on the other hand by representatives of the county councils to safeguard the county rates.

We have not space to discuss the arguments by which Mr. Elliott supports his views. Suffice it that they savour of commonsense, and much can be said in their favour, although there are objections which may be urged against them. We are inclined to think that Mr. Elliott has been unconsciously influenced by the atmosphere of Somerset House, and one objection which we see to his proposal is that it would be an aggravation of the present grievance that the tribunal which fixes assessments, except in the costly alternative of quarter session, is not impartial, inasmuch as it is largely composed of the men who make the assessments and spend the money, whilst the poor ratepayer has practically no voice in the matter at all.

Farmers, at all events, should carefully consider the report and make known without delay their views upon the all-important question of the assessment of property to local rates and taxes. The incidence of taxation is a different question, with which we believe the Government will deal in a future session. If it be found that the Government prefer the individual views of Mr. Elliott to those of the whole Commission, just as they accepted Mr. Hanbury's over-ruling of his Departmental Committee, we shall at least be able to congratulate ourselves on having a strong Board controlled by sound, practical business men, in whom the Government have complete confidence.

SOME MINOR FEEDING STUFFS.

The survey at the beginning of a new year always discloses something of interest in the old year's dealings in the less important staples. It is in this quarter, for example, that we have to look for rising and coming staples, and we can sometimes watch the very birth and first growth of demand. It is only of recent years that dari, millet and sorghum have been fed at all extensively to live stock, but the use of these staples is steadily increasing. Dari at 24s. per 480lb. is very cheap in comparison with beans at 32s. for the same weight, and millet comes at 25s. per 416lb. for the ordinary kinds. It is a highly concentrated food, and as it can be grown to a great extent in India and Burma may come forward to replace wheat, which in those regions appears too dependent on periodical rains, which may fail. The poverty of the Indian farmer prevents his being able to weather the storm, or rather the want of it, for in the arid east it is the absence of rain which is the recurring calamity. Some feed millet has recently come on offer at a sovereign per quarter, and has been eagerly taken up. Canaryseed is also a staple which might be used much more widely than at present. It is classed by some botanists as "a true cereal," and is extremely rich in the most valuable feeding materials. As it makes 38s. to 40s. per quarter it probably pays the grower. We get our supply from Turkey and Morocco, but have colonies of our own on which we might easily draw in preference. Egypt, India, and the West Indies may be mentioned. With reference to India a feature of 1901 has been the offer of Indian cottonseed at £2 per ton under the price of Egyptian. As cleaning processes, decorticating, &c., still leave a substantial profit on the difference, this branch of Indian trade ought to develop.

Farmers will be glad to note a fall of 7s. 6d. per ton on the year in London-made linseed cakes, of 5s. in American, and of fully 10s. in Indian. The manufacture of the cake from the raw material has gone a little too fast for the price, and farmers would do well to buy at present rates. Argentina has a good new crop of linseed, but it is no great counterpoise to the doubtful prospects of India. Rapeseed and cake have of late gone out of favour as feeding stuffs, yet the prices are attractively low, and the taste or flavour which cattle dislike is said to have been absolutely conquered by the addition of sundry inexpensive and healthy condiments.

A development of demand for feeding flour and for "chicken" wheat has characterised the year. The American feeding flour known as "red dog" was in such brisk and extensive request all through October and November that the price rose from 13s. to 14s. 6d. per sack without checking enquiry. During December this type of flour was practically unprocurable, but it is now once more on offer, though at 15s. per sack, equal to £6 per ton, the ardour of buyers is diminished. With respect to wheat, the use of the inferior types as feed has been not inconsiderable in England, while in the United States it has been very large. The best judges are deducting on this account not less than ten million quarters from the total American yield, which in the annual report of the 11th inst. was officially declared to have been 676,848,000 bushels. With maize scarce and dear, this increase in the feeding use of wheat was only to be anticipated. Prices for feeding stuffs are now irregular, but they look like being rather high than low in the present new year.

Memorial Tablet to the late Sir John Lawes.

A handsome memorial tablet is about to be placed in Harpenden (Herts) Parish Church, bearing the following inscription:—"In affectionate memory of Sir John Bennet Lawes, Bart., F.R.S., born at Rothamsted, December 28, 1814, died at Rothamsted, August 31, 1900. He used his long life and his great knowledge and experience as an agricultural chemist and as a practical and scientific farmer in the pursuit of truth, and for the benefit of his fellow men in his own country and in all parts of the world. This tablet is erected by the parishioners of Harpenden and others who deeply feel his loss as an example and friend."

At Westminster Police Court on Thursday, Leverett and Frye (Limited), provision merchants, of King's Road, Chelsea, were ordered to pay a fine of £10 and £3 5s. costs for having infringed the Merchandise Marks Act by selling an American ham as one of Irish production.

Messrs. Hy. Richardson and Company, of Skeldergate Bridge, York, have written us *re* the case in which they were prosecuted by the Leicestershire County Council, under the Artificial Fertilisers and Feeding Stuffs Act, 1893, for a deficient test in a quantity of basic slag, supplied by them to a client in Leicestershire at 43s. 7d. per ton carriage paid. They state that our report of the case was substantially correct, but contained one inaccuracy, which appeared in many other papers, probably arising out of some error in transcription. From a full report of the case they send us, we see that the test made by Dr. Dyer, for the plaintiffs in the case, showed 31 per cent. of phosphates, and Messrs. Richardson's guarantee for the first quality was 38 to 45 per cent; the deficiency was therefore 7 per cent. below the minimum guarantee. The third quality which they also quoted, but which was not accepted, was 30 to 35 per cent., and the deficiency was therefore not 7 per cent. below the third quality. The wording in many papers was, "7 per cent. deficiency *on* the third or lowest quality quoted for, whereas the best quality was ordered and paid for." If *on* is read as *or*, it would then be accurate (7 per cent. deficiency, or the third or lowest quality). We may mention that the trial has attracted a good deal of attention in agricultural circles, and to those who wish to see a full report of the case Messrs. Richardson and Co. will forward (so long as they last) a re-printed extract from the "Leicester Advertiser," on application.

By a Man of Mark Lane.

The President of the Board of Agriculture has promised to visit Taunton on March 1st, when he will be entertained at a dinner by the Taunton Farmers' Club. Sir Alexander Acland Hood and several members of Parliament have promised to be present.

The ballot for private members' Bills and resolutions took place in the Grand Committee Room of the House of Commons on Monday, and about fifty members attended. Two agricultural bills secured very good positions, Mr. Tomlinson getting eighth place for the Beer Bill of last session, which he has consented to farther, on account of Sir Cuthbert Quilter being unfortunate in the drawing; whilst Mr. Hudson, who has charge of the Compensation for Damage to Crops Bill—better known as the Railway Sparks Bill—secured ninth place. It may be mentioned that Mr. Rutherford obtained the first place for a Deceased Wife's Sister Bill, and Mr. Caine the second place for a resolution as to poverty in India, the third place falling to Mr. Edwards for a Welsh Local Government Bill.

Mr. Channing has secured the first place on Wednesday next for an Old-age Pensions Bill, which is backed by Mr. Burt, Mr. John Burns, Mr. Broadhurst, Mr. John Wilson (Durham), and Sir Walter Foster. The Bill will carry out the Universal Pensions Scheme of Mr. Charles Booth, and be practically on the same lines as the programme agreed to by the Conference of the Trades Union Congress and the Co-operative Societies held in London recently.

I may mention here that Mr. Chamberlain regards the results of the Conference in London of Co-operative and Trades Union Delegates as distinctly hurtful to the cause. The Conference unanimously voted in favour of Universal Pensions absolutely independent of character and thrift. No such scheme is, in Mr. Chamberlain's opinion, ever likely to be accepted, and the extraordinary views expressed are not calculated to make converts to the principle. This expression of views on the subject was given in the course of a letter written by Mr. Chamberlain's secretary in reply to a communication dealing with old-age pensions from Mr. S. M. Holden, Accrington.

The two Bills dealing with Old-age Pensions, of which notice has been given by Mr. Raymond Greene and Mr. Goulding respectively, are identical in their provisions with the Bill introduced last Session, and the two measures are promoted by the same members. First places have been obtained for one on the 19th of March, and for the other on the 14th of May. Meanwhile, Mr. Goulding has placed the following Amendment to the Address on the Paper:—"But we humbly represent to your Majesty that the system upon which taxation is now levied should be so widened as to enable your Majesty's Government both to make adequate provision for National and Imperial defence and to proceed with a policy of social reform, including the provision of Old-age Pensions for the deserving poor."

The Beer Bill has been largely remodelled from that of last year, and is of a much simpler character. The backers, however, are practically the same, namely:—Mr. Tomlinson, Sir Cuthbert Quilter, Colonel Kenyon Slaney, Mr. F. W. Wilson, Mr. Purvis, Mr. Price, Mr. Round, Mr. Edwards, Colonel Brookfield, Mr. Broadhurst, Mr. Boscawen, Mr. Corrie Grant, and Mr. Stevenson.

The Lord Mayor of London recently received a letter from Prince Alexander Scherbatoff, dated Moscow, December 31st, stating that the Imperial Moscow Agricultural Society, on the 21st, had desired him to express to his lordship its thanks for the most cordial and hospitable reception accorded to the Russian agricultural delegations by the Corporation of the City of London. He was especially happy to represent the society on that occasion, and to be able to express to the Lord Mayor his hope that his enlightened policy would lead to a good commercial understanding and intercourse between their two countries.

Mr. H. E. Moojen, chairman of the Central Markets Committee of the City of London, has also received a letter from Prince Scherbatoff, in which he says:—"The members of the Russian agricultural deputation have been particularly impressed by the open-heartedness and goodwill which they met on the part of the Central Markets Committee of the City of London. It affords me much pleasure to express the feelings of gratitude to you personally as chairman of the committee. The impression received by the members of the deputation will spread widely all over Russia, and I am convinced will, in the near future, produce important results towards the development of the commercial intercourse between our two countries."

During the past week two leaflets have come to hand from the Government of India Statistical Department, Calcutta, both dated December 28th, 1901; one is the first general memorandum on the wheat crop of the season 1901-02, and the other the first general memorandum on the winter oilseeds crop. In the former it is stated that the excellent harvest of last spring will not be equalled, the conditions which prevailed during the sowing season having been unfavourable for the repetition of such extensive sowings as were made last year. In Northern India there has been a great contraction in the area sown, as much as a million and a half of acres in the Panjab, most of it on unirrigated lands. The monsoon rains towards the end of the season were scanty, and they ceased prematurely.

In Central and Western India also the conconditions at sowing time were unpropitious for the same reason, and they were followed by conditions adverse to germination, while a plague of rats and insects is now reported from many quarters. Rain is urgently needed everywhere now, and it has fallen within the last two days in some of the submontane districts of the Panjab and the North-Western Provinces. If this should prove to be the beginning of a period of normal and general rainfall the wheat crop will be better than the expectations warranted by present conditions.

As regards the winter oilseeds crop the prospects were, at the time of reporting, not very encouraging on the whole. Almost everywhere the area sown was appreciably restricted in consequence of the absence of rain when sowings were made or when the seed was germinating. In the Panjab the contraction of the rapeseed crop on unirrigated land is specially important, the area sown being less than half the area sown last year. The issue of the crop in that province and elsewhere in Northern India now hangs upon the winter rains, which are due and much needed. In Bombay, Central, and Western India also the area placed under oilseeds has been more or less restricted, very greatly so in Bombay, and a deficient crop must be anticipated even if the winter rains should come at once and be of their maximum utility.

The receipts on account of Revenue from April 1, 1901, when there was a balance of £5,596,918, to January 18, 1902, were £97,500,095, against £88,816,078 in the corresponding period of the preceding financial year, which began with a balance of £3,517,047. The net expenditure was £157,460,182, against £147,698,015 to the same date in the previous year. The Treasury balances on January 18, 1902, amounted to £5,083,415, and at the same date in 1901 to £2,182,561.

By a Lobbyist

Of course, the great question of the moment, so far as agriculture is concerned, is as to what extent the forthcoming budget will affect agriculture? Now, prithee, do not expect any heroic measures affecting the price of wheat and the like. Sir Michael Hicks-Beach is as stern an anti-Protectionist as was ever bred in one of the inner dormitories of the Manchester School. You must expect nothing of a vital character so long as he is at the Treasury. He regards Free Trade—and I am speaking with an intimate knowledge of his views and purposes—as being as sacred as the two stone tablets of the Commandments. I should say that the mild suggestion of a Liberal M.P. like Mr. Pease to which I referred a couple of weeks since is to him the wickedest heresy. Yet the budget will seriously affect the labourer, and it may indirectly affect the wages bill of the farmer.

Of course, it is now confessed that the last tax upon sugar did not have any effect upon the price of sugar. This was more or less due to the vast stores which had been accumulated ere the tax was inflicted. Naturally, when Sir Michael Hicks-Beach imposed this tax he expected it to yield revenue. It was not up to the present. Hence he meditates increasing the tax. This increased tax will be felt, and felt to a degree entirely disproportionate to the amount. The accumulated stores will have been exhausted, and thus the original reflection meditated by Sir Michael will be in alliance with the later imposition. Every student of rural life knows that sugar is one of the most popular of all domestic commodities. It is in a considerable measure the staple food of young Hodge. Thus the weekly budget of the housewife will inevitably be affected by the last purpose of the Chancellor of the Exchequer. Of course, in the electoral sense the last tax upon sugar was a blessing in disguise to the Tory party. The Radicals made so many prophecies of an increased price—all of which have, of course, been unrealised—that the labourer now naturally regards him as the propagator of vain fears. However, this new infliction will more than readjust the balance. It will serve to rehabilitate the flaming Radical orator, and attach the guise of truth to all his wild rhetorical efflorescence.

Mr. Horace Plunkett, the Irish Minister of Agriculture, is such a sane and wise administrator that I am surprised at the unwisdom of the latest policy which he has adopted for the purpose of stimulating the Irish farmers to more enlightened methods. He has resolved to send lecturers throughout the country in order to open out to the Irish farmers the true vision of a reformed agricultural science and of profitable markets. How, however, can he hope to get desirable and good men with the conditions of employment which he imposes. No lecturer can be certain of more than a year's employment. These lectures, to be of any avail, must come from the mouth of authoritative men; and any authoritative man would be foolish to accept a position, the tenure of which is so unsatisfactory. I could, under the circumstances, almost describe the experiment as a feeble one. At all events, there cannot be any adequate return for the expenditure. The worst of it is, too, that the idea—which might be so fruitful of good—will probably be killed.

Meanwhile, there are again strange reports in circulation to the effect that Mr. Hanbury intends to reorganise the Board of Agriculture. In all sooth, it needs it. There are, and have been splendid officials at the Board. Men of the Elliott and Jacob Wilson type are in themselves saving graces. They reveal a sympathy, a knowledge, a genuineness of interest, and a resolution which are admirable. It would be ridiculous to say that the office is manned by administrators all possessing the same character and quality. I am not myself saying that an army or a naval officer may not be a heaven-sent agricultural authority. However, I frankly confess that I would not myself prefer a man who, as Monsieur Planchette would say, "ploughs the ocean, not the lea." But it is not a mere re-shuffling of men which we want in conection with the Board of Agriculture. We want a re-organisation of methods and of machinery. The Board of Agriculture is, by its very constitution, ill-adapted for the performance of the duties expected of it. True, it has done a good work in stamping out hydrophobia and cattle diseases; but I hold that we have a right to expect more than this for an expenditure of over a hundred thousand pounds, which is what the Board costs as an establishment. If the report be true, Mr. Hanbury need not trouble himself about the personnel of his establishment. His men have got used to the work, and they do it well, What is needed is a new, a sympathetic, and a practical machinery.

There is one difficulty which Mr. Horace Plunkett has to confront in Ireland, which would not be felt by no administrator in a similar position in England. He has to meet the sullen, the determined, almost the envenomed antagonism of the ascendant section in the country. This fact the two days' debate in the House of Commons on Irish affairs, made overwhelmingly apparent. I do not say that this imposes an invincible difficulty in the path of Mr. Plunkett. Of course, it does not—the very success of his organisation is a proof to the contrary. If, however, Mr. Plunkett can secure success in spite of this sullen antagonism—in spite of the fact that Irish landlordism regards him as playing with combustible material, what ought not Mr. Hanbury to accomplish in a country where the relations between landlordism and the farmers is of the friendliest character, and in which the two form an unbreakable and most sympathetic alliance. This is a point which should assuredly stimulate the reforming zeal of Mr. Hanbury.

The House of Commons will have been, when these lines come before my readers, sitting nigh on a fortnight. Not a question has been asked, not a suggestion has been made, not a hint has been thrown out, of the most infinitesimal value or of the most indirect interest to agriculture. Is not this alone a justification for what I must describe as the Parliamentary organisation of agriculture?

The death is announced in his 86th year of Mr. William M'Adam, Whitepark, Kelton, one of the oldest and best-known dairy farmers in Stewartry. For many years he was a noted prize-winner at the various dairy produce shows, and had also gained a wide reputation as a cheesemaker. Death was indirectly due to an accident sustained during the recent frosty weather.

Light Railways.—The President of the Board of Trade received, in his private room at the House of Commons, on Wednesday afternoon, a deputation of members of the Council of the Roads Improvement Association, with reference to the proposed Light Railways Bill of the present session. The deputation appeared in support of various proposals, the most important of which was that it should be made possible for promoters to obtain power to take a long strip of land compulsorily for the purposes of building a new road on which the light railway is to be laid, and to obtain exemption from the operation of clause 92 of the Lands Clauses Act, full compensation to be paid, however, to the owners of property for any depreciation sustained by severance; in estimating this compensation, any betterment to the property resulting from the construction of the railway and the road should also be taken into consideration.

The Story of a Grass Farm on Clay.

In Vol. X (1899-1900) "Journal of the Bath and West of England Society," the above title is given to a report by Mr. C. Morgan-Richardson.

It is extremely interesting, and is a striking testimony of the marvellous improvement of very poor land of cold clay in a very moist climate by judicious treatment and the intelligent use of suitable fertilisers.

The farm in question is situated at Noyadd-Wilgym, near Cardigan, is about sixty acres in extent, and when Mr. C. Morgan-Richardson took it in hand in 1879 it was in a wretched state of cultivation, and was described by the then outgoing tenant as of such a character "as would starve a crow." The grazing lands were starved and the fields were full of moss, with that blue colour over the whole which tells of carnation moss. The brambles grew out from the fences, and tufts of rushes and clumps of gorse gave variety in the open.

In Mr. Morgan-Richardson's first year of occupation he found it difficult to satisfy the appetites of eleven horned beasts, but in 1900, after nineteen years of occupation, the same land carried a stock of 18 shorthorn cows, a bull, 14 young beasts of all ages, 8 horses and ponies, and 16 breeding ewes, all in thriving condition, and even then having an ample reserve of grass for autumn and winter use.

This marvellous transformation was effected by efficient manuring, some draining, and clearance of gorse, and by laying down the whole of the farm to grass, with the exception of one field, which was retained for roots.

It was noticed that the cattle grazed reluctantly on the lands recently dressed with farmyard manure, and greedily on the lands dressed with artificial manures, and it was determined to try these dressings in alternate years.

The land intended for hay was, however, always dressed with farmyard manure, whilst phosphatic manure was applied to the rest.

Superphosphate, at the rate of 3½ cwts. per acre, was applied to the grazing land during the first or second week in March; but when farmyard manure did not cover all the hay land, he used, in February or March, 3 cwts. of superphosphate sometimes with and sometimes without 2 cwts. of kainit, followed in April by nearly 1 cwt. nitrate of soda per acre.

Mr. Morgan-Richardson dates the first improvement of the grass land from the time he used cotton cake to support his shorthorn cattle, and from his "alternately cutting and dressing" system. From that time the improvement became more marked, and continues now from year to year.

Later on he used basic slag instead of superphosphate, applying it in November or December; but he says he is not quite satisfied as to their comparative values. His land has generally benefited by the use of lime and phosphoric acid.

Mr. Morgan-Richardson gives it as his opinion that at equal prices superphosphate would give him the best results; and one of the most useful dressings which he ever tried was from a cargo of dissolved bone superphosphate, which was wrecked on the coast and sold at a low price.

After describing his seed mixtures, management of stock, mowing, etc., Mr. Morgan-Richardson goes on to say that he finds that there are still a few people in the world who look with suspicion on the practice of using artificial manures.

They talk of over-stimulation, forgetting or not knowing that to add nitrogen, phosphoric acid, or potassium in this way is merely a simple plan of restoring to the soil the constituents which a crop takes out of it, and, moreover, that the bigger crops which result from their use mean bigger manure heaps to go back to the land on which the corn or hay is grown.

It is impossible, therefore, that the fee simple of the value of the land can suffer from a system which raises its condition and increases its crop-growing capacity.

The story of a grass farm on clay is most interesting and instructive, and if possible every farmer, and especially those who farm heavy clay lands, should read, mark, learn, and inwardly digest it.

If it exists in pamphlet form, and could be sold at a cheap price, its circulation amongst farmers would be a real aid to agriculture.

Hirings in Cumberland and Westmoreland: Proposed Change of Dates.

A large and representative conference of delegates from most of the Urban and Rural District Councils of Cumberland and Westmoreland, convened by the Chamber of Agriculture for the two counties, was held at Carlisle on the 18th inst, under the presidency of Mr. H. C. Howard, Greystoke Castle, the chairman of the Chamber of Agriculture. Owing to the inconvenience caused by Whitsuntide falling at different dates every year, and thus making the so-called half-yearly terms of unequal length, a desire has grown to have the dates for the hirings of farm servants at Whitsuntide and Martinmas fixed, and the Chamber of Agriculture convened this conference with a view of ascertaining the feeling of representative bodies all over the two counties.

Mr. Hugh Jackson, Bampton, moved, and Mr. Tinniswood, Dalston, seconded, a resolution that the terms should be made equal, the former mentioning that the County Council, to whom representations had been made on the subject, had ascertained that the Home Secretary had power to alter the dates on the representations of the District Councils. The discussion which followed revealed much diversity of opinion.

Mr. Elliott, Aspatria, moved as an amendment that no change be made in connection with the Whitsuntide hirings, but that the Martinmas hirings be fixed for the second Saturday in November instead of the Saturday nearest the 11th, as at present. When the Saturday fell a few days before the 11th much inconvenience was caused by servants wanting to leave their places before their term had expired.

Mr. Garnett, Bowness-on-Windermere; Mr. Seatree, Penrith; and other sopposed any change being made, it being represented that Whitsuntide was a national holiday, when there were sports and other amusements provided in which the farm labourers participated; whilst Mr. Garnett remarked that South Westmorland was so much connected with North Lancashire that that district should be consulted before any change was made.

In the end the amendment was lost, and the motion, that the terms be made equal, was carried. Only the delegates and not the members of the Chamber took part in the voting.

It was then moved that the dates of the hirings should be the first Saturdays in May and November, and amendments were moved in favour of the second and last Saturdays. Both amendments were lost; but the original motion, fixing the first Saturdays in May and November, was only carried by a majority of one, there being 12 for the motion and 11 against.

Much disappointment was felt at the result of the conference, and those in favour of a change being made are now hopeful that the Carlisle Rural District Council, who have passed a resolution in favour of the Whitsuntide and Martinmas hirings being on the first Saturdays in May and November, and those for Candlemas and Lammas on the first Saturdays of February and August, will take action, and ask the Home Secretary to change the date at Carlisle, and thus give a lead to the rest of the county.

New Agricultural Patents.

Specially compiled for *Mark Lane Express* by Mr. G. D. Howard (Hughes, Sons, and Co.), Patent Agent, 38, Chancery Lane, London, of whom all information relating to Patents, Designs, and Trade Marks may be obtained free of charge.

341.—James Archdale, of Manchester, for "Improvements in screw-thread milling machines."

385.—Carl Fresenius, of the Strand, for "Improvement in the treatment of inferior oil seed cakes and other residues from the manufacture of vegetable oils, to render them suitable for use as cattle food."

458.—Frederick Andrew Schouten and Aubrey Frederick Spencer, of Chancery Lane, London, for "An improved process for preserving milk, cream, and other liquids, and means and appliances therefor."

Patents Sealed.

17,256.—G. C. Marks, of Chancery Lane, for "Churns."

The campaign against the paying of rent on the De Freyne and Murphy estates has, it is stated, completely collapsed. Within the last two weeks, out of a rent-roll of £17,000, nearly £9,000 has been paid by the tenants, and out of over 100 writs issued by Lord De Freyne's solicitor only five are now outstanding. Several of the local Roman Catholic clergy exerted themselves vigorously to induce the tenants to fulfil their obligations. At the Ballymote Petty Sessions, Lord De Freyne obtained ejectment decrees in 41 cases, and the same evening in 21 cases the full amounts and costs were paid up. In the large bulk of the remaining cases the tenants promised to pay as soon as they got their contributions back from the Plan of Campaign Fund.

WATERPROOF SHEETS

FOR

THRESHING MACHINES,
PORTABLE ENGINES,
MILLERS, CARRIERS,
LUGGAGE CART COVERS,

AND ALL PURPOSES.

Established 1801. *Telegrams*—"Peck, Wigan."

Adulterated Milk Case; Warranty Destroyed by Mixing.

At Worship Street Police Court on Tuesday, Messrs. Pryce and Harris, wholesale milk dealers, of Craven Yard, Drury Lane, were summoned by the sanitary authority of Shoreditch for selling milk adulterated with 4 per cent. of added water. Mr. W. Ricketts, jun., solicitor, defended.—Mr. Robinson, LL.D., clerk of the Borough of Shoreditch, for the prosecution, called evidence showing that on the 23rd December the sanitary inspector, by arrangement with a retail dealer named John Jenkins, waited on his premises in New Inn Yard, the delivery of the morning's milk from the defendant firm. A sample was then taken from the churn put out from the van, and the analyst's certificate showed 4 per cent. adulteration.

The defence was a warranty from the farmer, and the delivery of certain churns to the defendants' firm at King's Cross Station was proved, and part traced to Jenkins. The carman who made the delivery to the latter admitted that he took from a quantity in one churn the quantity required by Jenkins, putting it into an empty churn, which he delivered.

The sanitary inspector, however, said he saw the carman mix milk from two churns before delivery, and in deciding that the defence failed the magistrate said that the warranty was destroyed by the mixing. He acquitted the firm and the carman of any intention to defraud, and ordered the defendants to pay the costs, £2 14s. 6d.

The Paris Milk Supply.

The question of the purity or otherwise of the milk supply is receiving much attention in Paris at present. For a long time housewives have been complaining of the impossibility of getting good milk. They are persuaded that horses' brains are employed to give body to an abundantly watered article. It is, at any rate, certain that serious adulteration takes place, and the swarming microbe population of the Canal Saint Martin finds an outlet through the kind offices of the "garcons laitiers" who carry the milk from house to house in the small hours, and are believed to make large profits by their thefts.

By Hordeum.

Cropping.

The April and May weather we have been having will have furnished our barley-growers with an excellent opportunity for testing on a good scale if there is any real advantage in sowing early. There can be no doubt about the undesirability of late getting in of barley on any and every class of soil, but it is still very desirable that fuller information may be acquired concerning the advantages or otherwise of planting barley before Valentine's Day, unless it be getting in of "winter" barley in the autumn.

The dry spell of open weather we have enjoyed during the greater part of the month has given a fair number of enterprising men an opportunity to put the drill to work, and on light, dry lands a quantity of barley has been sown. Time will prove if such haste is a good thing or otherwise. We can form very little opinion about what sort of weather we are likely to get, yet the success or otherwise of all the seed put in during January must depend upon the

Climatic Conditions

of the next six months. If the numerous correspondents who contribute their valuable notes on "Farm Prospects" week by week will kindly keep their eyes on fields sown early and late and remark upon same now and again right up to the time of harvest, they can do a great deal of good. All such notes become of deep interest when a really practical question of importance is broached. But all such subjects require to be approached with great care, for the results of a single season may prove utterly misleading. Many years' experience has proved late sowing to be bad, but of very early planting little is known. Virtually every acre already in will become an experiment if only due note is taken of the relative stages of growth.

In this connection due regard ought to be paid to the type of grain grown and to the fact if it is fed off at all or sheep allowed to run in it.

The Quantity Sown

is also another factor of much influence in helping to determine the date of sowing. It seems obvious that early-sown plants, whether fed off or not, stand a better chance of tillering than late ones, and if so, an economy in the quantity of seed used can be practised.

I have already referred to the wide difference in practice at different places. Some counties show twice, or even thrice, the amount planted that is used in others, but even with the county area it is often noticeable that wide differences exist. There are plenty of farmers in Suffolk who plant three, or even four, bushels per acre, whilst many more use only a bushel and a half. In the premier barley county of the West of England the practice differs from that mentioned in East Anglia, for in Somerset it is as rare to find anyone using so little as a bushel and a half as it is to find one sowing two and a half bushels. Less rather than more than two bushels seems to suffice for the majority of the men in that highly practical county.

But if two bushels serves sufficiently well to content a large number of practical men, it seems hard to comprehend why more is needed anywhere. Surely it is a

Needless Waste of Seed

and it leads to diminished weight in the grain when grown. It is very significant to turn back to the experience gained at last year's Brewers' Exhibition. Out of 200 samples no less than 140 were grown with 8 to 10 pecks against 31 with more than 10 pecks, and 29 with less than 8. But almost all samples grown with the larger quantities were unduly light, so we get the double loss of diminished weight, which generally means smaller price, and loss of seed. It is highly probable that last year half a million acres of land received a larger amount of seed than need have been used, and this year will witness the same thing unless care be taken to determine if so much as two and a half bushels be really needed.

Turning to another phase of cropping, as to what and how to sow, a new question has arisen through combining science with practice, which merits very serious attention. Apparently it is becoming evident that

Non-calcareous Heavy Land

can, and does, grow good barley, especially when we have a series of years of deficient rainfall. How long our existing relative drought may continue cannot even be guessed, but if we continue permanently with a smaller supply of water we must adapt ourselves to the new conditions, one of the readiest adaptations being the selection of soils that best lend themselves to good results under the new circumstances. Another factor in this problem must not be overlooked. We now grow lighter barleys, and of varieties that can flourish on heavy soils. The modes of cropping and rotation are changing, and the right use of proper manures is getting to be understood. All these things have led to a general conclusion that still seems almost inevitable, but if it at length proves to be correct, the more widely it is understood and acted upon the better.

Messrs. Fison's Barley Competition.

Some sixteen years ago Messrs. Joseph Fison and Co., Ltd., of Ipswich, initiated a system of giving prizes annually to the growers of the best samples of barley grown with the aid of the firm's well-known barley fertiliser. The number of entries received has increased steadily year by year, and at this year's competition so many samples were sent that the judges were unable to complete the labours in one morning, as hitherto, and were obliged to defer their final decision to the following day. Messrs. Mortimer and Alfred Sizer were once more the judges, and they expressed the opinion that the average quality of the samples was the highest they had ever seen, and that it was a pleasure to see such a fine show brought together. Their awards were as follows:—

First prize, £20, T. W. Gaze, Frenze Hall, Diss, Norfolk; second prize, £15, F. W. Stearn, Old Newton, Stowmarket; third prize, £10, F. J. Robinson, Mendlesham, Stonham, Suffolk; fourth prize, £5, A. Juby, Brandeston; fifth prize, £2 10s., A. E. Gray, Wenhaston, Halesworth; highly commended, H. Nunn, Thorndon, Eye, and W. A. Pepper, Wherstead, Ipswich.

The first-prize sample was a magnificent one, both in size, colour and skin, and had it been exhibited at the London Brewers' Exhibition would assuredly have obtained high honours. We understand that the firm are again offering fifty guineas for competition this year.

Messrs Colchester's Barley Competition.

Messrs. William Colchester and Co., of the Chemical Manure Works and Bone-Crushing Mills, Ipswich, have issued particulars of their fifth Annual Gold Cup Barley Competition. As in former years, the first prize is a massive gold cup, valued at 20 guineas, the second a silver medal and diploma, and third a bronze medal and diploma, whilst special prize medals will be awarded in addition to the next best sample from each county; thus each county has a competition to itself, besides the gold cup and diplomas. It may be mentioned that the gold cup will be specially engraved with particulars of the competition and the occasion, or the winner may elect to receive the prize in 20 guineas cash.

As to the conditions, the competition is open only to the users of the gold cup barley fertiliser (Griffin brand), prepared and manufactured by the firm. For every ton of fertiliser purchased the customer can enter one sample of the barley grown by the aid of this manure, and thus two or more tons will entitle the purchaser to stage two or more samples at his discretion. The fertiliser may be used with or without farmyard manure, as circumstances require, but an essential condition is that no form of chemical manure other than this shall be utilised in the growth of a sample. Every exhibit at the entry must be the bona-fide property of the exhibitor, grown by himself; and all barley must be of this year's growth. Entry forms must be returned not later than November 15th, and can be obtained on application to the address given above.

The following gentlemen have undertaken the duties of judges:—Mr. H. Stopes, chairman of the Board of Jurors, Malting Barley, Brewers' Exhibition, London, and Mr. T. S. Damant, Ipswich Malting Co., Ipswich.

Disastrous Farm Fire.—On Thursday, a disastrous farm fire occurred at Oxenford Farm, near Chard. It appears that a labourer entered a cow-stall early in the morning, and accidentally knocked over a lighted oil lamp which was hanging from the ceiling. Almost immediately the whole place was in a blaze, the fire spreading to the thatched roof of that and adjoining buildings. Efforts were made to remove the cattle from the stalls, but so rapidly did the flames spread that this was impossible, and 12 cows were burnt to death. The farm buildings and some haystacks were totally destroyed.

The Critical Condition of the Hop Industry.

Conference at Tunbridge Wells.

A meeting of the Tunbridge Wells Farmers' Club was held on Friday last, to discuss this important subject. Amongst those present were Mr. C. J. Parris, Crowborough (President of the Club); Mr. Williamson, Eridge; Mr. Geo. Arnold, Frant; Mr. Killick, Hadlow; Mr. Walter, Rotherfield; Mr. Scott, Pembury; Mr. Luxford, Wadhurst; Mr. White, Wadhurst; Mr. E. Albert White, Beltring; Mr. Wickham, Ticehurst; Mr. Manwaring, Tonbridge; Mr. Austin, Wadhurst; Mr. Elleray, Groombridge; Mr. White, East Peckham; Mr. Dunkley, Frant; Mr. Martin, Uckfield; Mr. Ironmonger (Secretary of the N.A.E.H.G.); Mr. Durrant (Secretary of the T.W. Club); and many others.

The Chairman (Mr. Parris) having opened the proceedings, called upon Mr. Dunkley, who said that as it was clear that the hop market was overladen with stock, and that their produce was only saleable at unremunerative prices, it was necessary they should consider their future prospects. They were informed that the greater part of the last crop was being bought for preservation in cold storage; therefore it appeared certain that another heavy crop would be disastrous to the industry. They had to decide what was the best course to pursue. When planters had expended labour and money upon the growth of the crop, it was difficult to leave any part of it unpicked, and it seemed to him that restriction of the growth was desirable. Unpleasant as those facts might be, they were compelled to face them, and he trusted that when they had heard the statements which would be made to them by the Secretary of the National Association of English Hop Growers they would be able to arrive at a decision that would be generally satisfactory.

Mr. Ironmonger, who was introduced by the Chairman, prefaced his remarks by observing that he appreciated the compliment paid to him by the Club in asking him to address them on this urgent question, which might be considered under the three heads of supply, consumption and cold storage. With regard to the supply of hops to the English market, he found that the official returns of their growths for the past four years furnished the following figures. They had produced 356,958 cwt. in 1898, 661,373 cwt. in 1899, 347,894 cwt. in 1900, and 649,387 cwt. in 1901, making a total of 2,015,612 cwt. During the same period the imports from America and the Continent of Europe had amounted to 738,905 cwt., the aggregate supply being 2,854,517 cwt., or an average of 713,629 cwt. per annum. After deducting the exports of English and foreign hops, which averaged 19,096 cwt., there remained an average balance of 694,533 cwt., which it would be shown was considerably in excess of the requirements of consumers. With respect to the actual annual consumption, the speaker was of opinion that the usual acceptance of 700,000 cwt. was deceptive. Unfortunately, they had no English official figures to guide them in their calculation, although he hoped that in the next annual returns of the materials used in brewing the exact quantity of hops would be included, in accordance with the promise made by the Chancellor of the Exchequer to Colonel Brookfield. In the meantime he would quote for their information an official statement made by the Inland Revenue department of the U.S.A., which demonstrated that the average consumption in America per barrel of 36 gallons was 1.40 lb. From this statement and other particulars furnished to him by several English brewers, he considered they might safely conclude that our English consumption did not exceed 1½ lb. per barrel. In the year 1900, when the production of beer in England was larger than in any previous year, duty was paid on thirty-seven millions of barrels of standard gravity. But as the beer issued to the public was not entirely of standard gravity, the Government estimated that the quantity named represented 39½ millions of what they described as "liquid barrels." Taking the latter figure as the basis of calculation, and giving 1½ lb. of hops to each barrel, they would arrive at the figure of 529,017 cwt. as representing the ordinary brewery consumption. There were, however, some other purposes to which hops were

applied, and there was a certain proportion of waste, which might together be reckoned at 51,000 cwt., thus bringing the total to less than 600,000 cwt., and he believed they might accept that quantity as fully meeting the annual demand. Assuming the approximate correctness of those figures, it would be seen that their own growths and the imports, after deducting exports, had exceeded the consumption during the past four years by about 450,000 cwt., a surplus which by itself sufficiently explained the low average of values from which the industry had suffered, and also provided a forcible argument for the reduction of the future output.

Mr. Ironmonger then turned to the consideration of cold storage and its influence on the trade in front of them, tracing this system of hop-preservation to the experiments of Messrs. Briant and Meacham in 1894 to 1896, those experts having first endeavoured to devise some plan for the purpose, in the use of air-tight metal cylinders, in which the air was replaced by carbon dioxide gas. Their experience in that direction being somewhat unsatisfactory, some pockets of East Kent hops of 1894 growth were tested under different degrees of heat and cold, being kept from January, 1895, to January, 1896. The results proved that while the hops stored in ordinary temperatures lost about one-third of their condition, there was no appreciable deterioration of those that were stored in an atmosphere of 32 deg. or under. The investigators were thus caused to conclude that "the old practice of storing hops is, it is certain, entirely erroneous. The one effective preservative is low temperature, and we look forward to the widespread adoption of cold storage." Their anticipations were speedily fulfilled, as Messrs. Cattley, Gridley, and Co., of Duke Street, London Bridge, shortly afterwards erected premises and plant for the cold storage of hops, which have been since extended, until that firm has now sufficient cold storage accommodation for over 3,000 pockets. Other hop merchants had followed their example, and it was estimated that at the close of last year the capacity of the cold hop stores in London was not less than 80,000 pockets. But even that was unimportant when compared with the provinces. In Birmingham a syndicate of brewers had established cold storage for 11,000 pockets, and when there was added thereto the similar provision made by brewers, corporations and public companies in Burton-on-Trent, Liverpool, Nottingham, Manchester, Glasgow, Dublin and other large towns, it might roughly be estimated that the present cold storage accommodation in the United Kingdom was equal to 200,000 to 250,000 pockets of hops. The speaker was credibly informed that every foot of that space was already occupied by hops bought during the last and previous seasons. The cold storage plant industry was already employing twelve important firms, all of whom were busily engaged. During the last year new cold storage companies had been registered with an aggregate capital of over £1,000,000, so that it was evident that the system "had come to stay," and its presence constituted a real and pressing danger to hop growers, which would be intensified if they continued to grow the excessive crops that modern methods enabled them to secure. Mr. Ironmonger concluded by quoting the opinion of eminent hop merchants in the Borough, that, taking all the present circumstances of the position into account, the only effective protection against impending disaster was the limitation of the production to the requirements of consumers, bearing in mind the imports which might reasonably be expected to continue. Endorsing that opinion by his own observations, he trusted the planters would seriously consider the matter, and act accordingly.

Mr. George Arnold then proposed the following resolution:—"That in view of the present overproduction of hops and the rapidly-increasing capacity of 'cold storage,' whereby they can be preserved for long periods, thus avoiding waste of the surplus, and whereby brewers are enabled to adopt a 'waiting' policy in regard to purchasing, which gives them practical control of the market, this meeting of the Tunbridge Wells Farmers' Club is of opinion that the only effective means of permanently and sufficiently improving the ruinous condition of the English hop-growing industry is the reduction of the output, in order to bring the average supply of English hops to a level which will not exceed the average consumption of this indispensable product." In supporting the resolution, Mr. Arnold remarked that the statistics they had heard, and for which they were deeply indebted to Mr. Ironmonger, were absolutely appalling. The remedy was entirely in their own hands, for if ruin overtook the industry, they could not look to Parliament for assistance. Hitherto they had been blind to the consequences of over-production. They had grown from 50,000 acres in the years 1899 and 1901 a larger supply than had been produced from 70,000 acres in 1885 and 1886, and were now faced by the absolute control exercised over their market by brewers as the result of cold storage. He, therefore, urged the unanimous adoption of the resolution, and trusted they would act upon it, and that the publication of their decision would induce the English growers as a body to follow their example. He then read a letter from a Borough factor, emphasising the views already expressed, and pointing out that another large crop would keep the merchants off the market, with disastrous results to planters.

Mr. Albert White seconded the resolution, and advocated organisation for the purpose of a general and proportionate grubbing of hops. He admitted the difficulty of bringing it about, but he thought that it could be effected if the National Association were better supported by growers.

Mr. J. Mainwaring considered that general grubbing was not practicable, as some would grub while others would plant, and he feared they would by such policy open the door for foreigners to come in.

Mr. W. Langridge advocated the imposition of a substantial import duty, and was of opinion that the difficulties they were experiencing would be solved by "the survival of the fittest."

Mr. Lee said that foreigners would continue to send hops to England under any circumstances, as he regretted to say that he considered that farmers were too idiotic to combine against them. He also supported an import duty, and was of opinion that, as Mr. Chamberlain was studying the interests of the colonies, and as English agriculture—their chief industry—was dying, he (the speaker) had hopes that the day was not far distant when the House of Commons would be induced to move in the direction he desired. For this purpose they should press the matter upon the attention of their representatives.

Mr. Austin trusted the resolution would be carried unanimously, and that growers would be careful to cultivate hops of the best quality in preference to inferior sorts.

Mr. Luxon considered that farmers were their own enemies, and quoted a saying of an old grower, that protection was formerly found in the fact that hops would spoil, but from what they had heard that source of safety was removed by cold storage; they must, therefore, consider their position, and move forward on new lines.

After some remarks by Mr. George Langridge and other speakers, the chairman put the resolution to the meeting, and it was carried unanimously.

The secretary of the club was then requested to send the resolution to the various farmers' clubs and societies in the hop-growing districts, and to urge upon them the desirability of taking measures for the general reduction of the acreage by at least one-fifth of the present area.

A cordial vote of thanks for his address was presented to Mr. Ironmonger, and that gentleman having briefly replied, the proceedings terminated.

All official reports and notices of the National Association of English Hop Growers will be printed in the MARK LANE EXPRESS, *which will also contain all current information likely to be of interes and benefit to the members of the society.*

AGRICULTURAL LAW.

Interesting Decision as to Fencing.

In the Worcester County Court, on Wednesday, it was held in a case before Mr. Registrar Allen that owners of property adjoining common land were bound by law to fence against cattle on the common, which was contrary to the ordinary rule that an owner of property was not bound to fence against his neighbour's cattle. The action was one brought by the Rev. L. Morgan, of Powick, t recover damages caused by cattle belonging to Mr. Harrington, of the Sandpits Farm, straying into his orchard and eating cider fruit, and also money paid to the defendant to release a heifer impounded by the defendant while straying on his land from the adjoining common. The plaintiff obtained judgment for 9s. for the trespass by defendant's cattle and the return of 5s. in respect of the impounding. The parties were represented respectively by Mr. W. W. A. Tree and Mr. T. G. Dobbs, and the former cited to the Registrar a case decided on appeal laying down the principle upon which the Registrar gave his decision.

"Mark Lane Express" Diary.

January.
30. Sale of Mr. A. J. Hollington's shire horses at Abridge, Essex.
30. 31. Sale of horses at Crewe.
31. Sale and letting of shire horses at Peterborough.

February.
1. Sale of shire horses and fillies at Peterborough.
4. Meeting of the Council of the Shire Horse Society.
4. Meeting of the Council of the Shorthorn Society.
4. Glasgow Agricultural Society's Stallion Show at Scotstoun, Glasgow.
4. Sale of shire horses, the property of H. M. the King, at Wolferton, Norfolk.
5. Sale of 40 shire horses for Mr. R. Allen at St. Germans, King's Lynn.
5. Meeting of the Council of the Smithfield Club.
5. Meeting of the Council of the British Dairy Farmers' Association.
5. Meeting of the Council of the Royal Agricultural Society.

SOCIETIES.

Worcestershire Chamber.

At a meeting of the council of the Worcestershire Chamber of Agriculture, held on the 18th inst. at Worcester, and presided over by Mr. A. Dudley Clarke, Mr. T. R. Hulbert brought forward a resolution urging the necessity for a registration duty upon all imported grain and flour, live stock and carcases of meat. Such a duty would, he contended, be felt by no one, and would result in a revenue of anything from ten to twenty millions of money if a registration fee of 1s. a quarter on all imported grain and every head of live stock and carcases were imposed. It had been a matter for very general regret that the registration duty was removed.

The Chairman suggested that the consumer would be made to pay the duty.

Mr. Hulbert did not agree. So small a duty as 1s. a head on imported stock cou'd not be apportioned to the consumers

Mr. S. Gardner seconded, and remarked that the duty was desired purely for revenue purposes.

Mr. F. Corbett agreed that 1s. per quarter on imported wheat and flour would not be felt, but if it were extended to all grain and cattle food it meant that the farmer would have to pay it.

Mr. H. C. Gardner said that the duty should be confined to wheat and flour, otherwise the revenue would be mostly found by the farmer.

After some discussion it was decided to recommend the proposal to the annual meeting of the Chamber.

A communication was received from the Central Chamber in answer to the council's enquiry as to the position of the question of the combination of agricultural implement makers to raise prices generally, stating that the matter was referred to the co-operative committee, which had not yet met.

The Chairman remarked that owing to competition he believed the attempted combine would die a natural death. He believed the movement did not threaten as much danger to agriculturists as was expected. Mr. Roxburgh demonstrated by actual experience that the movement had not been successful, and that no detriment had been occasioned farmers. The Chairman added that an attempt had been made to carry out what was impossible in these competitive times, and vendors of implements would soon regain their freedom.

It was decided to await a further communication from the Central Chamber.

Yorkshire.

A meeting of the Council of the Yorkshire Agricultural Society was held at the offices, Blake Street, York, on Thursday. The Earl of Feversham, President, occupied the chair, and at the outset thanked the members for his election, and stated that he would at the Leeds show give two special prizes of £10 each to the classes for Cleveland bay stallions and brood mares.

The Leeds Local Committee were elected members of the Council for the ensuing year.

The Secretary reported that at the close of the year the membership of the society showed a net increase of eleven members. The life members numbered 429, an increase of 35, and the annual members 835, a decrease of 24. The accounts for the Bradford meeting showed a profit of £81 15s. 4d.

The Stock Prizes Committee presented a revised prize list for the Leeds Show. The total prize money was £2,020, divided as follows:—Cattle: Shorthorns £260, dairy £50, Jersey £48, Aberdeen Angus £75. Sheep: Leicester £60, Lincoln £74, Wensleydale long-wool £63, black-faced Scotch mountain £36. Pigs £112. Horses: Thoroughbreds and hunters £350, jumping competitions £135, harness horses £60, hackneys and ponies £235, coach-horses £150, Cleveland bays (including the two £10 specials given by the President) £60, Shire horses £150. Shoeing-smiths' competitions £40. Butter £15. Cheese £30. Bee appliances, honey, and wax, £17.

The judges for the next show were selected and approved.

A letter was read from the Town Clerk of Sheffield intimating that the General Purposes and Parks Committee had passed a resolution recommending the City Council to invite them to hold their show in Hillsborough Park, Sheffield, in 1903.

Mr. T. Fairley, the analytical chemist, submitted his half-yearly report. It showed that 108 samples had been analysed. One of the samples of undecorticated cotton-cake contained over 30 per cent. of woody fibre and wool, and a cotton-cake sold as decorticated contained nearly 14 per cent. of woody fibre and only 7¼ per cent. of oil, and 29 per cent. of albuminoids. The sample of decorticated cotton-meal contained an admixture of about 40 per cent. of ground husk. This is a new form of adulteration, which has not been observed in former years.

(*Other Societies will be found on pages 122 and 123.*)

COMING SHOWS.

The Yorkshire Show at Leeds.

A meeting was held in the Lord Mayor's Rooms, at the Leeds Town Hall, on Monday, to appoint a committee to make arrangements for raising a local fund and to deal with other matters in connection with the Yorkshire Agricultural Society's Show at Roundhay on the 30th and 31st July, and the 1st August. The Lord Mayor, Mr. A. E. Butler, the convener of the meeting, was suffering from a bad cold and could not attend, so that the Deputy Lord Mayor, Alderman F. W. Lawson, presided.

At the onset the chairman recalled the circumstances under which the City Council decided to invite the Society to visit Leeds this year. The invitation was, he added, cordially accepted, and it now became necessary to appoint a local committee to make the requisite arrangement for inviting subscriptions to a local fund, and otherwise to carry out the requirements of the Society. The City Council had placed at the disposal of the Society the splendid site at Roundhay, upon which the show was held in 1898, and there was every probability that with the greatly improved tramway service the attendance would be largely in excess of the numbers who visited the show four years ago. One of the financial requirements of the Society was that a sum of not less than £1,000 should be locally contributed, but in 1898 the local committee considered it desirable to ask the public for £2,000, with the result that 364 subscribers contributed £2,273 15s., the whole of which was dealt with in contributions to the Society's general and special prize fund and other expenses connected with holding the show at Leeds. It would, therefore, be desirable to follow the precedent of 1898 and appeal for £2,000 for the financial requirements of the local committee.

Sir Arthur Lawson moved, Colonel F. W. Tannett Walker seconded, and it was agreed that the Lord Mayor should be the chairman of the local committee. On the motion of Alderman Gordon, and seconded by Councillor Boston, Alderman F. W. Lawson was appointed deputy-chairman. A large and representative local committee were chosen, with power to add to the number.

It was resolved to ask Messrs. Beckett and Co., who had promised to give £100, to act as treasurers, and the Town Clerk was appointed secretary, with liberty to nominate an assistant secretary.

The Lord Mayor, the Deputy Lord Mayor, Alderman Gordon, Alderman Tetley, and Mr. Warren were proposed as a sub-committee to approve a circular asking for subscriptions to the local fund, and to consider and decide upon the best means of promulgating the appeal.

Mr. Maughan said he felt pretty certain that the show would "go" this year. Leeds held several records. The financial result attending the visit in 1879 was the largest in the history of the Society, the profit amounting to £1,608. In 1898 the profit was £677, and although the financial gain was smaller than in 1879 there were very satisfactory features connected with the meeting. For example, there was a record entry of sheep (223), and the first day's receipts at the turnstiles and grand stands had never been equalled, the takings being £1,191 and £253 respectively. The number of life and annual members in 1898 was 1,186, and the total admission of the public into the show ground on the three days was 67,009. The ground at Roundhay was the best possible site they could have. He asked them to elect a number of local gentlemen to join the Council of the Society for the current year.

The Lord Mayor, the Deputy Lord Mayor, Sir Arthur Lawson, Colonel Tannett Walker, Alderman Tetley, Councillor Boston, and the Town Clerk were chosen to serve on the Council as suggested.

Suffolk Society at Ipswich.

A meeting of the Committee of the Suffolk Agricultural Association was held at the Town Hall, Ipswich, on Tuesday, Mr. E. Packard in the chair, for the purpose of revising and confirming the prize list for the show to be held at Ipswich on June 5th and 6th next. The Secretary, Mr. Robert Bond, read a long list of donations to the prize fund, which included £500 by the town of Ipswich, and the following awards by breed societies:—Suffolk Sheep Society, gold medal, two silver medals, and £5; the Shorthorn Society, £10; the Hunters' Improvement Society, gold and silver medals; the Shire Horse Society, gold medal; the Polo Pony Society, medals.

Sir Cuthbert Quilter, M.P., wrote that he should be glad to contribute to the prize list, but should prefer the question of the form which his contribution was to take to stand over for the present. He suggested that arrangements might well be made for a prize or prizes for the best team of Suffolk horses, harnessed to waggons, similar to the successful competition held at the Woodbridge show. It was subsequently agreed that there should be special prizes for such a class, on the same lines as at Woodbridge, the competition to take place on the second day of the show.

Mr. George Manners, of Fornham Park, Bury St. Edmunds, sent a letter, in which he stated that as President-Elect of the National Pig Breeders' Association, he wished to impress the Committee with the importance of doing all that lay in their power to improve the breeds of pigs in Suffolk. At some of the smaller shows in the county there were practically no prizes given for swine—the most useful animal on the farm. In Suffolk, of all counties, this was especially to be regretted, as, according to the Board of Agriculture returns in 1900, Suffolk owned 50,000 more pigs than any other county. Lincolnshire, with 50,000 fewer pigs, gave £84 in prizes, compared with £48 given by Suffolk. He hoped, therefore, that the Committee of the Suffolk Show would increase the prizes for swine; and thereby show that they recognised how important it was that the owners of pigs in Suffolk should keep only the best strains. A slight increase in the prize list would induce the National Association to assist by offering medals for animals eligible for the Herd Book. He (Mr. Manners) would be pleased to offer a silver cup, value £5, for the best boar and sow of the large white breed under 12 months, the property of a bona-fide Suffolk tenant farmer.

He also suggested that it was desirable to revert to the practice of former years, and confine the prizes for swine to "owners or occupiers" or "residents in the county." He would suggest "owners or occupiers" only. It did not assist local breeders to have outsiders coming in with overfatted animals which only appeared in the showring, and benefited no one in the county. He earnestly hoped that judges be imperatively instructed to consider the breeding value of the animal only, and that excessive fat should be an objection. He felt that the matter was of exceptional importance in Suffolk, so much so that he had started a pedigree herd, in the hope of doing some good. Many farmers kept no pigs because they "did not pay," and no wonder, when they were content to go on year after year using any boar, and filling their yards with gaunt, unthrifty animals. The use of good stock would make an astonishing difference. With regard to the excess of 50,000 pigs in Suffolk, if by improving the breed the modest amount of 2s. per head only was allowed for increased value for greater thriftiness on less food, there would be at once a sum of £5,000 to be divided among Suffolk farmers.

The revision and confirmation of the prize list was proceeded with, the plan followed being much on the lines of the schedule at the previous show at Ipswich. Mr. Bond informed the Committee that the amount of money available for prizes he calculated to be £1,311 9s., as against £1,020 12s. at Beccles last year. The jumping and tandem classes, etc., were improved in view of providing a special attraction for Ipswich. With regard to the pigs, it was decided that the classes be the same as at Beccles, and the prizes as at the previous Ipswich Show, the latter being a little larger. It was decided to have sheep-shearing and horse-shoeing competitions.

With regard to the butter-making competition, the advisability of holding it was questioned on the ground of the expense. Mr. Flintham strongly advocated a competition, and eventually the following resolution was passed:—"That this Committee draws the attention of the County Councils of East and West Suffolk to the advantages of demonstrations of butter-making, horse-shoeing, and sheep-shearing at the annual show, and asks their financial assistance."

The fact that the Norfolk County Council contributed £200 towards such objects was afterwards added to the resolution.

New Site for the Wirral and Birkenhead.

An appeal has been issued by the Wirral and Birkenhead Agricultural Society for contributions towards the cost of equipping their new show-yard, which, it is estimated, will need a sum of from £12,000 to £14,000. The work must be put in hand immediately, in order that the ground may be ready for the Diamond Jubilee Show of the Society, which is fixed for September 10th and 11th next. Nearly £3,000 has already been promised, and several gentlemen have promised subscriptions, but have not yet fixed the amount.

In the course of the appeal, which is signed by the chairman and the secretary, it is stated that:—"The stormy weather which prevailed while the show was being held in the year 1900 caused such extensive damage to the stands, sheds and other buildings that the cost of reinstating them would have involved the Society in a heavier expenditure than the committee felt justified in undertaking with the funds at their disposal. This, coupled with the fact that a number of prominent exhibitors had intimated their determination of not exhibiting their stock on the old show ground, also that the Society's tenancy was terminable at short notice, decided the committee to lose no time in acquiring a new site.

"Under these exceptional circumstances they were reluctantly compelled to abandon the idea of holding the annual show in 1901, but they are pleased to report that their efforts to provide a new show ground for the Society have now been brought to a successful conclusion.

"Certain gentlemen have kindly come forward and purchased a very desirable site, consisting of 22 acres of land situate in Lower Bebington (in close proximity to Bebington Station, on the London and North-Western and Great Western Joint Railway, between Chester and Birkenhead), and have agreed to lease the land to the Society for an extended term, at a rental only sufficient to pay the interest on the purchase money, also coupled with an option to the Society of purchasing the property at cost price at any time during the term.

"To enable the Society to enter into a lease and to generally deal with its property as an incorporated body, without the intervention of trustees and without the necessity of its officers incurring personal liability, it was decided to register the Society under the license of the Board of Trade, as a Society for the promotion of Agriculture, at the same time retaining its original title, viz., 'The Wirral and Birkenhead Agricultural Society.'

"This decision having now been carried into effect, the sole liability of each member, in addition to the payment of an annual subscription, will be to contribute to the assets of the Society, in the event of its being wound up, an amount not exceeding £1."

The site thus obtained is a commodious and convenient one, and, if fitted as at present planned, will be a notable example of a show-yard, being probably one of the best in the Kingdom.

Agricultural Imports.

The following is an account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week ended Jan. 19, 1902, together with the quantities imported in the corresponding week of the previous year:—

	1901	1902.		1901.	1902.

* In 1900 these were not shown separately.

We regret to notice the death of Lord Rookwood, which took place on the 15th inst., in his 76th year. His lordship was a great admirer of pure bred stock of all kinds, and at his beautiful home at Down Hall, near Harlow, he at various times kept herds of Aberdeen Angus, Guernsey, and Jersey cattle. The Black Polled herd was dispersed in 1896, when one of the cows made 65 guineas, and the Guernseys were sold two years afterwards, and realised good prices. It was chiefly through Lord Rookwood's energetic action in the House of Commons that the Bill for the Slaughter of Cattle at the Port of Landing in Great Britain was passed. The funeral took place at Hatfield Broad Oak Church on Tuesday afternoon, in the presence of a large assemblage, representative of every phase of Essex county life. The Bishop of Colchester and the local clergy officiated. Lady Rookwood, Lord and Lady Aberdare, the Earl of Warwick, Lady Duncan, and the Hon. Lyndhurst Bruce were among the mourners. Numerous beautiful floral tributes were received from all parts of the country.

The Apple Orchard.

Sir,—I see that my letter of the 13th inst. re the merits and demerits of the orchard and plantation systems in modern fruit-growing has resulted in a somewhat amusing retort from the gentleman whose nom de plume I used as a peg on which to hang my somewhat decided opinions on this matter. Really the "Orchard Advocate" must have a remarkably poor opinion of the mental capacity of the modern fruit-grower if he imagines that his ideas are to be waved aside in the light and airy manner which "O. A.'s" first paragraph suggests. According to the "O. A.," every person who advocates the plantation system, or who, by adopting it himself, sets a bad example to others (which is the same thing), is aiding and abetting the foreigner in taking an odd million a year out of his countrymen's pockets. Was ever such an absurd theory advanced? In concluding my letter I mentioned that it would be interesting to hear the views of those who practise the grass-land system (of course, with profitable results), and in doing so the easiest way in which to convince the opposite side of the error of their ways would have been to dispose, one by one, of the objections which I raised against it. In taking up the cudgels on behalf of his favourite system, "A. O." has thought best to avoid any reference to my objections whatever. "A. O." is evidently under an entirely wrong impression as to the class of growers which my first letter concerns. My remarks were not intended for men who object to "soiling labour," or who are foolish enough to believe that fruit-growing for profit can, by any stretch of the imagination, be anything approaching "Arcadia." I am concerned with those who, given an acre of land, wish to make the very most out of it, and are not content with planting the trees and leaving them to practically take care of themselves. I do not attempt to deny that from a picturesque point of view, and also as regards personal comfort, there is much in the grass-land system; unfortunately neither of these qualifications tend to materially increase one's income. As regards the intercropping question, "A. O." is decidedly lugubrious, and seems to imagine that there is nothing more likely than that a man who has sufficient knowledge to manage fruit trees for profit (no easy matter) would be absolutely ignorant of anything pertaining to the growing of vegetables. At any rate, he would know how to manage bush fruits, which was one of my suggestions, and if in addition he cannot pick up sufficient knowledge to raise a few hardy outdoor vegetables he is indeed to be pitied. Of course, if he is miles from anywhere, and cannot dispose of produce; then, of course, he need not grow it; but such places are rare, and would be so unsuitable for fruit-growing itself that it would be folly to settle there. However, apart from the question of intercropping, my contention was that the presence of grass is injurious to the trees; and as "A. O." has made no attempt to convince me to the contrary, I still hold that opinion. I am quite open to conviction, but must confess that the "Arcadian" apple orchard is quite beyond my hopes of achievement.—I am, Sir, faithfully yours, PLANTATION ADVOCATE.

January 23rd, 1902.

The Ruin of Rural England.

Sir,—Your short notice of my book is so grossly unfair that I must beg leave to protest. Hostility I would not complain of, but when one is charged with writing whole chapters of abuse, and over-stating one's case, by a reviewer who does not think it worth while to quote anything from the book itself in support of his contention, an author has a just cause of complaint. Almost every phrase in which the writer of your short article has condemned the book could be confuted again and again from the contents of the book itself. I have made no statements that are not supported by ample eidence, and evidence that cannot be gainsaid. Your reviewer has replied by an expression of pious opinions which, unsupported, are of no value; the book will not be laid aside with scant attention as he supposes. I have to-day seen an agricultural paper with an appreciative article extending to three columns, and the book has been well received by local papers circulating in agricultural districts.—Trusting to your sense of fairness to insert this letter, I am, &c.,

J. WESLEY MARTIN.

Felsted, January 22nd, 1902.

GARDEN.

January is now drawing rapidly to a close, and already the days are beginning to "draw out" a little—though very slightly as yet. Still, one cannot help noticing that the dusk does not fall nearly so early now as a month or so back.

It is almost too early in the season yet to do much in the outdoor department, but the weather remains so mild and favourable to any outdoor operations that it would be a pity not to get on with anything that can be done in this way while the opportunity remains. Next month will be February, remember, and if it should deserve its old title of "February Fill-dyke"—as not infrequently happens after a mild, dry winter—there will be very little chance of getting much outdoor work accomplished then.

Any plots or beds that have not yet been dealt with had better be thoroughly dug up—or, better still, be trenched—and manured, consequently, at once, treating each, as regards both the working and manuring, in the manner calculated to best meet the requirements of the particular crop it is intended to carry. Beds to be cropped with long roots of any kind, such as carrots, parsnips, or beet, ought not to be manured now, or if any dressing is absolutely necessary, let it be placed well down below the surface, in the bottom of the trenches, which should be some 18 inches or 2 feet in depth. Turnips, however, like the manure near the surface, and just beneath the drills, and for potatoes also the dung is usually placed in the furrows, when planting, placing it either under or over the sets, according to the nature of the soil. Still, for both of these crops the ground had better be broken up, if nothing more, in order to let the air into it, and assist in obtaining a nice mellow tilth.

Do not forget the plots to be planted with rhubarb, shortly, and seakale (root-cuttings) in March; for both these the ground must be well and deeply worked and heavily manured if roots of the finest quality are to be obtained. If any asparagus is to be planted this spring, the bed, or plot, for this also may be prepared at any time now. For this subject the old raised-bed system is out of date now, and quite unnecessary. Seed-beds for raising either asparagus or seakale (from seed) ought also to be prepared in good time.

Get all peach trees, as well as apricots and nectarines, pruned and trained as soon as possible now, as if the present mild weather continues the sap will soon be commencing to move again in these precocious subjects. It will be as well, also, to decide in good time what method of protecting the trees when in bloom is to be adopted, and obtain the necessary materials. A coping fixed over the plants, along the top of the wall, if consisting of a wide board only, is always a great advantage; something of the kind is easily fixed, but of whatever kind is should be removable, so as to be taken down when no longer required.

Prepare a bed for a batch of ranunculus roots, if not already done, digging it well and working in plenty of well-decayed manure. A rather light soil suits these charming plants best; the roots are very inexpensive, and when in flower, in May or June, they are really exquisite. Plant 3in. or 4in. deep, and 4in. apart, always with the claws downwards.

At the same time, a good batch of the Crown anemones, as well as of A. fulgens, with some gladiolus, "the Bride," may be planted now, but it is too early yet for the ordinary large-flowering gladioli, and also for tigridias and others.

ROBSON'S CATTLE MART, BELFAST, HELD ON 21ST JANUARY.

The following returns are those of actual sales made in the markets referred to, the stock being weighed either before or after sale, for the week ending January 25th, 1902.

* So'd by live weight.

Plant Colonists.

Prior to the time when man in these countries began to till the ground—say between 2000 and 5000 B.C.—the face of the land had an aspect very different from what it bears at present, says Mr. R. Lloyd Praeger, B.A., writing in "Knowledge." Long before Neolithic man introduced the arts of husbandry, and began to choose pasturage for his flocks and to sow in the ground, in order that he might reap, the land had been completely colonised by plants which are still our common wild-flowers, and every nook and corner had its chosen inhabitants. When our forefathers commenced to till the ground, a destruction of the native plant associations was the result; and this gave an opening for plants suited to the new conditions. Annuals could maintain their hold year by year on the tilled land, where the former perennial plant-groups could no longer exist. And clearly those plants whose seeds happened to be mixed with the grain which the early husbandmen sowed would have an excellent opportunity of survival. Thus we can conceive that the now large and well-marked group of weeds of cultivation had a very early origin. Nor is it impossible to conjecture that in some cases plants originally native may have found a congenial habitat on these prepared grounds, and by degrees forsaken their old haunts and established themselves mainly here, and become parasitic, so to speak, not on man, but on man's operations. Certain it is that we have plants in our flora, which are presumably original natives, yet are always or generally found in association with man (though not of any service to him) in cultivated land or about dwellings etc.

The vegetation of our islands, as it now presents itself, is by no means a homogeneous or natural assemblage of plants. The higher regions of the mountains, the large lakes, swamps, and bogs, still retain their primitive facies, and there the original flora remains almost unmolested; but as we pass from these waste lands to the inhabited areas, where highly cultivated land is dotted over with towns and villages, and intersected with roads, railways, and canals, a greater and greater number of alien plants put in their appearance, till, in waste ground adjoining harbours or mills, we may find a rank flora struggling for existence amid murk and dust, in which exotic plants, the produce of widely separated lands, form the larger portion of the vegetation. To take an instance, the flora of Ireland numbers about 900 undoubtedly native species, to which may be added about 130 others which, though now permanent members of the flora, are considered to be possibly or certainly introduced originally; and about 200 other plants have been found growing spontaneously, which are certainly exotic, and not established. In other words, of this total of 1,230 plants, 73 per cent. represent the original vegetation of the country; 10 per cent. we may generally call plants which came with man and have now won a place in the permanent flora; while 17 per cent. represent the waifs and strays brought into the country by trade, agriculture, and horticulture; some of th elast will no doubt eventually establish themselves.

To consider in greater detail the various groups of which our immigrant vegetation is composed. First we have the group of crop plants—species which are grown for economic purposes, and which may spread and establish themselves. Some of these are, others may be, original natives; others again are undoubtedly exotic. The Lucerne (*Medicago sativa*), for instance, a native of the eastern Mediterranean, has long been grown as a fodder plant, and has now established itself on banks and dry ground in many places. The Comfrey (*Symphytum officinale*), on the other hand, is undoubtedly native in England, but apparently not so in Scotland or Ireland; yet has been so widely cultivated that its range now extends all over Ireland, and well up into Scotland. The Parsnip (*Pastinaca sativa*) in rank and distribution stands on a very similar footing; it has been in cultivation since Roman times. The Turnip, in its various forms (*Brassica Rapa, Napus campestris*), may be cited as one of the plants whose standing it is now almost impossible to determine. It has been widely cultivated for several thousand years, and is so still, whether as a root crop, for fodder, or for the manufacture of rape or colza oil. Which of the many forms are or were native, and what their distribution was, are questions which cannot now be answered with any degree of satisfaction.

The writer gives many other varieties of plants which have in some way or other been introduced into our fields. Summing up, the writer says:—We see how composite a thing our present-day flora is, and how many difficulties the student of geographical botany has to contend with in endeavouring to trace the history of the vegetation of the country. A weed may perhaps be defined as a flower in the wrong place; but in Nature there are no wrong places. Let tillage cease on any portion of the earth's surface, Nature takes it in hand; and through more or less rapid progressive changes of flora, the land is occupied by the plants best fitted to hold it, and the natural equilibrium restored.

Devon (Exeter).

The extraordinary weather since the commencement of the year is very favourable for outdoor work. Wheat tilling should have been completed, and the ploughing and tilling of oats is progressing, also the ploughing for barley and preparation for root crops. Swedes are shooting out, and had better be pulled, for they lose their feeding properties, and the ground can be got ready for sowing barley early. Cattle are doing very well out of doors, and hay is being saved, which is a great consideration, as it was such a poor crop. Winter fodder will now be sufficient. Sheep have risen in price, and cattle will sure to follow, as all stock is healthy. Lambs are coming on healthy and strong, and there is some nice young grass in the pastures for the ewes, which causes their milk to increase. Everything looks favourable at present; perhaps this is a record. Wheat is selling at 62 lbs. per bushel, at 3s. 6d.; prime white oats have sold at 1d. per lb., 47 lbs. to the bushel, or 3s. 11d. so by measure—they fetched 5d. more than wheat by weight, 25 per cent. more, nearly one less than 3s. 4d. per lb., whilst oats are 1d., and this land will produce twice as much oats as wheat per acre. This will account for the decline in wheat growing, for farmers cannot be philanthropists and grow wheat for the good of the public and loss to themselves. I defy any farmer to grow wheat at a profit at 3s. 6d. or 3s. 9d. per bushel, so wheat culture must become extinct. All catch crops, like vetches, rye, trifolium, etc., are almost too forward and looking splendid, so unless the weather is very bad spring keep will be early and plentiful.—G. H. (January 22).

North Devon.

At this season in this district there is not much to report on. The weather is fine, work on the farm well forward, wheat good plant and looking well. No spring corn yet put in. All live stock healthy and selling at fair prices. Our winter keep likely to meet all demands, if we get a fairly forward spring.—G. H. (January 22).

Norfolk.

One can scarcely realise it is mid-winter, the very mild, dry weather enabling us to get the land ploughed in the finest possible condition for the spring corn. Already many acres are ridged for potato planting, and other work is in the same forward condition. Our pastures are very bare from the drought of last summer, but seldom have I seen them looking more promising at this season. Mutton was a very disappointing trade all summer and autumn, and still no improvement, beef being a fair trade throughout the year, but most expensive to produce, our pastures being short and artificial food dear. The cereals were above an average crop on well-farmed lands, and harvested in fine condition. Prices fair for spring corn, but disappointing for wheat. With increased acreage of potatoes, combined with heavy yield, markets overstocked, and prices have given way with but very little prospect of recovery except for the very best.—W. A. N. (Jan. 23.)

Oxon (North).

Things in the farming line rub along much as usual, there being no very special feature to write about. The weather is mild, favourable both to the saving of hay and straw and to the progress of work on the land, which is generally in a forward condition, as well as to the lambing season, which is in full swing. Luck seems to be fairly good, with a fair proportion of doubles, and lambs are strong. Feeding-sheep are getting over the roots very fast, and being pushed into the market, with the consequence that mutton prices are very low indeed. Beef sells well; store cattle are doing well, and spending the daytimes on the grass. Prices of wheat and barley keep low, while oats are dearer than for a long time. Hay and straw is selling well, and a lot is being sent off this time, this neighbourhood being well suited for the growth of sanfoin, but for which we should have had but very little hay the last several years. Potatoes yielded large crops, and are only making very miserable prices. Taking things all round, the year just gone cannot agriculturally be called a good one. We can only hope, as we have often done before, that the present one will be a good ing for oats or barley.—J. G. (January 24th).

Shropshire.

After a few frosty days, that were favourable for carting manure, the weather broke up, but is still open and variable, and suitable for ploughing for oats or barley.—J. E. (January 24th).

Essex (West).

Crops and stock doing well. Labour and prices are the difficulty, and until our Government see their way, if they must tax necessaries, to tax those that compete with the farmer, and through him, with his men, good men will not come back to the land. A moderate tax on foreign flour would give our local mills a chance of re-opening, and our men an opportunity of making good bread, and the offal for cattle and pig feeding. As it is, the men feed on bakers' bread, made from roller flour, which fills them with wind, instead of giving them strength, and drives them to drink adulterated beer.—E. R. C. (Jan. 24th).

York (West Riding).

The year just past, is perhaps, from an agricultural point of view, one of the most disastrous we have had in this district for a long time, caused mostly by the long drought in summer and autumn, and in some cases by the very severe frosts early in November damaging the turnips and mangolds, and in some instances potatoes. Wheat is yielding fairly well for the quantity of straw, but is not a heavy crop per acre; it was much too dry for barley and oats, and turnips were in this district almost an entire failure, causing the markets to be glutted with sheep (as there is no keep for them), and which are now being sold at ruinous prices. At the present time we are having very nice weather, the land is ploughing well, and work is proceeding satisfactorily, and we should be in a forward state at seed-time, as there are practically no turnips left on the ground to retard the ploughing.—A. M. (Jan. 24th).

Foreign Prospects.

FRANCE.—With hardly an exception the wheat crop is doing well; weather has been mild and damp, with occasional rain. Markets everywhere continue quiet, for millers buy sparingly. Foreign wheat is almost neglected in Paris and the Northern Corn Exchanges. Term wheat is fully 6d. down on the week.

BELGIUM.—Our advices make no reference to crop prospects. Antwerp market early in the week was shaping better, but ceased to improve when America retreated. Brussels had a quiet trade at barely recent quotations.

HOLLAND.—Unfavourable advices from American and other markets caused a quieter trade in Rotterdam. Wheat was in ample supply, but met only limited inquiry. Rates for rye were maintained, and barley kept firm.

GERMANY.—Weather was mild and wet but no complaints are heard respecting crop conditions. Berlin yesterday closed steady for wheat, but not quotably higher on the week.

RUSSIA.—The prevalence of frost in place of the mild, moist weather previously experienced, cannot be regarded otherwise than a very grave incident in connection with the crops, especially in the exposed state of the fields; however, having come so suddenly, it may disappear before the damage becomes irreparable. Grain supplies in the interior continue moderate, while in Azoff districts prices are easier, in consequence of increased deliveries of grain.

HUNGARY.—The crops are protected by snow; previously they had been doing well. Colder weather appears to have stimulated demand and hardened wheat prices; the lower rates asked for Wallachian and Servian samples attracted most of buyers' attention. Term wheat is fully 6d. dearer on the week.

UNITED STATES.—The *Cincinnati Price Current* of yesterday says the weather is favourable for wheat, and though much of the crop which went under a snow covering is looking brown and tender, there is but little damage, and the outlook is fairly good. The grain movement is light.—*Dornbusch.*

Mr. Charles Smith, of Redcliffe, Whittingham, who for nearly half a century discharged the duties of factor of the East Lothian Estate of the Right Hon. A. J. Balfour, M.P., and for his father before him, died on Tuesday, aged 82. He had for many years been associated with most of the public bodies in Haddingtonshire.

Cheshire Cattle Fair was held on Thursday, and was a small and quiet one. The show of store cattle presented no attraction to buyers either in the way of quality or price, and trade was slow. The best dairy stock was in demand, and good lots speedily found purchasers at good prices. No sheep or fat cattle were in the market. Prices:—Milch cows, £14 to £22; calves, £13 to £19; heifers, £8 to £12; stirks, £5 to £9.

MONDAY (January 20).—The weather was generally cloudy over our islands, and rain fell in parts of Ireland. Rain was measured in the morning at several places in the north and west, as the result of the fall in the preceding twenty-four hours. A brisk rise of temperature had occurred over the whole kingdom, and in the central parts of England the thermometer in the morning was twenty degrees higher than on Sunday. The central area of a large cyclonic disturbance was situated on the coast of Norway, and under the influence of this storm system the wind was south-westerly in the British islands, and it was strong in places on our west coasts. The weather was dull, but dry, in London, and the temperature rose to fifty-two degrees, which is ten degrees above the average.

TUESDAY (January 21st).—Dull and overcast weather prevailed over our Islands, and mist or fog occurred in many places. Rain was measured in the morning in the North and West as the result of the fall in the preceding twenty-four hours, but the weather still continued dry in most parts of England. A mild South-Westerly current was again blowing from the Atlantic, and the temperature was generally much above the average. The lowest temperatures during Monday night were very little below 50 deg., except in the North, and the midday readings were in many places 10 deg. and more higher than the normal.

WEDNESDAY (January 22nd).—The weather was again very warm over our Islands, but it continued dry in the South-East of England, although rain fell at several places in the North and West. Rain was measured in the morning, as the result of the fall since the previous day, over the entire Kingdom except in the South-East of England, but the amounts were everywhere small. The thermometer was above the average over the whole country. A fresh cyclonic disturbance was approaching the coast of Norway from the Atlantic, and under its influence the winds were still blowing from West and South-West. In London the sky was cloudy, and the weather continued very warm, the thermometer registering 54 deg.

THURSDAY (January 23rd).—The weather was again generally dull, and the temperature remained high for the time of year. Rain was measured in the morning, as the result of the fall since the previous day, over a large part of the Kingdom, but the amounts were nowhere large. Rain again fell during the day at places in the North and West. The barometer was falling generally, especially in Ireland, under the influence of a cyclonic disturbance which was approaching from the Atlantic, and the wind had freshened considerably on our North-west coast. The current of air was still everywhere South-westerly. Wednesday night was warm, the lowest temperatures ranging generally between forty-five and fifty degrees. The midday temperatures were again everywhere high.

FRIDAY (January 24th).—Unsettled weather had become general over our Islands, and rain fell over nearly the entire country. A cyclonic disturbance had arrived from the Atlantic, and barometer readings near the centre of the storm system, which was situated to the North of Scotland, were below twenty-nine inches. The wind was increasing in strength from the West and South, and a moderate gale was blowing in places on our West coasts. Heavy rain was measured in Ireland as the result of the fall since the previous day, but in the East and South-east of England the weather had continued dry until the morning. Temperature had fallen over the entire Kingdom, although the midday readings were again high in most parts of England.

SATURDAY AND SUNDAY (January 26 and 27).—Strong northerly and north-westerly winds and gales occurred in many parts of our islands during these two days, and the weather was very unsettled, with snow or sleet showers in many places. Rain or melted snow was measured over nearly the entire country on both days, and in places the amounts were fairly large. A considerable fall of temperature has occurred, and rather sharp frost was experienced at night in most parts of Great Britain, especially in the northern, eastern, and midland districts. The day temperatures also continued low for the time of year.

CORN MARKETS.

LONDON.

Mark Lane, Monday.—Malt: We have had a moderate inquiry during the past week. Barley: Grinding and malting unchanged. Wheat: Dull. Oats: Steady. Maize: About 3d per qr cheaper. Flour: Quiet.—NIXON, GOWER AND CO.

Mark Lane, Wednesday.—The attendance was small, but notwithstanding a poor day's trading, quotations scarcely varied in the general sections. London millers continue content as to the present position of English wheat, but steadiness again pervaded the range of prices, as farmers send up only trivial quantities here. Whites, 29s to 30s 6d; reds, 28s 6d to 30s per qr delivered. The market for flour appears firm in general, but so inanimate that the actual position is rendered stationary at present. Stocks, however, still become gradually reduced. Town households, 23s 6d; whites, 26s 6d per sack delivered to the baker. Australian patents, 20s to 20s 6d per 280lb ex store. Grinding barley remains neglected, and easy. Odessa, 18s ex ship, 18s 6d ex quay. Danubian, in the former position, 18s. English malting continues well sold out, and attention is still being paid to samples for seeding. Oats steady, although slow, with American remaining out of supply, and Russian, etc., supplying necessary wants. English still very firm, at fully the recent advance, and in small supply. Garton's (spring sown), 25s 6d, 42lb; black winters, weighing the same, 23s 6d to 24s; and grey winters, 22s 6d to 23s 6d. New Zealand ordinary bluff, 25s to 26s per 384lb ex store. Maize unchanged. Round corn obtainable at the recent decline. Odessa 21s 6d ex ship, and 22s landed. Plate about 24s ex quay, the supply remaining small. Holders of imported beans and peas were making no concessions, apart from the poor trade going on just now; stocks, in fact, continue light.

Mark Lane, Friday.—There was nothing of interest at to-day's market, and, except in isolated instances, quotations were kept much on parity with those previously current, while buyers were assembled only in limited numbers all through. English wheat remains in scantly supply as farmers still refuse to entertain the views of London millers compared with prices procurable at local resorts. If anything, quotations sided in buyers' favour. White ranges at 29s to 30s 6d; and red, 28s to 30s per qr delivered. American without material alteration. Russian still quite out of our market. New Zealand short berry, 28s. The market for flour, although inanimate, denotes no weakness. Of English, No. 1 households, 21s 9d cash, delivered, ex mill. The London Millers' Association kept the price of town households at this afternoon's meeting at 23s 6d, and whites at 26s 6d per sack delivered to the baker. Australian patents, 20s to 20s 6d per 280lb ex store. Hungarian remains very scarce; best, 30s to 31s, and fancy brands 32s to 33s. Grinding barley steady, at last week's decline. English malting firm, with useful types still ranging up to 32s, and up to 40s for fine. Foreign slow. Californian, 25s to 28s for brewing purposes. Oats rather better since Friday last, and American remains of the past just now. F.a.q. Libau, 17s 6d to 17s 9d ex ship, and up to 19s 6d ex quay, 38lb, with 40lb Russian at 20s upwards, ex quay. Danubian, 17s 3d ex ship to come up, 38lb. English upheld, being still very scarce. Garton's (spring sown), 23s 6d, 42lb; black winters, weighing the same, 23s 6d to 24s; grey ditto, 22s 6d to 23s 6d. Flat maize nominal, being out of supply on spot, and there is nothing coming up at the moment. Mixed American, 26s 6d ex ship. Round corn better maintained. Odessa, 21s 9d ex ship, 22s 3d landed. Plate, 24s ex quay, the supply remaining light. The market for imported beans and peas keeps firm, but quiet. Egyptian splits, 23s 6d; Mazagans, 22s 6d ex mill; Morocco, 30s; New Zealands, 35s 6d to 36s 6d, 504lb, ex store. White Canadian peas held for 37s ex granary.

COUNTRY.

Ashford, Tuesday.—Wheat—Trade quiet; dry parcels pretty well supported at recent rates. Barleys—Only a moderate demand at dull quotations. Oats fully sustained late values. Beans and peas scarce, and quite as dear. White wheat, 28s to 30s; brown wheat, 27s to 29s; malting barley, 26s to 32s; grinding ditto, 22s to 25s; black oats, 18s to 21s; white ditto, 19s to 23s; old beans, 32s to 35s; grey peas, 33s to 34s.

Banbury, Thursday.—Wheat, new red, 28s to 29s per qr; beans (old), 36s to 37s per qr. Small show of wheat at rather easier rates.

Birmingham, Thursday.—Market was fairy well attended, but trade quiet both for wheat and feeding stuffs. Wheat unchanged, English realising 11s to 11s 3d per bag. Grinding barley 3d per qr cheaper, commanding 17s 6d to 18s per qr sharpness. Maize 3d to 6d per qr lower, Plate making 22s to 22s 6d sharpness; and round, 23s to 23s 6d sharpness. Oats and beans unaltered.

Boston, Wednesday.—Wheat, 28s; malting barley, 28s to 32s; oats, 21s to 22s; beans, 34s 6d; maize, 24s; grinding barley, 22s.

Braintree, Wednesday.—A quiet trade, prices ruling about the same as last week. Red wheat made up to 29s, and white 30s per qr. Barleys, best 33s; seconds 30s.

Brighton, Thursday.—Barley, 28s to 33s; grinding ditto, 21s to 2s; oats, English, 20s to 24s; peas, 34s. Wheat, oats, and barley firm at last week's prices. An average attendance, but little business.

Bristol, Thursday.—There has been but a small trade since our last. At our market to-day English wheat was in good supply, and made late rates. Foreign wheat 3d to 6d lower. Grinding barley and maize both 3d lower. Oats unchanged. There is a fair consumptive demand for flour at late prices.—GRACE BROTHERS.

Bury, Wednesday.—Wheat, although in no great supply, was inclined to be weak, but there was not much change in prices. Reds and whites, 28s to 29s per 504lb. Some parcels of red containing smut changed hands at 26s 6d and 27s per 504lb. Barley—The supply was small, but fully enough to meet requirements; demand being dull, and late rates barely maintained at 28s to 33s per qr; grinding sorts quiet at 22s to 25s. Danubian slow at 20s to 21s per 400lb. Oats, beans, and peas firm. Maize 3d per qr lower at 24s to 24s 3d per qr; old round corn nominal.

Cambridge, Saturday.—During the week trade has been dull. Supplies continue fairly good, but some samples lack condition. At this market to-day there was not quite so large a supply as last week, but the tendency of prices was in buyers' favour. Good dry lots sold steadily, but damp parcels were neglected. Red wheat, 27s to 28s, and white up to 29s per 504lb. Spring corn very firm indeed.

Canterbury, Saturday.—Wheat a slow trade; barley in rather better demand. Ruling prices:—White [illegible]s to 31s; red, 27s to 30s; malting barley, 28s [illegible]; grinding ditto, 23s to 24s; white oats, 20s to 24s; black oats, 19s to 22s; black winter oats, 22s to 23s; [illegible] peas, 32s to 33s; thick beans, 33s to 36s; Mangans, [illegible]8s; maize, 24s to 28s per quarter; tares, 7s to [illegible] bushel.

Carlisle, Saturday.—Fair supply of oats in our market to-day. Good demand at late rates. New oats, 20s 6d to 22s 6d per 336lb.—THOMAS ROBINSON.

Chester, Saturday.—The demand for English grain is maintained, and full prices are asked for all kinds. Quotations:—Wheat, white and red, 4s 4d to 4s 6d per 75lb.; malting barley 3s 8d to 3s 9d per lb; grinding barley, 3s 3d to 3s 6d per 64lb.; beans, 5s 6d to 5s 8d per 80lb.; oats, new, 2s 10d to 3s 1d; old, 3s 4d to 3s 6d per 46lb; Indian corn, 13s 3d to 14s per 240lb.

Chichester, Wednesday.—The market was well attended, and a fair amount of business was passing. Wheat was a shade easier. Feeding stuffs quiet and unchanged. Flour also was quoted at last week's rate.

Croydon, Thursday.—White wheat, 30s to 32s; red ditto, 29s to 31s; malting barley, 28s to 36s; grinding ditto, 22s to 24s; oats, 18s to 21s; beans, 31s to 33s; peas, 29s to 31s. A slow trade for wheat; prices unchanged. Oats firm. Beans and peas remain the same.

Colchester, Saturday.—Wheat: moderate supply; slow trade at barely last week's prices. Beans, peas, and oats steady.—FRANCIS AND CO.

Devizes, Thursday.—We had a fair supply. The trade for wheat was dull at late rates, prices still tending downwards. Barley, on the other hand, sold freely. Oats dull and the turn easier to purchase. Best wheat, 14s to 15s; secondary, 12s 6d to 13s; best malting barley, 29s to 34s; secondary, 25s to 28s; grinding barley, 20s to 24s; oats, 20s to 23s; beans, 16s to 20s; fine flour, 22s to 24s; extra fine, 23s to 30s; best bread, 9d.

Faversham, Wednesday.—White wheat, 29s to 31s; brown ditto, 28s to 30s; malting barley, 28s to 35s; grinding ditto, 23s to 26s; black oats, 21s to 23s; white ditto, 21s to 24s; beans, 34s to 38s; grey peas, 33s to 34s.

Glasgow, Wednesday.—There was the usual attendance at our market to-day. Wheat and flour quiet, with prices tending in buyers' favour. Indian corn slow sale, and 3d per boll down on the week. Home oats dull, and 6d per boll easier. Foreign oats quiet and unchanged. Canadian pease scarce on spot and rather dearer. Grinding beans steady at late rates. Barley unchanged Bran and thirds quiet trade at late rates. Oatmeal dull and easier.—GIBSON AND CLARK.

Glasgow, Saturday.—Flour: The sale of flour has been dull all week, and prices are 3d to 6d easier. Grain: Round maize is abundant, and pressed for sale. American corn has been shipped round from here to Liverpool. Feeding qualities of Scotch oats are plentiful and difficult to sell. Grinding beans are in buyer's favour. Barley quiet. Oilcake unchanged. Mill stuffs: Bran and thirds are in buyer's favour.—MCKINN N AND MCDONALD.

Ipswich, Tuesday. Wheat: Although the supply was by no means large, the trade was rather dull at last week's prices. Some of the samples offered were in rather poor condition. Barley: With one or two large buyers temporarily off the market, trade was quiet, but with not much change in prices; average samples 28s to 32s per qr; better class parcels were rather at a discount; grinding barley was a slow trade at 23s to 25s per qr. Low class Danubian slow at 19s to 19s 6d per 400lbs. Maize weak, and the turn lower; new round 23s per qr at Ipswich. Cotton cakes 2s 6d lower. Linseed cakes and other feeding stuffs firm.

Leeds, Tuesday.—The unsettled state of the American markets is disconcerting to the trade, and millers naturally stand out for lower rates to-day, but holders of wheat show no inclination to humour them, business is consequently restricted. No change in malting barley. Maize 3d lower. Beans and oats slow.—DUNNS AND CO.

Leeds, Friday.—With prices still lowering in America, there is less doing in all descriptions of wheat, and values show a further decline upon Thursday's reduced rates, the top price for English being 30s, and foreign 31s. Malting barley, beans, peas, maize, and flour all quiet and easier to purchase.

Leicester, Saturday.—Fair attendance and average supply of home-grown wheats, but only really good samples sought after, and prices rather weaker at 28s to 31s per 36st. Malting and grinding barley quiet. Fine oats firm.

Leith, Friday.—Trade during the past week has been very quiet, buyers being well stocked at the moment. Owing to the heavy arrivals of maize, the price has eased a bit. Wheat slow trade. Scotch oats in poor demand. Foreign oats easy. Barley, Scotch, quiet; foreign feeding, 21s. Hard white peas, 37s 6d. Beans, all varieties, 33s 6d to 34s. Round maize, 23s to 24s. Millet seed, 19s 6d. Mill Offals:—Better demand. Broad bran, 120s to 125s; medium bran, 100s to 102s 6d; sharps, 95s 6d to 97s 6d; parings, 105s to 107s 6d; cummings, 82s 6d to 87s 6d; dried grains, 100s; oat husks, 25s; meal seeds, 67s 6d; all sacks included.—WILLIAM MACLAY.

Lewes, Tuesday.—New white wheat, 29s to 30s; new brown ditto, 27s to 29s; malting barley, 32s to 35s; grinding ditto, 19s to 23s; oats, 20s to 25s; beans, 36s to 38s; peas, 32s to 34s per qr.

Lincoln, Friday.—Wheat a moderate show, and prices declined 3d to 6d per qr. There was little business doing in oats and barleys, the inquiry for seed being limited. Maize slightly easier.

Liverpool, Friday.—The market has had a fair attendance, but wheat has experienced only a moderate inquiry, with prices generally ½d below last Tuesday. The demand for foreign flour is very limited, and whilst prices remain unchanged the tendency of the market is in buyer's favour. The Liverpool Millers' Association make no change in prices and report a very quiet trade. Maize: Extreme scarcity of prime mixed checks any decline, the demand, however, is slow at unchanged prices. European has had a slight improvement in demand, but prices are generally ½d lower than Tuesday. Plate is in quiet request, and last market day's rates are repeated. Barley is slow for both malting and feeding, the latter being ½d lower to sell. Beans steady, but very quiet at unaltered rates, the exception being flat sorts, which are 6d lower. Peas steady but quiet, at late rates. Oats are very steadily held, but meet only a small demand at late rates for English. Oats are hard to sell, and prices in some cases are the turn in buyer's favour. Oatmeal steady but inactive at quotations. Oilcake firm, with a fair inquiry at about last Tuesday's prices.—SEGAR AND TUNNICLIFFE.

Maidstone, Thursday.—Considerable attendance at the Exchange to-day, but not cheerful over business, for the wheat trade is slow and prices of last week barely obtainable. Barley is on the drop, oats are fairly firm, especially for English, the stock of which is remarkably small. Beans and peas continue dear, being the least in appearance. Maize exhibits a decline, especially the round description. In rye, tares, hemp, etc., no alteration from last week.

Manchester, Thursday.—Trade has ruled quiet throughout the week in most sections of our market, with the tendency for the most part in favour of the buyer, more marked in some sections than others. English wheat can be bought at 3d per qr less money, whilst foreign is 1d to 2d per central down. Flour is reduced 6d per sack. Indian corn repeats later rates, but tends easier. Oats, peas, beans, and barley unchanged.

Newcastle-on-Tyne, Saturday.—A slow demand for wheat prevailed at our to-day's market, and where sales made prices favoured buyers. Maize easier; oats steady, at last week's prices; peas and beans firm, at late rates; barley unaltered.—JOSEPH POLLARD AND CO.

Newport (Mon.), Wednesday.—English wheat was more freely offered at the market, farmers having to take 1s per qr reduction on the week. Wheat and maize were slightly easier on the week; barley, beans, and oats unchanged; flour, fines, 23s per sack; mill offals scarce and dear. Attendance fair, but little business doing.

Northampton, Saturday.—Usual attendance, with a moderate show of samples of wheat and barley; business was quiet and dull; quotations a little easier than last week's. White wheat, 27s to 29s; red wheat, 26s to 28s 6d; barley, 25s to 32s; grinding barley, 22s to 24s; oats, 18s to 23s; old fine, 25s; beans, 32s to 40s; flour, 21s to 22s; fine, 24s.

Norwich, Saturday.—There was a good supply of wheat on offer at our market to-day, with prices rather easier than last week. Barley was in fair supply, with no quotable alteration in the trade. The first few days of the past week were unusually mild for the time of the year, but a change has set in with lower temperature. Wheat, red, 28s to 28s 6d per qr, weight 63lb per bushel Imperial. Corn Inspector's return for the week ending January 20th, 1902:—Wheat, 3,155.5, 27s 5d; barley, 6,910, 27s 10d. J. ARTHUR MILLS.

Nottingham, Saturday.—Wheat fair supply, and gave way 6d per qr. Barley only in moderate show, and values maintained. Oats in rather better supply, prices firm. Beans, small quantity offering, and fully as dear. ROBERT HUBBLE.

Peterborough, Saturday.—The wheat trade continues dull and apathetic, and to make sales to-day holders had to take 6d per qr less money. Barley in small supply and 6d dearer; oats and beans steady, at late rates. THOMAS HILL AND SON.

Plymouth, Thursday. Small attendance at the market to-day. Wheat 6d lower; oats unaltered; maize 6d and barley 3d decline.—ORLANDO DAVIS AND CO.

Reading, Saturday.—The Exchange was again well filled to day and business proved fairly brisk. The quantity of wheat on offer was moderate, but the inquiry did not come up to expectations, and last week's rates were generally prevailing. Barley came to hand plentifully, and met a fair demand, while oats changed hands readily at recent currencies.

Ripon, Thursday.—A very small attendance, and a light show of samples. Maize rather less money, other prices unaltered. Wheat, English (new), 29s to 30s; ditto foreign, 29s to 33s; barley, grinding, 22s 6d to 23s 6d; ditto, malting, 26s to 31s; oats (new), 21s to 24s; round maize, 24s to 27s per qr; beans, 1s per stone.

Romford, Wednesday.—Wheat trade slow at barely last week's prices. Fair supply on offer. Red wheat 28s to 29s, and white wheat 28s 6d to 30s 6d per qr.

Sheffield, Tuesday.—Although the attendance was fair the sales of English and foreign wheat were only slow, and generally transactions were at last week's rates. Indian corn was 6d a qr cheaper. Prices:—Wheat, white, 30s to 31s; wheat, red, 30s 6d to 31s; oats, new white, 21s 6d to 22s 6d; new black, 20s to 21s per 336lb; barley, grinding, 22s to 23s; malting, 28s to 32s per 448lb; peas, grinding, 32s to 34s; blue, 53s to 80s per 504lb; beans, Egyptian, 36s to 36s 6d; new English, 37s to 37s 6d per 532lb; Indian corn, small, 25s to 26s; American mixed, 27s 6d to 28s per 480lb.

Spalding, Tuesday.—The corn trade was a little slower, the top price for wheat being 28s per qr. Oats 22s per qr. All kinds of spring corn held their price.

Stamford, Friday.—Fair supply of wheat. Prices varied from 27s 6d to 28s 6d, according to quality. Barley, finest, 27s 6d to 29s. Oats a very good trade. Beans realised about late rates. Maize sold for an advance on late prices.

Stockton, Wednesday.—Small show of English wheat, which made 31 per qr. During the week the trade in foreign wheat has kept very quiet, and in some cases less money had to be taken, owing to easier advices from America. This feeling was maintained in to-day's market. Oats and maize 3d to 6d easier. Practically no malting barley showing.

Sunderland, Saturday. Grain in fair supply. Wheat sold in buyers' favour. Spring corn quiet. Arrivals coastwise, wheat, 835qrs; foreign, nil.—E. AND F. RICHARDSON.

Wakefield, Thursday.—There is only a nominal business passing in wheat on to-day's market, and 31 to 6d per qr less money is accepted. Malting barley is in very fair supply and eagerly pressed for sale, but little trade done, as malsters for the most part are filled, and the tendency in price is downwards. No alteration in feeding stuffs.—MICHAEL SANDERSON AND SON, LTD.

Wakefield, Friday.—There is nothing satisfactory to report of the wheat trade, which at the moment is under a cloud, but though inanimate, there is no pressure to sell, holders being content to await a return of the demand, and prices can only be called fractionally lower. Common barley firm; best sorts slow. Feeding stuffs in small demand, but unchanged.—DUNNS AND CO.

Wisbech, Saturday.—A fair supply of grain. Wheat a quiet trade at 6d decline; red, 28s; white, 28s 6d. Oats, 21s to 24s. Barley, 27s to 30s. Beans, 34s to 38s.—J. FLETCHER.

Wolverhampton, Wednesday.—A fair market, but trade slow in all departments. Quotations:—English wheat, new, 12s 6d to 13s per 216lb, Kansas 6s 3d per cental; oats, old 15s 6d to 16s, new 12s 6d to 13s 6d; beans, old 15s 6d to 16s 6d, new 14s 3d to 14s 9d per 196lb; barley, 31s to 32s per 448lb.

Worcester, Saturday.—Wheat offered in limited quantity, and no alterations in values. Beans and oats sold at late rates. Barley 3d to 6d cheaper. Wheat, white, 11s to 11s 9d; red, 10s 6d to 11s per bag.

Worksop, Wednesday.—Small attendance, and very little grain on offer. White wheat, 29s to 30s per qr; red wheat 27s to 28s; best malting barley, 29s to 32s; secondary qualities, 26s to 28s; grinding barley, 23s to 24s per qr; white oats, 21s to 23s; black oats, 19s to 21s per qr; maize, 27s to 28s per qr; fine sharps, £6 to £6 10s per ton; barley meal, £6 16s 8d to £7 per ton; bran, £5 10s to £6 10s per ton; flour, 1s 1d to 1s 3d per stone.

York, Saturday.—Larger attendance, but samples of wheat were a smaller show. Wheat was reduced 6d per qr., best wheat selling at 28s to 29s, medium 26s to 27s per 36 stones. Barley was in smaller supply; medium samples were most inquired after, the finer sorts being neglected. Prices varied from 27s to 30s per 32 stones. Oats were scarce, and trade slow; black oats, 20s to 21s, short white, 21s to 22s per 24 stones.

FOREIGN.

Hamburg, Saturday.—With a continuance of unseasonably mild weather, we have a very quiet market. Prices cannot be quoted materially lower, but buyers are scarce. The imports during the week amounted to:—Wheat, 2,606 tons; rye, 2,086 tons; barley, 5,579 tons; maize, 3,622 tons. American hard winter wheat No. 2 is offering at 29s to 29s 3d; No. 2 northern spring, 28s 3d; fine South Russian, 28s 6d to 29s 6d per 480lb; Walla Walla, February to May delivery, 29s 3d to 29s 6d per 500lb. Rye firm; 915 20 South Russian, February-March, has been sold at 23s per 480lb cif. Hamburg. Good Bohemian barley has been sold at 30s 6d to 31s; good Holstein and Mecklenburg, 26s to 28s 6d; fine Saal is getting very scarce, and costs 33s 6d up to 38s for best. Fine Moravian and Slovakian on the spot is held at

to 37s 6d per 448 lb. f.o.b., 60-61 k.o. oSuth Russian feeding barley is selling at 17s. 6d. to 17s 9d per 400lb cif. Hamburg. Offers are scarce. White Holstein and Mecklenburg oats are held at 21s 3d to 21s 9d per 336lb cif. east coast. Danubian and Odessa maize, arriving seasonably dry, meets a fair sale at 21s 6d; Turkish to arrive is held at 22s 3d, mixed at 25s 3d per 480lb cif. Hamburg. —JOHN TATLOCK.

Paris, Wednesday.—The weather is mild, damp, and misty, with fine rain at intervals. Advices respecting the crops show no perceptible modification, the young wheat plants for the present look well, but it is thought that colder and drier weather would be more suitable to them, for it is feared that later on intermittent frosts will succeed the present mild weather and prove more or less prejudicial to the cereals. The attendance at the weekly market was an ordinary one, and rather less movement ruling in the trade. The situation has not materially altered, so far as home grown wheat is concerned. Farmers still make moderate offers in their endeavour to maintain prices, but buyers are not the less reserved; millers manifest little demand owing to the wretched sale of their product, coupled with the complete quietude prevailing in the speculative market. In short, transactions were still unimportant, and there is no quotable variation to note in prices. Choice red 37s 10d, ordinary 36s 11d, and white 37s 10d to 38s 9d per 480lb. The market was quiet for flour at the opening and closed with a very drooping tendency at the following prices: Jan 27s 11d to 28s 2d, Feb. 27s 11d to 28s 2d, March April 28s 5d to 28s 8d, March-June 28s 11d, and May-August 29s 2d to 29s 5d per 280lb. There is nothing very interesting to note of rye, for offers are most insignificant that traders give them but little attention. Here, prices were nominally unaltered with, however, rather more sellers; buyers offered 27s 5d, but no sellers under 27s 10d per 480lb. Oats remain firmly held in the provinces, but prices appreciably unchanged. Offers maintain a certain importance, and in general stuff does not appear to be wanting. Here the tendency was firm for grinding and feeding barley, but unaltered for malting sorts, which were quoted 17f.50 (25s 4d) for choice, and 17f.25 (25s) for good. Grinding 16f.50 to 16f.75 (23s 11d to 24s 3d), and feeding 15f.50 to 16f. per 100 kilos (22s 6d to 23s 3d per 400lb).—*Bornbusch.*

FRUIT AND VEGETABLES.

Covent Garden, Saturday.—A good quantity of green stuffs on offer met a good demand. Potatoes very quiet. Fair supplies of fruit were to hand, and experienced fair support. Greenstuffs: Cabbages, 4s 6d to 5s; cauliflowers, 7s 6d to 9s per tally; Brussels sprouts, 1s 6d to 2s per half-sieve; spinach, 1s 9d; beetroots, 1s 6d to 1s 9d per bushel; carrots, 2s; turnips, 2s to 2s 6d; parsley, 1s 6d to 2s 6d; leeks, 2s to 2s 6d per dozen bunches; horseradish, 1s 3d to 1s 6d per bundle; celery, 9s to 12s per dozen rolls; forced rhubarb, 1s 6d per dozen bundles; English onions, 7s per cwt; Valencia, 7s 6d to 7s 9d per case. Potatoes: Maincrops, 80s; Reading giants, 40s; up-to-dates, 40s to 50s; blackland, 40s; Gartons, 40s per ton. Fruit: Almeria grapes, 12s to 24s per barrel; Channel Islands, 6d to 1s 3d per lb; English apples, 4s to 10s per bushel; Nova Scotian, 18s to 24s per barrel; Californian, 8s to 10s per case; pine-apples, 1s 6d to 4s 6d each; Jaffa oranges, 10s to 12s; Valencia, 8s to 12s; Denia, 10s to 18s per case; English tomatoes, 5s to 6s per 12lb; bananas, 7s to 10s per bunch.

POULTRY AND PROVISIONS.

Smithfield, Saturday.—Supplies large, a dull demand, and only limited sales transpired. Quotations:—Fowls: Yorkshire, 2s 6d to 3s; Essex, 2s 9d to 3s 3d; Welsh, 1s 9d to 2s 3d; Boston, 2s to 2s 6d; Surrey, 3s 6d to 4s 6d; Sussex, 3s to 4s; Irish, 1s 6d to 2s; turkeys (cocks), 6s to 8s 6d; (hens), 4s 6d to 6s; geese, 4s 6d to 6s; country ducks, 2s 6d to 3s 6d; Irish, 1s 9d to 2s; pigeons, 7d to 1s; quail, 10d to 1s 3d; wild rabbits, 10d to 1s; tame, 10d to 1s 2d each; Australian ditto, 7s to 8s per dozen; pheasants, 4s to 4s 6d; young partridges, 3s 3d to 3s 8d; old, 1s 8d to 2s per brace; hares, 2s 6d to 3s; leverets, 1s 6d to 2s; wild ducks, 1s 6d to 1s 8d; pintail, 1s to 1s 4d; widgeon, 11d to 1s 3d; teal, 8d to 1s; woodcock, 2s to 2s 6d; snipe, 8d to 1s; golden plover, 10d to 1s; black, 8d; Russian—Capercailzie (cock), 2s to 2s 9d; (hen), 1s 8d; blackgame, 1s to 1s 2d; ptarmigan, 10d; partridges, 1s to 1s 4d each.

CHEESE.

Glasgow, Wednesday.—The arrivals were small of home cheese, and the inquiry was limited. Holders would yield a bit if a fair trade would ensue. Cheddars and Dunlops are priced from 50s to 58s per cwt. New Zealand cheese are commanding more attention. At present they are reckoned better value than home parcels.

Newport, Wednesday.—The supply was short, but good business was done. Prices ruled:—Caerphillies, 56s to 63s; fancy dairies, 67s to 70s; Cheddars, 60s to 65s; Derbies, 62s to 66s; truckles, 60s to 65s.

THE BALTIC.

The past week has been very slow, and wheat prices closed 3d. to 6d. lower both for cargoes on passage and for future shipments. Transactions include Californian at 30s. 3d., blue stem at 29s. 6d., Walla Walla at 29s. 3d., Oregon at 30s. 6d. nearly due, and 30s. just sailed; Russian winter at 30s. 9d., Russian spring at 30s., Australian at 30s., Argentine at 29s. 6d., and white Kurrachee at 29s. 6d. per quarter.

Maize is again substantially cheaper on the week. A cargo of Galatz has been sold for 22s., Roumanian for 21s. 9d., Salonica 23s., Caucasian 23s. 3d., Bulgarian 22s. 3d., and Argentine 21s. 6d. per quarter. The latter was for May shipment. The price of American, 26s., is prohibitory.

Barley was dull from the Tuesday to the Thursday, but closed steadier. Sales have embraced Caucasian at 17s. 9d., Crimean at 18s. 9d., Azoff at 18s. 6d., Odessa at 19s. 3d., Californian at 24s., and Yerli at 20s. per quarter. The latter is a growth of Anatolia.

Oats were firm all through the week, but large purchases did not occur. We record a sale of white Konigsberg at 20s., of South Russian at 17s., and of Roumanian at 17s. 9d. per quarter.

Beans were steady. The Egyptian new crop for May shipment was in speculative offer at 29s. 6d., with buyers at 29s. per quarter.

Other cargo sales included Portuguese locust beans at 90s., and Egyptian cottonseed at 131s. 3d. per ton.

During the past week two wheat cargoes, two barley cargoes, and one cargo of beans arrived at ports of call, making since 1st January 13 wheat, 2 maize, 2 barley, 1 beans, and 1 linseed cargo arrived.

Review of the British Corn Trade

DURING THE PAST WEEK

Written exclusively for the Mark Lane Express.

January of late has been masquerading as April, and the usual mid-winter rest on the farm has sometimes been broken by an outburst of energy consequent on the feeling that such fine weather should not be wasted. The land ploughs up very nicely, being neither too dusty nor too wet. A little drilling has been accomplished. Here and there a field has been addel to the wheat acreage, and occasionally, too, the February sowings of barley here have been anticipated. Grain threshings have been unduly large, for there has been too much moisture in the air, and the markets besides are already over-supplied, the high temperature effecting an automatic reduction in the consumptive demand.

The news from America is favourable, for there has been a great snowfall all over Canada and the principal States of the American Union. This was just what was required, and in the winter wheat States has relieved many anxieties. From India advices are far less satisfactory. The official reports are long, and in parts confused, but their main import is that wheat is only doing well on land which is artificially supplied with water. The natural supply is poor all over India, this winter, and the result is almost certain to be a short harvest, the irrigated area being very much smaller than the unirrigated.

The Argentine wheat surplus, according to the latest telegrams, will not exceed 2,750,000 qrs., but the harvest in the south is not yet completed. No wheat exports are expected from Chilé.

The markets of the past week have been very difficult for holders of breadstuffs, the mildness of the weather pulling millers out of sympathy with wheat and bakers with flour. The prices ruling at the close of the six days' trade were 6d down for English wheat, and 3d. for foreign sorts, while American flour fell 3d. per sack. Under all the circumstances the decline might easily have been more marked. But for the small demands for actual consumption breadstuffs would probably have rather improved in value. At the same time, the supplies on passage are rather depressing.

	Qrs.
Californ'an	1,550,000
American	350,000
Argentine	90,000
Russian	65,000
Indian	80,000
Australasian	265,000
Other Countries	20,000
Total	2,820,000

On the 1st January only 2,350,000 qrs. were on passage. The items showing increase are Californian 350,000 qrs., American 60,000 qrs., Argentine 30,000 qrs., and Australasian 65,000 qrs. Indian may not improbably show an increase next week, recent Kurrachee shipments having been rather heavy.

Sales of breadstuffs for the week exceeded an average, the slight decline in prices tempting a certain amount of speculative buying.

	Qrs.
English wheat	125 000
Foreign wheat	295,000
Foreign flour	200,000
Sales: Total	680,000
Requirements	567,000
Excess	113,000
Stocks, Jan. 8	2,852,000
Stocks, Jan. 25	2,965,000

This is only 12,000 qrs. net increase from the beginning of the year, but it wipes out the previous reduction and effaces the natural January tendency for stocks in granary to be drawn upon not increased.

The farm stocks or estimated reserves of wheat in growers' hands are returned as follows:—

	Qrs.
Jan. 1	3,656,000
Jan. 25	3,473,000

Later in the year the deliveries of home produce will show the effect of indiscreetly heavy January sales.

Imports of spring corn last week were good of barley and maize, but small of oats. It is likely, however, that arrivals of oats for the last week of January (the present week) will be large, there being about 200,000 qrs. expected before Saturday next.

The actual receipts were last week:—

	Qrs
Maize	465,000
Barley	200,000
Oats	125,000

The imports of the cereal year, 1st September to January, have been as follows:—

	Qrs.
Wheat	6,071,000
Flour	2,736,000
Breadstuffs	8,807,000
Maize	4,345,000
Barley	3,714,000
Oats	2,915,000

The supplies of maize on passage to the United Kingdom are moderate, but as the proportion of sound corn afloat is three times as large as usual the value of that kind has fallen 2s. in a fortnight, flat corn remaining dear. The yellow descriptions shipped mainly by Argentina is a little lower on the week, but there is no plethora of the sort. Barley supplies on passage are above the average. Actual quantities of spring corn, etc., on the high seas are as follows:—

	Qrs.
Maize	735,000
Barley	725,000
Beans	6,500
Linseed	125,000
Rapeseed	12,000
	Tons.
Cottonseed	45,000

The cotton seed market seems to possess a remarkable intrinsic strength, for, despite a large quantity on passage, value tends in sellers' favour, and demand is not checked by 1s. 3d. per ton advance.

The imports of oats into London for 1901 were 5,250,000 qrs. against only 4,379,000 qrs. in 1900. No wonder, therefore, that the warehouses are full. Hussia increased her supply by 800,000 qrs., and Roumania's 122,000 qrs. constituted a new item. America, however, sent us 310,000 qrs. less than in the previous year. The price of oats is high, and buyers display a worthy preference for the finer types—320 to 384 lb. to the quarter. There are some splendid samples to hand from New Zealand; soil and climate evidently favour this Antipodean land, and the only drawback seems to be that the inhabitants are "born tired." Wages of 6s. per day for unskilled labour and 8s. for anything approaching skill (a good ploughman for example) utterly fail to attract, and agricultural land is going out of culture for want of "hands." Seeing that bread, meat, clothes and tobacco are all cheaper than in England, and that the local barley makes excellent and cheap malt, it is difficult to say why, with London willing to buy every sack shipped, only 42,000 qrs. of New Zealand oats—less than a thousand quarters weekly—unloaded at London quays in 1901.

We have to record a retrograde movement in milling offals, also in rice meal. In good rice lines 21s per sack is paid. Maize flour, at 18s 6d. per sack for best, and 18s. for secondary but still sound, is in steady request.

LONDON TERM MARKET.

This market is held twice a day, except on Saturday, when there is no afternoon call. The market is open to elected members only. No business except for future delivery is done, and the smallest quantity that can be purchased is 1,000 quarters, or 4,800 centals. The name of the month stands for guaranteed delivery (if required) on or before the last day of that month, and the following have been the prices per cental recently made:—

Wheat.—Calls.	Jan. s. d.	March. s. d.	June. s. d.
Jan. 20 11 a.m.	6 3	6 5	6 5

The Term Market standard wheat is No. 1 Northern Spring American sold on the Duluth certificate. Other sorts of wheat can be bought at the above prices plus or minus agreed difference between the other sort and the standard quality. Quotations are by the "true hundredweight" or cental of 100 lb. We do not give fractions of a penny per cental. The maize quoted is fair average quality from the United States.

The deposit required from members of the Term Market has been fixed at £50 minimum and 1s. per quarter margin on any purchases above 1,000 quarters.

The Term Market (while the "Baltic" is rebuilding) is temporarily situated at the Great Eastern Hotel, No. 190, Bishopsgate Street, ground floor.

HOPS.

Canterbury, Saturday.—The demand for hops continues, and coloury choice parcels are making more money, some East Kents having realised over 80s per cwt during the week. Low class samples continue to be purchased, but prices for these do not advance. A good demand rules for 1899 hops.

Worcester, Saturday.—The trade on our market has been fairly good during the past week, but only for the best medium hops, which realise full prices. There is a steady sale for good, sound hops, which appear to be worth a little more money, but low qualities are not inquired for.—PERCY AND CO.

THIS DAY'S MARKETS

MARK LANE, MONDAY.

[FIRST REPORT.]

The westerly wind and the high temperature were against business, and despite a fair attendance very little trade pressed. For English wheat, old prices were not paid, but some factors had instructions to admit no decline. Where concession took place 6d. was enough to bring buyers and sellers together. Foreign wheat was 6d. lower without selling well. Maize was again 6d. down for round corn, the condition of which is far from giving satisfaction. Flat corn was firm, but very slow indeed. For oats of 320 to 384 lb. weight premiums good prices were asked, but light South Russian and Roumanian were on offer at some decline. Barley was out of favour for malting, owing to muggy weather. Feeding barley declined 3d. Beans and peas were dull. The price of linseed was maintained for English and Indian, but Argentine gave way 1s. per qr. Rapeseed declined 1s. for Guzerat, but was rather firmer for the common kinds such as Jamba and Ravison. After a brief depression, cottonseed is again hardening, and was saleable to-day at about 1s. 3d. per ton advance.

THE MARKET CLOSED WEAK AND FLAT.

THE FLOUR TRADE.

MARK LANE Monday

The finest sorts of American patents were offered to-day at 24s. 6d. to 25s. per sack, and ordinary good North-Western patents at 1s. under these terms. The best London white flour was offered at 25s., and town households at 22s., while country sorts were offered at 20s. to 22s. for the great majority of samples. Kansas flour showed an upward tendency, but the demand for North-Western flour was not good, and London makes were also difficult to place. There was a fair and steady, but not an average mid-winter sale for London makes. The sale of country flour was not bad considering the mild weather. Extra fine patents, mixtures of good English and best American made 24s. to 25s. Hungarian flour was 6d. dearer on the week for all the leading types. The sales, however, were small. French flour was neglected. Australian flour was weak and the turn in buyers' favour.

Maize was offered at 4s. 6d. per cental for March, 4s. 7d. for June delivery. For April and May 4s. 8d. was asked. June is cheap because of large Argentine shipments booked for May.

PROVISIONS.

London, Monday.—The arrivals from Ireland last week were 2,604 bales bacon, and from foreign ports 9,260 bales bacon. The demand for bacon last week was very unsatisfactory, and, with stocks accumulating, all prices were further reduced, especially on fat selections. Irish ranging from 46s to 52s up to 59s; Danish ranging from 44s to 52s up to 59s; Canadian ranging from 44s to 46s up to 54s. The butter market was steady; Danish, 108s to 112s; Colonials, 80s to 100s up to 108s; French, 88s to 114s. Lard quiet; Irish, 53s to 63s; American, 47s 6d to 49s.

THE BALTIC, 1 p.m.

STATE OF TRADE.

Wheat cargoes open 3d. down for future shipment. Round maize still tends in buyers' favour. Barley and oats are not in much demand, but value is fully supported. Linseed is the turn cheaper for Argentine, but cottonseed is held for good rates.

BUSINESS DONE.

WHEAT.—No. 1 Northern Manitoba, 28s 6d, on passage; Australian, 23s, prompt shipment; best Duluth new crop, 23s 6d, prompt shipment; Californian, 29s 6d, prompt shipment; blue stem, 29s 9d, just sailed; Walla Walla, 23s, on passage; Russian winter, 29s 9d, prompt shipment (ice allowing); Russian spring, 29s 3d, prompt shipment (ice allowing).

MAIZE.—American, 25s 3d, prompt shipment; Odessa, 23s, prompt shipment; Argentine, 21s 9d, April shipment; Argentine, 21s 6d, May shipment.

M.L.E. THE BALTIC Machine EIGHT

BARLEY.—Azoff, 18s 6d, on passage; Roumanian, 18s 3d, prompt shipment.

OATS.—White Libau, 17s, prompt shipment; white Konigsberg, 20s, prompt shipment.

LINSEED.—Calcutta new crop, 48s 6d, May shipment.

RAPESEED.—Ferozepore, 38s 6d, February shipment; Jamba, 29s 6d, April shipment.

MAIZE GERM MEAL.—America, 6 guineas per ton, prompt shipment.

GRAIN AND FLOUR FACTORS REPORTS.

Flour.—Rather lower prices are being accepted for spot flour, and at the moment buyers are indisposed to purchase except for immediate requirements. Values on spot are as follows:—1st Spring Patents, 24s. 3d. to 25s.; 2nd Spring Patents, 23s. 3d. to 23s. 9d.; American Winter Patents, 24s. 3d. to 25s.; Extra Fancies, 22s. 3d. to 22s. 9d.

Offals.—The demand for Bran and Pollard is dull, and for most descriptions prices are in favour of buyers.—GREENHILL BROS. (Belfast).

The demand for milling offals during last week was small, but at this day's market there is more inquiry, and last Monday's prices are maintained. —JOHN BAWCOMB AND CO., Mark Lane.

Wheat—Trade dull; prices unchanged. Flour 3d per sack lower. Maize unchanged. Barley dull.—COVENTRY, Mark Lane.

Flour—A very quiet trade at 3d to 6d decline on the week.—T. S. MEDILL AND SONS, Mark Lane.

The arrivals into London last week were large, both of wheat, flour, and feeding stuffs. At to-day's market wheat again finds a slow sale at 3d. to 6d. reduction on the week. Maize and barley maintain last values, while oats tend dearer.—W. P. WOOD & Co.

FEEDING STUFFS.

Mark Lane, Monday.—Linseed Cakes.—There is a more active demand than has been experienced for some time past, and, with only limited supplies, stocks are getting into a small compass, and values have a further hardening tendency. Russians are firmly held at £7 10s to £7 12s 6d in mats, and £7 15s to £7 17s 6d in bags. Americans continue in good request at unchanged prices. Calcutta-made, in bags, offer at £7 12s 6d to £7 15s. London-made move off steadily, and prices are slightly firmer. Cotton Cakes.—With some recent heavy arrivals of Egyptian, the tone of the market is not quite so good, and there are now second-hand sellers at 1s 3d to 2s 6d per ton less money. English remain as last quoted. Decorticated are without change, and meal slightly firmer. Rape Cakes.—Quiet. East India unchanged. Maize Germ Meal. Both American and English are only sparingly offered, and with practically no stocks there is little fluctuation in prices, which remain unchanged. Rice Meal.—Arrived parcels of Rangoon make £5 to £5 2s 6d, while landed lots are quite as dear, at £5 5s to £5 7s 6d.

ROBERT AND JOHN HEWETSON.

SEEDS.

London, Monday.—There was a fair attendance at to-day's market. The supply of English red clover is moderate. Best qualities continue firm, but medium and inferior are cheaper. White clover is in active demand at a considerable advance on best qualities. Alsike and trefoil are firm. Italian and perennial ryegrass are steady and unchanged. Spring tares are in better demand and making more money. Winter tares are scarce and wanted. Birdseeds are quiet. Blue peas and haricots are dull.—JOHN PICARD AND CO.

CATTLE.

Metropolitan Market, Islington.

Monday, January 27th, 1902.

	British.	Total. Jan. 28th, 1901.

Calves	30	30 —
Pigs	70	35 50
Milch cows	35	35 50

Quotations per 8lb. (sinking the offal).

ENGLISH.

	Inferior. s. d.	Second. s. d.	First. s. d.
Beasts	2 8 ..	4 0 ..	4 9
Sheep	3 4 ..	4 10 ..	5 6
Lambs	5 10 ..	6 6 ..	7 4
Pigs	2 10 ..	4 0 ..	4 6

Milch cows, per head, £16 to £23.

British arrivals include as follows:—Scotland, 64; Eastern Counties, 504; Midland, Home, and Western Counties, 524; Devon, 30; Ireland, 98.

There was a decrease of 220 head in the beast market compared with Monday last, due to shorter arrivals from Scotland and Norfolk. Trade for both prime and second quality was brisker, and rates were firmer. A clearance is fully expected. Fat butchering cows and bulls, being also fewer in number, sold more readily at a slight advance in value.

The following are top quotations per 8lb (sinking the offal):—

	To-day.	Jan. 28, 1901.
Scotch	4s 7d to 4s 9d	4s 7d to 4s 8d
Devons	4s 7d to 4s 8d	4s 7d to 4s 8d
Herefords	4s 4d to 4s 6d	— —
Norfolks	4s 6d to 4s 8d	4s 7d to 4s 8d
Runts	4s 4d to 4s 6d	4s 2d to 4s 4d
Lincolns	4s 4d to 4s 6d	4s 2d to 4s 4d
Irish	4s 2d to 4s 4d	4s 2d to 4s 4d
Fat cows	3s 10d to 4s 0d	3s 6d to 3s 8d

In the Sheep Market there has been a decrease of 500 in the number present compared with Monday last. Wether sheep were firmer in value, and met with ready sales. For ewes also there was more inquiry, these making 2d. per 8lbs more money; lamb trade, though rather slow, maintained late rates; the supply included 220 Scotch and 4,750 from the Eastern counties.

Undermentioned quotations are at per 8 lbs. (sinking the offal), and are for the best of each class penned.

	To-day.	Jan. 28, 1901.
7½ to 8 st. Downs	5s 4d to 5s 6d	5s 10d to 6s 0d

10-st. Down ewes	4s 0d to 4s 2d	4s 6d to 4s 8d
11-st. half-bred do.	3s 10d to 3s 11d	4s 4d to 4s 6d
5-st. fat lambs	7s 2d to 7s 4d	7s 8d to 7s 10d

A small supply of pigs. Trade very slow. Best small breeds, to dress from 64 to 72 lb., were quoted at 4s 6d per 8lb.

London, Monday.—Good supplies. Trade slow. Beef carcasses 3s. 10d. to 4s.; hind quarters, 4s. 4d. to 4s. 6d.; roastings, 5s. to 5s. 8d. Sheep, ewe, 2s. 8d. to 3s.; wether, 3s. 8d. to 4s.; hind quarters, ewe, 3s. 8d. to 4s.; wether, 5s. to 5s. 4d.; pigs, large, 3s. to 3s. 4d.; small, 4s. to 4s. 4d.

St. Ives, Monday.—Beasts, 256; sheep, 258; pigs, 325; beef, 7s 3d to 7s 9d; mutton, 7s 7d to 9s 4d; pork, 6s 3d to 7s 3d; sows, 5s to 5s 9d; fat and store cattle fair trade; fat and store sheep fair trade; fat and store pigs better trade; milch cows fair demand, prices £12 to £24.

FOREIGN CATTLE

Deptford, Monday.—No beasts on the market, and none expected until Saturday. Sheep numbered 826 from the United States, trade for which, though of a slow nature, was rather firmer in regard to value, being quoted at from 3s 8d to 3s 10d per 8lb, offal given in. On Saturday last 1,531 beasts and 2,531 sheep were offered for sale, and met slow but steady trades, the former making 4s 4d to 4s 6d and occasionally 4s 8d per 8lb, and best pens of the latter 3s 8d. The following were the numbers os offer on the corresponding day last year with the current top rates:—Beasts, nil; sheep, nil.

Liverpool, Monday.—There was a smaller supply of cattle in market to-day; demand very slow, and prices generally lower, excepting for a few prime cattle. Sheep —Supply considerably less; best Scotch a shade dearer; other sorts lower. Beef, 6½d to 5½d per lb; mutton, 8d to 5d per lb. At market—1,240 cattle and 3,784 sheep.

HOPS.

London, Monday.—The demand noted in our last continues, the ridiculously low prices being accepted for English hops inducing some consumers to buy against possible contingencies.—W. H. LE MAY.

At a meeting at Toronto of the chief grain exporters of Canada on Tuesday a resolution was adopted in favour of a preferential rate for Canadian grain, in case Great Britain adopted a duty on grain, and if complete exemption could not be secured. The local Board of Trade will take the matter up, and will send a petition on these lines to Sir Wilfrid Laurier and Mr. Chamberlain.

At the fair held at Moneymore, Co. Londonderry, on Tuesday, there was but a small supply. Springers were in good demand. Prices—Calves, 2nd class, £3 15s. to £4 5s.; yearlings, 2nd class, £5 7s. 6d. to £6 8s. 9d.; 3rd class, £3 2s. 6d. to £4 12s. 6d.; two year olds, 2nd class, £8 10s. to £9; 3rd class, £5 17s. 6d.; springers, 1st class, £15 15s. to £17 10s.; 2nd class, £12 2s. 6d. to £14 5s.; 3rd class, £9 7s. 6d. to £10 2s. 6d.

LIVE STOCK AND MEAT TRADE REVIEW.

(WRITTEN SPECIALLY FOR THE "MARK LANE EXPRESS.")

Trade in London.

At the Islington Cattle Market, on both Monday and Thursday, trade for fat beasts of both prime and second quality, was of a slower nature, especially for the latter, which, with forced sales, sold at a decline of 2d. per 8lbs.; the best Scotch, Norfolks, and Devons were fairly steady in value, but rough cattle were very difficult to dispose of; fat butchering cows were in full supply, but the majority were of but medium quality, the best on offer were a shade dearer; fat bulls were easier to buy at last week's quotations. At Deptford markets were held on Monday, Wednesday, and Saturday, and, so far as supply was concerned, was chiefly confined to consignments from the United States; here trade was of a fairly firm and steady nature, last week's rates governing all transactions. The total number of beasts offered for sale on both markets was 5,140, consisting of 1,530 British (decrease 180) and 3,610 foreign (increase 1,019); these latter consisted of 3,532 from the United States and 78 from Canada; the following were the top rates obtained per 8lbs. (sinking the offal); 90-stone polled Scotch, 4s. 9d.; 90-stone Norfolks, 4s. 7d. to 4s. 8d.; 80-stone Devons, 4s. 7d. to 4s. 8d.; 95-stone Herefords, 4s. 6d.; 95-stone Runts, 4s. 6d.; 100-stone Lincolns, 4s. 4d. to 4s. 6d.; 110-stone ditto, 4s. 3d.; 90-stone States, 4s. 6d.; 100-stone fat cows, 3s. 10d. to 4s.; 100-stone fat bulls, 3s. 6d. The chief feature in respect to the sheep trade has been the marked increase in the arrivals from abroad, these totalling 6,845, as against 2,388 during the previous week; they consisted of 5,445 from the United States and 1,400 from Canada, trade for which was of a very slow and dragging nature, with a marked downward tendency in value. At the Islington Cattle Market, rates for both wethers and ewes ruled fully 2d. per 8lbs. lower, business being chiefly confined to Monday. A few lambs were on sale, and found ready buyers; best pens made per 8lbs. as follows (sinking the offal): 7½ to 8-stone Downs, 5s. 4d. to 5s. 6d.; 7-stone Southdowns, 5s. 8d.; 9-stone Downs, 5s. 2d.; 10-stone ditto, 5s. to 5s. 2d.; 10-stone half-breds, 4s. 10d.; 12-stone Lincolns, 4s. 8d.; 10-stone Down ewes, 4s.; 5-stone fat lambs, 7s. 4d.; 8½-stone Canadian and States sheep, 3s. 6d. to 3s. 8d.; 6½-stone ditto lambs, 4s. 4d. There being only 10 calves and 40 pigs on the market, neither the trade or quotations are worth noting.

Trade in the West.

There has been a fair amount of business passing during the week, the milder weather we are experiencing having imparted a better tone to the trade in store things, especially barreners, the more forward grades of which are selling from £24 to £30 per pair and over, and the more ordinary runs from £16 to £22, with plenty of inquiry at the price. Grass keep being now, for the time of year, exceedingly plentiful, not only in the meadows, but also in some places in the ordinary pasture lands. Of course, this is very helpful to graziers, and affords them the opportunity for a little speculation, but for which they would be practically doing nothing. And another thing, it is equally helpful in that it enables stockowners to put out their surplus supplies in far better condition than would be the case in less favourable circumstances. Therefore, the mild weather is beneficial in more than one way, even if temporarily, though undoubtedly we shall have to suffer for it later on. The milch beast trade, too, is very firm, at prices ranging from £16 10s. to £21 for useful young heifers and for anything exceptionally good even higher rates are being paid; older bullocks meeting a quieter demand at from £15 down to £12. In-calvers are likewise in general request at from £12 to £14. Purveyors of milk are still experiencing considerable difficulty in getting their requirements met, hence the buoyancy of the trade just now. There is not very much passing in store sheep, but a few couples, as well as cross-bred wethers have changed hands during the week at fairly satisfactory rates, couples realising 44s. to 56s., and wethers up to 36s. In fat stock bullocks, which are only coming to hand to a very moderate extent, keep one of the firmest things on the market, the general run for useful breeds of steers and heifers being from £15 to £23 each (or about 11s. per score), fat cows bringing £14 to £17 (or 9s. 6d. to 10s. 6d.). Mutton continues a very disappointing trade, and, instead of prices improving, the tendency is to still lower rates, both for wethers and ewes, the former having made during the past week from 46s. to 54s. each (or 7d. to 7½d.), and ewes 36s. to 46s. (or 6d. to 6½d.). Lambs have moved off a trifle better, some suckers at Wimborne having sold up to 40s. 6d. (or 9d. to 9½d.). Veal sells a trifle better than it did, best calves bringing from £4 to £6 (or 7½d. to 8d.); seconds, 6½d. to 7d.; whilst rearers sell from 18s. to 40s., the trade being very active. Pigs keep well up in value, porkers of neat weights realising capital prices, the best making 10s. 6d. per score (or 50s. to 66s. each), whilst baconers may be quoted as making 9s. 6d. to 10s. (or 74s. to 90s.). Fat sows sell steadily at 7s. to 8s. Store pigs are in good demand for keeping on. Except for fat sheep business all round may be described as fairly satisfactory.

Trade in Scotland.

The number of fat cattle on offer this week has been rather smaller, but the general quality quite an average. Trade has been good throughout, and prices as nearly as possible similar to those of the preceding week. Sheep have been shown in average numbers. Owing to the bad London markets, no improvement in trade can be quoted, with the exception of ewes, which, being shown in smaller numbers, made a shade more money. A few fat lambs on offer continue to sell at a fair price at from 38s. to 42s. Fat calves and pigs exceedingly dear. There were scarcely any store sheep, but there was a fair supply (for the time of year) of store cattle. Those of a good class in forward condition were readily sold at fairly satisfactory prices, but rough cattle and small stirks were totally neglected. There was a good show of milch cows, and they met a satisfactory trade at rather high prices. Quotations:—Top price best beef to 8s. 6d. per stone; mutton to 7½d. per lb.—JOHN SWAN AND SONS, LIMITED.

Trade in Ireland.

In both cattle and sheep, the supplies at last Dublin's market were large for the time of year, although the offerings of sheep were nearly four hundred under last week. The increase in cattle (107) and decrease in sheep (390) brought supplies back to about the level of a fortnight ago, when trade was considered to be fairly energetic and firm. A cautious feeling prevailed, and it was harder to maintain the currencies of the previous Thursday for either beef or mutton, though there was a full attendance of buyers. The irregular way in which purchases were carried out was in a great measure due to the scarcity of well-finished cattle, the bulk of animals offered for sale being only half-meated. This description of beef dragged heavily, and it was difficult to make anything like a clearance. Best heifer and ox beef 54s. 6d. to 57s. 6d., with extra good lots making up to 60s. per cwt.; good second-class, 48s. to 52s. 6d.; and inferior 40s. to 46s. Number of cattle in market, 2,665. In the mutton department, trade was disappointing, as compared with last market. Local butchers bought cautiously for trade requirements, but there was practically no change in values current at last market. No improvement was to be noted in the export trade, notwithstanding that there was a good attendance of buyers, who claim—whether rightly or wrongly—that prices on this side are equal to those current in English markets. Well-finished light weight Cheviots sold freely enough at late rates, but rubbishy sheep—of which there were far too many—did not clear. Best wethers, 6½d. to 7d. per lb.; ewes, 5½d. to 6d.; inferior sheep, 4½d. to 5d. per lb. Light hoggets from 30s. to 40s.; and heavy from 42s. to 54s. each. House lambs of choice quality sold freely at 40s. each, but secondary qualities neglected. Prime veal scarce, and worth from 7½d. to 8½d. per lb; rough calves not inquired for. Choice milch cattle scarce, and really good springers made up to £20 and £21 each; other descriptions irregular. In the pig market, the supply was rather limited, and with a full attendance of buyers, and a fair revival in demand, prices went up from 1s. to 2s. per cwt. Best light weight pigs sold at from 45s. to 47s. per cwt.; coarse from 32s. to 40s.

LONDON.

Islington, Thursday.—Fair supplies brought forward, and, as usual on Thursday, the bulk comprised fat bulls and rough cattle. The demand was of a quiet character, but prices were unchanged. Fat bulls, 3s 4d to 3s 8d per 8lb to sink the offal. Arrivals of sheep were extremely small, and, with next to no demand, trade proved nominal. The same remarks apply to calves and pigs. Total supplies:—90 beasts, 260 sheep, 10 calves, 5 cows, and 20 pigs.

COUNTRY.

Ashford, Tuesday.—Best beef sold well, making up to 12s per score. Mutton dull of sale. Other stock unchanged. Prices:—Best beef, 11s to 12s; secondary, 10s 6d to 11s. Cows, 9s to 10s per score. Small Downs and half-breds, 5s to 5s 2d. Kent wethers, 4s 4d to 4s 8d. Barrens, 3s 6d to 4s per stone. Best veal, 4s 10d to 5s 4d; coarse ditto, 4s 8d. Pork, 10s 6d to 11s for roasters; 5 to 10 score hogs, 9s 6d to 10s 6d; sows, 8s 6d a score.

Basingstoke, Wednesday.—At Raynbird and Sons' saleyard there was a good attendance of buyers to meet a supply of 49 fat beasts, 47 calves, 455 fat sheep, 300 pigs, and 43 head of dairy and store cattle, for which the following prices were realised:—Prime Devon steers reached £24 5s; shorthorn steers made up to £22 15s; cows, £18 10s; Welsh steers, £16 10s; Scotch steers, up to £19 5s. Prime quality fat sheep and lambs realised from 40s to 55s; twelve-months-old ditto, 35s to 50s; fat ewes, from 35s to 48s 6d; rams, 40s to 45s 6d; fat calves, 60s to £5 7s 6d; small, 20s to 45s. Fat hogs, 80s to £6; fat porkers, 45s to 65s; small, 28s to 40s; store pigs, 17s 6d to 27s 6d; dairy cows, up to £20 5s. The show of fat beasts included some prime quality Devons and shorthorns; for these there was a good inquiry, and prices well maintained; for inferior beasts less money had to be taken. An average supply of good-quality fat sheep and lambs was almost cleared at about last week's values, the tendency being for a slight advance for the short entry of fat ewes. Dairy cows and heifers of all descriptions met a brisk trade with a quick inquiry. Store cattle continue a slow business. Fat calves made more money. Fat hogs and porkers sold readily at last week's quotations. Store pigs are very dear. Ruling values:—Prime fat Devon beasts, 7d to 7½d; ditto shorthorn, 6d to 6½d; bulls, cows, and inferior beasts, 5d to 5½d per lb. Best quality fat sheep, 7d to 8d; second quality, 6d to 7d; old ewes, rams, and inferior beasts, 5d to 6d per lb. Fat calves, 6d to 7¾d per lb. Fat hogs, up to 10s per score; porkers, up to 11s 6d per score.

Boston, Wednesday.—Best beef, 8s; cow beef, 7s and 7s 3d per stone. Heifers, £13 to £16; in-calvers, £18 to £21; wethers, 7½d and 8d; ewes, 5d per lb; hoggs, 38s and 42s.

Braintree, Wednesday.—There was a rather short supply of beasts and hogs at Messrs. Balls' auction mart, although the trade was sharp. Average prices: Beef 5s, and mutton 5s 2d per stone; pork, 11s per score. Stock penned: 30 beasts, 114 fat sheep, 56 hogs, and 120 store sheep.

Bristol, Thursday.—Fat cattle in large supply to-day, trade generally quiet, best qualities realising 60s per cwt; secondary animals, 54s to 56s. Moderate number. Sheep sold slowly at 7½d per lb for light wethers, and 7d for heavy. Ewes made 6d. Pigs plentiful, baconers making 9s 6d per score, and porkers 10s 9d. Little inquiry for store cattle.

Bury, Wednesday.—There was a large supply of fat beasts for the time of the year, the quality being above the average. Trade ruled good throughout, at late rates, prices reaching up to £27 10s. Several lots of forward store beasts penned. Mr. G. Baldwin's Cumberland steers, about 2½ years old, from Pippin Hall Farm, reached up to £13 15s. Ten consigned by Sir A. Noble, Bart., fetched £11 15s. Cows in or near milk made up to £19 10s. Rather short supply of fat sheep, but not much difference in trade, as compared with last week. Shearlings went up to 61s 6d. Fat ewes were in shorter numbers. Not so many store hoggets penned. One hundred good Suffolk hoggets, sent by Messrs. Sturgeon Bros., averaged 34s 6d. per head. Two hundred good black-faced ewes in lamb made from 49s to 37s 6d, and averaged about 45s per head. Good show of fat pigs. Trade about the same as last week. Fat sows went up to £9 15s.

Calne. FRIDAY.—Present prices for prime pigs, in lots of not less than 10, on rail within 100 miles of Calne.

	Thickness of fat in any part of the Back.	Price per Sc.

Under 11 sc. 10 lb.	Not exceeding 2¾ in.	8 6
Under 12 sc.	Not exceeding 3 in.	

—C. & T. Harris & Co., Ld.

Cambridge, Monday.—Beasts, 362; beef, 7s to 8s. Sheep, 738; mutton, 3s 8d to 5s. Pigs, 502; pork, 6s to 6s 6d. Horses, 14. A few lots of small stores, and all sold. Fat beasts, good show, prices unchanged. Fat sheep, a fair number to hand, trade not so good. Stores, a few lots to hand, and all sold. Fat pigs, a large show, and prices not so good. Stores, a fair all-round trade. Hay and roots, short supply. Straw, good supply, and trade fair.

Carlisle, Saturday.—Supply of Irish stripping cows and heifers for store purposes again small, as also was the attendance of buyers. Slow sale, quotations being as follows:—Stripping cows, £11 to £12; heifers, £9 to £11 10s.

Chichester, Wednesday.—Fair supply of fat stock, which sold steadily without change. Very large supply of store sheep, and, considering the general dulness of the trade, a fair proportion changed hands. There was no material change in prices. The pig department was well supplied, and an average trade was done. Altogether there were 5,373 head of stock in the market, made up as follows: Cattle, 409; sheep, 4,298; pigs, 564; calves, 90; horses, 12. Tolls taken, £28 7s 8d.

Dorchester, Wednesday.—Extensive supplies came to hand at to-day's cattle market (Messrs. Ensor's as well as Messrs. Duke and Son's), the tone of which was good throughout, with a tendency to rather higher values than otherwise. The beef trade continues good, the ordinary run of the bullocks offering being from 10s 6d to 11s per score, very little, except something very special in weights, exceeding this figure; fat cows range from 9s to 10s, and contract bullocks, 8s 6d. Calves rule steady, with values a trifle better; best calves make £4 10s to £6 5s, and seconds 60s to 78s; rearers, 15s to 38s. Mutton is still a quiet trade at low prices, wethers only in a few cases touching 50s (or about 7d to 7½d); ewes, up to 46s (or 6d to 6½d). Lambs are a good steady trade at from 34s to 38s for cross-breds (or 8½d to 9d). Porkers are dear, making 40s to 60s (or 10s per score); baconers, 70s to 90s (or 9s to 9s 6d); fat sows, £4 to £6 5s; stores, 18s to 40s.

Dublin, Thursday.—Numbers in market: Beasts, 2,665—increase, 107; sheep, 5,044—decrease, 390; calves, 46—increase, 7. The demand for beef was slower, with prices for all classes in buyers' favour and the rougher descriptions difficult to finish. The trade for sheep tending in buyers' favour. Choice light-weights and fancy qualities only made late rates. Cattle, live weight, 27s to 34s per cwt; mutton, dead-weight, 5½d to 7½d per lb.—GANLY, SONS, AND CO.

Hereford, Wednesday.—Bullocks and cows, 538; calves, 57; sheep and lambs, 691; pigs (fat and sows), 37 sucking pigs, 7; pigs (stores, not more than ten), 263; pigs (stores, more than ten), 164; horses, 2; colts, 3. Prices: Best beef, 6d to 7d per lb; wether sheep, 6½d to 8d per lb; ewes, 5½d to 6d per lb; veal, 8d per lb; lamb, 9d per lb; pork, 5½d to 6d per lb; bacon, 6d to 6d per lb.

Ipswich. Tuesday.—Messrs. Robert Bond and Sons report the number of fat cattle forwarded again showed an increase, but as they were wanted, values for all those well grazed were maintained at last week's level; secondary sorts sold freely, but in some cases were slightly easier. The fat sheep pens were full, and a slow trade prevailed at lower prices, especially in the case of ewes and partly-finished hoggets. Half-bred hoggets, from 53s 6d to 51s; Suffolk ditto, to 51s 6d; ewes, to 45s 6d; grazing hoggets sold without alteration to 35s 6d. Calves were not so numerous; those for weaning made up to 63s, and for killing to 90s. Fat swine were in short supply, but, nevertheless, trade was not so brisk and prices were somewhat lower. Stores sold well up to 26s. A fair number of grazing cattle were penned for the season; trade was dull, without change in values. Cows, fresh-calved, or near, sold well up to £18 10s. At the Drill Hall about 70 horses were offered; the best animals were in request; cart horses to 35gs, colts to 30½gs, hackneys to 22gs. Numbers at sales and market:—Cattle, 550; calves, 35; horses, 101; sheep, 946; swine, 1,222.

Leicester, Wednesday.—Very full consignments of home-fed bullocks in prime condition came forward, and, with buyers and dealers well represented, a more active trade passed in good lots, inferior, however, being rather

slow. Choice bullocks made 6¼d to 6¾d per lb, secondary descriptions 6d to 6¼d; cows, 5d to 5¾d per lb; heifers, 6d to 6¾d per lb. Sheep were a large delivery, and sold rather slowly at 7¼d to 7¾d per lb for best qualities, large weights making 6¾d to 7d per lb, and ewes 5¼d to 6d. Calves flat at 7d to 7¼d per lb.

Newport (Mon.), Wednesday.—The supply of best quality cattle was not quite so large as in recent weeks, nor was there a large supply of sheep, but trade was brisk all round. Good attendance of buyers. Quotations:—Best beef, 6¼d to 6¾d per lb; secondary, 6d to 6¼d; cows, 5¼d to 6d; best wether mutton, 7¼d to 7¾d; ewes, 6d to 6¼d; veal, 6¾d to 7¼d; pigs, porkers, 10s 6d to 11s per score; baconers, 9s to 9s 6d.

Norwich, Saturday.—The supply of store cattle here to-day was moderate; trade was quiet, and prices were the turn in favour of buyers. A fair supply of fat beasts moved off at 7s 6d to 8s per 14lb. Store sheep, which were in average supply, were dull. Keeping hoggetts brought 25s to 35s per head. Fat sheep, which were in good supply, moved off rather slowly at 7s 6d to 8s and 8s 3d per 14lb.

Romford, Wednesday.—Average supply of fat beasts; trade rather slow. Best animals, 4s 6d to 4s 8d; middlings, 4s to 4s 2d per stone. Calves in very short supply; trade dear, at 5s 6d to 5s 8d per stone. Sheep in shorter supply; trade about the same. Best sheep, 5s 4d to 5s 6d; middlings, 5s to 5s 2d per stone. No store beasts on offer. Pig market closed.

Salford, Tuesday.—The supply of both cattle and sheep was larger than last market day. Trade ruled slow for cattle, but last week's prices were obtained The demand for sheep was also slow, and the tendency of prices was against the seller. A large supply of calves, but as choice fat ones were rather scarce this class was in good demand at full prices. Quotations:—Cattle, 4¾d to 6¼d; sheep, 6d to 8¼d; calves, 5d to 8d per lb. At market: Cattle 3,056, sheep 8,693, calves 156.

Sheffield, Tuesday.—The show of milch beasts was smaller than last week, and for the best lots there was a fair demand at from £18 to £22. Secondary animals made from £14 to £17.

Spalding, Tuesday.—A small show of beef, making fully 8s per stone. Cow beef, 7s 6d per stone. A small show of store beasts, and trade rather better. Cows were in demand, and realised very satisfactory prices. In sheep there was a dull trade, prices being lower on the week. Best mutton, about 7d per lb.

Shrewsbury, Tuesday.—Good demand for store cattle; fairly brisk trade for stock generally, with a slightly upward tendency. Fat calves and beef higher in price. Quotations:—Beef, 5¾d to 7d; mutton, 6¾d to 7¾d; veal, 7d to 8d per lb. Porket pigs, 10s to 10s 6d; bacons, 9s to 10s per score. Cows, with calves, up to £22. Hay, up to £5 10s; clover, up to £5 per ton. Number offered:—668 cattle, 54 cows (with calves), 422 sheep, 97 calves, 75 fat, 186 porket, and 357 store pigs. Swedes made about 19s per ton.—B. R. CROXTON.

Stockton, Wednesday.—There were on offer 157 cattle, 352 sheep, and 311 pigs. An average show of best cattle, but few customers. Trade slow at 7s 6d to 8s per stone; rougher kinds, 6s 6d to 7s per stone; sheep, 7½d; ewes, 5d to 6d; tups, about 4d.

Thame, Tuesday.—There was a fair supply of stock at market. Beef was of excellent quality, meeting with keen competition and maintaining the good prices of the past few weeks, every head, with few exceptions, being sold. Mutton was a slow trade, and in favour of buyers. Mr. Bond's sale comprised 70 fat beasts, 120 fat sheep, 53 fat and weaning calves, and 124 fat and store pigs. Fat bullocks made £18 to £21 10s; fat heifers, £14 to £20 2s 6d; fat ewes, 35s to 43s; fat wethers, 41s to 48s 6d; fat tegs, 39s to 48s; fat calves, £3 to £4 12s; cow calves, 22s to 56s; bull calves, 18s to 48s; fat tegs, 10s per score. Stores a fair trade.

Wakefield, Wednesday.—A large supply of beasts and sheep, and a slow sale at last week's prices. Beef, 5d to 6¾d per lb; young sheep, 7¼d per lb; heavy animals, 6d to 7d per lb; ewes and tups, 5d to 6d per lb. Numbers in market:—Beasts, 1,302; sheep, 3,217.

Wolverhampton, Wednesday.—Beasts fair supply; moderate trade. Sheep A moderate number offered, and steady trade. Calves—Small supply; good demand. Beef, 5¾d to 6¾d per lb; mutton, 6d to 8¼d per lb; veal, 7d to 7¾d per lb; pigs Bacon, 9s 6d per score; porkets, 10s 6d to 11s per score; sows, 7s 6d to 8s per score.

Worksop, Wednesday.—Fair show of stock, and moderate trade, beef being down a trifle. Best qualities of beef made from 7s to 7s 3d per stone; secondary qualities, 6s 6d to 7s per stone; best wether mutton, 6¾d to 7¼d per lb; ewes and other sorts, 5d to 6d per lb.

FOREIGN.

Deptford, Wednesday.—Beast entries to-day totalled 800 head, which is an increase of 130 as compared with last Wednesday's figures, and again consisted of shipments from the United States. Trade ruled slow at 4s 3d to 4s 5d. 1,304 United States and Canadian sheep and lambs were offered (1,004 being from the former), and ruled very slow at 3s 2d to 3s 4d and 4s 4d per 8lb, to sink the offal respectively.

BUTTER.

Tuesday.—Bedale: In rolls of 24oz., 1s 6d to 1s 7d per roll. Gainsborough: 1s 3d per lb. Leeds: York lump, 14s 6d to 15s per stone; long rolls, 1¼lb., 1s 8d to 1s 11d; fresh in 1lb prints, 1s 2d to 1s 3d per lb.; Danish, 109s to 114s per 112lb.; Irish creameries, 98s to 104s; Colonial, 100s to 106s. Settle: 1s 2d to 1s 3d per lb. Spalding: 10d to 11d per lb. Stone: 1s 3d to 1s 4d per lb.

Wednesday.—Barnsley: 1s 2d to 1s 3d per lb. Boston: 1s 1d to 1s 2d per lb. Colne: 1s 2½d per lb. Goole: 1s 3d per lb. Hereford: 1s 3d to 1s 4d per lb. Kirbymoorside: 1s per lb. Keighley: 1s 2d to 1s 3d per lb. Knaresborough: (wholesale) 1s 4d; (retail) 1s 6d per roll of 24oz. Louth: (wholesale) 11d per lb. Market Drayton: best, 1s 2d to 1s 3d; seconds 1s 1d to 1s 2d per lb. Market Weighton: 1s per lb. Northallerton: 1s 5d to 1s 7d. Stockton: 1s 2d to 1s 4d per lb. Worksop: 1s 2d per lb.

Thursday.—Brigg: 11d to 1s 1d per lb. Driffield: 1s per lb. Birmingham: 1s 3d to 1s 5d per dozen; 14s to 15s per dozen. Kidderminster: 1s 1d per lb. Penistone: 1s 4d per lb. Ripon: 1s 8d to 1s 10d per single roll of 24oz. Scarborough: 1s 3d per lb. Wetherby: 1s 2d to 1s 3d per lb. Wellington: 1s 3d to 1s 5d per lb.

Friday.—Derby: 1s 3d to 1s 4d per lb. Easingwold: 11 or 12 for 1s. Grimsby: Danish, 110s to 112s per 112lb; Dutch, 104s to 108s; Canadian, 100s to 102s. Helmsley: 11 or 12 for 1s. Leeds: Danish, 109s to 114s per 112lb; Irish creameries, 98s to 104s; Colonial, 100s to 106s; York lump, 14s 6d to 15s per stone; ditto long rolls, 1¼lb, 1s 8d to 1s 11d; fresh butter, in 1lb prints, 1s 2d to 1s 3d per lb. Leyburn: 1s 8d to 1s 9d per roll of 26oz. Lincoln: 1s to 1s 2d per lb. Otley: 1s 6d to 1s 8d per roll of 26oz. Whitchurch: 1s 1d to 1s 2d per lb.

Saturday.—Appleby: 1s 1d to 1s 4d per lb. Berwick: 10d per lb. Carlisle: 1s 3d to 1s 5d per lb Doncaster: 1s 1d to 1s 2d per lb. Grantham: 1s to 1s 3d per lb. Howden: 1s 2d per lb. Lancaster: 1s 3d to 1s 4d per lb. Malton: 1s 2d to 1s 3d per lb. Pontefract: 1s 4d to 1s 5d per lb. Retford: 1s 3d to 1s 4d per lb. Richmond: 1s 3d to 1s 4d per lb. Stokesley: 1s 2d to 1s 3d per lb. Skipton: 1s 2d per lb. Whitby: 1s 2d per lb. York: 1s 2d to 1s 4d per lb.

EGGS.

Tuesday.—Bedale: 10 or 11 for 1s. Gainsborough: 10 for 1s. Leeds: Yorkshire, 14s to 15s per 120; Irish, 11s 6d to 14s; Danish, 10s to 11s; Austrian blues, 8s to 8s 6d; do reds, 6s 6d to 7s. Settle: 10 to 11 for 1s. Spalding: 11 or 12 for 1s. Stone: 10 to 11 for 1s.

Wednesday.—Barnsley: 8 for 1s. Boston: 11 or 12 for 1s. Colne: 2s 7d per score. Goole: 11 for 1s. Hereford: 9 or 10 for 1s (wholesale, 10 to 12). Kirbymoorside: 11 or 12 for 1s. Keighley: 8 or 9 for 1s. Knaresborough: 9 or 10 for 1s. Market Drayton: 10 to 11 for 1s. Louth (wholesale): 12 for 1s. Market Weighton: 12 for 1s. Northallerton: 11 or 12 for 1s. Stockton: 7 or 8 for 1s. Worksop: 1s 8d to 1s 9d per score.

Thursday.—Birmingham: 8 or 9 for 1s. Brigg: 11 or 12 for 1s. Driffield: 11 or 12 for 1s. Kidderminster: 10 for 1s. Penistone: 8 for 1s. Ripon: 11 or 12 for 1s. Scarborough: 8 or 9 for 1s. Wetherby: 9 or 10 for 1s.

Friday.—Derby: 9 or 10 for 1s. Easingwold: 11 or 12 for 1s. Grimsby: Austrian, 6s 10d to 8s 4d per 120; Styrian, 7s 2d to 9s 11d. Helmsley: 11 or 12 for 1s. Leeds: Yorkshire, 13s to 14s per 120; Irish, 10s 9d to 13s; Danish, 9s 9d to 10s 9d; Austrian blues, 8s to 8s 4d; ditto reds, 6s 6d to 7s. Leyburn: 11 or 12 for 1s. Lincoln: 10 or 12 for 1s. Otley: 10 or 12 for 1s. Whitchurch: 11 and 12 for 1s.

Saturday.—Appleby: 10 to 11 for 1s. Berwick: 1s 5d per dozen. Carlisle: 8 or 9 for 1s. Doncaster: 10 or 11 for 1s. Grantham: 9 or 10 for 1s. Howden: 11 or 12 for 1s. Lancaster: 9 for 1s. Malton: 10 for 1s. Pontefract: 7 for 1s. Retford: 2s to 2s 2d per score. Richmond: 9 or 10 for 1s. Stokesley: 9 or 10 for 1s. Skipton; 6 or 7 for 1s. Whitby: 10 for 1s. York: 8 or 9 for 1s.

COLONIAL DAIRY PRODUCE.

London, Friday.—The demand for Australian and New Zealand butter remains good but not brisk, and prices have not fallen, as some expected. On the contrary, there is, if anything, a hardening tendency, and values look as if they would shortly take an upward turn. Choicest brands make 104s to 106s, with 107s for strictly choicest lots. Finest remains at 98s to 102s. The Copenhagen official quotation has been left unchanged this week. Although there is a firmer market in Denmark, and the basis there is 4s per cwt. higher than it was last week. In the United Kingdom Danish values have advanced 2s per cwt. The demand for Canadian cheese is not so good as last week, but prices remain unchanged. New Zealand continues firm, shipments clearing as they arrive.—W. WEDDEL AND CO.

FEEDING STUFFS.

London, Thursday.—Linseed: Owing to a good consumptive demand, and a considerable prospective deficiency in the world's supplies, prices have improved considerably. Spot Calcutta to London 55s, passage 54s 6d to 55s 3d, January 52s 9d, March 49s 6d, April-June 48s 3d. La Plata Dec.-Jan. 48s 6d, Jan.-Feb. 47s 6d. Hull also dearer, La Plata shipping or shipped 48s 6d, Dec.-Jan. 48s, Jan.-Feb. 47s 6d. To the Continent, Bombay Dec.-Jan. 55s, Jan.-Feb. 53s 3d, Feb.-March, 51s 6d, March-May 50s 9d. Calcutta on passage 53s 3d, March-April 49s, April-June 48s 6d. La Plata Dec.-Jan. 48s, Jan.-Feb. 47s 3d. Linseed oil: Although the demand is small, prices have risen in sympathy with seed. We quote spot in pipes £29 5s, barrels £29 10s, Feb.-April £28 10s, May-August £28. Hull spot naked £28, Jan.-April £27 10s, May-August £26 10s. Linseed cakes: Quiet. We to-day quote London-made £7 15s to £8, ex mill. American Western £7 5s to £7 7s 6d, Russian £7 10s to £7 12s 6d. Cotton cakes steady, London-made £4 10s to £4 12s 6d. Rapeseed is rather steadier in tone. To London we quote Yellow Cawnpore Jan.-Feb. 40s 6d, Brown Cawnpore 38s 3d. To the Continent Yellow Guzerat Jan.-Feb. 42s 6d, Yellow Cawnpore Jan.-Feb. 40s 6d, Brown Cawnpore Nov.-Dec. 38s 3d, Brown Calcutta 36s, Ferozepore Nov.-Dec. 38s 3d. Jambs Feb.-March to Hull 29s 9d. Cottonseed, owing to a very strong oil market, has improved in value, but does not close quiet at the best. Spot London £6 10s, afloat £6 8s 9d, January £6 8s 9d, Feb.-March £6 10s, April £6 12s 6d. Hull, spot and near, £6 5s, January £6 6s 3d, Feb.-March £6 8s 9d. Cargoes February £6 13s 9d, March £6 15s, April £6 16s 3d. Bombay to Hull Feb.-March has been sold at £4 11s 3d, but at the close £4 8s 9d is utmost obtainable.—THE PRODUCE BROKERS CO., LTD.

Hull, Tuesday.—Linseed: The arrivals are 1,110 qrs from Boston, 11,275 qrs Calcutta, 135 qrs Harlingen, 663 qrs Konigsberg, 12,098 qrs New York, 50 qrs Rotterdam; total, 25,531 qrs. The market still tends upwards. Calcutta, 48s 3d reported paid April-June to Hull. Plate, 48s 6d paid and bid for afloat; 48s now asked January; 47s the value Jan.-Feb. Baltic sorts, nothing doing. Cottonseed: Notwithstanding the good arrivals the market has been very firm since our last, and values have improved in all positions, although not much business done. Spot sold at £6 5s to £6 7s 6d, which latter obtainable January, and £6 10s and £6 11s 3d paid Feb.-March, but at close to-day there is a quieter tone, with sellers at £6 6s 3d spot; £6 7s 6d January, and £6 10s Feb.-March. Oils.—Exports for the week ending 14th January, 1902.—Linseed oil: 1 America, 4 Germany, 2 Norway; total, 7 tons. Cotton oil: 40 Belgium, 5 Denmark, 5 France, 51 Germany, 222 Holland, 2 Norway; total, 325 tons. The market is quiet but steady. Linseed oil: 28s 3d spot; 27s 3d Jan.-April; 26s 6d May-August. Cotton oil: 22s spot; 22s 3d Jan.-April; 23s May-August. Crude: 20s 6d spot; 20s 9d Jan.-April; 21s 6d May-August. Rape oil: Jamba naked, 24s spot; 1st quality naked, 24s 6d spot. Oil seed cakes: Linseed cakes are fully 2s 6d per ton dearer, and in small supply. Cotton cakes continue in heavy consumption, but fresh sales are not plentiful, deliveries being mostly on contracts previously made. There is no accumulation in the mills.—KEIGHLEY MAXSTED AND CO.

WATERLOO ROUND FEEDING CAKES, £6 12s 6d PER TON; WATERLOO ROUND 97 PER CENT. PURE LINSEED CAKES, £9 10s 0d PER TON; WATERLOO ANGLO SHAPE 97 PER CENT. PURE LINSEED CAKES, £9 7s 6d PER TON; WATERLOO 97 PER CENT. PURE EGYPTIAN COTTONSEED CAKES, £6 0s 0d PER TON. ALL F.O.R. HULL.

MOLASSINE FEEDING MEAL, packed in bags, of 1½cwt. each. Price per cwt., 7s. 6d. Price per ton, £6 15s., on rail at works, Silvertown, Essex, and F.O.R. Liverpool. A sample lot of 6cwt., in 4 bags of 1½cwt. each, delivered free to any station in England on receipt of remittance for £2 11s 0d.

HAY AND STRAW.

Manchester, Wednesday.—Hay, 6¾d to 7¼d; clover, 7d to 8d; clover (Canadian), 6¾d to 7d; straw (wheat), 6¼d; straw (oat), 6¼d to 6¾d per stone.

Lincoln, Friday.—Hay and clover, 70s to 80s; straw, 60s to 70s per ton delivered on rail.

Manchester, Friday.—Hay, 6¾d to 7¼d; clover, 6¾d to 8¼d; straw (wheat), 6¼d to 6¾d; straw (oat), 6¼d to 6¾d per stone.

Whitechapel, Saturday.—The demand was very quiet, and prices tended lower. Quotations:—Best clover, 95s to 110s; inferior ditto, 80s to 90s; specially-picked hay, 115s; good ditto, 108s; inferior ditto, 80s to 90s; mixture and sainfoin, 90s to 110s; and straw, 28s to 40s per load.

WOOL.

Canterbury, Saturday.—The advance at the London wool sales has improved the tone of trade, and some splendid lots of Kent wool have changed hands at 6d. Half-bred fleeces, 6d; downs, 7d to 8d per lb.

London, Tuesday.—The first series of London sales of Colonial wool commenced to-day with catalogues comprising 9,494 bales out of an available total of 192,000 bales. There was a large attendance of both home and foreign buyers and animated competition. Prices, as compared with December closing rates, ranged for Australian merino and fine crossbred from par to 5 per cent. higher, while coarse crossbred showed a rise of 10 per cent. Cape wools were also par to 5 per cent. higher. As at present the sales will last till the 6th February.—HELMUTH SCHWARTZE AND CO

London, Friday.—English—per pk. of 240lb.—Fleeces S. Dn. Hggs, £7 to £8 10s; half-bred hoggs, £6 to £6 10s; half-bred wethers £5 to £6; Kent fleeces, £5 to £6; South Down ewes and wethers, £7 to £8 10s.; Leicester do, £5 to £5 10s; Colonial—per lb—Vic.—Fleece super, 1s. 5d. to 1s 7d; scoured good, 1s 7½d to 1s 8¾d; scoured average, 1s 6d to 1s 7d; greasy average to fair, 10½d to 11½d; N. S. W. scoured average, 1s 3d to 1s 4d; greasy average, 8d to 8¾d; S. Aus. greasy average, 6¾d to 7d; N. Z., scoured average, 1s 4d to 1s 5d; grease average, 8d to 9d; Cape scoured sup. 1s 5d to 1s 6d; fleece average 6¾d to 7¼d; greasy average, 5½d to 6¼d; Natal, scoured 1s to 1s 1d; greasy average, 6¼d to 7d; cross-breds—Grs—Vic, good to super 10½d to 11¼d; New Zealand, fine, 8d to 9d; medium, 4¾ to 5¼d; coarse, 4d to 4¼d.

MANURES.

Liverpool, Friday.—Nitrate of soda is exceedingly firm at £9 17s 6d to £10, but there is little demand experienced at present. In sympathy with the improvement in nitrate, sulphate of ammonia is dearer, but is comparatively the best value at current rates. Fish guanos are scarce at advanced rates. Kainit in fair request, as also bone meal. Basic slag is much sought for, and many of the producers having sold their season's production, it is impossible to obtain prompt deliveries; in fact, in some districts there is a difficulty in placing orders for forward delivery. Superphosphate of lime, the most soluble phosphatic fertiliser, is likely to cause more attention, and annexed are current rates in this district. Feeding stuffs are idle and values barely maintained. Prices:—Nitrate of Soda, best quality, *i.e.*, guaranteed 95 per cent. pure, in bags, £10 per ton; East India Bone Meal, fair to prime, in bags, £4 1s 3d to £4 6s 3d per ton; Kainit, prime 23 per cent., in bags, £2 7s 6d to £2 10s per ton; Palm Nut Cake, prime, in bags, £5 12s 6d per ton; Linseed Cake, American thin oblong, prime, in bags, £7 12s 6d to £7 15s per ton; Linseed Cake, English, prime, in bulk, £8 12s 6d to £8 15s per ton; Linseed Cake, foreign, prime, soft and oily, in bags, £8 5s per ton; Cottonseed Cake, N.A. decorticated, prime, in bags, £7 2s 6d to £7 6s 3d per ton; Cottonseed Cake, English, decorticated, prime, soft, in bags, £7 12s 6d to £7 15s per ton; Cottonseed Cake, English, undecorticated, prime, in bulk, £4 15s to £4 17s 6d per ton; Cottonseed Cake (crushed), 20-25 per cent. oil, prime, in bags, £7 5s per ton; Maize Germ Meal, prime, in bags, £6 2s 6d to £6 5s per ton; Rice Meal, Rangoon, as imported, in bags, £5 10s per ton; Indian Meal, coarse to fine grinding, prime, in bulk, 13s to 13s 6d per 240lb; Linseed, fine bold feeding, in bags, £3 3s to £3 6s per quarter, 416lb; D.N.S. Brand, Superphosphate of Lime, guaranteed, 25 to 27 sol., in bags, £2 5s to £2 7s; D.N.S. Brand, Superphosphate of Lime, guaranteed, 30 to 31 sol., in bags, £2 10s to £2 12s; Superphosphate of Lime, guaranteed, 35 to 35 sol., in bags, £3 to £3 2s; Basic Slag, prime quality, guaranteed, 30 to 35 per cent. phos., in bags, £1 12s to £1 13s; Basic Slag, prime quality, guaranteed, 35 to 40 per cent. phos., in bags, £1 14s 6d to £1 15s 6d; Basic Slag, finest quality, guaranteed, 38 to 45 per cent. phos., in bags, £1 17s to £1 19s per ton at the producing depots.—H. JONES LANGAR AND CO.

POTATOES.

Goole, Wednesday.—Owing to the mild weather trade was rather heavy here to-day. The Co-operative Society's price was 5s 9d per load for all varieties. Best "Up-to-Dates" made 5s to 55s per ton. Retail price, 6d per stone.

Borough, Saturday.—General tone is dull and depressed, supplies being very heavy, and demand without the faintest recovery. Quotations:—Scotch maincrops, 80s; blackland Reading giants, 45s; blackland up-to-dates, 45s to 50s; Lincoln silts up-to-dates, 55s to 60s; and Gartons, 45s per ton.

Spitalfields, Saturday.—The arrivals of potatoes this morning were again on a large scale, and extensive quantities are on rail, while with no improvement in the demand, the market remained in a dull and congested state. Quotations:—Best Lincoln up-to-dates, 60s to 65s; blackland ditto, 45s; Wisbech ditto, 50s to 60s; Scotch ditto, 60s; Scotch maincrops (grey soil), 70s; Lincoln maincrops, 80s to 90s; Reading giants, 45s; and blackland Gartons, 45s per ton.

SEEDS.

London, Monday.—Messrs. John Shaw and Sons, seed merchants, of Great Maze Pond, Borough, London, S.E., report an increasing all-round activity in farm seeds. As regards white clover-seed, fine samples of which are exceedingly scarce, the advance now established has assumed phenomenal proportions. Alsyke is likewise in short supply, and realises high rates. Meantime, English red offers freely, with rates favouring buyers. Trefoil continues cheap, but steady; whilst perennial and Italian rye-grasses fully maintain former terms. Spring tares attract more attention, without any signs of yielding in value. For mustard, rape, and linseed, the sale is meagre. With respect to canary seed, although the demand just now is confined to narrow limits, quotations remain strong, and stocks the world over are much smaller than usual. Last season's exports from Rodosto were 39,253 bags, of which only 5,280 came to England. There is a good inquiry for Eclipse seed peas. Scarlet runner beans are now obtainable on tempting terms. Blue peas and haricot beans continue a disappointing business.

STOCK AND SHOW NOTES.

By Herdsman.

The Royal Isle of Wight Agricultural Society suffered a loss of £111 16s. 10d. on their last year's show, and they have recently held a meeting to decide how to wipe out the debt. Sir Barrington Simeon, Bart., M.P., presided, and he said that "unfortunately for the society it rained very heavily on the show day, which affected them to the extent of £30 in gate money. On the other hand, the prize list was greatly increased by prizes for open classes. It was very difficult to say what should be done under the circumstances. The society came of age this year, and they did not wish to knock a promising boy on the head on the occasion of his 21st birthday. It would be very disappointing if they had to give up the society when his Majesty the King had promised his patronage." Sir Simeon further remarked that he was afraid there were many idle, selfish people in the world, some of whom might belong to that society. They did not care who paid the debts, so long as they did not. Finally, he advised them to "get what you can in the room, and see if some sense of shame may not strike those gentlemen who do not attend and do not pay up." A list was then passed round, and £46 14s promised in the room. Sir Simeon said he was convinced that the deficit would be satisfactorily wiped off, and I hope that such will be the case.

The Bridlington Agricultural Society's sixty-seventh annual show will be held at Bridlington on Wednesday, July 23rd. The secretary of the society is Mr. B. M. Townsend, Quay Road, Bridlington.

I would point out to intending exhibitors at the Birmingham Shorthorn Show and Sale to be held on March 5th, 6th, and 7th, that the entries close on Tuesday, February 4th, and that when they apply for entry forms they should state whether they are required for cows or bulls, as separate certificates are issued. The prize list contains the usual classes, viz., four for cows, heifers, and heifer calves, and seven for fulls of all ages, with thirty-eight prizes ranging from £50 to £4, including an extra prize of ten guineas for the best lot of five bulls between the ages of 9 and 21 months bred by the same exhibitor, for which the animals entered in the £50 class are now eligible. The secretary is Mr. W. H. Lythall, Bingley Hall, Birmingham.

The Committee of the Lydney and District Farmers' Club have fixed Whit Monday, May 19th, as the date of this year's show, which will be held at Lydney.

The North-East of Ireland Agricultural Association have decided to hold their spring show on April 30th and two following days, and the Horse and Sheep Show on July 23rd, 24th, and 25th, both being held at the Society's well-appointed showyard at Belfast.

The list of prizes for live stock, farm produce, &c., to be offered at the Bath and West and Southern Counties Society's Show at Plymouth on May 27th and four following days is now in course of issue. The importance of the meeting is shown by the fact that the money prizes, in addition to medals and plate, total up to nearly £3,300, distributed as follows:—Horses, £800; cattle, £1,242; sheep, £509 5s.; pigs, £245; poultry, £164 5s.; dairy, £254 15s.; shoeing, £54 10s.; shearing, £26 17s. 6d. Of this amount, £2,773 10s. is contributed by the Bath and West Society, £105 by the Plymouth Local Committee, £100 by the Devon County Agricultural Association; £80 7s. 6d. by the Devon County Technical Education Committee, and the remainder by the leading stud, herd, and flock book societies and by individual donors. In addition to the money prizes there are fifty-six prizes of medals and plate offered by breed societies and others.

In the horse section are classes for Shires and other agricultural breeds, and for hunters, Hackneys, ponies, and harness horses. There will also be jumping competitions, and a considerable sum is offered for prizes in these classes. The following breeds are represented in the cattle classes, viz.:—Devon, South Devon, Shorthorn, Hereford, Sussex, Red Polled, Aberdeen Angus, Jersey, Guernsey, Kerry, and Dexter Kerry. There are also butter-test and milk-test prizes for South Devon cows and also for cows of any breed. In the sheep section are classes for the following breeds: Cotswold, Devon Long Wool, South Devon, Southdown, Hampshire Down, Shropshire, Oxford Down, Exmoor, Dartmoor, and Somerset and Dorset Horn. The breeds represented in the pig classes are the Berkshire, Large Black, Large White, Middle White, Small White or Small Black, and Tamworth.

The prize schedule also includes classes for cheese, butter, cream, and cider, and competitions for butter-makers, milkers, shoeing smiths, and sheep-shearers. Entries for stock and produce, and for the above-named competitions, should reach the secretary, Mr. T. F. Plowman, 4, Terrace Walk, Bath, on or before April 7. The entries for machinery, implements, &c., close on March 18.

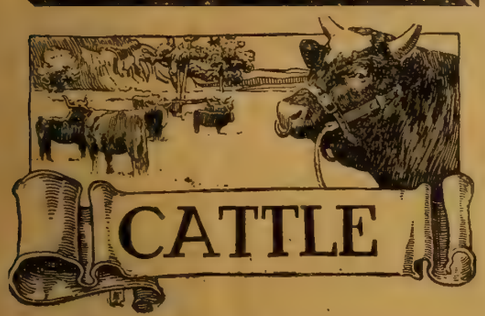
The well-known herd of Jerseys and flock of Shropshire sheep reared by the late Rev. Seymour Ashwell at Finmere Rectory, Buckingham, will be disposed of on Wednesday, February 5th. At the same time the stock of farm implements, hay, and roots will also be sold. The herd of Jerseys, which has been maintained at Finmere for many years, was kept in accordance with the late owner's taste for rearing pure-bred animals of all kinds on his farm, which he successfully managed. They are descended from excellent imported stock purchased from time to time, and from good English-bred animals from the first-class herds belonging to Captain Spicer, Captain Fraser, Mrs. Burton, and the late Mr. John Tremayne. The cows are of true character and uniform, with good milking properties, and there are some promising yearling heifers and young bulls.

The Shropshire sheep were selected from some of the best flocks, including that of Mr. J. Bowen Jones, at whose dispersal sale at Ensdon House in 1898 some good sheep were purchased. The ewes, which will mostly have lambed by the time of the sale to a well-bred ram by Ensdon Charmer 9,904, dam by Royal Attractor 9,658, are large framed, good in colour, and well woolled, and there are some promising ewe tegs, which would have come into the flock next season. There is also a choice young litter of pure-bred Berkshire pigs. The sale will be conducted by Messrs. J. Thornton & Co., and will commence at 11.30 with the implements.

Messrs. John Thornton & Co. have received instructions to dispose of a number of pure-bred Shorthorn cattle belonging to the Right Hon. Lord Barnard, and the sale will take place at Raby Castle, Staindrop, Darlington, on Thursday, February 20th. Shorthorn cattle have been kept and pure-bred bulls used for generations at Raby, where about the middle of the eighteenth century—1750 to 1800—great attention was given to the improvement of agriculture, and buildings were erected in the park. Some of the earlier bulls were obtained from those well-known breeders the Earl of Zetland, Messrs. Atkinson of Peepy, and Messrs. Angus in Northumberland, as well as Mr. D. Nesham of Gainford, and Miss Milne of Otterburn. Some of them were winners at the Barnard Castle and local shows.

THE GALLOWAY STEER KNOCKYCOID, which we show above, was winner of the first prize at the Birmingham Fat Stock Show, in the class for Galloway Steers not exceeding four years old, being exhibited by Mr. A. Palmer, Wakefield Park, Mortimer, Berks. Knockycoid was bred by Mr. W. Hyslop, Knockycoid, Barrhill, N.B., and is by Penninghame of Knockycoid, out of Cherry of Knockycoid.

Sires were selected from old-established first-class herds. Telemachus 26th 66,421 came from the Marquis of Exeter's herd at Burghley, and was full of prize blood. Knight of Raby 65,743 and Latinus 68,891 were bred from the Alnwick and Booth strains. Raby Archer 73,342, the issue of Mr. Duthie's Merry Archer and Lord Lovat's beautiful cow May, was long used, as well as his sons. White Baron 80,247 came down from the late Mr. James Bruce's herd at Inverquhomery, that had produced many Smithfield prize winners, and Gay Knight 78,936, bred from the old Angus blood in Northumberland, is now in service. The herd, coming early into the market, will afford purchasers a good opportunity of securing first-class stock, many of which are likely, under good management, to distinguish themselves at the forthcoming shows this season.



I would remind intending exhibitors that the entries for the King's Premiums at the Show of Thorough-bred Stallions to be held under the auspices of the Royal Commission on Horse Breeding at Islington in March will close on Monday next, or post entries on February 10th.

SPENCER'S
COD LIVER OIL FOR CATTLE.
Calf Brand.

The Best and Cheapest article for rearing Calves, being a natural substitute for Cream. Equally good for all other stock—a medicine and food combined, Far better and cheaper than Feeding Meals.

Write for booklet giving full particulars to the Manufacturers:—

ISAAC SPENCER & CO.,
HULL.

Sale of the Dewsall Court Herefords.

Fine weather was experienced at the dispersal sale of the Dewsall Court herd of Herefords on Thursday. The sale was occasioned by the retirement of Mr. A. H. Morris, who is leaving Dewsall Court, and the whole of the stock and farming implements was disposed of, the cattle on Thursday, and the horses, sheep, implements, etc., on Friday. Mr. W. Pye was the auctioneer, and there was a large and representative gathering of agriculturalists from Hereford and the adjoining counties.

The proceedings began at half-past eleven with luncheon, at which Mr. W. M. Haywood presided, owing to the unavoidable absence of his father, Mr. Alderman Haywood. In proposing the health of Mr. Morris, the chairman said he very much regretted that he occupied the position he did that day, as it meant the severance from them of one who was highly esteemed by the whole agricultural community of Herefordshire. He was sure all hoped Mr. Morris would have a very successful sale (applause). There was a grand lot of cows to be sold. The Dewsall Court herd might fairly nslaim to be one of the oldest and certainly one of the best non-exhibiting Hereford herds now in existence.

Mr. Arthur Morris, in reply, said he was very much obliged to Mr. William Haywood for his kindness, and he was much obliged to his friends for assembling in such large numbers, and hoped that all those who bought cattle would find them turn out satisfactorily, and also the sheep and horses. He had done his best to keep the cattle going well, but there had been three bad summers, which caused them perhaps not to look so well as they might otherwise have done. He stated, in conclusion, that all the calves would be entered in the next volume of the Herd Book, unless the purchasers informed him that they did not intend to keep some of the bulls

After the auctioneer had made a few remarks, the sale began. Following is a list of the principal prices obtained:—

COWS AND CALVES.

		gs.
Dainty 4th	Mr. T. Fountaine, Holmer	20
Her heifer calf, Dainty 8th	Mr. Clews	12½
Prim 4th	Mr. T. P. Smith	21

Particulars of Transactions in Store Stock.

(Reported to the Department of Agriculture and Technical Instruction for Ireland.

Athlone Fair (Co. Westmeath), held on Tuesday, was an average-sized one. A good demand prevailed for all cattle with quality and condition, and a good clearance was effected at prices favouring sellers. There was a very small supply of sheep, and a moderate demand was experienced for those suitable for export, but all others were difficult to sell at any price. Prices:—Calves, 2nd class, £3 15s. to £4 10s.; yearlings, 1st class, £7 10s to £8 5s.; 2nd class, £6 to £6 10s.; two-year-olds, 1st class, £10 10s. to £11; 2nd class, £7 15s. to £10; 3rd class, £6 to £6 10s; three-year-olds, 1st class, £13 15s. to £14 10s.; 2nd class, £10 5s. to £12; 3rd class, £7 10s. to £9; springers, 2nd class, £12 10s. to £14 5s; 3rd class, £10 to £10 10s. Lambs, 2nd class, £1 to £1 2s.; over 12 and under 24 months old, 1st class, £1 18s; two years old and upwards, 1st class, £2 2s. 6d. to £2 10s; 2nd class, £1 13s. to £1 18s.; 3rd class, £1 5s. to £1 7s. 6d.

There was an average-sized fair at Fethard (Co. Tipperary) on Tuesday, the supply consisting chiefly fo second-class one and two year old cattle. The demand was good for those in forward condition, but thin stock sold slowly, and a good number were left unsold. The small supply of springers met a good demand. A very small supply of lambs sold slowly. Prices:—Calves, 1st class, £5; 2nd class, £4 to £4 10s.; yearlings, 1st class, £8 5s. to £8 10s.; 2nd class, £6 5s. to £8; 3rd class, £4 10s. to £5 10s; two-year-olds, 1st class, £12 5s. to £13 5s.; 2nd class, £8 to £11 15s.; springers, 1st class, £15 10s. to £17; 2nd class, £11 10s. to £15; 3rd class, £9 to £10. Lambs, 2nd class, £1 2s. to £1 6s.; young pigs, 8 to 10 weeks old, averaged about 25s. each.

Contagious Diseases of Animals.

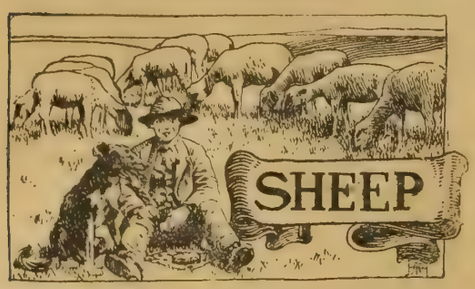
NOTE.—The figures for the current Year are approximate only.

Banbury Horse Show.



The annual horse show at Banbury took place on Monday, and for once in a while was favoured with fine weather throughout the day, so that there was a very large attendance of spectators. The entries were more numerous than for many years past, numbering 214, of which 84 were in the agricultural classes, the remainder being nags and hunters.

The judging, as usual, took place in the Horse Fair—one ring for the heavy horses and another for the light ones—and was undrtaken by the following gentlemen:—Hunters, harness horses, etc.—Mr. W. Mewburn, Pembury, Kent; and Mr. A. Britten, Great Billing, Northampton. Cart horses—Mr. T. B. Freshney, South Somercotes, Louth; and Mr. J. Lewis, Garthmyl, Montgomeryshire.

The agricultural classes were conspicuous for the improvement to be seen in the young animals compared with former years, but this was counterbalanced by a falling off in the aged classes. In were nine entries, and the animals were not so were nine entries, and the animals were not so good as are usulally seen here. Mr. A. Pepper had the premier place with a brown, bred by Mr. C. E. B. Fry, of Mollington; Mr. W. L. Hirons being second with an upstanding bay sired by Haddon Image; while Mr. J. H. Gregory was third. In the aged mare class Mr. A. C. Rogers was first with a bay sired by Harold, which has won several prizes at shows in the neighbourhood. The second prize went to Mr. J. Fox, for a very useful animal, Mr. J. Wait coming next. For cart colts under four years, Mr. J. T. Miller was first with a bay of great size and quality, and which was picked out as the winner as soon as he entered the ring. Mr. Lepper was second with a good-looking chestnut, but he was not nearly so deep-chested as the winner. Mr. F. E. Killbey was third. The fillies under four years had a great deal to recommend them, and than the five that were placed it would be difficult to find better animals. The Misses Bull had a red ribbon for a very smart-looking bay sired by King of Keele, and Mr. Rogers had the second place with a bay sired by Harold. Mr. Fry was third with a brown sired by Haddon Image, which was first last year in the class under three years, and had the premier position at Kineton as a yearling. For colts under three years there were twelve entries, and the class was an excellent one all through, giving the judges a great deal of trouble. The coveted place was secured by Mrs. Tarver, with a roan which was looked upon by all as being the winner, being well-proportioned and very promising-looking. Mr. Lepper was second. There was some excellent animals in the class for fillies under three years, and the prizes here went to Mr. Rogers and the Misses Bull, there being several commendations in the class. For the colt under two years, Mr. T. H. Hawkes was first with a bay sired by Haddon Image, and Mr. J. H. Cave was second. Mr. Rogers secured both the prizes in the filly class, which comprised some capital animals.

The first of the harness classes was for animals over 15¼ hands, and it contained nothing of great merit. Messrs. Woolliam and Spencer were first, Mr. T. E. Ivens second, and Mr. W. W. Railton third. There were no fewer than eighteen entries in the classes for animals not exceeding 15¼ hands. The first prize went to Mr. T. C. C. Morgan for a smart brown gelding with capital action, and Mr. T. E. Ivens had the second prize with a chestnut mare that went admirably, Mr. Wait being third. In the local classes the winners were Messrs C. R. Claridge, J. H. Bolton, J. H. Neale, and E. Coleman. There were some very good animals in the hackney class, Mr. T. Band securing the premier place, with Mr. C. Williams second. In the cob classes there were nineteen entries, and the leading prize went to Messrs. Woolliams and Spencer, Mr. J. R. Ivens taking the second. As may be supposed, the hunting classes were filled, and amongst the competitors were many animals known with the local packs. The hunters were put through their paces in the old agricultural show field on the Oxford road, and there were a good many spectators, including a number of well-known fox-hunters in the district. In the 12st. 7lb. class, under five years, there were no fewer than twenty entries, and the judges spent a long time before making their awards. The winner was found in a

fine-looking chestnut gelding shown by Mr. P. Berridge, sired by Ishmael. The second prize went to Mr. E. Clarke for a black gelding sired by Victor, a hunter with many excellent points. Fifteen animals faced the judges in the class up to 12st. 7lb. over five years, and here Mr. F. M. Gibbard had the premier position with a well-mannered bay gelding, which had many admirers, Mr. P. Berridge being second with a smart-looking brown gelding sired by Seymour. For weight-carriers a smart-looking bay gelding sired by Primrose, the the property of Mr. T. H. Hawkes, was placed first, and Mr. F. M. Gibbard had the second prize for a brown gelding of much merit. In the limit class, Mr. Berridge and Mr. Hawkes were successful with animals which had won in the other classes. Most of the animals were good performers over hurdles and in some instances the jumping was remarkably good.

Removal of Sheep Without a Certificate—Heavy Fine.

The Hon. Gerald Rowland Clegg Hill, Hawkstone Park, was charged at Whitchurch on the 17th inst. with removing 204 sheep on December 6, and 289 sheep on December 14 from Carnarvonshire to Whitchurch, Shropshire, without the necessary authority. The Cambrian Railway Company were also charged with conveying the said sheep without the necessary licences.

Mr. Hazlewood, of Bridgnorth, stated that on the 6th December 204 sheep arrived at Whitchurch Station from Portmadoc, and were unloaded by defendant. No certificate of their removal was received, and the police in consequence were unable to see them and ascertain if they were free from sheep scab.

The defence was that the offences were committed in ignorance as to the requirements of the law.

The Chairman said it was a most serious offence, and they would not be doing their duty to the county and to farmers if they did not inflict a heavy penalty. Defendant was fined £25 and costs in each case; the railway company £5 in the first case and £25 in the second.

LITERARY NOTICES.

The "North Wilts and District Directory" for 1902 has made its appearance. This is the twenty-eighth year of publication of this popular directory, and as several additional items of official county information have been added this year, the value of the work as a book of reference has been further enhanced. As in former years, interesting and useful details concerning the local parishes are given—the parishes being arranged in alphabetical order—and also a list of the inhabitants. That no effort has been spared to make the directory complete is evinced throughout the work. The directory of Swindon alone occupies 56 pages, or in round numbers over 8,400 names, each of which has been revised and verified. Three maps, one each of Wiltshire, Berkshire, and Gloucestershire are included, and these add to the value of what is undoubtedly one of the best local directories issued. The publishers are the proprietors of the "North Wilts Herald," Swindon, and the price is the low one of sixpence.

The 1902 edition of that popular little horticultural annual, "My Garden Diary," has now been issued, and is similar to that of last year. Most gardeners are well acquainted with and appreciate "My Garden Diary," but for those who have not seen it we may mention that it is a most artistic and useful production, in which brief but comprehensive notes on the work in the garden for each month is given, with a calendar and a nice amount of space for making notes, etc.; whilst items of general interest are also given. It has for some time past been the constant companion of numerous gardeners—both amateur and otherwise—throughout the year, and is likely to continue to be so, for it is a capital reminder. Messrs. Sutton and Sons, Royal Seed Establishment, Reading, are the publishers, and the price is one shilling.

A nicely-illustrated and brightly-written article on California and its wheat industry, by Mr. N. A. Cobb, prefaces the November part of the "Agricultural Gazette of New South Wales." Interesting and useful articles are also contributed on the fowl tick and the codling moth, while the other contents of this issue continue in the standard of excellence and utility that former issues have achieved. For a Government publication, the number is distinctly well produced, and up-to-date in style.

From the West of Scotland Agricultural College we have received a copy of a report on "Experiments on the Manuring of Turnips," which were conducted in different districts of Scotland during 1900 by R. Patrick Wright, F.A.A.S., F.R.S.E., Professor of Agriculture at the above institute.

The results obtained from the experiments on charlock spraying, carried out by the Technical Instruction Committee of the Lancaster County Council, are embodied in a report written by Mr. Frank P. Walker, B.Sc., F.A.A.S., and illustrated from photographs. Much useful information is contained in the report as to the habits and prevention of charlock.

Mr. Cecil H. Hooper has had reprinted, and is publishing through Messrs. J. B. Nichols and Sons, London, the paper on the "Cost of Cultivating Farm and Market Garden Crops." This paper should prove useful to collectors of statistics, but will serve no other useful purpose that we can see.

We have received from Messrs. Harrison and Sons, of the Royal Midland Seed Warehouse, Leicester, a copy of an illustrated price list for 1902.

Mr. William Watt, of Cupar and Perth, has favoured us with a copy of his garden seed catalogue for Spring, 1902.

A very artistic production is the 1902 issue of "Daniels Bros., Ltd., Illustrated Guide for Amateur Gardeners." It is well and handily arranged, while the illustrations are excellent.

Tuberculous Beef.—At West Hartlepool Police Court on Monday, William King, described as a horse slaughterer, was fined £10 and 19s. 6d. costs, or in default one month's imprisonment, for having deposited at the public abattoir for preparation for sale as human food the carcase of a diseased animal. The Town Clerk (Mr. Higson Simpson), who prosecuted, stated that the defendant bought a diseased and lame cow for 5s. from a Greatham farmer. A butcher named Nelson, who appeared to have been the defendant's tool and dupe, took the animal to the abattoir, saying that he had got a very nice heifer that had broken its leg, that he had bought it cheap, and had brought it to be dressed. The carcase was found to be riddled with tubercle, and was destroyed. The defence was that King sent the animal to the abattoir merely in order to secure the hide.

PRACTICE WITH SCIENCE.

National Agricultural Examination Board.

This Board, which is composed of representatives of the Royal Agricultural Society of England and the Highland and Agricultural Society of Scotland, has now issued the regulations for the examinations to take place under the auspices of the Board in 1902.

The examination for the National Diploma in the Science and Practice of Agriculture will take place in the Great Hall of the Yorkshire College, Leeds, on Monday, May 5th, 1902, and following days. The subjects of examination are: Part 1: Agricultural botany; mensuration and land surveying; general chemistry; geology; and agricultural entomology. Part 2: Practical agriculture; agricultural book-keeping; agricultural chemistry; agricultural engineering; and veterinary science.

The examination for the National Diploma in the Science and Practice of Dairying will take place at the Reading College (for English students) from Monday, September 22nd, to Thursday, September 25th, 1902, and at Kilmarnock (for Scottish students) from Monday, September 29th, to Thursday, October 2nd, 1902. The subjects of examination are:—General management of a dairy farm, including the rearing and feeding of live stock; management of a dairy, and the manufacture of butter and cheese; knowledge of the scientific principles underlying the practice of dairying, and of the composition, nature, properties, and changes undergone by the different substances met with in dairying, and a general acquaintance with the principles of laboratory methods, so far as dairying is concerned.

The entries for the Diploma in Agriculture close on Monday, March 31st, 1902, and those for the Diploma in Dairying on Monday, September 1st, 1902.

Copies of the regulations may be obtained of the secretaries of the two societies represented on the Board, viz., Sir Ernest Clarke, 13, Hanover Square, London, W., or from Mr. James Macdonald, 3, George IV. Bridge, Edinburgh.

A Canadian Ham Sold as English.—At the North London Police Court on Monday, Sidney Stone, provision dealer, Holloway-road, was summoned by an inspector of the British Bacon Curers' Association, Mark Lane, for a contravention of the Merchandise Marks Act (Section 2, Sub-section 2), 1887, by selling an American ham falsely described as an English one.—Mr. A. F. Rowe was counsel for the prosecution.—The defendant's shopman, Henry Gosling, was also summoned for selling the ham falsely described.—The facts were the same in each case.—Mr. Stone said he could not plead guilty, because at the time of the purchase of the ham he was away on a holiday at Yarmouth. Gosling said he pleaded guilty to great neglect on his part.—Mr. Rowe said it could not be too widely known that these summonses were taken out at the instance of the Board of Agriculture, who were determined to put an end to the practice of passing off as English goods articles which were of foreign origin. Acting on the instructions of an inspector of the association, a Mrs. Annie White, on September 2 last, went to Stone's shop and asked for a ham. The defendant Gosling produced two—one which he said was Canadian, and 8½d. per lb., and the other, which he said was English, and was 10d. per lb. She said she would take the English ham, and asked for a receipt and an invoice, and on this the ham was described as English. This invoice constituted the false description. Mrs. White took away her ham, and next day returned with Inspector Ward, and confronted the defendant Gosling. The latter said it was an American ham, but he had sold it as English in the interests of his employer.—Inspector Ward was called, and bore out this statement; but the defendant Stone said he doubted the assertion that Gosling said he did it in the interests of his employer.—Gosling: I did not say so.—The defendant Stone said he would have liked to see Mrs. White, to ask her how she had led Gosling into committing this offence. She said she must have an English ham, and Gosling, in order to effect a sale, brought her another ham, said it was English, and charged her a little more for it. He (Stone) was never asked for an English ham.—Mr. Fordham, in deciding the case, said he did not know that a good Canadian ham was much worse than an English one, but it was a fraud upon the public to sell an American ham for an English one. The full penalty for such an offence was four months' imprisonment, or a fine not exceeding £20. There were two summonses against each defendant, but, as there had been no previous complaints against them, Stone would be fined £10 and £3 5s. costs, and Gosling £10 and 2s. costs, or two months each.

PRICE 6d. (By post, 9d.)

SHOULD BE IN THE POSSESSION OF EVERY

FARMER, LAND OWNER, AND STOCK-KEEPER.

A YEAR'S RECORD OF BRITISH AGRICULTURE.

ENLARGEMENT OF THE

AGRICULTURAL ANNUAL

AND

Mark Lane Express Almanac, 1902.

Portraits of Prize-winning Animals at the Norwich, Birmingham, and Smithfield Fat Stock Shows, 1901.

PRESS OPINIONS.

"Is a splendid sixpennyworth. It is well illustrated, and has a great many valuable articles besides a good deal of information compactly arranged for easy reference."—**Derby Mercury.**

"A useful publication, long popular among English farmers and breeders of fat stock."—**Scotsman.**

"The volume is finely illustrated, many of the photographs of rural scenes used as headpieces being especially interesting."—**Live Stock Journal.**

"The volume consists of about 250 pages, and is nicely bound and well illustrated."—**Hunts County News.**

"Is as deftly edited as ever. Besides the usual information, it contains many articles on subjects of special interest to our farmers and breeders, and should thus maintain its popularity."—**Leicester Post.**

"Mr. H. Stopes, the well-known barley judge, has something to say concerning barley threshing and dressing, and his remarks will doubtless be carefully perused by barley growers."—**Belfast News Letter.**

"The volume consists of about 250 pages, and is nicely bound in a coloured wrapper, on the front of which appear, in a most artistic frame, portraits of his Majesty the King and H.R.H. the Prince of Wales."—**Kenilworth Advertiser.**

"From life-like photographs—of the great prize winners at the Smithfield, Birmingham, Norwich, etc., fat stock shows, is a very important one, and will sure to be appreciated." — **Bedfordshire Mercury.**

"Contains a complete record of the past year, and includes illustrations and particulars of some of the principal prize-winning animals at the great fat stock shows."—**Essex County Standard.**

"The statistics, which form an important part of the work, are more complete, whilst the addition of about a dozen illustrations—reproduced from life-like photographs — of the great prize winners at the Smithfield, Birmingham, Norwich, &c., fat stock shows, is a very important one, and will sure to be appreciated."—**Leamington Spa Courier.**

"There are reference lists, illustrations, and pages of general information, all suited to the purpose of the annual, which is neatly produced."—**Sheffield Daily Independent.**

"Is a creditable production."—**Farm and Home.**

"Contains numerous articles on subjects of immediate importance to farmers."—**Meat Trades Journal.**

"Full as ever of information useful to the agriculturist."—**Weekly Dispatch.**

"The list of societies has been made even more complete than last year, whilst the various tables and statistics which have been so much appreciated in previous years have been added to and brought up to date."—**Hampshire Chronicle.**

"Of great use and interest to agriculturists."—**Daily Graphic.**

"This publication, which has deservedly become very popular, will in future be issued at the commencement of each year, instead of as hitherto, during the Smithfield Show week, the object being to make it a complete record of the previous year. This is an admirable arrangement, and the publication before us is as complete as it is possible to make it."—**County Gentleman.**

"The statistical matter, the illustrations, and the lists of societies have been brought up to date, and the volume altogether will be a welcome addition to the library of those associated with the farm."—**Aberdeen Free Press.**

"Looked forward to by a vast number of agriculturists in all parts of the kingdom."—**Birmingham Gazette.**

"A wealth of useful information. It is an eminently practical guide to farming and stock-keeping, and contains facts and figures relating to the farm and markets."—**Liverpool Courier.**

"In this well-known annual we are pleased to greet an old friend. The improvement manifests itself on almost every page of the annual."—**Chester Courant.**

"A list of Agricultural Societies and the various tables and statistics, which have been so much appreciated in previous years, have been added to and brought up to date."—**Reading Mercury.**

"Is got up in the same attractive style as its predecessors, and contains the usual comprehensive variety of subjects."—**Farmers' Gazette.**

"Is indispensable."—**Reynolds.**

"Is now awaited by multitudes of agriculturists."—**Liverpool Courier.**

"Is quite delightfully illustrated."—**Daily Telegraph.**

"Every farmer should have a copy."—**Leicester Chronicle.**

"This popular annual, as usual, contains many articles and illustrations of great interest and value to agriculturists."—**Lincolnshire Echo.**

"Contains numerous articles on subjects of immediate importance to farmers."—**Globe.**

"The annual will be found as useful as ever, and is one of the works which can ill be dispensed with by either farmer or breeder."—**Nottingham Daily Guardian.**

"Is attractively got up, has the best of paper, printing, and illustrations, and the literary contents deserve much more than a merely formal word of praise, the subjects being fairly fresh as a rule, and well treated."—**Dundee Advertiser.**

"A well-known and important book to agriculturists in all parts of the kingdom."—**Northampton Daily Reporter.**

"Is looked forward to by agriculturists as a trustworthy and interesting record," — **Worcester Chronicle.**

"About a score of articles of interest to farmers are supplemented by pleasing illustrations of rural life."—**The Times.**

"Contains numerous articles on subjects of immediate importance to farmers."—**Dorset County Chronicle.**

"An exceedingly popular one."—**Bristol Times and Mirror.**

"An assured place in the esteem of agriculturists. Profusely illustrated, its letterpress comprises excellent summaries of the agricultural events of the year and a really valuable array of articles of diverse interest, written by men who know their business and are able to present facts in an attractive guise."—**Glasgow Herald.**

"For sixpence the farmer may have an encyclopædia of agriculture, beautifully illustrated, the compilation of the most practical men in the country."—**Norfolk Standard.**

"The agriculturists' favourite."—**Kent Messenger.**

"Is now looked forward to by numbers of agriculturists in all parts of the Kingdom."—**Irish Times.**

"Contains a complete record of the past year as affecting agriculture, and includes illustrations and particulars of some of the principal prize-winning animals at the great fat-stock shows."—**Sunday Special.**

"It is nicely printed, well illustrated, and carefully compiled, whilst the price at which it is published places it well within the reach of all sections of agriculturists, who will find within its pages much of interest and profit."—**Western Daily Press.**

PRICE SIXPENCE (by post, 9d.).

1, ESSEX STREET, STRAND, LONDON, W.C.

PRELIMINARY LIST FOR 1902.

The following fixtures of agricultural shows in 1902 have already come to hand, and we print them for the information of secretaries who have not yet made a selection of dates. As others are fixed we shall be glad to receive intimation, in order that our usual annual list may be as complete as possible:—

SEPTEMBER 20 (about).—Wirral Farmers' Club Foal, Grain, and Root Show, at Poulton. Entries close, September 15 (about). Secretary, T. Johnson, Higher Farm Prenton, Birkenhead.

SEPTEMBER 23.—Llanymynech and Tanatside District Horse Show Society, at Llanymynech. Entries close, September 17. Secretary, J. Ellison, Morton, Oswestry, Salop.

SEPTEMBER 23 and 24.—Ayr Ram Society's Show and Sale, at Ayr. Entries close, August 25. Secretary, J. Howie, 58, Alloway Street, Ayr.

SEPTEMBER 24.—Altrincham Agricultural Society, at Altrincham. Entries close, September 6. Secretary, J. Herbert Hall, 2, Dunham Road, Altrincham.

SEPTEMBER 24.—Frome District Agricultural Society, at Frome, Somerset. Entries close, September 10. Secretary, T. C. Harding, Frome, Somerset.

SEPTEMBER 24.—Byfield Shire Horse and Foal Show and Sale, at Byfield. Entries close, September 18. Secretaries, Miller and Abbotts, High Street, Banbury.

SEPTEMBER 25.—Ashbourne Shire Horse Society, at Ashbourne. Entries close, September 10 (about). Secretaries, G. Desborough and T. Wooddisse, Market Place, Ashbourne.

SEPTEMBER 26.—Kent and Romney Marsh Sheepbreeders' Association, at Ashford, Kent. Secretary, W. W. Chapman, Fitzalan House, Arundel Street, Strand, London, W.C.

SEPTEMBER 30.—Gransden and District Agricultural Society, at Great Gransden. Entries close, September 16. Secretary, Robert J. Risley, Great Gransden, Sandy, Beds.

OCTOBER 1.—Royal South Bucks Agricultural Association, at Riding Court Farm, Datchet, Bucks. Entries close: Root Crops, July 1; other entries, August 31. Secretary, R. H. Barrett, High Street, Slough.

OCTOBER 7.—Moreton-in-Marsh Shire Horse Society, at Cricket Ground, Moreton-in-Marsh. Secretary, A. W. Drury, Moreton-in-Marsh.

OCTOBER 7, 8, 9, and 10.—British Dairy Farmers' Association, at Royal Agricultural Hall, Islington, London. Entries close, September 8. Secretary, W. C. Young, 12, Hanover Square, London, W.

OCTOBER 8 (probably).—Coleshill Farmers' Club Shire Horse and Foal Show, at Cricket Field, Coleshill. Entries close, September 24. Secretary, J. W. Fifield, Coleshill, near Birmingham.

OCTOBER 9 (probably).—Princes Risborough Agricultural Association, at Princes Risborough. Secretary, W. G. Humphreys, Owlswick Manor, Risborough, Bucks.

OCTOBER (2nd week in).—Worcestershire Shire Horse Society, at Cattle Market, Worcester. Entries close, Octiber 1. Secretary T. W. Powell, Leigh, Worcester.

OCTOBER 14 and 15.—Cheshire Dairy Farmers' Association, at Chester. Entries close, October 11. Secretary, R. Challinor, St. Oswald's Buildings, Chester.

OCTOBER 18 to 24.—Brewers' Exhibition and Market, at the Royal Agricultural Hall, Islington. Managing Directors, Messrs. Dale and Reynolds, 45, Cannon Street, E.C.

OCTOBER 23 and 24.—Ayrshire Agricultural Association's Show of Dairy and Farm Produce, &c., at Kilmarnock. Entries close October 10. Secretary, J. Howie, 58, Alloway Street, Ayr.

OCTOBER 28.—Clavcross and District Ploughing Association, near Clavcross. Entries close, October 25. Secretary, A. Milner, Stretton, Alfreton.

OCTOBER 29.—Gravesend and Rochester Agricultural Association, near Rochester. Secretary, R. Miskin, Frindsbury Road, Rochester.

NOVEMBER 5 and 6.—Cheshire Dairy Farmers' Association, at Nantwich. Entries close, November 1. Secretary, R. Challinor, St. Oswald's Buildings, Chester.

NOVEMBER 20, 21, and 22 (probably).—Norfolk and Norwich Christmas Show Association, at Agricultural Hall, Norwich. Entries close, October 25. Secretary, Caleb Barker, East Harling, Thetford, Norfolk.

NOVEMBER 25 and 26.—Lord Tredegar's Agricultural and Poultry Show, at Cattle Market, Newport. Secretary, F. J. Justice, Tredegar Estate Office, Newport, Mon.

NOVEMBER 25 and 26.—Whitchurch Dairy Farmers' Association, at Whitchurch. Entries close, November 19. Secretary, T. Nunnerley, Whitchurch, Salop.

NOVEMBER 27 and 28.—Chippenham Agricultural Association, at Chippenham. Entries close, November 14. Secretary, Edward Burbidge, S. Wraxhall, Bradford-on-Avon.

NOVEMBER 29 to December 4.—Birmingham Agricultural Exhibition's Society's Fat Cattle and Poultry Show, at Bingley Hall. Entries close: Stock, Poultry, &c., November 1; Implements, October 20. Secretary, W. H. Lythall, Bingley Hall, Birmingham.

DECEMBER 1 and 2.—Tonbridge Fat Stock Show Association, at Tonbridge Agricultural Hall. Entries close, November 5. Secretary, Thomas M. Dove, 18, Lansdowne Road, Tonbridge.

DECEMBER 3 and 4.—Scottish National Fat Stock Club, at Waverley Market, Edinburgh. Entries close, November 1. Secretary, J. Wylie, Royal Bank, Leven Street, Edinburgh.

DECEMBER 4.—Wadhurst Christmas Fat Stock Show. Entries close, November 17. Secretary, F. Austen, Marling Place, Wadhurst, Sussex.

DECEMBER 8 to 12.—Smithfield Club (Incorporated), at Royal Agricultural Hall, Islington. Entries close: Implements, October 1; post entries, October 5. Stock, November 1; post entries, November 5. Secretary, E. J. Powell, 12, Hanover Square, London, W.

DECEMBER 9, 10, and 11.—Yorkshire Society's Christmas Exhibition of Stock, Poultry, and Roots, at York. Entries close, November 20. Secretary, F. Arey, 3, New Street, York.

DECEMBER 9, 10, and 11.—Leeds Smithfield Club, at Engineers' Drill Ground. Entries close, November 29. Secretary, J. H. Clark, Hirst's Yard, Duncan Street, Leeds.

DECEMBER 10.—Vale of Aylesbury Fat Stock Show, at Aylesbury. Entries close, November 29. Secretary, F. J. Brown, Auctioneer and Estate Agent, Aylesbury.

DECEMBER 10.—City of Liverpool and District Cowkeepers' Association, at Liverpool Hay Market. Entries close, December 6. Secretary, T. Backhouse, 58, Tetlow Street, Liverpool, N.

DECEMBER 10 and 11.—West of England Fat Stock and Poultry Society, at Devonport. Entries close, November 24. Secretary, J. Cooms, Quicks, Oreston, Plymouth.

DECEMBER 12.—Wisbech Christmas Fat Stock Show, at Wisbech. Entries close, December 7. Secretary, W. J. Chamberlain, Cornhill, Wisbech.

THE DEVON BULL DRAMATIST, which forms the subject of the above illustration, is the property of and was bred by Mr. J. C. Williams, Caerhays, St. Austell, Cornwall, being by Pretty Middling 2859, out of Ellen Terry 3rd, 12561. At the Cardiff Show of the Royal Society, where our photo was taken, Dramatist won the champion prize for the best meat Devon in the show, and also won first prize in the class for Devon bulls calved in 1897, 1898, or 1899.

SOCIETIES.

Bucks Chamber.

The annual meeting of the members of the Bucks Chamber of Agriculture was held at Aylesbury on the 15th inst., Mr. W. Weston (Chairman) presiding. The statement of accounts showed the total receipts to have been £59 19s. 5d., including a balance of £12 8s. 5d. from the previous year. The expenditure had been £59 9s. 8d., leaving a balance overdrawn of 3d. This was due to the payment of several bills from last year, and the fact that a year ago they were assisted by the receipt of three life members' subscriptions. In reality the income had been more this year and the expenditure less.

The report was adopted, on the motion of Sir E. H. Verney, seconded by Mr. D. Elliott.

The Chairman said he had great pleasure in proposing that Mr. H. S. Leon be their chairman during the ensuing year. He was sure their selection was most excellent, as Mr. Leon took a great interest in agriculture, and no doubt would take a prominent part in connection with the work of the Chamber, and thus do what he could for the benefit of the agriculturists of the county.

Mr. D. Elliott, in seconding, said he was sure they would have a good chairman in Mr. Leon.

The motion was carried unanimously.

Mr. Weston then vacated the chair in favour of Mr. Leon, who said he was much obliged to them for electing him as their chairman. He would do the best he could in the interests of the Chamber of Agriculture. He would not, however, promise to attend every meeting, but he would always do his best to be present. Aylesbury was a terrible place for him to get at, for, although Bletchley was only sixteen miles away, it took a whole day to get there and back.

Mr. John Rose said that in looking through the list of persons who had served in the office of chairman he was surprised to see that Sir Edmund Verney had never held the position. It had been customary for the Vice-Chairman of one year to be the Chairman of another. He should therefore have pleasure in proposing that Sir Edmund Verney be their vice-chairman during the ensuing year, for he had attended many of their meetings and had assisted them on several occasions (hear, hear).

Sir Edmund Verney said he believed that it was the invariable rule for a tenant farmer to be the vice-chairman of the Chamber.

Mr. Weston—No.

Sir Edmund Verney said he had another reason for declining the position. He and Mr. Leon happened to agree on some political matters, and he did not wish it to be thought that there was anything like a party character about that association. He would rather see someone holding altogether different views in the office; and if it should be their wish a year or two hence, and he should be alive, he would be pleased to accept the office.

Mr. Weston said that at the last meeting it was suggested that Mr. John Rose should be the vice-chairman for the ensuing year.

Sir Edmund Verney said he would propose that Mr. Rose be elected vice-chairman.

Mr. Weston seconded, and the resolution was carried, Mr. Rose accepting the office.

Mr. Elliott proposed, Mr. Rose seconded, and it was resolved, that Mr. Weston be the annual deputy to the Central Chamber.

Mr. Rose proposed, and Sir Edmund Verney seconded, the re-appointment of Mr. J. Whitehouse Griffin as one of the deputed members to the Central Chamber.

Mr. John Treadwell was also elected a deputed member, at the instance of Mr. T. J. George, seconded by Mr. Weston.

It was resolved that the next meeting should be held at Winslow on February 26, and that following at Newport Pagnell on March 26. The places of the other meetings were fixed as follows, but the dates were left open:—April, High Wycombe; May, Aylesbury; October, Buckingham; November, Newport Pagnell; and December and January (1903), Aylesbury.

Clydesdale Horse.

The twenty-fifth annual general meeting of the members of the Clydesdale Horse Society will be held in the Religious Institution Rooms, 200, Buchanan Street, Glasgow, on Tuesday, February 4th next, at six p.m. The annual report has been issued in advance, and we give below some extracts from it:—

"The Society will have attained its semi-jubilee on June 30th next. From its commencement it enjoyed the patronage of his Majesty the King as H.R.H. the Prince of Wales, and on his Majesty's accession to the throne in January last, he was graciously pleased to continue his patronage. The Society has had a fairly prosperous year financially, and an addition of £224 19s. 1d. has been made to the capital account. The breed again achieved a signal success at the great International Show at Chicago held in the beginning of December. The team of six geldings sent over by Messrs. A. and W. Montgomery carried the leading honours in all forms of competition against picked teams of other draught breeds. The home trade in pedigree Clydesdales has moved in the main on normal lines, but, on the whole, it cannot be described as dull. Various auction sales were held, and good averages were recorded.

Membership.

"The general effect of the changes of the year is to leave the roll less by eight names than it was at the close of 1900. Fifty names have been deleted and 42 added, the membership now being: Life governors, 96; life members, 931; annual members, 270; total, 1,297. Of the fifty deletions no fewer than 31 were due to death. Amongst those taken away were her Majesty the Queen, Lord Lionel Cecil, the Earl of Galloway, K.T., Lord Wantage, K.C.B., V.C., and Major Cheape, of Wellfield, all of whom were Life Governors of the Society. Amongst the others whose deaths are recorded was one member of Council, Mr. James Lockhart, Mains of Airies, Stranraer, who took an active share in the work of the Society, and was known far and near as a very successful breeder of Clydesdales. The names of four annual members have been struck off as being in arrears of subscription, and 15 annual members resigned.

Stud Book.

"The twenty-third volume was issued during 1901, and the twenty-fourth is now in the press. An alteration was made in the last date for receiving entries for the volume now in course of being printed. It was fixed at October 31st, and so far as the number of entries received is an indication, the alteration has been beneficial. But there are disadvantages also which require to be considered. Entrants have gone on the principle that, as this is the closing date, nothing need be done in the way of making entries until the month of October. Consequently, the staff had little or nothing to do during September, when formerly large numbers of entries were received, and the work of preparing the volume for the press was of necessity delayed until November was commenced. The printing of the book was not begun until immediately after the new year (1902), and is being pushed forward as rapidly as circumstances will permit. In view of these things, it will be for the Council to consider whether the late date of entry should in future be adhered to. The cash sales during the year amounted to £26 19s., the corresponding figure for the previous year being £15 4s. The number of volumes actually issued during the year to members and others was 1,438, as compared with 1,412 in 1900.

Exportation.

"The export trade during 1901 was fairly lively. The number of exportation certificates issued by the Society was 167, and it is known that, in addition, 150 Clydesdale mares were shipped in one order to South Africa. The 167 were distributed as follows:—Canada, 68; U.S.A., 42; Russia, 25; South America, 20; South Africa, 5; Italy, 2; New Zealand, 2; Sweden, 2; Holland, 1. The number of certificates issued in 1900 was 178.

Premiums.

"In this department the Affiliation Scheme, with grants of bronze medals, has again proved popular. Seventeen societies, as against 12 in 1900, affiliated with the Society during the year, and competitions for the Society's bronze medal took place at the shows under their jurisdiction. The particulars of the awards, as far as reported and confirmed, together with the awards of 1901, will appear in the Stud Book, Volume XXIV., Appendix C.

Devon Cattle.

At the annual meeting of the Devon Cattle Breeders' Society, Sir Thomas Acland was elected president, and Sir Redvers Buller, Mr. Lambert, M.P. and Mr. P. J. Stranger (for Devon), Messrs. R. W. Hancock, A. C. Skinner, and C. W. Skinner (for Somerset), and Mr. E. F. Maunder (for Dorset) were elected members of the Council in the place of those retiring by rotation.

The Council, in their annual report, stated that they had resolved upon offering prizes at the show and sale to be held at Exeter in February next for the best bull calved in 1900, and for the best bull calved last year. The Council, realising the necessity and importance of extending the foreign trade in Devon cattle, had appointed a committee to consider the best means of furthering the interests of the breed of such cattle at home and abroad. There were 36 life members of the society, one honorary member, and 159 ordinary members. The accounts showed that on the year's working the society had a balance in hand of about £20. The report and accounts were adopted.

The special committee appointed recommended that a correspondent be selected to write articles on the breed of Devonshire cattle, that the society take steps to circulate such articles, and that a grant be made for the purpose. An amendment that the society endeavour to create a home trade was defeated, and the recommendations adopted.

Ixworth Farmers' Club.

The annual meeting of the Ixworth Farmers' Club was held on Monday, Mr. Cordy S. Wolton presiding.

From last year's financial statement it appeared that the year commenced with a balance in hand of £14 1s. 1d.; annual subscriptions amounted to £73; special donations, £98 14s.; gift from the town of Bury St. Edmund's, £17 2s.; gate money, £88 7s.; tickets sold before the show, £20 6s. 9d.; entry fees, £12 14s., and other items, making a total of £356 14s. 4d. The expenditure included: Prize money, stock show, £143; and numerous other outgoings, leaving a balance in hand of £61 2s. 11d.

The Chairman remarked that he never remembered the club in such a flourishing financial position before. It was shown that great success had attended the stock show held in the Abbey Grounds, Bury St. Edmund's, where the attendance was large.

The Chairman moved the re-appointment of Sir E. Walter Greene, Bart, M.P., as President. Mr. Cordy Wolton bore testimony to the kindly interest which Sir E. Walter Greene evinced in the success of the club.—Mr. D. W. Taylor (Grange Farm, Bury) seconded the proposition, which was unanimously agreed to.—Mr. J. Sturley Nunn, who was again unanimously re-elected secretary, was congratulated upon the financial position of the Club. In accepting office, he spoke of the efficient services rendered by Mr. J. C. Booty, as auditor, who was also re-appointed.

A discussion ensued upon the advisability of Ixworth Farmers' Club associating itself more closely with the town of Bury St. Edmund's by holding its shows more frequently there.—The Chairman cordially agreed with the suggestion.—It was understood that the shows would be welcomed at Bury St. Edmund's, and that the Abbey Grounds would be available.

Ultimately a resolution was unanimously adopted in favour of holding a live-stock show in Bury St. Edmund's, on Whit-Monday, May 19th. As to the autumn show, it was resolved to leave the committee to decide where it should be held.

Malton.

The annual meeting of the Malton District Agricultural Club was held on Tuesday, under the presidency of Mr. William Harrison, of Hutton.—Mr. T. Mitchell, the secretary, read the report, in which it was stated that there had been a small improvement in the financial position of the club during the past year. The number of members was 62. The expenditure had amounted to £24 3s. 7d., and there was a balance in hand of £17 5s. 8d.

Mr. Fairley, the club's analyst, in his report stated that tests had been made with barleys grown by the aid of arsenical manures, and the result was that no trace of arsenic was found. Experiments in this direction would be continued, and the secretary asked for assistance in the way of samples of manures, plants, etc., from the members of the club.

The Chairman, in moving the adoption of the reports, said several gentlemen from the Wolds had made very serious complaint to him about the drugging of horses, and he believed many of the farmers were terrified by it. One gentleman had told him that he had lost three horses since Martinmas, and he thought it was due to the drugging of the animals by old servants who had left. They would have to try and stop the practice, and he thought it would be wise if the Press would give a caution to carriers against getting drugs for the lads. For the present perhaps the club would not take steps, but if other cases cropped up it would be the duty of the club to take some steps.

Mr. John Abbott, vice-president of the club, suggested that the chemists should be cautioned against supplying poison to farm lads.—Mr. Humphreys seconded the motion, which was carried unanimously.

Mr. William Harrison was re-elected president, Mr. Abbott vice-president, Mr. Thomas Collinson treasurer, and Mr. S. Mitchell secretary.

South Durham and North Yorkshire Tenant Farmers.

The annual meeting and dinner of the South Durham and North Yorkshire Tenant Farmers' Protection Association took place at Darlington on Monday afternoon, Mr. George Smurthwaite, chairman of the association, presiding at both functions.

The report presented by the Secretary, Mr. P. B. Kent, showed that last year there was a membership of 60, with 16 subscriptions in arrears. This year they had 141 members, and all the

subscriptions were paid. During the past year the membership had increased by 65. The balance in hand was now £38 9s. 5d., as against £34 4s. 6d. in the previous year. All disputes brought before the committee had been settled in a satisfactory manner, and legal opinion had been obtained for members in case of emergency. The association had been of immense value to the tenant farmers in the district, and similar organisations were being formed in other parts.

The report and balance sheet were adopted, Mr. Smurthwaite was re-elected chairman and Mr. P. B. Kent secretary.

Professor Middleton in Favour of Tenant Farmers.

At the dinner subsequently held, the toast of "Success to the Association" was proposed by Professor Middleton, who said he had always urged farmers to combine together. He thought the chairman and secretary were to be congratulated on the success which had attended their efforts in connection with the association. In the discussion which had taken place in the papers with respect to getting people back to the land, a policy had been advocated by which the people were to work their own land. He could not help thinking that was a fallacy, though it was urged by political economists. The intentions of those who wished to sweep away the tenant farmer altogether might be good, but they might well cry out for protection from their friends. The tenant farmer with a limited capital could do much better for himself working another person's land than if working his own. Land, after all, was an expensive luxury, and experience had shown them that the men who had succeeded best were tenant farmers, who were producers in the best sense of the terms. The system under which they lived—landlord, tenant, and labourer—was the best one for this country.

During a holiday on the Continent he compared the condition of agriculture there with that in the North of England, and was conscious how very inferior were the teachers of agriculture in England to those on the Continent, and especially in Germany. But he was delighted to find how very superior the practical English farmer was in the management of the land, and how much better were his cattle and sheep than anything that could be shown on the Continent. That was due to the tenant farmers of the country, who were essential to the welfare of the British nation. The political economist desired to destroy the class altogether; but what he could not do there was some risk of the farmers doing themselves. The encouragement given them to go on in the last thirty years had been very small indeed, and nothing was more common than to hear a farmer who had sons say he should not put them to the business. The census of 1881-1891 showed that while the number of farmers remained the same, the number of farmers' sons engaged in the business was very much reduced. What the result of the present census would be he could not say, but there was a great tendency to give up, and to despond as to the future.

The chairman, in responding, was very heartily cheered. He said they began the association with 30 or 40 members, but to judge by the number of smiling faces around the table they might think agriculture was the sport of kings. Professor Middleton was much cleverer than the tenant farmer. He had left farming and taken to lecture farmers. That was a very wise plan, because, when their fathers farmed, wheat sold at double the present price; they had only to turn the cattle into the field to fatten them, and wages were only half what they were now. They wanted to make the country attractive to keep the people in it; but if the landlords would only lower their rents one-half, the farmer would have no trouble in making his men live.

The Milk Standard.

In reply to the toast of "Success to Agriculture," Mr. C. Marshall (secretary of the Northumberland Dairy Farmers' Association) responded, and said recent legislation had fixed the milk standard, but, as a matter of fact, they could not fix a standard for the natural product. The difficulties of the health authorities were about as great as those of the dairy farmers in regard to milk. They had interviews with the Newcastle, Sunderland, and Gateshead Corporations, and had discussed the question of the milk supply with the medical officers, and they found that further legislation was necessary before much could be done. They were the only class of men who were assumed to be rogues until they proved their innocence. If a man sent out milk of low quality, the onus was on him to prove that it was genuine. He found a genuine desire on the part of the authorities not to deal unjustly with the farmers, but they had a duty to perform in safeguarding the milk supply. In Mr. Hanbury they had a strong man, who would see to the bottom of matters, and he was glad to find that the Board of Agriculture had set out on the lines recommended to the local authorities—that of allowing an explanation privately of any complaint of milk before any prosecution was instituted. At present they could only deal with the case in open court.

One of the difficulties arose through the magistrates not having got to the bottom of the question. The quality of the milk was absolutely beyond the farmer's control. He might feed as he liked, but they could control the quality only very slightly, and then it would go back again. The quality of milk from a herd also varied from 2 to 4 per cent. in 30 hours. They had to complain of the way in which they were treated by the analysts. An analyst could tell them that a milk was of low quality, but he could not say whether it was pure or not. In Northumberland they had several cases to fight, and were determined to carry them to the House of Lords if necessary.

Suffolk Sheep.

A meeting of the Council of the Suffolk Sheep Society was held at Ipswich on the 17th inst., Mr. J. Fleatham presiding.

The secretary read a letter from the Royal Counties' Agricultural Society in respect to the provision of classes for Suffolk sheep at their next show at Reading, the Suffolk Sheep Society having offered to contribute half the premiums for four classes. The reply he received was to the effect that the Prize Committee did not see their way to provide classes for Suffolk sheep, the prize-list being already a large one.

Some discussion took place on the subject, in the course of which the Secretary stated that he had been in communication with a friend who was a member of the Royal Counties' Agricultural Society, and it was eventually resolved, on the proposition of Mr. S. R. Sherwood, seconded by Mr. J. R. Grimsey, that the Suffolk Sheep Society should offer £20 if the Reading local committee would provide two classes, one for ewe lambs and the other for ram lambs.

Applications were made from the Suffolk, Essex, and Norfolk Agricultural Societies, respecting the grant for premiums from the Suffolk Sheep Society in 1892.—It was resolved, on the proposition of Mr. S. R. Sherwood, that premiums should be granted as in previous years, under the usual conditions. The Council also recommended the grants of silver medals and cash premiums to twelve agricultural societies and farmers' clubs—viz., eight in Scotland, and four farmers' clubs in the eastern counties.

The Editing Committee reported that in Vol. XVI. the entries received were:—Renewals, 221; new flocks 20, including one in South Wales, making 241, against 245 in 1900. The committee suggested that the portrait in the frontispiece should be that of the late Mr. George Dobito, who was really the founder of Suffolk sheep as a breed. On the motion of Mr. S. Traylen, seconded by Mr. S. A. Flick, the report was adopted.

The Secretary reported that, in accordance with the resolution passed at the meeting of the Council on May 3rd, 1901, the Veterinary Committee had carefully considered the "causes of attack of garget, and any preventive means for lessening the losses annually sustained from such attacks." The lateness of the season at the time of reference precluded any steps being taken to deal with the question prior to the lambing season of 1902, but the Secretary was instructed to ascertain the opinion of flock-owners as far as possible. The committee met on January 3rd, 1902, when a vacancy caused by the resignation of Mr. Alan Stanford was filled by the election of Mr. E. J. Cheney. It was resolved:—"(a) That a circular-letter be sent to flock-owners, asking information respecting garget, and stating that the Society was prepared to carry out, and bear the cost of, a thorough investigation into the causes of, and remedy for, the disease. (b) That Mr. E. J. Cheney, Mr. S. R. Sherwood, Mr. G. P. Watkins, and the Secretary be a sub-committee to draft the form of circular and questions. (c) That the services of a veterinary surgeon be secured to carry out the necessary investigation of any cases.

The committee are fully convinced that the loss annually caused by attacks of garget might be yearly lessened, if not altogether prevented, by a thorough and systematic inquiry into cases of disease. The investigation must necessarily extend over a considerable period and number of cases before any definite results could be expected, and the importance of a careful examination of affected animals, collection and tabulation of information respecting the periods of attacks, predisposing causes, etc., was so great that the committee recommended that the services of Mr. T. G. Heatley—an experienced veterinarian—should be retained, on the terms named by the sub-committee, and agreed to by Mr. Heatley—viz., the payment of all out-of-pocket expenses. The Secretary also read the circular which the committee had drawn up, and a number of questions were asked of the flock-owners to whom the circular was to be sent.

The report was unanimously adopted.

The draft report of the Council to be presented at the annual meeting on February 7th was subsequently considered and adopted.

Taunton Farmers' Club.

The Taunton Farmers' Club's annual meeting was held at Taunton on the 18th inst. Mr. A. C. Skinner, of Bishop's Lydeard, the vice-chairman of the club, presided in the absence of the president, Sir Alexander Acland Hood, Bart., M.P., who was unable to leave London. Mr. Walter R. J. Greenslade, secretary and treasurer, presented the balance-sheet, which showed a decrease of membership, and a financial loss on the year's working, which, however, was nearly covered by a deposit at the bank.

Sir A. A. Hood was re-elected president; Mr. Skinner, vice-president; Mr. Greenslade, secretary and treasurer; and Mr. S. Kidner, of Milverton, delegate to the Central Chamber of Agriculture.

It was stated that the President of the Board of Agriculture, the Right Hon. R. W. Hanbury, M.P., had consented to be present at a meeting of the club, and at the annual dinner, which will follow it, on Saturday, the 1st of March next, and to address both gatherings. It was decided to make every effort to render the right hon. gentleman's visit a great success, and it was stated that a very numerous attendance might be expected.

Mr. H. Nowell Harvey, of Taunton, then proposed "That it would be greatly in the interest of farmers and others in West Somerset to form an agricultural trust or company for the purpose of improving the selection, preparation, and disposal of their produce, so as to compete more effectually with foreign and colonial trade, and to obtain increased and more reliable profit." Mr. Harvey pointed out that although during the last ten years the population of the United Kingdom had increased by only one-fifth, yet the imports of agricultural produce had nearly doubled, and he thought combination amongst English farmers might remedy to a great extent this state of affairs.

Mr. Kidner, while not entirely agreeing with Mr. Harvey as to the benefits to be derived from combination, seconded the resolution, which was carried.

Yorkshire Coach Horse.

The annual meeting of the Yorkshire Coach Horse Society was held at York, on Thursday, Mr. W. Hutchinson, of Selby, presiding over a good attendance of members. In the course of the annual report it was stated that the Society, with the hopefulness that marked the lovers of all kinds of animals, looked forward with interest to the probability of his Majesty the King forming a stud for the production of full-sized carriage horses, feeling assured that no better foundation could be built upon than the beautiful Yorkshire coach horse. All who saw the exhibition at the Yorkshire Show must have been struck with the excellent quality and high character of the breed, a strong testimony to which was the fact that of the nineteen geldings shown in one class nine or ten found customers at remunerative prices. Although the expenditure of the Society for the past year had a little exceeded the income, the assets showed a balance of £157 10s. 4d. in favour of the Society after writing off £30 for the unbound books of the six volumes issued up to the present time. The medals granted to the local shows continued to be highly appreciated, as well as the grants of money which were given from time to time as funds allowed. While grants of this character might have to be curtailed in the near future, owing to the expense of the seventh volume of the Stud Book, the Society would continue to show a liberal spirit.

The following interesting communication regarding the future of the Yorkshire Coach Horse in Canada, from Mr. J. Dyke, for twenty-one years Canadian Government agent at the port of Liverpool, was read:—

"The improvement of horses in the Dominion of Canada is just now attracting a great amount of attention in that country, more especially with a view to raising high-class carriage hosres, and at the forthcoming assembly of the Provincial Legislature and Dominion Parliament at Ottawa there are to be meetings and discussions on the subject.

"Yorkshire coach horses are, of course, known in Canada, but have never received the general attention they deserve, and a great deal of good would certainly result if photographs, as large as possible, of the best typical Yorkshire coaching stallions and mares, together with descriptions of the breed, approximate prices, and what they have accomplished in Continental countries, were sent out at once

"Of course you have a strong element, the standard trotting horse breeders, to contend against, but as clean-legged, good-looking, and sweet-headed sires, free from white if possible, are sure to be in demand this spring in many parts of Canada, more especially where they are about to enter into horse-raising to supply the wants of the British artillery and cavalry and London dealers you should have nothing to fear.

"Canada is badly in need of stallions, and we can have every reason to hope that this will be a record year for sales if you help. Would there be any chance of hiring Yorkshire coaching stallions, with the option of purchase, by men giving banker's bonds and covering the horses by insurance against all risks? The risk crossing the Atlantic is nowadays little more than the journey to Ireland or the Continent."

It was agreed to forward copies of the Yorkshire Coach Horse Stud books to Canada, and also photographs of good types of the breed.

CHICKENS ALL THE YEAR ROUND
BY USING
Hearson's Patent
CHAMPION INCUBATORS.
Manufacturers by Appointment to
H.M. THE KING.

The CHAMPION INCUBATOR has now been before the world over 20 years, and has achieved a reputation which eclipses 11 competitors.

COVERDALE'S
Poultry Powder
The Wonderful Chicken Tonic.
It won't prevent Chickens Dying in the Shell,
BUT, once hatched, and properly fed with food containing just a sprinkling of
Coverdale's Poultry Powder,
you are assured of success. A 1/3 tin is enough for 600 chickens for a week, or 30 chickens for 20 weeks. 1/3 spent in this way might save you 15/-.
Coverdale's Poultry Powder is not a spice, but a scientifically prepared tonic. It contains all the elements necessary for producing perfect health and condition—it is THE Powder for bringing forward young chicks. We want every Poultry-keeper to send a penny stamp for a Free Sample, sufficient for 20 chickens for two days.
Sold in Tins, 3d., 1/3, and in Bags, 3/- and 5/9, post free.
COVERDALE'S POULTRY POWDER, Ltd.,
20, Parliament Street, YORK.

Food-Stuffs for Poultry.*

(Copyright.)

By H. B. GREENE, M.R.C.S.

(*Continued from page* 93.)

It will be seen then that to get the best results from laying hens the albumenoid ratio of the diet must not only be higher than usual, but that the total solids in the dietary may be kept at the maximum figures of the standard ratio. Among other food stuffs which possess a high albuminoid ratio and are suitable to include as a change in the diet of laying fowls, may be mentioned peas and beans, cabbage and onions, middlings, malt sprouts, and buttermilk, while several among the patented food-stuffs are rich in albuminoids.

But the utility poultry-keeper is also desirous of rearing good table birds, and when the time comes to fatten them the diet must be quite different.

Fattening Diet.

Instead of increasing the albuminoid ratio the carbonaceous foods—that is, those which are rich in carbon—must be chosen.

Seeing that soft food is more easily and quickly assimilated than hard, the food should be given in the soft state, and may be selected from ground oats, white Indian meal (if procurable), buckwheat meal, malt sprouts, fat meat, potatoes, and buttermilk. The latter is much esteemed in Ireland for fattening turkeys, and is said to whiten the flesh. On the contrary, maize and yellow Indian meal produce yellow fat, but if this is not objected to, their use as fattening foods is not to be prohibited.

Influence of Breed and Size on Ratio of Food.

The question of the variety of breed kept will, to a small extent, affect the composition and ratio of the food. In an experiment conducted at the New York Geneva Experimental Station it was found that "the larger breeds did somewhat better on the nitrogenous ration and the smaller breeds considerably better with the less nitrogenous."

Climatic conditions and exposure to cold winds are worthy of special attention when arranging a ration, and the lesson is to be drawn from the character of diet adopted by man under conditions of extreme variations of temperature.

For instance, contrast the diet of the Esquimaux in the far North with that of the Hindoo in British India. The one, exposed to intense cold, and condemned to lead a life of constant energy to procure his nutriment, lives mainly upon food such as fish, the blubber of whales, seal, and walrus, and maintains his heat by the large quantity of fat stored up in the system by such fare, while the Oriental, living in a climate which certainly does not tend towards any superfluous exhibition of energy, pursues his leisurely way through life on a handful or two of rice, supplemented with a little fruit. To such an extent does the Hindoo use this poor component of diet to the exclusion of other items, that an ulcerative disease of the eyeball is frequently the result; while the Anglo-Indian, on the other hand, who does not limit the amount of nitrogen and fat in his diet to the climatic conditions of his new surroundings soon finds that his appetite has to be coaxed with condiments and his liver stimulated with cayenne.

The influence, therefore, of climate and temperature should teach the poultry-keeper that diet can with advantage be modified in keeping with changes of season and weather, and the degree of exposure to cold to which his birds are subjected. In a poultry farm with a bleak and wintry aspect, and especially if the birds have a large extent of range, or scratching sheds on the American principle, the carbonaceous components of the dietary can be used in excess of the limits usually advised.

Barley meal, barley, buckwheat, ground oats, and even maize, may be administered to an extent which would be fatal to success if adopted by the fancier whose runs are located in warm and sheltered localities, and whose birds are enclosed in limited space. And here let me mention that the two foods which I consider dangerous to use are maize and bran.

Maize, for the reason that it tends to lay on internal fat and to induce liver disease, should be used most sparingly, only under such conditions of exposure and exercise as I have mentioned. To the small poultry-keeper whose birds are strictly confined, I say, avoid it like a poison.

The other dangerous food is bran.

Although possessing a high and useful albuminoid ratio, bran has an undesirable affinity for water, and by the moisture absorbed from the atmosphere, fermentative processes are set up which cause intestinal irritation and diarrhœa. The sample used may be absolutely fresh, and no bad consequences may follow for some time, but the moment a degree of moisture exists sufficient to commence fermentation, then the food becomes harmful.

A highly authority has recently written that the irritant property of bran is due to the amount of husk present, but against this view is the fact that husk is present in oats in a much higher percentage, and in barley in almost as high a one as in bran, and yet they do not possess irritant properties.

The same authority has brought prominently under notice the high value of sunflower seeds as a component of poultry diet. The ratio is good, and the constituents are well balanced; but although this food is by no means unknown to those who rear and fatten turkeys, it might with advantage to the industry in general be much more universally cultivated and fed than it has been up to the present. The consideration in detail of the food-stuffs suitable for rearing chickens is in itself a special subject. I shall only touch upon one or two important points.

Food for Chicken-rearing.

In chickenhood not only is there much activity and energy expended in exercise, but growth is proceeding at a marvellous rate. Tissues have to be built up and heat maintained in a body which is still dependent on external as well as internal sources of heat. Bone and frame, muscle and fat must all be provided, and therefore the food-stuffs should be supplied in liberal and varied amount.

The albuminoid ratio should be high, and as nearly as possible approach that of the egg, which is as 1 : 2½.

The food for young chickens must therefore be rich in nitrogenous elements especially, and the most common mistake in rearing chickens is to supply too starchy foods. Bone-meal is particularly needful, not only because of its richness in animal material, but on account of the phosphates it contains, which are so necessary for bone growth.

Oatmeal and Sussex ground oats should also be included as chief items of chicken diet.

In the increased heat attending the process of moulting and sitting or broodiness we recognise conditions requiring some modification of the diet. Both are states of what might be termed "natural fever." But while in moulting this fever is characterised by a determination of blood towards the surface or skin, set up by the irritation of the dead or dying feathers, in the process of broodiness the febrile condition is characterised by a determination of blood inwards to the egg organs, producing a temperature of sometimes 107 deg.

To assist moulting by diet, the indications point to the necessity of food of a nitrogenous nature, such as lean meat, middlings, peas or beans, dari wheat, cabbages, lettuces, grass and dandelions. Maize, barley, buckwheat, rice and above all, hemp-seed must be strictly excluded.

In broodiness the preference may be given to nitrogenous or carbonaceous diet according to the desire of the poultry-keeper to stop the process or encourage it.

These, then, are some of the principles to be borne in mind in the feeding of poultry, and if in this very cursory review of poultry food-stuffs and their effects I have omitted any facts of note, I trust you will overlook the omission in considering the wide range of subject. If, on the other hand, I have, to the more experienced, seemed to reiterate knowledge with which they are already conversant, I would crave their indulgence. And to each and all I return my thanks for their kind consideration and attention this evening.

* A lecture delivered under the auspices of the Utility Poultry Club by N. B. Greene.

Messrs. T. W. Palmer and Co., of 5, Victoria Street, Westminster, S.W., have forwarded us a copy of a useful list of fencing for estates, farms, and railways. All descriptions of fencing and gating are here enumerated and priced; also a number of other useful appliances for the farm and garden.

Does Your Poultry Pay?

This question, so frequently asked, can easily be answered by keeping an account. Every Poultry Keeper wishing to satisfy himself upon this point should obtain a copy of a book specially compiled for *Farm Field and Fireside* readers.

The accounts can be started at any time of the year, and are arranged in such a way that a child can keep them.

The object of

"The Amateur Poultry Fancier's Accounts Book"

(which is published at 2s.) is to encourage poultry-breeding, which by proper management, embracing a simple, yet effective, keeping of accounts, the results should undoubtedly show, at the end of each year, a handsome return on the outlay.

THE ACCOUNT BOOK which is intended to last for twelve months, can be obtained, post free, 2s. 3d., from the publisher:

1, ESSEX STREET, STRAND, LONDON.

IN PARLIAMENT.

HOUSE OF COMMONS.

The Agricultural Rates Act. Employment of School Children.

Dr. Macnamara asked the Home Secretary on Monday what steps he proposed to take with the view to carrying out the recommendations of the Employment of School Children Committee which reported in November last.

Mr. Channing had on the paper a question to the same effect.

The Home Secretary: I have not lost sight of the matter, and I am having a Bill prepared, and hope to introduce it this Session.

New Bills and Notices of Motion.

On Tuesday numerous private Bills were brought in, and read a first time, among them being the following:—

Mr. Tomlinson.—Bill to amend the Law relating to the manufacture and sale of Beer.

Mr. Hudson.—Bill to give Compensation for Damage by Fires caused by sparks from railway engines.

Mr. Raymond-Greene.—Bill to provide Pensions for the Aged Deserving Poor.

Mr. Goulding.—Bill to provide Pensions for the Aged Deserving Poor.

Sir Edward Strachey.—Bill to amend the Outdoor Relief (Friendly Societies) Act, 1894.

Mr. Kearley.—Bill to give facilities to Leaseholders for the purchase of the fee simple of their holdings.

Mr. Haviland-Burke.—Bill for the reinstatement of the Evicted Tenants in Ireland, and for other purposes.

Mr. Channing.—Bill to provide Pensions for Persons over 65 years of age.

Sir Charles Dilke.—Bill to provide for the establishment of Wages Boards.

General Laurie.—Bill to enable Leaseholders to become Freeholders.

Colonel Long.—Bill to remove certain doubts as to the meaning of the Market Gardeners' Compensation Act, 1895.

Sir Edward Strachey.—Bill to relieve members of Friendly Societies of certain disqualifications arising from the receipt of temporary relief.

Mr. Trevelyan.—Bill to empower urban authorities to levy site value rates.

Mr. M'Crae.—Bill to amend the Lands Valuation (Scotland) Act, 1854.

Among the notices of motion given on the same day was one by Mr. Black.—That day four weeks to call attention to the question of State-conferred old-age pensions, and move a Resolution; and another by Mr. Lewis—That day four weeks to move a resolution in regard to the afforesting of waste land.

"Futures" in Corn.

On Tuesday, Mr. Field asked the President of the Board of Trade whether he had had any further correspondence with the German Government respecting the operation of their law, lately introduced, regulating exchange transactions in food stuffs by preventing gambling in "futures" in corn; and whether he would consider the advisability of co-operating with the Governments of those countries which were endeavouring by legislation to prevent corners in food supplies being engineered by exchange dealers.

Mr. G. Balfour.—The answer to both questions is in the negative.

Vice-President of the Irish Agricultural Department.

In reply to a question by Mr. Coghill, on Thursday, if a seat had yet been found for the Vice-Presidedt of the Irish Agricultural Department, Mr. Balfour was understood to say that he was not aware.

Mr. Coghill: If there is any difficulty in the matter of finding a Unionist seat for the Vice-President, will the right hon. gentleman make arrangements with the hon. gentleman the member for Waterford to do so?

No answer was given.

Duty on Corn.

On Thursday Mr. Jeffreys asked the Chancellor of the Exchequer whether he could state what amount of revenue would have been produced during the past year if the old regstration duty of 1s. a quarter upon imported corn had been imposed.

The Chancellor of the Exchequer: The duty on grain, and meal, and flour, to which my hon. friend refers, would, on the imports of 1901, have produced £2,658,000. (Cheers.)

Mr. Whitley: Can the right hon. gentleman state how much of that sum would have been drawn from the wages of persons?

The Speaker: Order, order.

SULPHATE OF AMMONIA.

Incomparably the BEST and CHEAPEST form of Nitrogen and Ammonia.

PRODUCES LARGER CROPS THAN ARE OBTAINED FROM THE USE OF ANY OTHER FORM OF "ARTIFICIAL" NITROGEN.

See Reports of Experiments at Dalmeny, Woburn, Midland Dairy Institute, The Coachford Agricultural Society (County Cork), The Escrick and District Agricultural Club, The North Walsham and Aylsham Agricultural Society, The Yorkshire College Experiments.

See also Report of Root Show at Scottish National Fat Stock Club, which all the First Prizes in the Open Classes were awarded to Roots and Cabbage grown with Sulphate of Ammonia.

PRODUCES CROPS OF HIGHER FEEDING VALUE THAN ARE OBTAINED BY THE USE OF ANY OTHER MANURE.

See Reports of Analyses of Crops in Experiments at Dalmeny, Woburn, &c.

PRODUCES BETTER QUALITY OF MALTING BARLEY THAN IS OBTAINED FROM THE USE OF ANY OTHER MANURE TESTED AT ROTHAMSTED.

See Report on "Manurial Conditions affecting the Malting Quality of English Barley," in **Journal of the Royal Agricultural Society of England, 1897.**

AUCTION SALE.

By order of the High Court of Justice, Schumacher v. Holton, 1895 S. No. 1,803, and Ffennell v. Holton, 1895 F. No. 702.

WOOLWICH.—Valuable Riverside Properties, adapted for Wharfingers, Warehousemen, Contractors, and others. To be Sold by Auction, with the approbation of Mr. Justice Byrne, by
BENJAMIN FANSON BREACH, of the firm of
FAREBROTHER, ELLIS, EGERTON, BREACH, GALSWORTHY, and CO.,
at the Mart, Tokenhouse-yard, London, E.C., on THURSDAY, 27th FEBRUARY, 1902, at 2 o'clock precisely, in four Lots, the following FREEHOLD PROPERTIES—

LONG'S WHARF, comprising the ship-breaking yard of Messrs. Castle & Sons, near to the Warspite Wharf, Messrs. Siemens Bros. Telegraph Works, and the Woolwich Dockyard. Having a valuable river frontage to the Thames of 228 feet, a similar frontage to Harrington Road, and embracing an area of over an acre, having brick and tiled offices, dwelling-house range of four stores, &c., thereon. Let to the above on lease for 21 years from Lady-day, 1898, at the moderate rent of £350 per annum.

TRINITY WHARF, HARRINGTON ROAD, adjoining, having a river frontage of about 123 feet and a similar road frontage, and embracing an area of about 25,800 superficial feet, with buildings and offices thereon. Can be arranged as two holdings if desired, and possession given.

JACKSON'S and BENTLEY'S WHARF, with BUILDING SITE adjoining, having a frontage of 49 feet to the River, a return road frontage to Trinity Street of about 138 feet, and an area of about 7,700 feet. With possession.

FREEHOLD GROUND-RENT of £10 per annum, secured upon eight tenements, known as Nos. 30 to 37, Trinity Street, producing £124 per annum. With reversion to the rack rents in 46 years.

May be viewed by permission of the tenants, and particulars with plan obtained of the undermentioned Solicitors:—Messrs. WADESON and MALLESON, 7 Devonshire-square, E.C.; of Messrs. CARR, TYLER, and OVERY, 23, Rood Lane, Fenchurch Street, E.C.; of Mr. ALLAN BURNETT, 18, Wallbrook, E.C.; of Messrs. JULL and GODFREY, 23, Queen's Anne's-gate, Westminster, S.W.; of Messrs. BIBBY'S
"CREAM EQUIVALENT" for CALVES.

An Ounce of Fact is worth a Ton of Theory.

A STRIKING FACT.

In our Spring number of "Bibby's Quarterly" we reproduced the photographs of two groups of Calves which are now being reared at the Hornby House Farm, Bedale, Yorks, by his Grace the Duke of Leeds.

One of the groups is being fed on New Milk and the other on Separated Milk and "Cream Equivalent."

We asked our readers to tell us which of these groups were fed on New Milk, and 707 Farmers, Farmers' wives, their sons and daughters competed for a small prize which we offered to those who guessed correctly.

445 selected the "Cream Equivalent"-fed Calves as having been fed on New Milk.

We think the above striking FACT speaks volumes for "Cream Equivalent."

The "Cream Equivalent" can be had at 15s. per cwt., carriage paid to nearest station.

SOLE MANUFACTURERS:—

J. BIBBY & SONS,

Exchange Chambers, Liverpool.

VESTA CREAM MEAL.

This, our latest Calf Meal, has been specially made for use with either Skim or Separated Milk, and after the first few days can be used alone.

It is very nutritious, easily digested, prevents scour, and imparts a beautiful sleek skin.

It is one of the richest milk substitutes obtainable, and fine healthy thriving calves are reared on it by the leading breeders of cattle.

It is therefore a *perfect milk substitute.*

T. GITTINS, Esq., Wrentnall Farm, Shrewsbury, says:

"I am more than pleased with your Calf Meal, I consider it excellent in every way."

DAIRY-HERD EVOLUTIONS.

This is Candlemas week, a most important one in old times, when there was quite a numerous class in the country called dairymen, who, standing between farmers and labourers, rented cows of the former. The 2nd of February was the commencement of the dairyman's year, and this is why there are still so many Candlemas fairs held at this period. There used to be a complete lull in live stock tradings after Christmas all through January. But some of the cows were made to drop their calves soon after the beginning of the year, and it was thought right to have all the others intended to be let sufficiently forward in calf to come into profit in February or March. The want of cows to fill out dairy herds for letting was what led to the fairs, and it was only natural for th esheep-formers and dealers to bring to them their stocks of the woolly tribes which they desired to dispose of.

The new number of the "R.A.S. of E." commences with an interesting article on "Agriculture in the Reign of Queen Victoria," in which special allusion is made to the fact of dairying proving to a large extent a resource for a great many more English farmers than prevously had depended very much on it, after they were unable any longer to get profit from corn-growing. But the development of things for many years previously had been of a nature to bring cows, milk, and dairying more to the front. A leading feature of the middle of last century was the network of railways which became spread all over the face of the land. This naturally extended the direct-milk-sale trade enormously. Town and country became united. Fresh milk could flow readily from one to the other over hundreds of miles of railways, and not only did dairy farmers find it to their interest to cultivate this new trade, even to the shortening of their cheese and butter industries, but other classes of farmers, who had never thought much of dairying before, found that it would answer to combine milk with grazing, and also with the rearing of pedigree cattle. By-and-by it was discovered that pedigree cows could be bred of a kind to yield almost as much milk as the old ordinary cows, and then bull-breeding was associated with the direct sale of milk, so that many a farm which in the old days was by no means particularly noted for carrying more than ordinary stock now glories in a famous pedigree herd trained to yield emolument in two ways—by sending large quantities of milk to London or to some other large city, and by furnishing a crop of valuable bull-calves; and the latter, when coming from a pedigree dairy herd, are sure to sell.

This gigantic change and the discovery of the cream-separator together have almost

wiped Candlemas out of the calendar, so far as England is concerned, and the old dairyman who used to rent cows has long since found his occupation gone. Even for butter-making, now that the tedious labour of milk-setting can be dispensed with, the farmer finds that it answers best to do without the dairyman and "paddle his own canoe." The milk contractor must have cows in profit all the year round, the result being that, although fresh calvers and in-calvers may still form the leading features of Candlemas fairs, they are also in great demand at other periods. The discovery has long ago been made that the cows that calve just before winter, if liberally fed with auxiliary feeding stuffs until the grass-growing impetus comes, will yield much more, and sustain their lacteal secretions for a much more lengthy period than the cows that calve in spring. The latter, after seven or eight months' fertility, diminish their yield rapidly in autumn, but after the cow that drops her calf in November has, by high-feeding, given a maximum yield seven months, the influence of Green food on her system promotes secretion just at the very time it would otherwise rapidly decline.

Some of our dairy herds have developed into truly grand form for combining milk-selling with grazing without laying any claim to herd-book registry, and they are among the largest in the country. We have heard of five hundred, and even seven hundred cows in profit at one time, the whole of their milk sent daily to London, yet every calf was reared chiefly on milk-substitutes; the heifers to breed and supply the place of cows, which, after yielding milk two seasons, go for beef. Of course, pedigree bulls serve the cows, which are themselves probably quite as pure-bred as herd-book ones. Moreover, a great deal of auxiliary feeding stuffs are consumed as a regular part of the system, so that as the cows go off their milk at the end of their second year, scarcely any time is required to finish fattening them. Such a system works automatically, almost like clockwork, and if a cow while in profit meets with an accident, she is always in a condition to be converted to beef.

When we consider how profitable must be management of this kind, as well as that when regular pedigree herds are kept for combined milk-selling and bull-breeding, what a pity does it seem that by far the bulk of cattle bred, milked, and grazed in the kingdom are actually of such a decidedly mongrel, ne'er-do-well cast that, according to the land-agent who has to do with estates in three counties, and whose critical remarks on the state of our agriculture Earl Nelson quoted recently in "The Nineteenth Century," they are such as "with the best of treatment could not be expected to leave a good profit." Surely we require similar action to be taken all over the kingdom to that adopted by the Northumberland Agricultural Society, of stationing pure-bred bulls at convenient centres for the more general service of farmers.

Heavy Fine under the Swine Fever Order.—At Lambeth Police Court, on Monday, John Parker, of Hanover Street, Peckham, was summoned by the London County Council for contravening the Swine Fever Order of 1894, by moving certain pigs without the license of an inspector or officer of the Board of Agriculture.—Mr. John Coleman, from the Solicitor's Department of the Council, supported the proceedings on their behalf, and remarked that by illegally moving 31 pigs into an affected area, the defendant had rendered himself liable to a penalty of £155. In November last the Council's inspector found swine fever existing at a farm in the occupation of the defendant at Peckham. On December 14 (at which time the place was free from disease, but had not been declared free from infection), it was found that 31 fresh pigs had been brought upon the farm.—The defendant said he had the premises thoroughly disinfected, and did everything he possibly could. A month later he moved these pigs in, not knowing that he was doing wrong.—Mr. Hopkins ordered the defendant to pay a penalty of £25 and costs.

By a Man of Mark Lane.

Mr. A. Stanley Wilson, M.P. for Holderness, was present at the annual dinner of the Holderness Agricultural Club held on Tuesday, and in the course of a short speech said that we had too long favoured the foreigner to the disadvantage of the home produced, and something ought to be done to assist the latter class. He thought the time had come when a tax ought to be placed upon imported wheat. A few days ago the Chancellor of the Exchequer was asked how much a tax of a shilling a quarter upon imported corn and flour would produce. The reply was that it would be more than two millions six hundred pounds. He could not imagine a fairer tax. It would be evenly distributed over the whole country, and would hit no class of the community particularly hard. In fact, he thought it would be the very best tax that could possibly be devised at the present moment. Something must be done, and now was the Government's opportunity. If they saw their way to impose that tax it would, he was certain, be carried through the House of Commons by a very large majority.

Colonel Slacke, on behalf of the Local Government Board, recently concluded an inquiry into the Hollingbourne Rural District Council's scheme of water supply for a string of villages in Mid-Kent, lying between Maidstone and Ashford, containing considerable property owned by Mr. Akers-Douglas, M.P., as well as the historic Leeds Castle, whose famous moat, it is said, will be affected by the scheme. There was very strong opposition from landowners, brewers, farmers, the South-Eastern and Chatham Railway Company, and others, the opponents generally favouring the rival scheme of the Mid-Kent Water Company, who claim to be able to supply the district more cheaply than the Company, and to do so, moreover, without any liability to the district rate. The result of the inquiry is awaited with interest, as involving the question whether the scheme of a local authority, seeking to supply an admitted want under the Public Health Act, should be given official preference over that of a private company.

Mr. Galloway has given notice that he will move the rejection of the Compensation for Damage to Crops Bill, and Major Jameson that he will move the rejection of the Beer Bill.

The Queensland Department of Agriculture offers the substantial reward of £5,000 for the discovery of a menas of eradicating the prickly pear pest. A proviso will be made that the cost must not exceed a certain sum per acre, and the Department will have to be satisfied that the means adopted are efficacious. As it is, the Department has a process evolved from the experiments at the Westbrook State Farm, but the cost per acre is too great.

The receipts on account of revenue from April 1st, 1901, when there was a balance of £5,596,918, to January 25th, 1902, were £102,382,095, against £92,714,078 in the corresponding period of the preceding financial year, which began with a balance of £3,517,047. The net expenditure was £160,596,682, against £150,426,371 to the same date in the previous year. The Treasury balances on January 25th, 1902, amounted to £4,568,967, and at the same date in 1901 to £2,079,170.

I have received during the past week some further leaflets dealing with Indian crops. One gives the first forecast of the wheat crop of the Punjab for 1901-02, issued on December 24th last by the Punjab Department of Land Records and Agriculture. It states that the monsoon rains of 1901 were not as copious as those of the preceding year, and ceased very early. No good rain fell in the Punjab plains in August. Very light showers fell in the month of September, since which time there has been no rain at all. Both on this account and on account of the fact that the wheat crop of last year was the largest on record, the area sown this year is estimated to be 81 per cent. of that finally returned last year. The area estimated to be under wheat at the end of November, 1901, is 6,214,500 acres, as against 7,717,800 acres finally returned last year.

The same Department also issued its first forecast of the rapeseed crop of the Punjab of 1901-02 on December 24th, in which only 23 out of 27 districts are dealt with. The total area sown with rapeseed in the province, up to the end of November, 1901, is estimated at 814,700 acres, or a decrease of no less than 720,600 acres, or 47 per cent. from the area of last year, given in the final forecast as 1,535,300 acres. The decrease has occurred principally on unirrigated lands due to early cessation of the monsoon rains and the extraordinarily dry autumn. In only three districts—Kangra, Jhang, and Muzaffargarh—is the area estimated to exceed slightly that of last year. In all others there is a decrease amounting in Rohtak to 92, and in Hissar to 86 per cent.

In the first forecast of the wheat crop of the Central Provinces of India, issued by the Department of Land Records and Agriculture for that district on December 17th last, it is stated that the sowings of wheat were successfully carried out in all districts except in parts of Jubbulpore, Hoshangabad, and Raipur. The area sown is reported to be generally larger than last year, and is roughly estimated at two and a quarter million acres, or one hundred thousand acres in excess of that sown last year, but half of the normal area. In only a few districts, however, was the germination of the early sowings successful. The clear dry weather which followed the sowings rendered germination defective and encouraged insects which damaged the seedlings. Re-sowings were therefore necessary in parts.

The late sowings have generally germinated fairly well, and prospects are good at present in the open tracts in the northern districts, and fairly good in Nagpur, Raipur, and Bilaspur; but are not satisfactory in Betul, Wardha, and Bhandara. Owing to the absence of both dew and rain, the crop is suffering from a lack of moisture, and rain is everywhere most urgently needed to improve the condition of the crop.

New Agricultural Patents.

Specially compiled for the *Mark Lane Express* by Mr. G. D. Howard (Hughes, Son and Co.) Patent Agents, 38 Chancery Lane, London, of whom all information relating to Patents, Designs, and Trade Marks may be obtained free of charge.

891.—Harry Trotman and Welford and Sons, Limited, of Fleet Street, London, for "Improvements in milk churns, and the like."

1307.—George John Hutchings, of Birmingham, for "Improvements in apparatus for cooking foods for poultry, game, and the like by steam."

1328.—Robert Schultz, of the Strand, for "A new or improved method of preserving eggs."

Patents Sealed.

17,345.—P. J. Parmiter, of Salisbury, for "Hoes, horse; turnip thinning machines."

17,644.—F. W. Howorth, of Lincoln's Inn, London, for "Cooling and agitating milk, etc."

Motor-Car Regulations.—A deputation of representatives from the Association of County Councils waited on Mr. Walter Long, President of the Local Government Board, on Thursday respecting the motor-car regulations, which Lord Thring described as equally bad for the trade and the public. Sir John Hibbert explained the resolutions passed on the subject by the Association. Mr. Long, in reply, said he entirely agreed as to the necessity for some strengthening of the law with regard to the identification and driving of motor cars, but the difficulty lay in making the actual arrangements. He hoped that practical suggestions on the matter would be sent to him, and that greater security would be found in strengthening the law. He did not see why there should not be increased power given to the local police to control the traffic on the local roads, as the police did in London and other large towns.

By a Lobbyist

Anyone listening in the House of Commons as the scandal was being revealed in connection with the purchase of horses for the Army may have been pardoned had he reflected on the inutility and ineffectiveness of the English Board of Agriculture in comparison with the Canadian Board. In the Dominion the breeding and the organised sale of horses is made a distinct purpose of the Minister for Agriculture. As a result of this the Canadian farmers have reaped a considerable profit during the progress of the war, and have before them the prospect of reaping a still more considerable profit in the future supply of the British Army.

Put briefly, the scandal is that in the purchase of Austrian ponies for the Army a profit of £44,000 was made on a contract of £111,000. My readers will naturally ask why was not the English Board of Agriculture consulted in such a matter, which, after all, is a business of which its officials should be supposed to know something? The mere fact that the question instinctively suggests itself is one of the strongest criticisms that could be directed against the Board. It reveals at once the position of unimportance and disregard which the Board holds in Executive esteem. I would wager that the idea of employing officials of the Board of Agriculture never even suggested itself to the sapient officials at the War Office. For the matter of that, I would wager that it never even suggested itself to any officer having administrative authority in connection with the war. This is the measure of the esteem in which the Board is held.

Has the strange anomalous fact that there is no method of associating with the Board of Agriculture any direct representative of the farmers and of practical farming ever struck my readers? Of course, we all know that there is an indirect method of placing upon the Board representative of the Army and the Navy. I admit that we have seen excellent and practical men placed upon the Board, like Sir Jacob Wilson, Professor Somerville, and Major Craigie, and, in a less significant position, like Mr. Bew; but I aver that their selection was in spite of the general system. It would, moreover, be strange if upon a body which—if it have a purpose at all—should have in its hands the control of the destinies of agriculture, should not have associated with it one or two men who have some practical comprehension of the necessities of the interest. It is altogether different with the Irish organisation. Steps were taken in the establishment of the Irish Board to have upon it direct representatives of agricultural localities and men connected with local governing bodies. The position which in the English Board (I am speaking in this connection of the actual Executive Board, and not of the machinery) is occupied by Front Bench politicians is occupied in Ireland by men of practical knowledge both of the necessities of the interest and of the needs of localities. The contrasting result is that the English Board is sterile, and the Irish Board is fertile of good.

I am not going to discuss the old question as to whether the cultivation of horseflesh can be profitably conducted upon a wholesale scale in this country. At least, however, in the course of Friday night's debate there were M.P.'s—and I fancy that Mr. Henry Chaplin was among the number—who did not hesitate to say that a portion of the profit which must accrue from the cavalry necessities of the army might well go to the British farmer. I believe, too, that there is something in the remark of the North Devon Member who declared that the North Devon pony, with its strain of Exmoor blood in it, is admirably suited for Army work. My purpose has rather been to reveal the inocuity of the Board of Agriculture. The Canadian Board has, on the other hand, already made arrangements for securing a considerable amount of this profit. It has entered into direct and specific arrangements with the English War Office, it has proceeded to associate with it men skilled in the science of horse-breeding, and it has taken steps to persuade the keen-eyed Canadian farmers to establish horse-farms. The Canadian Board has, in fact, been wise enough to comprehend that the military future is with the horse-soldier. Even the infantryman will probably be mounted. It perceives, too, that the very extent of the British Army, and the fact that we cannot help being generally at war, must provide a continuous demand above and beyond what I may describe as the normal wear and tear of horse-flesh. What has the English Board done? For the matter of that, what can it do? Nothing. And, for the matter of that, has anybody indicated any desire that it should do anything?

Mem.—If we had systematic horse-farming under Government encouragement in England we should probably get rid of that most undesirable personage, the horse-coper.

What strange stupidities the English political hatred of Protection leads us into? During the debate on the Address we had a side revelation thrown upon this. A Member of Parliament was insisting with platitudinarian vehemence upon the necessitv of maintaining a strong Navy, and inadvertently he attacked the suggestion that we should establish granaries. "Why," said he, "'tisn't only food that we should need if once we lost command of the seas. There are a score of other necessities. Should we not also, then, because of this, establish great national hoards of these necessities, as well as build granaries?" And the House actually cheered. It never reflected that if once we lost command of the seas we should in six weeks be reduced to starvation depth. It never reflected that, after that, it would be a mere matter of days to produce a desuetude and misery in comparison with which the ravages of a brutal soldiery or of a hideous pestilence would be as naught. It never reflected that with a strain we could do without the other necessities for a year, nay, for two years, possibly for five. A queer, unthinking body is the House of Commons; and it is unthinking because of its reverence for old, worn-out, toneless cries and its loyalty to fetishes with clay-feet. The declaration of this statesman would have been laughed at incontinently in the village debating society. As I say, here at St. Stephen's it was cheered amain.

"How goes on your idea of an Agricultural Party?" Thus queried a Member for a rural constituency. Well, I am fain to confess it goes on badly. The Member himself—he is a cynic—knows that it goes on badly. But, for the matter of that, no political movement is progressing furiously at this moment. The reason is obvious. We have presented to us too many issues of more lurid moment. We have questions of life and death fascinating our attention; we have points involving the maintenance of an Empire riveting our thoughts. The very native patriotism of our representatives prevents any engrossing interest in lowlier things. Wait, however, until these issues have disappeared. The legislators, strung up to a high tension, will need occupation. I believe that even the agrarian M.P. will not be able to meander in the uninviting glades of Do-nothing-land. I am thus not without hope. We may not see an Agricultural Party; we shall see an aroused interest in the fate of agriculture. This debate on the horsing of the army was in itself a portent. Better than all, rural M.P.'s are beginning to ask what good does the English Board of Agriculture really do. The most useful thing of the many good things that the Irish Board has done is the stimulation of this inquiry. Men have been induced to it by comprehending the value of the Irish body.

Food Supplies in Time of War.

Some Press Opinions.

On another page we give a report of the discussion which took place in the House of Commons on Tuesday on the subject of our food supply in time of war. To give our readers some idea of the opinions on the subject held in various parts of the country, we give below extracts from the leading articles dealing with the matter which have appeared in some of the principal daily papers:—

The Standard says:—"A sufficiently plausible case, no doubt, can be made out for special action in the matter. Only one-third of our wheat is grown at home, and if we were engaged in serious war with a Naval Power the mere apprehension of the failure of imports would send up prices, and, if it did not involve scarcity, might easily cause inconvenient excitement in the country. But on a balance of advantages and disadvantages, the wiser thing is to face the risk. We should start with at least two months' food for the population, and, if our Navy cannot be trusted to keep the seas open for the corn ships, we may as well give up all pretence to be capable of permanently defending our shores. But it is not at all clear that there would be any serious hindrance. Food is not contraband, and might go in safety under a neutral flag to the nearest neutral ports. On the other hand, the plan of public granaries or of subsidising farmers to hold over from harvest to harvest the necessary amount of corn would mean a very large capital expenditure and a degree of State interference with the delicate machinery of trade and speculation that would bring intolerable abuses in its train. . . . There was more force in the contention that an impost on foreign corn, by encouraging our own farmers to enlarge the area under wheat, would not only ensure more food, but would breed a race that would yield good soldiers. Still, if Protection is to be commended, it must be justified first of all on its merits, and defended from the very obvious objections that occur even to those who are less dogmatically committed to Free Trade than Sir William Harcourt."

The Morning Post remarks:—"We think that the Government will be well advised to reconsider the advisability of appointing a Committee representing the nation to inquire into the whole question and to report to Parliament. Awaiting such a Committee—and we do not understand from Mr. Gerald Balfour's speech that the door is absolutely shut to such a proposal—it seems unnecessary to discuss the suggestions made by several honourable Members last night—as, for example, a duty on imported grain, the storage of wheat, or the giving of a bonus to farmers to keep the wheat in the stacks. All these suggestions are worthy of consideration; but they cannot be accepted without careful and, if we may say so, scientific consideration of all the difficulties and necessities of the case. On one point, happily, every one was agreed. The first and surest safeguard for a proper food supply in time of war is the supremacy of the British Navy. . . . . Those who have taken pains to study the organisation and efficiency of the Fleet are not at all satisfied that it is as strong as it should be. Indeed, they very frankly affirm that it is not. Therefore, let us see to the Navy first, and in the meantime the Government will be well advised to reconsider the advisability of appointing a Committee to look into the whole subject of the food supply in time of war. We fail to see any valid objection to such a course."

The Daily Chronicle:—"It is quite clear to anyone who will look the matter fairly in the face that the English wheat-producer can only be fostered at the expense of the consumer. The argument of Mr. Seton-Karr and Mr. Chaplin is that we should be prepared to enhance the price of corn now to a very considerable degree, in view of an uncertain contingency of famine prices in time of war. Even if we were prepared to do anything so foolish, it would be useless. When five-sixths of our corn supply comes from abroad no amount of tampering with natural economic conditions will enable us to increase our home production to such an extent that we can be independent of foreign supplies. It is an inevitable tendency of civilisation for the older countries to draw more and more upon remote territories of

virgin soil for subsistence and for raw material. . . . If it were possible that our enemies could intercept our merchant ships to any serious extent, our ruin could not be averted by the most magnificent system of State granaries. It is not only our food supplies that our Navy would have to protect in time of war. We are a nation of shopkeepers, and still more of manufacturers. Mr. Chaplin's vision of a Britain isolated by hostile fleets, yet secure in the strength of enormous reserves of wheat, is indeed a delirious dream. If we ever became isolated in this way, if we found ourselves unable to maintain the ingress of raw materials and communication with foreign markets in some part of the world for our manufactures, we should assuredly starve, however great might be the stores of corn lying up in our granaries."

Morning Advertiser:—"No one will deny the importance of the issues raised, though the suggestion of an inquiry on an indefinite reference had its defects. But the real basis of the security of the food supply of Great Britain during a war with a Great Power must rest on the Fleet. Unfortunately some of those members of the Opposition who echo this when they desire to dispose of the suggestion of storage granaries, or the interested proposals of the agricultural party, are not always to be found in the forefront when it comes to making the necessary provision for naval defence."

Yorkshire Post:—"But for the withdrawal, the amendment, which demanded an inquiry into the subject, would have suffered defeat by an overwhelming majority. In its opposition we believe the House of Commons to be in the right, especially because, though the mover of the amendment was careful to avoid the advocacy of any particular defence against the danger he foresees, there is no doubt that the movement has been pressed forward in behalf of two proposals—one to establish State granaries, and the other to tax corn imports, and so, for the benefit of one class in the country, to make all others pay an artificially high price for food. The success of the amendment would have been the success of one or both of these schemes, neither of which would have been of permanent advantage to the mass of our population. . . . Reference was made to Rome, and, as is usual, there was shown a lack of study of a period that should be of great interest to this country—of Rome in the height of her wealth. It was said that Rome did not fall because of her dependence on foreign corn. But that dependence had a very great share in bringing about her fall. Cicero's letters prove that agriculture was destroyed in Italy, and the masses, crowded in the towns, and especially in Rome, deteriorated physically and mentally. The great orator notes that when the Civil war began Pompey tried to get possession of the Roman fleet—in order that he might starve Italy; and Rome was, indeed, half starved when Cæsarian victories allowed corn to be shipped from abroad. The matter is, we believe, destined to have further discussion; and the first thing is to combat that complacent optimism which is not justified by the present conditions of our town populations or by the teachings of history."

Manchester Courier:—"Mr. Seton-Karr's proposal merited other treatment than the flippant scepticism with which it was treated by several Members, and a more complete answer than that which was furnished by the President of the Board of Trade. Inquiry into the matter would not of necessity involve the establishment of national granaries, absorbing a capital of £30,000,000, although Mr. Gerald Balfour based his statement on the assumption that it would, and thereby conceded the best part of Mr. Seton-Karr's argument. We all believe in the invincibility of the British Navy, but his Majesty's ships cannot be everywhere at the same time, and the bare possibility of external food supplies being cut off—even for a short time—from a country which now produces from its own soil no more than one-third of the food which it consumes is too dreadful for contemplation. Surely it demands some counter-provision. Even if the dreaded misfortune was only partial, and involved merely a 'tightening' of the corn markets and a temporary panic, the resulting misery would be much greater than the President of the Board appears to imagine. A Government store of corn would be a blessed stand-by at such a time. In any event, no sufficient case has been made out against the inquiry asked for by Mr. Seton-Karr."

Liverpool Courier.—"There is reason to fear that national granaries on a large scale would not prove an efficient remedy for our ever-increasing dependence upon foreign sources for our food supplies. The process of periodic clearing and replenishing in time of peace, apart from all considerations as to the effect upon the market, would tend neither to economy nor efficiency. Larger in'der measures will probably be found necessary. At the same time, the danger of the situation is painfully obvious, and Mr. Seton-Karr is fully justified in the persistency with which he directs attention to it. Mr. Cobden said he would not propose the abolition of the Corn Laws if he thought the result would be to decrease the wheat acreage of the country; but it is really useless to discuss Mr. Cobden's anticipations now, seeing that nearly every one of them has been falsified. . . . Our primary necessity is an invincible navy. There is no escape from that, and we should feel a good deal more comfortable in this regard if defects in propellers, condensers, and other essential equipment of a warship were less frequent. But assuming undoubted command of the sea to have been secured, there remains the problem of a food supply on a level as to price with the purchasing power of the poor, who are the majority. A state of war at once brings into operation a set of laws and regulations for international purposes, based on considerations of humanity and the rights of combatants and non-combatants respectively. The unique position of this country with reference to the food question seems to demand a national code for emergency control of prices and the prevention of a famine panic likely to prove politically calamitous."

Pasture Lands as Sources Revenue.

(From a Correspondent.)

The importation of food-stuffs into the United Kingdom is increasing with leaps and bounds, and the total figures are now simply stupendous.

Some of the items we cannot produce, because of the unsuitability of our climate, and these we may exclude.

In 1899 we imported:—

	Millions sterling.
Corn (not including maize) to the value of	45
Dairy produce " "	19¾
Cheese " "	5½
Condensed milk " "	1½
Bacon, ham, and pork " "	16½
Eggs " "	5
Beef, mutton, and other flesh foods "	30
Potatoes " "	3½
	126½

This enormous total represents food grown in foreign countries and in our Colonies, and which is brought to our shores by steamers running at low freights, is landed duty free, and is carried inland by fast goods trains at cheap and special rates.

To such a pitch is the perfection of the transport of imported food carried that it is stated to be possible to send agricultural produce from New York to London at through rates at a less cost than from country stations between, say, Southampton and London.

This enormous keen and increasing competition renders the position of the British farmer most difficult and even desperate, and it is not to be wondered at that British agriculture is declining, that our arable land is rapidly going out of plough cultivation, and that ou rrural folk are drifting to populous centres of industry—and in too many cases helping to still further increase the already congested slums of our great cities and towns.

Of the total of 47¾ millions of cultivable acres of the United Kingdom, 28¼ millions of acres consist of grass lands.

The stead decrease of the arable acreage is a very serious matter, for it means that we are getting more and more dependent on food which is brought to us from over the seas.

It is estimated that we have in the United Kingdom some seven millions of poor people who lead a hand to mouth existence. How these would fare with even a temporary cessation of food supply in war time is a question that should be seriously considered by all who have the interests of their country at heart. The latter should also consider it from their own selfish standpoint, for how would it fare with us all with a loaf treble its present value?

Many remedies for the improvement of British agriculture have been suggested, but unfortunately for the farmer, the bulk of the people of the United Kingdom take but little interest in the matter, and those that do shrink from proposing measures of a drastic character.

The farmer has, therefore, to rely on his clear head and strong arm to carry him safely through the difficulties and dangers of his business.

He has to reckon with the fact that he must grow more grass and less corn, and that he must look to his pasture lands more and more as sources of revenue, and, let us hope,, sources of profit as well.

What is the present condition of the 28¼ millions of acres of the United Kingdom now returned as permanent pasture, and what can be done to improve it?

These questions have been exercising the minds of scientists and practical farmers for some time past, with the result that large sums of money have been placed at the disposal of County Councils and agricultural colleges with the view of promoting agricultural education and for conducting field experiments.

There seems to be a consensus of opinion that, taken as a whole, the grass lands of the United Kingdom are being simply worn out for want of plant food. This is not to be wondered at, for continuous removal of fertilising constituents without adequate return in the shape of farmyard manure or chemical fertilisers must inevitably produce exhaustion.

In many districts the chief crop is grass, and of all the crops it is the most generally neglected.

Although we use great quantities of fertilisers on our roots and corn crops, we somehow seem to think that the grasses can rub along with just the modicum of farmyard manure that we can spare, and we trust to Nature to do the rest. Nature does a great deal, but animals and crops remove certain constituents from the soil which we human beings must replace. This is not being done, and millions of acres of grass land are to-day being starved for want of plant food. It is impossible to produce a tithe of the farmyard manure requisite to restore fertility to even a "small" portion of the total area under grass, and we are compelled to invoke the aid of what are called artificial or chemical manures.

For several years past experiments have been conducted in various districts of the United Kingdom with the view of ascertaining the best and cheapest means of improving the quality and largely increasing the yield of grass with consequent increase of fertility of the soil.

Professor Kinch, of the Royal Agricultural College, Cirencester, has been conducting a series of experiments for the last nine years on pastures, and the results of these during 1901 are now available. These show that the application of 5 cwt. of superphosphate per acre gave an increase of 6½ per cent. over the unmanured plot, and more striking results still were obtained by using a compound manure containing phosphates, ammonia, and potash, for the percentage of increase of yield over the unmanured plot amounted to no less than 120 per cent.

The report of the Essex Technical Instruction Committee emphasises the necessity for manuring grass lands, for numerous experiments have demonstrated that the use of phosphatic manures has produced an increase of yield of hay of 43 per cent. on old grass lands and 34 per cent. on new grass lands.

With nitrogen added to the superphosphate the average increase of hay was 102 per cent.

Commenting on the renovation of pastures, the Cornwall County Council report states that where superphosphate has been used a complete transformation has been wrought. The grass has been eaten to the last mouthful, and much of the moss has disappeared, and been replaced by a dense bottom of leguminous herbage. The committee having charge of the experiments expresses the opinion that the worn-out pastures of Cornwall may be rejuvenated at a cost of about 15s. per acre.

The University College of Wales has conducted a series of valuable experiments at 45 centres, situated in Cardiganshire, Carmarthenshire, Merionethshire, Brecoushire, Montgomeryshire, and Pembrokshire.

The latest deductions drawn from these experiments, which have now extended over a period of seven years, is to the effect that from every point of view grass lands are immensely improved in productiveness by using a mixture of phosphatic and nitrogenous manures, and that of the phosphatic manures superphosphate is rather to be preferred.

In Scotland the complaints of flock masters of the deterioration of the hill pastures and consequent inability to carry the head of stock they formerly did, have become so serious that the matter has been taken in hand by the West of Scotland Agricultural College and the County Councils of Drumfries and Kirkcudbright. These bodies have demonstrated that the phosphates removed from the soil by successive generations of flocks may be restored by suitable artificial manures, and pastures may be so improved in value that a profitable increase of mutton per acre may be obtained.

It is reported in Ireland that the results from top-dressing permanent pastures and meadows with phosphatic manures have been so satisfactory that, whenever a new creamery is started, the use of phosphates, mostly in the form of superphosphates, as a top-dressing invariably follows. It

is recognised that the quality of the herbage is improved, and that the production and quality of Irish butter have been materially assisted and enriched, enabling the creameries to re-establish the repute of Irish butter and to enter into successful competition with Denmark in the English market.

These instances are sufficient to demonstrate the enormous and profitable improvement which may be effected on the pastures of the United Kingdom by judicious manuring.

It is no exaggeration to say that hundreds of official experiments have been made on pasture lands during the past two or three years, with the result that farmers can now be confidently recommended to pay close attention to these and to manure these neglected areas to the utmost of their power. The man that can make two blades of grass grow where one grew before deserves well of his country. If we cannot grow wheat at a profit we can increase our flocks and herds and produce more milk, butter, and cheese, and to that extent be less dependent on foreign countries for the class of food comprised within this category.

Warwickshire Agriculturists and Rural Depopulation.

The subject of rural depopulation was considered by the Warwickshire Chamber of Agriculture on Wednesday afternoon, at Knowle. Councillor Blackham opened the discussion by moving that the Chamber should reaffirm a resolution passed on November 2nd calling on the Government to formulate a scheme whereby State aid might be given to the erection of cottages in country districts.

Mr. Oscar Bowen regarded the lack of proper housing accommodation as one of the greatest difficulties in the way of retaining the agricultural labourer on the soil, and seeing that only 2 per cent. return could be obtained by private builders of such dwellngs, he urged the Government to give their assistance. The importance of maintaining an efficient Army and Navy was now recognised, and it was only by subsidising agriculture in the manner suggested that a supply of healthy men would be secured.

Mr. L. C. Tipper asserted that it was only playing with the question of depopulation to suggest cottages, saying that he had driven over estates where dozens of good cottages stood empty and where others were falling into decay through their tenantless condition. The crux of the matter, he said, was wages; the farmers could not afford to pay their men on the town scale. Put the farmers in a position to make bigger profits, he continued amid applause, and they would be able to pay better wages, and retain their labourers.

Mr. Bowen, in reply, explained that his contention was that better housing of Hodge was one of the remedies. He defied anyone to prove that the agricultural labourers were properly housed. If the Chamber induced Government to remove one of the difficulties, something would be done.

In a comprehensive speech the chairman, Mr. J. Brierley, wound up the discussion, saying that he agreed with Mr. Tipper as to the effect that better wages would have upon the agricultural population. He also reminded his hearers of the attraction which town life offers to those who desire further education or amusement, although, as he pointed out, they would probably be no better off in a pecuniary sense owing to the expensiveness of living in populous centres and the necessity of paying house rent—a necessity which did not present itself in the country, where they were earning 18s. a week and breathing the pure country air. He further contended that the incidence of the death duties also helped to depopulate the villages. It was found that three years' income was often necessary to pay the duties, and the result had been that on some estates scarcely any repairs were effected and no new buildings were erected because they would increase the gross value, and, therefore, the amount payable in death duties.

The resolution having been carried *nem. con*, Mr. Tipper returned to the charge with the motion to the following effect:—"That the principal cause of the depopulation of the rural districts is the inability of the farmer to pay higher wages, and the remedy lies in the imposition of duties on all competing foreign products." Some laughter greeted this undisguised assault on Free Trade, but Mr. Tipper expressed his belief that the time was not very far off when the duty would be imposed. Captain Caldecott seconded, his opinion being that "We are too self-opinionated."—On being put to the meeting the resolution was defeated by seven votes to five.

Mr. J. T. Critchell, the London correspondent of the "Pastoralists' Review"—the wool, stock, and meat paper of the Southern Hemisphere—is about to visit Australia for a six months' holiday, after having been absent from that country for the long period of seventeen years.

IN PARLIAMENT.

HOUSE OF COMMONS.

Our Food Supply in Time of War.

On Monday evening, in the course of the debate on the Address, Mr. Seton Karr moved the following amendment:—"But we humbly venture to express the hope that your Majesty will direct inquiry to be made into the present large and increasing dependence of the United Kingdom on foreign imports for the necessaries of life, and the circumstances that might arise therefrom in the event of your Majesty becoming involved in war with some foreign Power or Powers, with the view of ascertaining what measures, if any, can be taken to lessen such dependence or guard against the dangers thereof." He said there were about 200,000 men in this country who were on the verge of starvation, and were only kept from riot and violence by the police, but in the event of a naval war the price of bread would go up to such an extent that that number would very largely be increased. We were in the unique position of being absolutely dependent on foreign countries for the necessaries of life. No other great Power had ever been in this position. The food supplies to this country were in private hands, and were not controlled by legislation. The hon. member was speaking at midnight, when the debate stood adjourned.

On resuming on Tuesday, Mr. Karr said there were three methods which might be adopted in order to improve the present position, and he urged the Government to inquire into those methods. The first was preferential duties in favour of our Colonies. (Hear, hear.) The second plan was that of national granaries, in which connection he considered the elevator system of the United States the best possible way of storing grain. The third suggestion which was worthy of inquiry was a food supply department founded on the principle of the committee of subsistence established in France after the Revolution. The history of the past two years showed that the Government were not omniscient, and the only way the Government could prove that they were right in their attitude towards this subject was to hold an inquiry.

Sir H. Vincent, in seconding the amendment, pointed out that the price of wheat during the American-Spanish war rose rapidly from 25s. to 50s. a quarter. That was a serious matter, but how much more serious would it be if this country and not America was engaged in a naval war with one of those countries from which we obtained large food supplies? It was absolutely essential in the present state of affairs in the Continent of Europe, when we found ourselves reduced to sixty days' supply of wheat, to ask ourselves what we should do if we were at war with France, Germany or any other Continental Power.

Mr. M. W. Ridley, in a maiden speech, said there was no doubt as to our dependence upon other countries for our food supplies. The proper way to meet the difficulty was not by the establishment of granaries, but by our present system of safeguarding our interests by the fleet. (Hear, hear.) Rome failed not because it had to depend upon foreign nations, but because of the inherent rottenness of her ruling powers. But we were not in that danger. We had the advantage of Rome in that matter and in the reliance we could place on the quickly increasing supplies we could obtain from our colonies. He thought that we should rather ask the State to establish a "corner" in ships than a "corner" in corn. (Hear, hear.)

Sir Wm. Harcourt said it was with very great pleasure that the House had witnessed the first appearance in its debates of the hon. member who had just spoken. The mover of the amendment talked of the danger to this country of "corners" in wheat in America. Did he really propose that the Government should undertake the operation of fighting "corners" in America? A more risky proposal he could not conceive. It meant that we were to buy up corn in order that if a "corner" was made in America we could let out our stock and knock down the price. In his experience no man had ever tried to make a "corner" but had come to grief—(hear, hear)—and therefore he could not conceive a more rash proposition than that the English Government should expend millions of money upon granaries in order to prevent a "corner" being made in America. It was said that in times of war ships with cargoes of wheat coming to England would be at the risk of being intercepted by the enemy. There was a great delusion on this subject. Wheat coming from Russia or America in time of war would not be consigned to England, but to a neutral Continental port, and no enemy would dare to attack a consignment to a neutral port. The wheat would go to Antwerp or Ostend, and the only risk would be on the voyage thence across the Channel. If we had to get our food supplies in time of war from the Colonies it would be at much greater risk than if we got them from, say, the United States. Such a cargo might be sent to Holland or to France, and would only become a belligerent cargo when being sent to this country. But a Canadian or Australian cargo would be liable to capture, even though going to a neutral port.

Mr. Gibson Bowles: Not in neutral bottoms.

Sir W. Harcourt: Why not?

Mr. Bowles: Because of the declaration of Paris, which lays it down that a neutral flag covers a belligerent cargo.

Sir W. Harcourt said no doubt in some cases the flag would be transferred, as it had been in the past, but now the danger was much greater, for in the case of produce from Australia they would have to be guarded in the Pacific as well as in the Atlantic. The advocates of this motion were really seeking for protection, though the mover disclaimed those views. At all events, that would be the effect of it. If we were to buy for this purpose exclusively from our own colonies, it would necessarily enhance the price, because we would be buying in a limited market. We could not always be at war, and the corn for storage purposes could not be kept beyond a certain time. Had the hon. gentleman calculated what would have been lost by the lock-up if we had stored the requisite supply of food since the Crimean war? Obviously the National Debt would be a joke compared with the loss. Was the House of Commons prepared thus to adopt the fears of the brave and the follies of the wise by committing itself to such a rash gamble at the proposal involved? (Hear, hear.)

Colonel Kenyon-Slaney said the right hon. gentleman had set up a bogey of his own in order to pummel it. The main desire of the mover, with which he agreed, was that it should be recognised by the Government that this was not an academic question, nor one which could be much longer postponed. He thought that when all the various schemes had been examined they would agree that the best way to secure the proper food supply in time of war would be so to manage our affairs that the supplies could be grown in this country.

Major Rasch said the thanks of the public were due to Mr. Seton-Karr in bringing this matter forward. He did not think it would be possible to keep any large supplies of food in granaries. The way to solve the question was to support the agricultural interests. He approved of a registration fee of a shilling per quarter, which would bring in £2,500,000 a year, and that ought to go towards the relief of agricultural rates. (Ministerial cheers and laughter.) With such encouragement a large additional acreage would be put under crops.

Mr. Jeffreys suggested that ricks of wheat might be kept and subsidised by the Government, as was the case with horses, which had been found very useful in the present war. The loss of interest on this system would be worth 2s. per quarter.

Sir W. Harcourt did not think 2s. would be a sufficient inducement to the farmer.

Mr. Jeffreys would also give another 2s. per quarter for damage by vermin and 1s. per quarter for keeping the wheat for a year. This would give a valuable reserve in the country of four million quarters, and would be an inducement to patriotic action on the part of the farmer.

Mr. Gerald Balfour, President of the Board of Trade, agreed that it would be extremely imprudent for the Government to embark upon a system of national granaries, the cost of which would be at least a million at the outset. The Government of any country was ill adapted for speculations of this sort, and it would demoralise the people. It would check the inflow of corn from ordinary sources at the very time that it was most important to the country that the corn should come in. The idea that the Government could ration the entire population was absurd and extravagent. As to the danger of a corner in foodstuffs being made in the United States in case this country was engaged in war, what advantage would it be to the merchants of America to form such a corner in time of war any more than in time of peace? Results had proved that attempts at corners in corn had been most disastrous for those engaged in them, and in the case of the great Leiter corner, the price of corn only rose above the normal for about a month. (Hear, hear.) There was really nothing to inquire into, for the rise in prices which would inevitably follow on a war would mean no real scarcity or famine prices. It would be sufficient for us in case of war if we had a Navy adequate to the interests of the country, and if we had not such a Navy, then the Government ought to be impeached for neglecting its most essential duty. (Cheers.)

Mr. Chaplin was afraid he could not add much to the information in possession of the House, but he ventured to think that this question was one more directly affecting the Secretary of State for War and the First Lord of the Admiralty rather than the right hon. gentleman who had just spoken. (Cheers.) Undoubtedly the supply of corn was a most serious item in the defence of the country. (Cheers.) When the right hon. gentleman said there was no case for inquiry he could not agree with him. This country depended for

three-fourths of its corn supply upon foreign markets, and the possibility of any failure in the supply in time of war was causing considerable anxiety. The present position of things was most unsatisfactory, and if by any misfortune this country was engaged in a European war, there was a great probability of the supply of corn from abroad being greatly interfered with. The right hon. gentleman had given them assurances, but when they remembered how completely the Government were deceived on all important circumstances connected with the present war, there was but very little comfort or satisfaction to be derived from the right honourable gentleman's declaration. (Cheers.) As to national granaries, the idea was by no means new; Joseph was a man of energy and resource among the Egyptians, and surely what was possible in the time of Joseph ought not to be beyond the resources and capacity of British statesmen. (Laughter and cheers.) No case for inquiry! He maintained that there was every necessity for it, and if it should be found that there was ground for such fears as had been spoken of in the course of the debate, it was high time this country set to work in earnest to provide a remedy. (Cheers.)

Mr. G. Whiteley remarked that the majority of the speeches delivered during the debate savoured very much of protection, and he pointed out that, whereas we grew some grain in this country, we grew no cotton. If we were to lose command of the sea, the import of raw cotton would be stopped, and that he contended would be almost as great a disaster as the stoppage of our food supply. If we were to protect our food supply, why should we not protect our drink supply? (Laughter.) The great point was to protect our shores and to maintain a strong navy. After all, the amendment pointed to an imaginary grievance, and it would be far better, he thought, if the House spent its time in trying to remedy real grievances.

Mr. T. G. Bowles could not understand hon. members representing agricultural constituencies objecting to a rise in the price of corn. He had always thought that the one desire of agriculturists was a rise in prices. (Laughter.) Then they had the illustration of Joseph. He did not think that a good one. Joseph made a corner in corn, and although a Jew often succeeded in making a corner, he believed a Gentile had never succeeded in that direction—(laughter)—and he did not believe the Government would. He ridiculed the idea that corn could be declared contraband of war, and added that the geographical situation of the British Isles was such that all the fleets of the world could not blockade our ports. If it be true that the difficulties of getting access to these islands would not be very great in time of war, he thought the price of foodstuffs would not rise very much. If we were secure as to our supply of corn we were equally secure as to our supply of raw material, and that came next in importance to corn. After all this was a question for the Admiralty, and if the people at the Admiralty had not satisfied themselves that these islands could be kept open during a time of war, every one of them ought to be taken out and beheaded on Tower Hill. (Laughter.) Of all the problems which the Admiralty would have to solve in time of war the easiest was the securing of our food supplies. (Hear, hear.)

Mr. Purvis declared the amendment to be protection, and nothing but protection. It was really an attack on the policy of free trade.

Mr. D. Maciver regretted that the Government could not see their way to grant the inquiry asked for, and he hoped that the mover of the amendment would keep pegging away until he had achieved his object.

Mr. Field said it was perfectly evident that free trade as preached by the Manchester School was a sham and not a reality. There was a system of free imports only, with the result that agriculture was running to decay and ruin all over the three kingdoms. He could not understand why the Governments of the world could not co-operate to prevent "corners" in corn and rescue the producer from the hands of the gamblers in food supplies. (Hear, hear.)

Mr. Seton-Karr asked leave to withdraw the amendment having regard to the interesting discussion that had taken place, and the sympathetic reply that had been given by the Government.

The amendment was by leave withdrawn.

Argentine Cattle.

On Thursday Mr S. Samuel asked the President of the Board of Agriculture whether he could state on what date the last authenticated case of foot-and-mouth disease of cattle occurred in the Argentine Republic, and whether he would now consider the removal of the prohibition against the slaughter of Argentine cattle at Deptford.

Mr. Hanbury.—No, sir. I cannot yet undertake to remove the prohibition. It is still too soon to assume that the disease has entirely disappeared. So recently as October 3, our Consul at Buenos Ayres reported the existence of the disease in the southern part of Argentina on the authority of two stock owners; but the latest reports as to the disease were made in February, 1901.

Preferential Rates for Foreign Produce.

Mr. Field asked the President of the Board of Trade whether he would consider the advisability of appointing a Select Committee to inquire into and report upon the prevailing system of preferential rates for foreign goods and produce imported into the three kingdoms.

Sir H. Vincent.—Hear, hear. A very good question (laughter).

Mr. G. Balfour.—The Railway and Canal Traffic Act of 1888 prohibits railways from making a difference of rates for foreign merchandise in respect of the same on similar services. I have no evidence that the law has been infringed, and I cannot recommend the appointment of a Select Committee, but I will inquire into any specific cases in which complaint may be made of preferential rates.

New Bills.

Amongst the new Bills introduced and read a first time on Tuesday was one by Dr. Macnamara to amend the law relating to the housing of the working classes, to establish Fair Rent Courts, and to amend the Law of Rating. This Bill embodies the Radical scheme of legislation for the housing of the working classes, and deals comprehensively with the whole question. Dr. Macnamara proposes that land should be acquirable for housing at a declared value, and that the Chancellor of the Exchequer should lend the purchase-money to local authorities at 2 per cent. interest, bearing himself whatever loss might be sustained on the transaction. No dwellings should be demolished until other houses have been provided for the people displaced, and the freeholder should be held absolutely responsible for the condition of the slum property on his land. Finally, Dr. Macnamara would establish in each district a Fair Rent Court, composed of members of the municipality and others, to whom the tenant could appeal in case of extortionate rent.

On the same day was issued another Bill, which enacts that in granting outdoor relief to a member of any friendly society, the Board of Guardians shall not take into consideration any sum received from such friendly society as sick pay, except in so far as such sum shall exceed 5s. a week. This Bill passed the Commons last year practically without opposition, only to be rejected on third reading in the House of Peers. Sir Edward Strachey has the Bill in charge. What may be regarded as a kindred Bill proposes that any member of a friendly society in receipt of temporary outdoor relief for a period not exceeding eight weeks, shall not thereby be disqualified from being registered as a voter or from voting at Parliamentary or local government elections; and that outdoor relief granted by way of loan to a member of any friendly society, and repaid within three calendar months, shall equally not disqualify for franchise. The Bill was also brought in by Sir E. Strachey, and is backed by, among others, Sir A. Rollit.

LITERARY NOTICES.

The Journal of the Royal Agricultural Society (1) makes its appearance in a neat green cover, with gold lettering. Nothing within its covers shows that this is the first of the annual volumes, but we have no doubt that such is the case. The number before us is almost treble the size of the old quarterly issues, and certainly from its appearance it will look better upon the book-shelf. Where, however, we fear that members of the society will find cause of complaint will be that they only receive one volume once a year instead of four for their subscription. Turning to the contents of the book itself, the first article consists of a lucid account of English agriculture in the reign of Queen Victoria, and this is accompanied by a very excellent picture of her late Majesty. Rather a new departure is made when second place is given to an essentially practical article, for Mr. Neville Grenville's contribution on cider-making is deserving of praise, inasmuch as the hints given will be of real use. "The Hop and its English Varieties," by Professor Percival, of the Wye College, is a well written and illustrated account of the cultivation and history of this crop, while Professor Gilchrist, of the Reading College, is responsible for an article upon "The Education of the Young Farmer." Professor McFadyean, of the Royal Veterinary College, contributes a rather lengthy article upon "Epizootic, or Contagious Abortion," in which is traced this disease in cattle, horses, and sheep. The official report of the Cardiff Show runs to a considerable number of pages, and this is followed by accounts of experiments caried out at Woburn, and other matter of an official nature. The volume altogether is one that will commend itself to the majority of the members.

(1). Journal of the Royal Agricultural Society for England.—Vol. 62 of entire series, 1901.

Dr. Conan Doyle deserves the thanks of his country men for the very thorough review (2) he has written up on the causes and the conduct of the South African War. There have been so many statements made of different natures that we fancy a great many patriotic Englishmen do not thoroughly grasp or are cognisant of much of the negotiation which preceded the war, and which had been going on for more years than the great number of people imagine. In the volume before us a complete acocunt is given of the trouble in South Africa, which led up to President Kruger's ultimatum, and for the purpose in view Dr. Conan Doyle gives a succinct history of the whole of South Africa during the last century. The chapters, too, in which he deals with the way in which the war has been conducted show that the many statements which have been floating about to the detriment of the British army are false and baseless. The price at which the book is issued is a very low one, and the "further ambition is, however, to translate it into all European tongues and to send a free copy to every deputy and every newspaper on the Continent and in America. For this work money will be needed, and a considerable sum. We propose to make an appeal to the public for these funds. Any sums which are sent to me or to my publisher will be devoted to this work. There cannot be too much, for the more we get the more we shall do." We believe we can state, without fear of contradiction, that a very large number of people's knowledge of the war is somewhat misty, and to these we can commend the book before us as being a fair, true, and reliable account of the cause of the South African troubles.

(2) "The War in South Africa; its Cause and Conduct," by A. Conan Doyle; published at 6d. by Messrs. G. Newnes, Limited, Southampton Street, Strand, London, W.C.

The Technical Instruction Committee of the Staffordshire County Council have issued a report of their manurial experiments carried out in 1901. Owing to the dry spring and summer the effect of the manures was not very noticeable, and in the case of the experiments with root crops the results were nil. The report is signed by Mr. T. Turner, Director of Technical Instruction to the Council, and Mr. J. C. Rushton, Instructor in Agriculture.

"Fertilisers, Illustrated," is the title of a most artistic and capitally got-up booklet, issued by Messrs. Joseph Fison and Co., Ltd., of Ipswich. It gives particulars of this firm's well-known fertilisers, and in order to show how universal is their usefulness a number of excellent illustrations are given of crops grown with the aid of these fertilisers. Home crops are represented by barley, wheat, mangolds, hops, and potatoes, whilst amongst foreign crops shown are sugar cane, pineapples, bananas, tobacco, etc. There is one particularly interesting illustration, and this is a photo of the Okapi, the new animal discovered by Sir H. Johnston, K.C.B., in 1901. This booklet is issued free to customers of Messrs. Fison, but others can obtain a copy, price sixpence.

We are in receipt of a copy of "Wrinch's Seed Barley Annual" for 1902, published by Mr. J. H. Wrinch, of Ipswich, who is noted for his "Premier" and "Prolific" barleys. This is the sixth year of publication of this annual, and the 1902 edition is perhaps the best issued. It is artistically got up, nicely printed, and, in addition to other items, contains two interesting articles, one being entitled, "Round and About the Markets" (chiefly East Anglian corn), and the other is on the "Tithe Rent Charge and the Corn Returns." It may be mentioned here that the world's championship at last year's Brewers' Exhibition was awarded to Wrinch's "Premier," this making the fifth occasion on which "Premier" barley has won the world's championship.

A useful catalogue has been issued by Messrs. J. T. Hobson and Co., the well-known makers of poultry appliances, etc., of Bedford. The catalogue is fully illustrated, and with it is forwarded a booklet containing a large number of testimonials from customers, showing how the goods of this firm are appreciated and valued.

Messrs. Ben. Reid and Co., Ltd., seedsmen, florists, nurserymen, and implement makers, of Aberdeen, N.B., have forwarded us a copy of their well-illustrated and conveniently-arranged catalogue of vegetable and flower seeds and various other horticultural requisites for the coming season.

Six-Rowed Barley.

Sir,—May I be allowed to correct a statement made by "Hordeum" in your issue of January 20? Referring to a letter of mine which recently appeared in the "Field," he says I stated "that six-rowed barleys were not approved and used by brewers, ignoring the fact that vast quantities of this very grain have been regularly imported for many years, and malted and brewed with the utmost satisfaction."

The facts of the case are briefly as follows:—In an article in the "Field" of November 16th last, signed by "Agricola," the writer advised English farmers to sow six-rowed barleys in autumn with a view to selling them for malting. I replied that if his advice was adopted they would get a product only fit for grinding, and suggested that the proper type of barley for autumn sowing in England was not a six-rowed variety, but a two-rowed chevalier barley of the Archer type, an opinion to which I still adhere as all the English six-rowed barleys which I have seen are only fit for grinding. It is common knowledge amongst brewers that much of the foreign barley used by them is six-rowed, and I am quite aware of the fact, as I have myself seen it growing in Asia Minor, where much of the brewing barley comes from, but the six-rowed barley grown in England is very different in character from that which we get from districts like Smyrna and Chili. Brewers are not ignorant of the true character of the barley which they buy, as "Hordeum" says, neither have they any prejudice in the matter; what they want is the best possible barley.—Yours, etc.,

W. R. Wilson.

Springfield Brewery, Wolverhampton.
January 29th, 1902.

Thousand-Headed Kale Seed.

Sir,—I saw in your columns, about a fortnight or three weeks ago, one or two advertisements of thousand-headed kale seed for sale. Can you tell me if the vendors sold the seed, and why the advertisements are not in your paper now? I have a rick of kale seed which I estimate to yield about one ton of seed when thrashed. I should like to sell, but have written to some of the largest seedsmen in England, and they have plenty themselves. Will you kindly say if you think it any use to put an advertisement in your "M. L. E."?

If I cannot sell this seed the rick need not be thrashed till next winter.—Yours truly,

Henry Butler.

Pauntley Court, Newent, Glo'shire.
January 30th, 1902.

[We pre-ume that the advertisers referred to have disposed of all their seed. Can any reader render our correspondent assistance?—Ed.]

The Apple Orchard.

Sir,—I have neither time nor inclination to enter upon the discursive methods to which "Plantation Advocate" would seem to invite one in reference to extending apple cultivation. We must take broader views of the subject if we would turn into British pockets the £1,000,000 a year we are paying to outsiders for imported apples; and no doubt it is incumbent on us, from economic and patriotic impulses, *at once* to set to work to stop this diversion of cash, the resu't of discreditable neglect in not considering increased demand, and neglecting to extend a charming and profitable industry.

Fortunately, we can *at once* take steps to obviate this state of things. There are thousands of acres of good pasture land in various localities suitable for the establishment of the orchard immediately, without doing away with valuable pasture land, and I have shown in detail in the Express of December 23rd, 1901, the result which might be secured of an average annual income of £504, throughout the first twenty-one years of a twenty-acre plantation of best sorts of keeping apples, instituted by an outlay of £214 13s. 4d., and leaving the turf, if properly tended, valuable for grazing as before, and without detriment to the productiveness of the trees and the quality of their fruit.

"Plantation Advocate" asserts spade cultivation to be the better. Well, he may begin it on his acre of land by burying two spit deep his good turf at an initial outlay of about £8 per acre for the work; but the trend all over the country is the opposite way, nor, in except in a very few limited areas, which I have indicated, will any follow on. But, to arrest the flow of capital into the pockets of outsiders, we must begin *at once* to establish our apple orchard on an extensive scale, and there's any quantity of land available. The petty plantation system of "Plantation Advocate" is useless for the purpose, as in this case time is the essence of endeavour in securing our cash at home.

I venture to think I have in my four letters fully and clearly set out my subject, and in thanking you, Mr. Editor, for the space accorded to me, I beg to say I do not propose to continue further discussion upon petty issues. I have discharged the duty incumbent on every patriotic citizen concerning a not unimportant matter.—I am, yours truly,

The Advocate of the Apple Orchard.

January 30th, 1902.

[Correspondence upon this subject must now cease.—Ed.]

The Food Supply Debate.

Sir,—The debate which has recently taken place in the House of Commons was most disappointing.

Possibly this was due to the weak manner in which the case was placed before the House, and by not enough being asked for in the amendment.

Had legislation on the matter been demanded the result might have been a Committee of Inquiry.

With the exception of the speech of Colonel Kenyon-Slaney, there was an appearance of want of perception of the crux of the question; those speaking in favour of the amendment not fully stating the case, and those speaking against seeming to exaggerate their objections.

Over a third of our so-called permanent pasture is practically waste land, and should be ploughed up, as under a proper rotation it would produce much food for men and stock.

The crux of the question—the prosperity of home agriculture—has to be faced, and the sooner it is faced the better for the safety of the nation. The only way to obtain a secure reserve of food is by encouraging an increased production in the United Kingdom, then at all times the reserve will be automatically replaced.

The fact is the position has come about by depending on outside sources for food, instead of producing most, as formerly.

Mr. Gerald Balfour's speech gave me a very bad impression of him as a statesman. He made too much of the question of a decrease in the importation of raw materials. They never have been, and apparently never will be, declared contraband of war. Whereas, there is little doubt that food will be declared contraband of war. Food supplies were treated as contraband of war during the recent troubles in Crete. England appears to have been a consenting party to this arrangement, as Her Majesty's fleet remained off the Cretan coast, and food, so necessary for the continuance of Cretan defence, was prevented reaching them. This naturally involves similar treatment from other powers when England's difficulties arise. Not only in the recent case of Crete, but twice towards the end of the eighteenth century, when we were self-supporting in the matter of wheat, our Government of the day, being at war with France, contended that food imported into that country was contraband of war. Our own precedents will be our own condemnation should hostile powers join in preventing the exportation of wheat to this country. Mr. Balfour contended that, so long as we have a Navy, it is sufficient for us to depend upon the ordinary operations of supply and demand.

He ignored the fact that during the great war with France the average price of wheat in this country was in 1800 113s. 10d., in 1801 119s. 6d., and in 1812 126s. 6d. per quarter; and that when the Crimean War commenced, in 1854, the average price of wheat for September was 56s. 7d. per quarter. In the month of November following it had advanced to 71s. 6d per quarter. It then rose in January, 1855, to 72s. 8d., and in the closing period of that year the price was above 80s. per quarter. In March, 1856, the treaty of peace was signed, and wheat fell to 68s. 11d. per quarter for that month.

At that period of our history we were almost self-supporting in the matter of wheat, and during the whole of the Crimean War there was no deficiency in our wheat crops per acre; in fact, they were better than that of 1853, when the average price was 53s. 3d. per quarter. If he had considered these facts he never could have stated that, although at the outbreak of war the price of corn would rise, the panic prices would not last very long.

He dismissed the statement that certain countries might prohibit the exportation of wheat during the war, and suggested that such action would fall heavier on Germany, Italy, and France. Apparently it has escaped his notice that the United Kingdom imports about half of the total amount of wheat exported, and other parts of Europe consume most of the remainder. The United States and Russia in an average year export about two-thirds of the wheat that wheat-importing countries require; the Russian wheat chiefly going to various parts of Europe.

Mr. Balfour's statement that the wheat imported from Russia was small was misleading. His statement that India, Canada, and the Argentina were our principal sources of supply after the United States, was also misleading, as India during recent years has not been a large exporter of wheat. During 1900 we only imported 6,100 cwt. of wheat from India. Surely it is high time for our statesmen to make themselves better acquainted with the real facts of our food supplies in time of war.—Faithfully yours,

Thomas G. Read.

8, Holles Street,
Cavendish Square, London, W.
January 30th, 1902.

Mare Eating Bedding.

Sir,—I have a big, powerful cart horse. She "handious" and eats her bedding and the timber, and is quite sick. Please could you tell me what to treat her with? I was be very glad, because she's off her meat several times. I think she has a sluggish liver.—J. B.

[There is one word in your letter, which may or may not have an important bearing on the question as a whole, which we cannot make out, or of which we do not know the meaning. It looks like "handious." What does "handious" mean? The remainder is a trifle obscure, but it is gathered generally that this cart "horse" eats her bedding, gnaws the wooden stable fittings, and behaves as though suffering from indigestion, although you think she has a sluggish liver. Obviously, the first step is to prevent the further consumption of the bedding, by providing some material which she will not eat. The consumption of any quantity of bedding material, even when it consists of sweet, clean, wheat straw, is always bad for the digestion, and incidentally for the "wind." It should be changed for moss-litter or sawdust, which even the greediest of feeders will not eat, or if there exists the morbid appetite that is sometimes associated with dyspepsia, a muzzle should be put on when the corn and hay have been consumed. The destruction of the woodwork of the manger or stall divisions should also be stopped. Biting of soft and unseasoned timber, used in stable fittings is often the beginning of crib-biting, to which habit it is not unlikely your animal is a victim. Iron manger fittings and hard wood stall divisions are best, as offering less temptation to the use of the teeth. If you have no other way out of the difficulty, there is still the muzzle, as suggested for preventing the eating of the bedding; but some horses do not "do" well when always condemned to wear a muzzle, and the plan has many drawbacks. Then comes the question of exactly what is wrong with the "horse." Is it stomach or liver? We cannot very well, on the strength of the knowledge of the case to be derived from your description, venture to prescribe medicine; but if you will be good enough to attempt an amended account of the symptoms, defining "handious," and stating what indications there are of liver derangement or improper performance of its function, we shall be pleased to try to help you.—M. R. C. V. S.]

Some Matters of Interest to the Trade.

Trade in flour has been very dull during the past two or three weeks, and prices have declined 6d. since these notes last appeared. That, however, did not bring business to millers, and as bakers are by no means well stocked it seems clear that they are waiting for a further drop. Offals of all kinds still continue to go off well; in fact, millers cannot make them fast enough, which is accentuated, as there is only a very quiet demand for flour. Prices, too, keep up, and if the present spell of colder, damp weather continues they will no doubt further appreciate. Bran appears to be in most demand, and it is very evident that a fair quantity of this product now goes out of the country. English wheat seems to have been in better supply upon the markets, but some of it has been received at the mills in anything but prime milling condition.

Local Associations.

Judging by the agenda of the recent Council meeting of the Millers' National Association which was published in the trade Press, matters are becoming a little more eventful. There seems to be a wish on the part of the association to establish local associations in different parts of the country where they do not at present exist, and to affiliate them with headquarters when in working order. This can only be regarded as a step in the right direction, for if the members of the trade could only be induced to agree and to do business on certain fixed lines it would be better for every individual among them. Hitherto there has been too much jealousy and unloyalty amongst millers, which has tended to lower prices and place the trade upon an unsatisfactory basis. The writer does not believe in association with the object of raising prices, but the latter should be such as will secure a fair return on the capital invested. That this has not been the case, owing to competition and cutting, is well known, and yet the evils go on unchecked.

Many of the larger mills have greatly increased their output in order to cheapen the cost of manufacture, with the consequence that more flour is made than can be disposed of within reasonable distances of the mills. The natural consequence is, that it must be sent to different parts of the country, where it goes into competition with the flour of local makers. But what is gained in lessening the cost of manufacture is partly or wholly lost by selling under cost price.

Where does the Advantage Come in?

There seems a wish on the part of many millers for closer union just now, and for this reason the National Association may be successful to some extent in the efforts it is making at the present time. The break-up of the North-Eastern Association was a great blow to association work, but it would never have taken place if every one of its members had been perfectly loyal to all the others. It is "never too late to mend," however, and it is to be hoped that the competition and cutting which resulted from the break-up will have taught many serious lessons. Almost every other trade and profession can form a basis of agreement; why not millers?

Other matters of interest which are being considered at the present time are those of dirt in wheat, the better education of young millers, the improvement in the quality of English wheat, and the question of a tax on imported wheat. As to the first-named, the principal trouble is with wheat from South Russia, with which screenings and other rubbish are

Deliberately Mixed b Shippers.

Besides screenings, these wheats contain stone, dirt, barley (often in large quantity), oats, rye, seeds, smut, and impurities of almost every conceivable kind. The London Corn Trade Association have been approached by the Millers' Association upon several occasions, and although concessions have been made, much more is expected. Hence the present movement.

As everyone knows, technical and commercial education is very much neglected in this country in comparison with others. This is no doubt one of the reasons why German and other nations have been able to secure such a considerable portion of the world's trade of recent years. Every workman should thoroughly understand why he does such and such things; in short, should understand the principles which underlie his trade, so that, if necessary, he may be able to adapt himself to a totally different set of circumstances. It is to be feared that in the past a great deal of cold water has been thrown on technical education; hence, when an important body like the Millers' Association take up the subject in earnest, there seems more hope than ever before.

In regard to English wheat, millers complain of want of strength, and compare some of the starchy sorts now grown very unfavourably with the old types in favour in this country. But the characteristics of any kind of wheat depend

More upon Climate and Soil than upon Seed.

Some samples of English wheat are as different to others as "chalk is to cheese." If by any means stronger wheats can be grown without affecting the yield, by all means let us have them to mill. An improved system of farming and the use of artificial manures might do something to reach the desired goal; experiments can therefore always be made with advantage. But, knowing something of farming as well as of milling, the writer is very doubtful if much good can be effected. Possibly the port millers are not very anxious to see a change, as if fairly strong wheats could be grown in this country and in greater quantity, the inland millers would at once become formidable rivals.

In regard to taxing foreign wheat on its arrival into this country, the interests of farmers and millers are somewhat opposed. A tax would no doubt lead to some little advantage for the former, but it would seriously hamper the latter, unless an equivalent duty were put upon imported flour. If any tax is imposed at all, the writer is of opinion that it should be placed upon the manufactured article in all cases, and not upon the raw material. In the case of wheat, there is the advantage, too, that the offals from its reduction are secured as foodstuffs for cattle in this country.

MILLER-FARMER.

Agricultural Imports.

The following is an account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week ended Jan. 25, 1902, together with the quantities imported in the corresponding week of the previous year:—

* Not shown in 1901.

At Woolwich Police Court on Wednesday Young Avery, a provision dealer, of Green's End, Woolwich, and John Swayne, his assistant, were each fined five pounds, with two guineas costs, for a breach of the Merchandise Marks Act, by selling as Irish a ham which was really what was known as a short cut American. It was stated that the ham was of poor quality, costing fifty shillings per cwt, and that the defendants sold it to a Mrs. Cable at the rate of eightpence-halfpenny per pound.

GARDEN.

A first batch of potatoes of any good early variety may be got in very shortly now, if not at once, on some very warm and sheltered border at the foot of a south wall or close fence, and which receives the benefit of every ray of sun, while screened from the chilling influence of north or east winds. In most gardens of any extent there is at least one such "early border"; but in default of anything of the kind, one should, if possible, be arranged, even though a wall has to be built, or a fence put up, for the purpose.

For very early potatoes the soil should be light, rich, and mellow. A lot of rank manure is unnecessary, and even injurious; but by adding moderate quantities of old hot-bed material, leaf-mould, burnt earth (or the products of a smother fire), and if the soil is naturally heavy, some road-scrapings as well, a beautifully friable and mellow, as well as fertile staple can soon be obtained. If such a bed or border is raised a foot or so above the general level, and rather more at the back, so as to slope gently towards the south, and so catch the sun more fully, so much the better, as it will be drier in wet weather and nearly always warmer.

Have the required number of sets ready sprouted in shallow boxes, and when planting these should be carried out on to the ground, and the sets transferred directly from them to the trenches, so as to avoid the risk of breaking any of the "spears" as far as possible. Select a warm, sunny day for planting, and open the trenches or drills (running north and south, of course) in the morning, letting them remain and get warm in the sun, planting and covering in the sets during the afternoon, before the sun goes off the ground. Of course, these early plantings are made rather more closely than usual, but do not crowd the plants or sets too much, a space of about 2 ft. from row to row, and 10 in. between the sets being quite close enough.

See that a good sowing of peas is made while the fine weather lasts, and look well after any early-sown rows that may be already up. Sow a few rows of broad beans in a rather sheltered spot at once.

A first sowing of onions and parsnips may be made in the open ground very shortly, weather permitting, so get the beds ready. Plant a small, sheltered bed with shallots, and in the south of England the underground or potato onion is usually planted about this time. Finish planting autumn-sown onions and lettuce, and get some of the best cauliflowers out as soon as possible—these on a very sheltered border. Sow in frames, with a gentle bottom heat, horn carrots, radishes, and a few turnips. A small bed of leeks should also be sown for an early crop.

Under glass the early-sown tomato plants should be pricked off singly, as soon as they are a full inch or so in height, with one pair of proper or "rough" leaves apiece. If sown thinly, they may stand a little longer, and then be transferred singly to small pots—2 inches or 2½ inches—but in either case keep them warm and moderately close for about a fortnight afterwards. There is still time to sow seed of tomatoes, but for planting outside the last week in the month will be soon enough.

Peaches under glass, where started last month, with a moderate degree of artificial heat, will be in bloom by this time, or nearly so. These quickly respond to very slight forcing at this season, being of a naturally precocious character, and when in full flower, a well-grown peach tree affords a pretty sight. While in bloom keep the atmosphere of the house moderately dry, no syringing being allowed, and also admit air rather freely, but take care that the roots does not want for moisture. At this early season it is usually necessary to fertilise the blossoms artificially, so whenever the sun shines for even a few minutes about the middle of the day, or between, say, 11 a.m. and 2 p.m., take the camel-hair brush or rabbit's-tail and distribute the pollen from flower to flower. If at all numerous, however, do not fertilise all the blossoms, but only those that are in the best positions, and appear strong and healthy.

As soon as the vines in the early house have fairly "broken," rub off all but the strongest or best placed one on each spur, though if the spurs are very wide apart, or the vines not very vigorous, two may be left, at least for a time. Pinch out the points of these remaining growths as soon as the trusses of bloom become prominent, and then proceed to tie them down to the wires, or trellis, but very carefully and gradually, for fear of breakage.

Beyond preparing beds or borders for planting hardy herbaceous plants, carnations, etc., presently, and perhaps sowing a few more annuals, there is not much to be done outside yet. A few climbing roses on warm walls may be pruned for early blooming, but it is decidedly too early for the general stock yet.

Indoors continue to insert cuttings of pelargoniums (geraniums) of all kinds, striking them in sandy soil and a rather dry heat. Sow a box or two of ten-week stocks, also lobelias, petunias, cannas, and others, in heat.

B. C. R.

Carmarthen.

We have had very changeable and all sorts of weather during December and January Hard frost for two or three days, then high winds and quite a tempest, with a great thickness of mist, and the barometer has been flying up and down at a great rate; then a few days of very mild, growing weather Primroses, verbenas, and snowdrops are to be seen in sheltered places, and the prognostigators for a very hard winter have made a great mistake and are quite out of it. We have not had one day's skating for a long time, fields are looking green, and cattle and sheep get good pickings during the day, which is a great save, as hay and straw are very scarce, and if we had a hard winter would have been very dear. Farmers are able to get on well with our work. We have an old proverb in Wales, "When we have a green winter we have a brown churchyard," and we find it so. We hear of many deaths. The wet, muggy, misty weather has taken many away to the great majority. But it is early yet; January is not quite out, and to-day is cold and frosty. We may have hard, cold weather again in February, March, and April, when we will want fine; mild, growing weather; but let us hope for the best, for everything is now looking favourable, with the great prospects of peace and the respite from that horrid war which has cost us so many valuable lives and a mint of money. Winter keep is now likely to be sufficient, which is a great save. The prices of cattle and sheep are looking up, and fat pigs are selling at good prices (11s. per score). Our lambing season has not commenced yet.—D. P. (Jan. 30).

Gloucester (North-West).

January began with floods, which have been favourable to everything on the farm, enabling cattle and store sheep to get most of their keep on the pastures, and there has been no waste from mud in the sheep pens, thus relieving some of the anxiety felt at the beginning of winter by the scanty crops of hay and swedes. Work is well forward; the land being so dry, it is mostly ploughed up to the hurdles. A few fields have been planted to peas and beans in the best possible condition, the frost we had making the land work well and giving a seasonable check to the autumn-planted crops, which generally look strong and vigorous. Looking to the future, however, perhaps more rain is wanted, as many springs dried last summer are not yet started, and when ploughing deep there is very little moisture in the subsoil.

Ewes are lambing down well, with a good percentage of twins, and as usual when roots are scarce the lambs come strong and healthy. Although workmen are scarce, the question of labour is not so acute as it was last year. We are learning to do with less, but anyone going about the country must notice the lack of neatness that used to be so characteristic of an English farm. To-day we are having a very rough cutting wind from the north-east, which may soon alter the agricultural outlook.

J. H. W. (Jan. 31.)

Middlesex.

Season very mild, with a nip of frost, which will do good, and will be much appreciated by people generally who have the winter's work to do, and which is all behind. Season's prospects, however, are good, and spring may even yet be early. All is promising for next year's crops.—F. K. (Jan. 29).

Wilts (North).

The present winter, with the exception of some short spells of severe frost, has on the whole been favourable as regards the consumption of provender, and as this district is somewhat better provided with hay than many others, the trade in that article has been brisk, and much has been sold, as the prices now make that plan the most profitable. The last few winters have been so dry that drainage, usually so useful in this region, has not been of the same value as in ordinary season, a good deal of the pasture land in North Wilts being on the Oxford clay, where the subsoil is of a tenacious character. Cattle have done well this winter with limited rations; at least those in the fields. Beef and mutton continue at about the same prices, and trade is fairly brisk as well as for store and dairy cattle. Large quantities of feeding stuffs are used to keep up the liberal supply of milk now required in the winter months.—W. F. P. (Jan. 31).

Salop.

The weather keeps very wintery, frosty, and cold. Barometer at the extreme height. Sheep healthy and strong, the lambs running and playing.—J. G. (Jan. 31).

Somerset (West).

Considerable rain has fallen within the last few days, still we are far short of our usual quantity and water storage is very low. Although extremes have not been experienced, the character of the season has been sudden and unexpected changes. Autumn-sown crops generally look well, but complaints are heard of wheat losing plant on the lghter lands. Although there are good reserves of mangel, swedes are being eaten off very fast, as they did not bulk as in some previous seasons; hay and straw will require care and economy to make them last until the grass comes, although there were fair surplusses left over from last year. As regards prices the season has been disappointing. Each of the chief products of the farm in turn having to be sold at less than previous years, with no corresponding advantage in purchases, or margin of profit to meet the case. Dorset horses, ewes, and lambs have had a successful time, and are looking better than for some years past; whilst other flocks are now lambing, and I hear of no complaints.—S. K. (Jan. 29).

Foreign Prospects.

FRANCE.—Weather has turned colder, to the satisfaction of farmers, and the wheat crop maintains a favourable appearance.

BELGIUM.—Colder weather may have produced a firmer market, but the crops have not suffered. Yesterday, at Antwerp, a fair amount of business went through at firm prices.

HOLLAND.—Crop conditions are mainly favourable—Rotterdam early in the week had a better tone, but subsequently became easier on American advices and freer offers.

SPAIN.—Very severe weather in many provinces has caused some detriment to autumn-sown crops and prevented the development of spring sowing.

GERMANY.—Mild weather continues, and although snow fell in the night it did not lie long on the ground. Crop prospects are regarded as favourable, and it is hoped that the time for sharp frosts is passing away.

RUSSIA.—There appears to have been some exaggeration in the report of the prevalence of severe weather in all parts of the Empire at this side of the Ural range. In the north-east the temperature last week was 9 degrees below the normal, whereas in south-west governments it was several degrees above the season's average. Rain has fallen in north-west, centre, and east, and the area under snow is relatively small. Few complaints of crop damage are heard, and the work of spring sowing should soon be inaugurated.

HUNGARY.—The snowfall of last week has disappeared, and weather is mild. The crops appear to be all right.

BULGARIA.—Autumn-sown crops are doing well; there is an absence of snow, but the young plants are said to be strong enough to withstand the probable frosty weather.

ITALY.—On the whole the agricultural outlook continues good; the condition of the wheat crop is satisfactory.

UNITED STATES.—The *Cincinnati Price Current* says snow now covers the wheat crop. Some adverse reports have come to hand, but generally conditions are fair to good. The interior grain movemenf is light.—*Dornbusch.*

Scottish Chamber.

A meeting of directors of the Scottish Chamber of Agriculture will be held within the Board Room at 10, North St. David Street, Edinburgh, odn Wednesday next, the 5th inst, at 10.30 a.m., when the following business will be transacted:—(1.) Rural depopulation. Reply from Board of Agriculture. (2.) Sheep dips and insecticides, etc. Evidence before Poisons Committee of Privy Council. (3.) Sheep worrying—promised legislation. (4.) Sale of stock by live weight. (5.) Creameries in Scotland. (6.) Conference and annual reports. (7.) Admission of new members and any other competent business.

The Agent-General for South Australia has receieved a cable from his Government announcing that Mr. J. D. Towar, of Michigan, has been appointed Professor of Agriculture and Principal of the Agricultural College in South Australia.

THE WEATHER.

MONDAY (January 27th).—The weather was generally rather finer than on Sunday, although snow showers were again experienced in the east of England, and cold rain was reported at a few places in the west. Melted snow, sleet, or rain was measured in the morning over nearly the entire kingdom, as the result of the fall since the previous day, and the amounts were fairly large in the north and west. Frost occurred in all except the western districts on Sunday night, and in the north of Scotland the sheltered thermometer indicated twenty degrees of frost. The temperature scarcely rose above the freezing point throughout the day in the north of Scotland, while in the south of England the thermometer rose to nearly fifty degrees.

TUESDAY (January 28th).—The weather continued very unsettled in our islands, and a cyclonic disturbance had its centre over the south of Scotland. Cold showers fell in the western and southern portions of the kingdom, and snow fell over nearly the whole of Scotland. Melted snow or rain was measured in the morning over the entire country, as the result of the fall since the preceding day, and the fall was rather heavy in the west. The winds were north and north-east in Scotland, but were chiefly westerly elsewhere, and a gale was blowing at the entrance of the English Channel. Temperature was higher in Scotland than on Monday, but elsewhere it had fallen and was in fair agreement with the average. The day was fine in London, and the mid-day temperature rose to forty-seven degrees, which is about five degrees above the average.

WEDNESDAY (January 29th).—A very decided alteration in the distribution of atmospheric pressure was in the morning found to have taken place over the United Kingdom. Tuesday's deep disturbance had in the night travelled across the North Sea, and its centre was now making for the Baltic. In its rear the barometer rose at a great rate over the whole of our islands. The northerly to north-westerly wind had spread to all parts, but in Scotland and the north of Ireland it was once more backing westerly. Fair to fine bright weather was extensively prevalent, but snow showers were falling in the Hebrides, hail at Holyhead, and rain at Malin Head, while a thunderstorm had visited Jersey.

THURSDAY (January 30th).—The weather was cold over our islands, although rather less so in the west than elsewhere. A large area of high barometer readings embraced the whole kingdom, and the mercury was still generally rising. The wind has decreased in strength, and continues for the most part from the northward. Small amounts of melted snow and cold rain were measured in the morning, as the result of the fall since the previous day, but the weather during the day was nearly everywhere dry. Frost occurred over nearly the entire country during Wednesday night, and in Scotland the cold was severe. The mid-day temperatures were again low for the time of year, but they were highest in Ireland, where a slight south-west wind ha dset in.

FRIDAY (January 31st).—A keen north-east wind was blowing over our islands, and a moderate gale was reported in the English Channel, and on our east coasts. A large anti-cyclone occupied the whole of the United Kingdom, and the barometer readings were exceptionally high in Scotland and in Scandinavia, the mercury in places exceeding thirty-one inches. Melted snow was measured in the morning, as the result of the fall in the preceding twenty-four hours, in the East of England, as well as in the Shetlands and Hebrides. Sharp frost occurred in many places during Thursday night, and at Nairn the thermometer in the screen fell twenty-four degrees below the freezing point. The day temperatures were below the average over the whole country.

SATURDAY AND SUNDAY (February 1st and 2nd).—A north-east gale was blowing at many places on our coasts during these two days, and the weather was generally very wintry. There was a very keen frost on Saturday morning in Scotland, and in most parts of our Islands the temperature had fallen to the freezing point, but the sensation of cold was greatly increased over England by the very strong north-east wind which blew. The barometer was still generally high, and in Scotland the mercury stood at thirty-one inches, although it was everywhere decreasing. Snow fell at times in the south-east of England on Sunday, but the amount when melted was scarcely appreciable, and the weather in other parts of the kingdom continued dry. In London the thermometer on Saturday rose to thirty-nine degrees, while the highest reading on Sunday was lower by six degrees.

Anniversary Meeting of the Royal Society.—The sixty-third anniversary meeting of the governors and members of the Royal Agricultural Society will be held at the Society's House, 13, Hanover Square, on Thursday, May 22nd, at noon, when the half-yearly report of the Council will be read, and the election of the president, trustees, and vice-presidents, and twenty-five members of the Council will take place.

CORN MARKETS.

LONDON

Mark Lane, Wednesday.—Notwithstanding a touch of sharp weather, the markets failed to be influenced to any extent, both attendance and business being limited since noon. Home-grown wheat offers at last week's decline, while town millers continue in the same indifferent mood, and nearly everything goes to local resorts. Whites range at about 29s to 30s 6d, and good reds quoted at 29s 3d per qr delivered. A better feeling prevailed respecting American descriptions, 31s ex ship being secured for No. 1 Northern Manitoba, and 30s for No. 2 ex ship. No. 1 Northern Duluth, 31s 6d ex quay. Hard Kansas, 30s 3d ex ship, 30s 9d ex quay. Californian, 30s 6d to 31s. Flour steady, although business was of only a retail character. The London Millers' Association kept their quotations at last Monday's reduction. Grinding barley remains easy. Crimean, 18s ex ship; Danubian, 17s 6d; English malting maintained, while supplies continue to grow less, fine more especially. Oats, if anything, the turn better, with, however, no actual alteration in prices. American none. New Zealand ordinary bluff, 25s. 26s, 384lb ex store. English fully in holders' favour, and still scarce. Garton's, 23s 6d, Spring-sown, 42lb; black winters, weighing the same, 24s to 24s 6d; grey winters, 23s to 24s, 42lb. Scotch oats, 23s to 23s 6d, 42lb. Flat maize remains out of offer and nominal. Round corn unchanged. Holders of beans and peas were keeping to former limits, apart from trade being at a standstill.

Mark Lane, Friday.—No relief was afforded to-day's market, the attendance of buyers being again kept down. Prices deviated but slightly, scarcely anything doing in English wheat. Whites range at about 29s to 30s 6d, and reds at 28s to 30s per qr delivered. Conditions show no improvement. Foreign descriptions unchanged, and arrivals off coast continue light. There is no feature whatever to report respecting the flour market. Arrivals of best-known brands during February are expected to be somewhat below requirements, while a good deal of the liberal supplies coming up of late have gone to complete old contracts. Town households, 23s; and whites, 26s per sack delivered to the baker. Top price town made 21s net. No. 1 households, 21s 6d cash, taken at the mill door. Whole meal, 172s per ton; and wheat germ meal, 117s 6d to 120s. Grinding barley steady at the recent decline. Crimean quoted at 18s ex ship. English malting remains in small compass, attention being still mainly devoted to suitable types. Of foreign, Ouchaks, 19s to 26s, 400lb. The better qualities of oats meet with fair attention. F.a.q. Libau, 17s 6d and over ex ship, 38lb; and 18s to 18s 6d ex quay. Danubian, ship to come up, 17s and 17s 6d ex quay, with 40lb Libau at 20s upwards ex quay. Konigsberg, 20s ex ship. English well maintained, being in small supply. Gartons, spring sown, 23s 6d, 42lb; black winters, weighing the same, 24s; and even finer types, 24s 6d; grey winters, 23s to 24s for ordinary to fine, 42lb. New Zealand ordinary bluff, 25s to 26s, 384lb ex store. American descriptions remain exhausted. Flat maize is now scarcely mentioned, while round corn is steady. Odessa, ex ship to come up. 21s 6d, and ex quay, 22s 3d. Plate, 24s ex quay. The market for imported beans and peas affords nothing fresh, holders being firm and supplies inadequate.

COUNTRY.

Ashford, Tuesday.—Wheat samples scarce, but prices unchanged. Malting barley dearer, but grinding a trifle cheaper. Some demand for superior lots of oats and barley for seed, the former commanding fancy prices. Quotations:—White wheat, 28s to 30s; red wheat, 27s to 29s; best malting barley, 32s; seconds malting barley, 27s to 28s; English grinding barley, 25s to 27s; foreign ditto, 20s to 22s.

Banbury, Thursday.—Wheat, red (new), 28s to 30s per qr. Small show of wheat at rather more money than last week.

Birmingham, Thursday.—A much improved attendance at this market, and trading more active in all departments. Values of both English and foreign wheat remain about unchanged on the week. Quotations:—English wheat 11s to 11s 3d per bag (186lb). In foreign wheats, Plates are offered at 29s 9d per qr (496lb) Sharpness; No. 1 hard Manitoba, 32s 9d at Bristol; No. 2 hard winter, 30s 6d at Bristol; Ghirka, 29s 9d at Sharpness. Maize is about 6d down on the week, Bessarabian offering at 22s per qr (480lb); Galatz-Foxanian, 21s 9d at Sharpness. Grinding barley is 6d per qr easier at 17s 9d per 400lb at Sharpness. English beans, 14s to 14s 6d per bag (196lb), and oats, 22s to 23s per qr (312lb) delivered Birmingham.

Braintree, Wednesday.—Red wheat, 27s to 28s 6d, and white, 29s to 30s per qr. A few samples of superior barley made up to 33s. A large quantity of clover seed on offer, but very little changed hands. Trade quiet in all lines. Peas and beans in demand.

Brighton, Thursday.—Barley 28s to 33s; grinding ditto, 21s to 22s; English oats, 21s to 23s; beans, 34s to 35s. Oats and barley firm at last week's prices. Wheat in good supply, and firm at late rates.

Bristol, Thursday.—A moderate trade has been doing since last week. At market the rates for both English and foreign wheat were unchanged. Maize and barley were each 3d lower. Oats unaltered. Quotations:—English wheat, 27s 6d to 28s 6d; American, 30s to 32s; grinding barley, 17s 9d to 18s 3d. Oats—Irish black, 19s 9d to 20s; American, 19s 9d to 20s 3d; maize, round, 21s 6d to 22s. Flour—Since last week a quietly steady tone has prevailed at prices practically unchanged. The demand for flour has been only moderate, and of a hand-to-mouth character; but there is a rather better feeling generally, and a more hopeful view is taken in the trade than has been the case for the past few weeks. Quotations:—English, 21s to 26s 6d; American bakers' grades, 18s to 20s; patents, 22s to 24s.

Bristol, Thursday.—There has been a moderate trade since our last. To-day English wheat was in fair supply at late rates. Foreign also unchanged. Maize and barley both 3d. lower. Oats unaltered. The demand for flour is small; bakers are, presumably, working down their stock.—GRACE BROTHERS.

Bury, Wednesday.—Wheat was in fair average supply; demand quiet at rather less money; reds and whites, 28s to 28s 6d per qr on the line. Barley—Trade much smaller, several buyers having ceased operations for the time, but the trade for all useful medium parcels is sound and healthy, at 29s to 33s per qr. Oats scarce and strong, at full prices; white, 21s to 24s; black, 19s 6d to 21s per qr. Maize unchanged on the week, at 24s per qr for new round; flat and old round nominal. Cotton cakes rather lower; linseed cakes firm, at £8 10s to £8 15s per ton. Bran unchanged, at £5 10s to £5 15s per ton.

Cambridge, Saturday.—Quietness has been the prevailing feature of all departments during the week. Supplies have been smaller, but dry winds have improved the condition. At this market to-day there was only a moderate supply of wheat. Trade was steady, at last week's rates. Red wheat, 27s to 28s; white, up to 29s per 504lb. Barley in small supply; malting quality firm, seed lots rather dearer. Beans dull. Oats quite as dear.

Canterbury, Saturday.—Wheat slow; barley in improved demand. Ruling prices:—White wheat, 28s to 31s; red, 27s to 30s; malting barley, 28s to 35s; grinding ditto, 23s to 24s; white oats, 20s to 24s; black, 19s to 22s; black winter oats, 22s to 23s; grey peas, 32s to 33s.

Carlisle, Saturday.—Fair supply of oats in our market to-day; good demand at late rates. New, 20s 6d to 22s 6d per 336lbs.—THOMAS ROBINSON.

Chester, Saturday.—There was little trade doing, and no changes took place in prices of English grain. Indian corn 3d per sack lower. Quotations:—Wheat, white and red, 4s 4d to 4s 6d per 75lb; malting barley, 3s 10d to 4s per 60lb; grinding barley, 3s 4d to 3s 6d per 64lb; beans, 5s 6d to 5s 8d per 80lb; oats (new) 2s 10d to 3s 1d; old, 3s 4d to 3s 6d per 46lb; Indian corn 12s 9d to 14s 3d per 240lb.

Chichester, Wednesday.—There was an average attendance for a byemarket day. Wheat was in moderate supply, and with a quiet trade price were unaltered. Feeding stuffs were firm. Flour unchanged.

Colchester, Saturday.—Wheat—Small supply; quiet trade at last week's prices. Beans, peas, and oats steady. —FRANCIS AND CO.

Croydon, Thursday.—White wheat, 29s to 31s; red ditto, 28s to 30s; malting barley, 28s to 36s; grinding, 22s to 24s; oats, 18s to 20s; beans, 31s to 33s; peas, 29s to 31s. Trade for wheat quiet at last week's prices; oats firm; beans and peas unaltered.

Faversham, Tuesday.—White wheat, 29s to 31s; brown ditto, 28s to 30s; malting barley, 28s to 35s; grinding ditto, 23s to 26s; black oats 21s to 23s; white ditto, 21s to 24s; beans, 34s to 38s; grey peas, 33s to 34s.

Glasgow, Wednesday.—The trade during the week has been dull, and prices the turn in buyers' favour. There was the usual attendance at our market to-day. Wheat and flour almost nothing doing to test values, with prices tending in buyers' favour. Indian corn scarce on spot, and price steady. Round maize slow at late rates. Grinding beans and Canadian pease are steady, but quiet trade. Home and foreign oats are dull, and prices nuominally unchanged. Barley steady, but quiet. Bran and thirds quiet, but unchanged. Oatmeal steady, but slow sale.—GIBSON AND CLARK.

Hull, Tuesday.—Linseed: The arrivals are 1,614qrs from Bombay, 2,220qrs Calcutta, 40qrs Harlingen, 1,750qrs Konigsberg, 750qrs Libau, 25qrs Rotterdam; total, 6,399qrs. A strong and advancing market. Calcutta, 56s spot, 49s 6d April-June. River Plate as high as 51s reported paid for "Gena" afloat; 49s 9d to 49s 6d later boats afloat; 49s the value December-January a large business done at the price for January-February. Cottonseed: The market has been steady, without much activity. Business done spot at £6 5s to £6 6s 3d, with still sellers at latter, and at which a little January changed hands, but holders now asking £6 7s 6d, whereat one or two sales made February-March, with further buyers at this price, and £6 8s 9d to £6 10s quoted. Oils: Exports for the week ending 21st January, 1902.—Linseed oil: 3 Germany, 3 Norway; total 6 tons. Cotton oil: 89 Belgium, 4 Egypt, 26 France, 114 Germany, 75 Holland, 1 Norway, 1 Sweden; total, 310 tons. The market is steady. Linseed oil: 28s 6d spot; 27s 9d February-April; 27s May-August. Cotton oil: 21s 10½d spot; 21s 10½d February-April; 22s 9d May-August. Crude: 20s 7½d spot; 20s 7½d February-April; 21s 4½d May-August. Rape oil: Jamba naked, 24s spot; 1st quality naked, 24s 6d spot. Oil seed cakes: Linseed cakes are 2s 6d to 5s per ton dearer on the week, and in short supply. Cotton cakes: Deliveries on contracts continue very large; fresh sales have fallen off somewhat, but are expected to rally very soon; prices 1s 3d per ton cheaper on the week.—KEIGHLEY MAXSTED AND CO.

Leeds, Tuesday.—It is difficult to understand the trade just now; Europe shows comparative firmness, only the option markets following America, but the latter country exhibits undoubted weakness, causing buyers to hold back, and prices for all descriptions of wheat must be quoted 3d per quarter lower on the week. Malting barley unchanged. Maize 3d lower. Beans and oats dull.—DUNNS AND CO.

Leeds, Friday.—Little doing in either English or foreign wheats, and no change from Tuesday's reduced prices, except an easier tendency. Beans, peas, oats, maize, barley, and flour barely maintain late rates.

Leicester, Saturday.—Good average attendance of buyers and dealers, with only moderate supplies of home-grown wheats; but trade ruled rather sluggish, only fine dry samples being in request, and quotations had an easier tendency. Red wheats, 28s to 29s; white wheats, 29s to 31s per 36 stones. Malting barley in poor request at 28s to 32s per 32 stones; grinding barley a slow trade. Beans steady. Fine oats firm at 23s to 25s per 26 stones.

Leith, Friday.—There is little change in the market since last report, and trade still continues quiet. Wheat unaltered. Scotch oats cheaper; foreign oats slow sale. Barley, Scotch, unchanged; foreign feeding, 21s; hard white peas, 37s 6d; beans, all varieties, 33s 6d to 34s; round maize, 23s to 24s; mille seed, 19s 6d. Mill offals:—Demand steady. Broad bran, 120s to 125s; medium bran, 100s to 102s 6d; sharps, 95s 6d to 97s 6d; parings, 105s to 107s 6d; cummings, 82s 6d to 87s 6d; dried grains, 100s; oat husks, 45s; meal seeds, 67s 6d, all sacks included. —WILLIAM MACLAY.

Lincoln, Friday.—A fair attendance at the Corn Exchange, and about an average show of grain. Wheat trade rather quiet, and prices about 6d per qr lower than last week. Not much doing in barley and oats, prices being slightly easier. Maize, beans, and peas were quoted at about last Friday's rates.

Lincoln, Friday.—Fair supply of English wheat, with steady trade at prices in buyers' favour. Barleys, a good supply and very firm in value. Oats poorly represented and made full money. Beans peas and maize firm.

Liverpool, Friday.—The market has had a good attendance, but wheat has had only a quiet trade generally at prices unchanged to ½d higher than Tuesday, the exception being Manitobas, which meet a very good inquiry. Flour—The demand for flour is small and mostly of a retail description; prices, however, are unchanged for American descriptions. Hungarian flour is again 1s dearer in consequence of the high prices ruling for milling wheat in Hungary. The Liverpool Millers' Association make no change in the minimum price of bakers'. Maize—Mixed moves slowly, and is ¼d down from last market day. European inferior sorts are in fair request, but prime qualities are quiet at about ½d under Tuesday. Plate steady, but quiet at unchanged prices. Barley—Malting very slow, prices in buyers' favour. Feeding shows some improvement in demand, but the turn lower to sell. Beans firm owing to scarcity, but quiet. Peas are steadily held, with a moderate inquiry at late rates. Oats have had only a small inquiry, and, although prices are unchanged, the tendency is easier. Foreign sorts are getting in smaller compass, and hold steady, with some inquiry.—SEGAR AND TUNNICLIFFE.

Maidstone, Thursday.—Steady trade in wheat to-day, and last week ? for it secured, but the tone not sufficiently strong to record a rise. Other grains ? fairly good, but buyers do not care to enhance stock, as they imagine room for a fall. Articles such as maize, hemp, rye, tares, &c., show no variation since last report of their status.

Manchester, Thursday.—Moderate attendance. Fair inquiry for English wheat, which sells at last week's prices to 3d per qr easier; foreign during the week declined 1d to 2d per cental, but recovered a good 1d. Maize quiet trade, about last week's prices for mixed; European 1d lower. Oats—Better demand for English and Irish sorts; foreign quiet, rather lower. Beans, peas, and barley unchanged. Flour slow, easy.

Newcastle-on-Tyne, Saturday.—Wheat met with a very slow demand here to-day, buyers having their own way where sales were made. Maltings easier and 6d per qr lower. Barley—Very little offering; fine parcels were picked up at last Saturday's prices. Beans and peas dull, but not quotably lower. Scotch oats favoured buyers; foreign unchanged.—JOSEPH POLLARD AND CO.

Newport, Wednesday.—Wheat was slow, and receded 6d from last week's prices. Maize was similarly cheaper. Barley, beans, and oats unchanged. Flour, fines, 22s 6d per sack.

Northampton, Saturday.—The same indifference which has been noticed in our corn markets continues, and the quotations to-day are not much different from the several past weeks; millers and farmers are alike indisposed to operate. White wheat, 27s to 29s; red, 26s to 28s; barley, 25s to 32s; grinding ditto, 22s to 24s; oats, 18s to 23s; old fine, 25s; beans, 32s to 40s; flour, 21s to 22s; fine, 24s.

Norwich, Saturday.—Wheat was in smaller supply at our market to-day, with a firm trade at late rates. There was only a small supply of barley offering, which changed hands at former terms. Wintery weather has prevailed during the past week, with snowstorms and sharp frosts. Wheat, red, 28s to 28s 6d per qr; weight, 63.bs per bushel imperial.—J. ARTHUR MILLS.

Nottingham, Saturday.—Wheat only in moderate supply. Millers tried to buy at 6d less, but only a small business resulted, holders being unwilling to make any concession. Barley a limited show, and full rates supported; but few oats and beans offering, and values maintained.—ROBERT HUBBLE.

Peterborough, Saturday.—There is not much change in the wheat trade, which keeps slow, but prices to-day were not quotably altered from last week. Only small business passing in barley, and seed parcels again rather dearer. Oats and beans firm.—THOMAS HILL AND SON.

Plymouth, Thursday.—Wheat unaltered. Maize rather easier. Barley and oats quiet, former rate. Small attendance.—ORLANDO DAVIS AND CO.

Reading, Saturday.—The Corn Exchange was very well attended to-day, and the amount of business transacted was rather larger than usual. The quantity of wheat on offer proved quite equal to the demand, and sales proceeded at late rates. Barley was in average supply, and changed hands readily, as did also oats, the prices realised in each case being unaltered from those of recent markets.

Ripon, Thursday.—The market has a brisker tone, more business being done. Farmers' wheat rather less money; bran firm. Wheat, English (new), 28s 6d to 29s 6d; ditto foreign, 29s to 33s; barley grinding, 22s 6d to 23s 6d; ditto malting, 26s to 31s; oats (new), 21s to 24s; round maize, 24s to 27s per qr; beans, 1s per stone.

Romford, Wednesday.—Wheat trade slow at 6d a qr. decline. Fair supply on offer. Red wheat, 27s 6d to 28s 6d; white, 28s to 30s per qr.

Rye, Tuesday.—Red wheat, 27s to 29s; white ditto, 27s 6d to 29s 6d; barley, 27s to 29s; tick beans, 35s to 38s; Mazagan ditto, 34s to 37s; long pods, 32s to 35s; grey peas, 35s to 38s; black oats, 19s to 26s; white ditto, 20s to 26s.

Sheffield, Tuesday.—Attendance small, and quiet trade. English and foreign wheat ruled 6d per qr lower. Full prices were obtained for beans and oats, which were firm. Quotations: Wheat, white, 30s to 31s; red, 36s 6d per 504lb; oats (new), white, 21s 6d to 22s 6d; new black, 20s to 21s per 336lb; barley, grinding, 22s to 23s; malting 28s to 32s per 448lb; peas, grinding, 32s to 34s; blue, 53s to 80s per 504lb; beans, Egyptian, 36s to 36s 6d; English (new), 37s to 37s 6d per 532lb; Indian corn (small), 25s to 26s; American mixed, 27s 6d to 28s per 480lb.

Spalding, Tuesday.—At the Corn Exchange wheats made 27s to 27s 6d per qr, trade being slow. Oats were a slow trade at 22s per qr, and not much showing. Beans 6d easier.

Stockton, Wednesday.—There was a small show of English wheat, and prices were about 6d easier. The trade in foreign wheat keeps very quiet, and to do business a reduction of 6d per qr upon last week had to be accepted. Maize 3d to 6d lower. Oats unchanged.

Sunderland, Saturday.—Little business passing at this day's market. Wheat lower to sell. Barley and oats rather easier. Arrivals coastwise:—Barley, 500 qrs; oats, 393 qrs; foreign nil.—E. AND F. RICHARDSON.

Wakefield, Friday.—There is a firm feeling in the small business passing on to-day's market in wheats, but only a small trade has been done. The supply of malting barley is quite sufficient to meet any inquiries, as maltsters are practically finished for the season. No alteration in feeding stuffs.—MICHAEL SANDERSON AND SON, LIMITED.

Wakefield, Friday.—Last week's depression has passed away, the trade having assumed a stronger and more confident tone, although the consumptive demand is still restricted. All descriptions of wheat may be called rather dearer to buy, but not to sell. Barley firm, but slow. Feeding stuffs unchanged.—MESSRS. DUNNS AND CO.

Wisbech, Saturday.—A limited supply of grain. Wheat 6d lower; prices, 27s to 28s. Oats firm, 21s to 24s. Barley, 26s to 29s. Beans, 34s to 38s.—JAMES FLETCHER.

Worcester, Saturday.—Quiet for all kinds of grain. English wheat moderately offered, and made last week's prices. Oats and beans firm, but barley showed an easier tendency. Wheat, white, 11s to 11s 6d; red, 10s to 10s 6d per bag.

Worksop, Wednesday.—Fair attendance, but small show of grain, with wheat a trifle easier. White wheat made from 28s to 29; red wheat, 26s to 28s; best malting barley, 29s to 32s; secondary qualities, 26s to 28s; grinding barley, 23s to 24s; white oats, 21s to 23s; black oats, 19s to 21s; maize, 27s to 28s per qr; fine sharps, £6 to £6 10s; barley meal, £6 16s 8d to £7; bran, £5 10s to £6 10s per ton.

York, Saturday.—Moderate show of wheat and other grain, but business was rather depressed, and in wheat prices were lower. Finest samples varied from 28s to 29s per 35 stones. Barley was very much neglected, the demand being only for medium samples. Finest barley, 29s to 30s; medium, 27s to 28s; common, 26s to 27s per 32 stones. Oats were more plentiful, but trade was quiet; black oats, 20s to 21s; short white, 21s to 22s per 24 stones. No change in feeding stuffs.

FOREIGN.

Hamburg, Saturday.—There is a better tone in the market, and prices are hardening. Offers of American wheat are now nearer the mark for importation. The imports during the week amounted to:—10,532 tons wheat, 2,162 tons rye, 5,757 tons barley, 1,460 tons maize. American hard winter wheat No. 2 is selling at 29s 1d. March shipment is held at 29s 3d. No. 2 Northern spring

at 28s 9d. Fine South Russian at 28s 6d to 29s 6d per 480lb. Walla-Walla, April-May, June delivery here at 29s 9d per 500lb. Austria is buying here Russian and American wheats. Rye quiet, 9⅓. South Russian, Feb.-March, is offering at 22s 9d, F0-F1 ko.; Danubian floating at 21s 9d per 480lb. There is some demand for good Bohemian barley to arrive per barge at 30s 3d. Good Silesian and Polish has been taken by our brewers at 26s 6d to 29s 6d. Moravian and Slovakian is held at 32s to 35s per 448lb. Stocks in the Saal district are about cleared; offers are getting very scarce. South Russian feeding barley is selling at 17s 6d to 18s c.i.f. Hamburg. Mixed maize is held at 24s 6d; there is a fair demand for sound Odessa and Turkish at 22s 3d to 22s 9d per 480lb; Danubian, offered at 21s 9d, is not in favour.—JOHN TATLOCK.

Paris, Wednesday.—Transactions in native wheat have again been only of very little importance, in spite of more liberal offers on farmers' part. Lower prices are slowly beginning to be taken, but in a progressive manner, and the occasion for them may be found in the poor sale of flour, the favourable condition of our growing crop, the reserves in the Western departments, and finaly the weaker position of the foreign markets. Millers in the immediate environs still purchase very sparingly, and the larger millers restrict their output. Sellers are compelled in order to do business to grant a concession of about 6d per qr. on last week's rates. Choice red is now quoted 37s 10d; ordinary, 36s 6d to 36s 11d, and white, 37s 10d to 38s 3d per 480lb. The flour market was supported at the opening, and closed with a slight advance at the following prices:—January, 27s 11d to 28s 2d; February, 27s 11d to 28s 2d; March-April, 28s 5d to 28s 8d; March-June, 28s 8d to 28s 11d, and May-August, 29s 2d to 29s 5d per 280lbs. The tone is still inactive, and prices for rye remain unchanged, with a weaker tendency, although offers are scarce in all directions. Here, prices were nominally unaltered, with, however, a few more selers; buyers offered 27s, but no sellers under 27s 5d per 480lb. Oats are quiet but well supported. Offers present a certain importance, and it is thought they will be maintained on the present footing until the end of February, and then will increase or diminish in March and April, according to the more or less favourable weather for the crop. Here transactions were still inactive, holders asking prices which buyers could not grant. Quotations are as follow:—Grey Beauce, 24s 8d to 24s 11d; white, 23s 9d to 24s 1d; red 23s 9d to 24s 1d; black from the central provinces, 25s 3d; small Picardy, 25s 3d to 25s 6d. Although the demand for barley remains restricted, prices are well supported in all directions. The demand is satisfactory in Auvergne, and trade, if not very brisk, is still pretty regular. Here the tendency was firm for grinding and feeding corn, but unaltered for malting sorts, which were quoted 17f.50 (25s 4d) for choice, and 17f.25 (25s) for good. Grinding 16f.50 to 16f.75 (23s 11d to 24s 3d), and feeding 15f.50 to 16f. per 100 kilos (22s 6d to 23s 3d per 400lb).—*Dornbusch.*

WOOL.

Canterbury, Saturday.—Kent fleeces realised 5½d, with an occasional 6d for special quality. Lamb wool, 4d per lb.

Glasgow and Leith.—There is not much of interest to report in Scotch wools throughout the past month. The improved tone of business in the southern markets during the month, and especially latterly at the London sales, has not had much effect here yet. At the public sales in Leith on 28th and Glasgow on 29th, the attendance of buyers was small, and biddings were slow. In whitefaced wools good half-breds commanded some attention at pretty firm rates, and the finer lots of this quality, and also of cheviots, are now well cleared out. There is less demand for ordinary quality parcels, of which a fair quantity is still available. Blackfaced is being shipped to America to a certain extent, but the home trade still continues comparatively indifferent. Stocks are low and are firmly held.—J. AND W. GREIG.

Liverpool, Wednesday.—The first series of periodical wool auctions for this year began on the 21st instant. East India being catalogued on that an the two following days, sundry combing descriptions on the 24 h instant, and clothing sorts to-day. The arrivals of East India reached 10,350 bales, so that with 2,550 bales left out of the 2,790 bales taken in at the November sales, and a few second-hand parcels, 13,237 bales were catalogued and nearly 11,000 bales sold, the home trade taking 7,000 bales, the Continent 1,500 bales, and America 2,500 bales. There was a pretty fair number of home buyers, the usual few from the Continent, and America wanted moderate quantities both of the better as well as low duty sorts. The selection comprised some nice useful parcels, but included a good proportion of wasty, common sorts, also a large offering of Bussorah Persians, Native Skin, Goat Hair, etc. Competition was more or less quiet throughout, and compared with November currency, the fluctuations are unimportant. White Joria, Vicanere, and Kandahar are practically unchanged; good yellows, suitable for the French trade, ruled a shade easier, sometimes amounting to ¼d per lb.; medium whites, yellows, and greys, in fair condition, were steady, but dirty lots, as well as native skin and goat hair, sold irregularly, and often favoured buyers, whilst all ginned, and greasy Bussorah, declined ¼d. to ½d. per lb. There was only a moderate attendance to-day, and with quiet competition, prices on the whole were very irregular, compared with November sale rates. We quote the few offers made for Peruvians ¼d to ½d per lb. lower, while unwashed Chili and washed and greasy Morocco fetched ¼d per lb. advance, Spanish and River Plate skin being in slight request at previous figures.—RONALD AND RODGER.

THE BALTIC.

Wheat cargoes have been firmly held, and there is a slight increase in the inquiry. Sales have included Californian at 30s. 6d., Blue Stem at 29s. 9d., Walla Walla at 29s., Russian Winter at 30s. 6d., Russian Spring at 30s. 3d., Australian at 30s. 3d., Argentine at 30s., No. 1 Hard Manitoba at 30s. 9d., No. 1 Northern Duluth at 29s. 6d., No. 1 Northern Manitoba at 29s. 6d., No. 2 Manitoba at 28s. 3d., White Kurrachee at 29s. 3d., and Red at 29s. per qr.

Maize is hardening for Russian Roumanian, but Argentine for May and June shipment is pressed on sale by speculators at a low price, and a good deal of it is being taken up; in fact, it ought, on all present showing, to be a "very good thing," and 21s. 9d. has been paid for ex or term cargoes for June shipment, 22s. for two for May. The price paid for a Caucasian cargo now loading at Poti was 23s. on Thursday, but 22s. 9d. was accepted on Saturday for another cargo to sail not later than February 28th. No American has recently sold at the high prices established on the 27th ult.

Barley has fetched 24s. 6d. for Californian, 18s. 9d. for Odessa, and 18s. 3d. for Kustendje. Oats have made 17s. 9d. for Libau, 20s. for Konigsberg, and 22s. 9d. for Black Swedish; and beans have realised 29s. 6d. for new crop Egyptian, April shipment.

Oil seeds have been in fair request. Linseed has made 50s. for Argentine on passage, rapeseed 39s. for brown Cawnpore on passage, and cottonseed £6 7s. 6d. for Egyptian for February shipment.

Three wheat cargoes arrived at ports of call last week, making 16 during January, against 13 in January, 1901.

MANURES.

Liverpool, Friday.—Nitrate of soda maintains late advance, and best quality commands £10 5s per ton on the spot, but the demand is only quiet. Sulphate of ammonia is firm and comparatively better value to agriculturists than nitrate at their respective prices. A fair demand is experienced for East India bone meal and superphosphate of lime, and basic slag continues in active request, but the delays in deliveries are causing some little inconvenience to buyers. The trade in feeding stuffs is quiet, and in some instances values tend in buyers' favour, whilst English linseed cakes are slightly dearer. Current rates are as follow:—Nitrate of soda, best quality, i.e., guaranteed 95 per cent., pure, in bags, £10 5s to £10 7s 6d per ton; East India bone meal, fair to prime, in bags, £4 to £4 6s 3d; kainit, prime 23 per cent., in bags, £2 7s 6d to £2 10s; palm nut cake, prime, in bags, £5 12s 6d; linseed cake American thin oblong, prime, in bags, £7 11s 3d to £7 15s 0d; linseed cake, English, prime in bulk, £8 15s to £9; linseed cake foreign oblong prime, soft and oily, in bags, £8 5s; cottonseed cake, N.A. decorticated, prime, in bags, £7 2s 6d to £7 5s; cottonseed cake, English decorticated, prime, soft, in bags, £7 10s to £7 12s 6d; cottonseed cake, English undecorticated prime, in bulk, £4 15s to £5; cottonseed, crushed, 20 to 25 per cent. oil, prime, in bags, £7 5s; maize germ meal, prime, in bags, £6 2s 6d to £6 5s; rice meal, Rangoon, as imported, in bags, £5 10s per ton; Indian meal coarse to fine grinding, prime, in bulk, 13s to 13s 9d per 240lb; linseed, fine bold feeding, in bags, £3 3s to £3 6s per qr 416lb. D.N.S. brand, superphosphate of lime, guaranteed, 25 to 27 sol., in bags, £2 5s to £2 7s per ton; D.N.S. brand, superphosphate of lime, guaranteed, 30 to 31 sol., in bags, £2 10s to £2 12s per ton; D.N.S. brand, superphosphate of lime, guaranteed, 35 to 36 sol., in bags, £3 to £3 2s per ton; basic slag, prime quality, guaranteed, 30 to 35 per cent. phos., in bags, £1 12s to £1 13s per ton; basic slag, prime quality, guaranteed, 35 to 40 per cent. phos., in bags, £1 14s 6d to £1 15s 6d per ton; basic slag, finest qualities, guaranteed 38 to 45 per cent. phos., in bags, £1 17s 6d to £1 19s per ton. at the producing depots.—H. JONES LANGAR AND CO.

POTATOES.

Borough, Saturday.—The market was again well supplied, while heavy stocks still remain on hand, the general tone of the market being decidedly of a quiet character. Scotch Maincrops (Dunbars), 90s; Up-to-Dates ditto, 8s; Reading Giants Blacklands, 45s; Blackland Up-to-Dates, 45s to 50s; Lincoln Silts, 60s; and Gartons Blacklands, 40s to 45s per ton.

Goole, Wednesday.—There was a large attendance here to-day. Trade was quiet, and last week's prices were scarcely maintained. The Co-operative Company paid 5s 9d per load for all varieties. Best Up-to-dates made 54s per ton. Retail price, 6d per stone.

Spitalfields, Saturday.—Arrivals not quite as heavy, but proved more than adequate to buyers' requirements, and the market remained dull and prices weak. Quotations:—Best Lincoln Up-to-Dates, 55s to 65s; Blackland ditto, 45s; Wisbech ditto, 50s to 60s; Scotch ditto, 60s; Scotch Maincrops (grey soil), 70s; Lincoln Maincrops, 80s to 90s; Reading Giants, 45s; and Blackland Gartons, 45s per ton.

Review of the British Corn Trade

DURING THE PAST WEEK

Written exclusively for the Mark Lane Express.

January left the English wheat-fields forward, but in few parts *too* forward. During the last three days of the month a bitter wind kept back growth, and February has come in with winterly conditions prevalent. In France the rye and wheat are very advanced for the season, and the same applies to Italy and Spain. The snowfall in the East of Europe has been welcome, but no severe frost has yet been experienced, the Black Sea ports being open and the Danube very little impeded by ice.

Indian telegrams announce that there is now only little prospect of anything like an average wheat crop in either the Punjab or the North-West Provinces. The rest of India will not be able to make up the deficiency in these leading wheat regions. Indian shipments since the beginning of the shipping year, 1st August, have included 754,000 qrs. of wheat, and the months of February and March may raise the total to 800,000 qrs. But the old crop is nearly played out, and last week the shipments fell to 3,000 qrs. Argentina is not as yet shipping new wheat at all freely to Europe, as Brazil and Cape Colony bid a higher price. But full exports to Europe are expected before February is out.

The prospective arrivals of wheat and flour for the next three months are being discussed with interest, and it is generally thought that last year's moderate figures will not be exceeded. In that case the markets should advance. The arrivals from Pacific ports are likely to be 250,000 qrs. larger than last season, India may send us 46,000 qrs against nothing this time last year, Russia and Roumania should be good for an extra 50,000 qrs. and Turkey may send an extra 25,000 qrs. This gives us a total increase of 371,000 qrs. On the other hand, Argentina is not likely to ship more than half of last year's figures, Australia the same, and Hungary may diminish flour shipments by the equivalent of 50,000 qrs. The total diminution in breadstuffs at this rate will be 562,000 qrs. There remains the Atlantic, United States, with Canada, but of this region it may briefly be said that whereas none expect the increase to be more than about 250,000 qrs., many doubt if last season's figures will be more than just paralleled. On the whole, therefore, the situation is encouraging to wheat holders. The visible supply of wheat in America on February 1st is thus cabled:—

	Qrs.
1902	11,417,000
1901	10,927,000
1900	11,063,000

These figures include Canada and the United States, both seaboards.

Wheat supplies on passage on 1st February were estimated as follows:—

	Qrs.
Californian	2,000,000
American	400,000
Argentine	120,000
Russian	80,000
Indian	60,000
Australasian	350,000
Sundries	10,000
Total	3,020,000

The quantities of other staples on passage on 1st February were thus estimated:—

	1902. Qrs.	1901. Qrs.
Maize	635,000	780,000
Barley	735,000	390,000
Linseed	160,000	201,000
Rapeseed	9,000	1,000
	Tons.	Tons.
Cottonseed	41,000	26,000

The quantity of maize will be seen to be quite moderate, but that of barley is undeniably heavy. Of linseed the quantity is decidedly less than at this time last year, but increased prospective supplies of the other two oil seeds about balance the effect of the linseed returns.

The average price of household flour for January was 21s. 9d. per sack, against 24s. 6d. in 1901 and 21s. 9d. in 1900. The top price was 28s., against 30s. in 1901 and 28s. in 1900. Whites stand half way between the household and the top-price grades.

Last week's sales of English wheat were heavy, thanks mainly to which supply was in excess of demand for bread-stuffs as a whole.

	Qrs.
English wheat	186,000
Foreign wheat	279,300
Foreign flour	164,000
Total supply	629,300
Total wants	567,000
Surplus	62,000

The British visible supply of wheat on 1st February is thus estimated by *Beerbohm's List.*

	Qrs.
1st Feb., 1902	8,200,600
1st Feb., 1901	7,992,300
1st Feb., 1900	8,460,300

The general idea is that we are not so well off for stores as two years ago, but are a little better provisioned than we were last year.

Imports of maize last week were heavy, of oats a full average, of barley less than usual. But as we have already seen, the supplies of barley on passage are heavy, and the figures for the last week of January therefore represent a mere accidental lull.

The visible supply of maize in America is cabled as follows:—

	Qrs.
1st Feb., 1902	1,358,000
1st Feb., 1901	1,650,000
1st Feb., 1900	1,695,000

The price of mixed American maize in London is maintained, owing to genuine scarcity.

There is a decidedly improved sale for barley, especially for seed qualities and for the brighter samples. The country markets have been a trifle in advance of Mark Lane in this respect, but London looks like waking up for barley. There are buyers of best Norfolk and of finest Saale at 40s. There are enquiries for 448lb. on chak at 32s. to 34s., and there are fairly good sales of 448lb. Californian at 26s. to 28s. for fine, 24s. to 26s for fair average quality. A few samples of Danish have been making 27s. to 28s.; Yerli, 20s. to 22s., and New Zealand, 23s. to 29s. per qr. The Tripoli Barley newly to hand is, however, very poor stuff, and 18s. is the price that has had to be accepted. No change in Russian or Roumanian marked the last six days of January trade.

Oats are in somewhat better demand. Some business is being done for June shipment from the Baltic at 17s. 9d. per 304lb., which is not widely different from the spot price of light North Russian. Scarcely any American oats are obtainable.

There are a few buyers of Canadian peas at 37s., and of old dick beans at 42s., but for the most part the trade in pulse has lacked energy.

The linseed trade is decidedly strong, and more money has been obtained since the 29th ult. There is still a good inquiry at the rise. Cottonseed has fluctuated daily, but closed on Saturday afternoon weak. There is much complaint about the commoner makes of cotton cake, and the vendors of the unconverted article strongly support the idea of a Government standard for cake. The value of the oilseed itself is so unquestionable that the fullest tests are to be courted by its holders.

LONDON TERM MARKET.

This market is held twice a day, except on Saturday, when there is no afternoon call. The market is open to elected members only. No business except for future delivery is done, and the smallest quantity that can be purchased is 1,000 quarters, or 4,800 centals. The name of the month stands for guaranteed delivery (if required) on or before the last day of that month, and the following have been the prices per cental recently made:—

WHEAT.—Calls.	Jan. s. d.	March. s. d.	June. s. d.
Jan. 27 11 a.m.	6 2	6 3	6 3
4 p.m.	6 2	6 3	6 3
Jan 28 11 a.m.	6 2	6 3	6 3
4 p.m.	6 2	6 3	6 3
Jan. 29 11 a.m.	6 2	6 3	6 3
4 p.m.	6 2	6 3	6 3
Jan. 30 11 a.m.	6 2	6 3	6 3
4 p.m.	6 2	6 3	6 3
Jan. 31 11 a.m.	6 0	6 3	6 3
4 p.m.	6 0	6 3	6 3
Feb. 1 11 a.m.	6 0	6 3	6 3
To-day noon	—	6 3	6 4

The Term Market standard wheat is No. 1 Northern Spring American sold on the Duluth certificate. Other sorts of wheat can be bought at the above prices plus or minus agreed difference between the other sort and the standard quality. Quotations are by the "true hundredweight" or cental of 100 lb. We do not give fractions of a penny per cental. The maize quoted is fair average quality from the United States.

The deposit required from members of the Term Market has been fixed at £50 minimum and 1s. per quarter margin on any purchases above 1,000 quarters.

The Term Market (while the "Baltic" is rebuilding) is temporarily situated at the Great Eastern Hotel, No. 190, Bishopsgate Street, ground floor.

Wheat sales for future delivery during January amounted to 5,030,000 qrs.

Maize to-day was held at 4s. 7d. per cental for February and March, and at 4s. 9d. for April to

THIS DAY'S MARKETS

MARK LANE, MONDAY.

[FIRST REPORT.]

There was more doing at to-day's market, and the feeling among grain holders was not so depressed as at the January exchanges. A good demand for chicken and feeding wheat at 26s. to 28s. was experienced, while milling wheat of the home crop went off fairly briskly at 29s. to 30s. per 504 lb.; red, 30s. to 31s. per fine "fluff" white. Shortberry New Zealand was about the cheapest foreign sort, while old Duluth at 32s. 6d. to 33s. was about the dearest. Californian was offered at 31s., with buyers at 30s. 6d. per qr. The demand for Indian and Russian wheat was small, but supply being small also, value was fully supported. Crushed Odessa barley had a fair sale at 8s. per bag of 152 lb., while a guinea per qr. was paid for pure Danubian weighing 416 lb. There was an improved inquiry for samples fit for seed, and 40s. was not grudged for anything specially good. Beans and peas were more firmly held, owing to the severe weather. Tares were in good request. "Bluff" New Zealand oats made 25s. 6d., and all sorts of oats were firmer from the 27th ult. Maize was in improved request at previous rates, and the feeling in this branch of trade was more hopeful than at the close of January.

CLOSE OF THE MARKET.

By Telephone, 2 p.m.

THE RATHER HEAVY SNOWFALL DURING MARKET HOURS MADE THE CLOSE OF TRADE STRONG IN TONE; BUT IT REDUCED THE ATTENDANCE OF BUYERS.

THE FLOUR TRADE.

MARK LANE Monday

There was a stronger tone about the Exchange to-day, and the very finest of American oats were often held from 24s. 6d., a 6d. rise from the close of January. Choice Minnesota Patents came at 22s. 6d. per sack. Kansas flour seems to be all but unobtainable for future shipment, a fact which naturally tends to enhance spot values. Some cheap baking flour, at 17s., was taken up, while 14s. 9d. accepted for Red Dog also attracted buyers. If the wintry weather continues feeding flour is likely to appreciate in value. Country flour, with a free supply for the time of year, was no better on the week. A few fancy patents made 24s. per sack. Holders were firmer in tone, despite the slow sales.

London flour was in improved request at the 6d. decline allowed last week. The market for town households at 21s. 9d. to 22s. appeared to be hardening. Australian was dull, but firm. Hungarian was again the turn dearer. French continued neglected. The very wintry conditions prevailing caused some holders to ask a little more money towards the close, but the light was not good for the inspection of samples, and no very big business was done in any type.

THE BALTIC, 1 p.m.

STATE OF TRADE.

The market for wheat cargoes has opened with a fair amount of business doing at Saturday's best terms. Maize may be quoted 3d. dearer, and cottonseed cargoes are also a little in seller's favour, as compared with the weak close of the trade on Saturday.

BUSINESS DONE.

Flour.—Trade to-day has been quiet, but firm at last week's prices.—T. S. MEDILL AND SONS, Mark Lane.

WHEAT.—Californian, 30s 6d off coast; Californian, 30s 3d prompt shipment; Walla-Walla, 29s prompt shipment; No. 1 Northern Manitoba, 28s 6d prompt shipment; No. 1 Hard Manitoba, 30s 6d prompt shipment; Argentine, 30s prompt shipment; Australian, 30s 3d prompt shipment; Russian Winter, 30s 6d prompt shipment.

MAIZE.—Roumanian, 22s on passage; Galatz, 22s 6d on passage; American, 26s on passage; Argentine, 22s May shipment.

BARLEY.—Russian, 17s 9d on passage; Californian, 24s 3d on passage.

OATS.—Konigsberg, 20s prompt shipment; Roumanian, 18s prompt shipment.

TARES.—Syrian, 23s 6d prompt shipment.

PEAS.—Canadian, 36s 3d arrived.

DARI.—Smyrna, 23s prompt shipment.

LINSEED.—Morocco, 58s arrived.

HOPS.

Borough, Monday.—W. H. Le May report:—The extremely low prices prevailing for English hops is causing consumers to buy more than their usual requirements, and many are being placed in cold stores.

GRAIN AND FLOUR FACTORS REPORTS.

Maize-germ meal for shipment (American) may be purchased at from £6 2s. 6d. to £6 5s. free to truck. Rice Meal.—A little lot ex dock easily commands £5 6s. 3d., while a shipment afloat is quoted £5 ex ship.—JOHN BURSTALL AND CO. (Mark Lane).

The arrivals of wheat and flour are small. Trade is firm and prices of both articles are fully maintained. There is no change in value of maize, barley, and oats.—COVENTRY (Mark Lane).

The imports of wheat last week were light. At to-day's market demand is not active, but sellers hold for an advance of 3d. on last Monday's prices. Maize shows no change, but oats and barley are against buyers.—W. P. WOOD AND CO., Mark Lane.

The trade for milling offals, although not very brisk, is firmer, with prices against buyers, due to the colder weather. Coarse middlings are being 2s. 6d. per ton dearer.—JOHN BAWCOMB AND CO., Mark Lane.

Flour.—Stocks of flour on spot getting into smaller compass, sellers are commanding better prices, and the tone of the market has become firmer with an upward tendency. Values on spot are as follows:—1st Spring Patents, 24s. 3d. to 25s.; 2nd Spring Patents, 23s. 3d. to 23s. 9d.; American Winter Patents, 24s. 3d. to 25s.; Extra Fancies, 22s. 3d. to 22s. 9d.—GREENHILL BROTHERS (Belfast).

Offals.—Bran continues in moderate demand. Prices unchanged, but, if anything, in buyer's favour.—GREENHILL BROTHERS (Belfast).

Flour.—Prices continue in buyer's favour, there being an entire indisposition to enter into fresh contracts.

Grain.—Round and flat corn are unchanged on the week. Oats and barley are lower to sell. Pease being scarce on spot are held at full prices. Beans are 1½d. to 3d. cheaper. Oatmeal 6d. per sack down.

Mill Stuffs.—Bran and thirds 2s. 6d. per ton lower.—MCKINNON & MCDONALD (Glasgow).

FEEDING STUFFS.

Mark Lane, Monday.—Linseed cakes: There has been a fairly active demand during the past week, and with only limited supplies of foreign, the tone of the market has slightly improved, while in some instances an advance of 2s 6d to 5s per ton is demanded. Russians move off steadily at unchanged prices. Americans are only sparingly offered at last week's quotations. Calcutta-made in bags remain relatively cheap and unchanged in price. London-made have been in more request, and crushers have raised their prices, and now ask 2s 6d to 5s per ton more money. Cotton cakes: With a considerable falling-off in the demand, and some heavy supplies of foreign, coupled with the fact that most of the English mills are running on cottonseed, values have given way 2s 6d to 5s per ton, and best brands of Egyptian are obtainable at 1s 3d to 2s 6d per ton less money, while there are sellers of English at the same reduction. Decorticated are without change, and meal offers at 1s 3d per ton less money, while for Feb.-March shipment some business has been done at £6 6s 3d c.i.f. Rape cakes: Quiet. East Indian, £4 5s. Maize germ meal: There is practically no American to be had on spot, but shippers are more reasonable in their ideas, and are willing to entertain bids of £5 10s c.i.f. for early despatch from the mill. English goes quietly into consumption at £5 17s 6d to £6. Rice meal: Stocks of Rangoon are exceedingly small, and, with only a limited quantity afloat, values are firmly held up, landed lots making £5 5s to £5 7s 6d, while £5 to £5 1s 3d ex ship terms is the price asked for near at hand parcels.

SEEDS.

London, Monday.—Our market to-day was fairly attended, and a fair business was transacted. The supply of English red clover was moderate, but only best samples found buyers. There was a moderate sale for Canadian red, the only new foreign which is cheap enough for this market. White clover has advanced by leaps and bounds, and is still talked higher. Alsike and trefoil are firm. Perennial and Italian grasses are quiet. Both winter and spring tares are dearer, the former being about exhausted, and eagerly sought for. Canary-seed is very quiet. Haricots and blue peas will find buyers with colder weather.—JOHN PICARD AND CO.

CATTLE.

Metropolitan Market, Islington

Monday, February 3rd, 1902.

	British.	Total.	Feb. 4th, 1901.
Beasts	1,440	1,440	1,190
Sheep and lambs	9,920	9,920	7,240
Calves	10	10	5
Pigs	—	—	60
Milch cows	50	50	70

Quotations per 8lb (sinking the offal).

	ENGLISH. Inferior.	Second.	First.
	s. d.	s. d.	s. d.
Beasts	2 8 ..	4 0 ..	4 9
Sheep	3 4 ..	4 8 ..	5 4
Lambs	5 4 ..	6 0 ..	6 6

Milch cows, per head, £15 to £22 10s.

British arrivals include as follows:—Scotland, 64; Eastern Counties, 719; Midland, home, and Western Counties, 503; Devon, 30; Ireland, 124.

In the beast market to-day there was an increase of 220 head compared with last Monday, due to larger arrivals from Norfolk, and of fat shed cows from the home districts; of these latter the consignments were heavier than has been known for many months. Trade for beasts of both prime and second quality was steadier, and a clearance is expected. Fat cows were in good request, but owing to the increased supply made only late rates; fat bulls were shorter in number and sold readily. The following are top quotations per 8lb (sinking the offal):—

	To-day.	Feb. 4, 1901.
Scotch	4s 8d to 4s 9d	4s 7d to 4s 8d
Devons	4s 6d to 4s 8d	4s 6d to 4s 8d
Norfolks	4s 6d to 4s 8d	4s 7d to 4s 8d
Lincolns	4s 4d to 4s 6d	4s 2d to 4s 3d
Irish	4s 4d to 4s 6d	4s 2d to 4s 3d
Fat cows	3s 10d to 4s 0d	3s 6d to 3s 8d

In the sheep market there was an increase of 2,260 in the number penned compared with Monday last. Amongst these was a larger supply of lambs, which were difficult to vend even at a reduction of 10d per 8lb. lower. Trade for wether sheep was dull, and still more so for ewes, at a decline of 1d to 2d per 8lb. The supply included 330 Scotch and 5,210 from the Eastern Counties. Undermentioned quotations are at per 8lb (sinking the offal), and are for the best of each class penned:—

	To-day.	Feb. 4, 1901.
7½ to 8st Downs	5s 2d to 5s 4d	5s 10d to 6s 0d
9st Downs	5s 0d to 5s 2d	5s 10d
10st Halfbreds	4s 8d to 4s 10d	5s 6d to 5s 8d
10st Yorkshires	—	—
12st Lincolns	4s 4d to 4s 6d	5s 2d to 5s 4d
10st Irish	—	—
10st Down Ewes	3s 10d to 4s 0d	4s 4d to 4s 6d
11st Half-bred do	3s 8d to 3s 10d	4s 2d to 4s 4d
5st Fat Lambs	6s 4d to 6s 6d	7s 8d to 7s 10d
6st Half-bred do	5s 10d to 6s 0d	6s 10d to 7s 0d

No pigs on the market.

London, Monday.—Good supplies. Trade slow. Beef carcasses, 4s 2d to 4s 4d; hind quarters, 4s 8d to 5s; roastings, 5s 4d to 6s. Sheep, ewe, 2s 10d to 3s; wether, 3s 8d to 4s; hind quarters, ewe, 3s 8d to 4s; wether, 5s to 5s 4d. Pigs, large, 3s 8d to 4s; small, 4s to 4s 4d.

St. Ives, Monday.—Beasts, 203; sheep, 312; pigs, 418; beef, 7s to 7s 9d; mutton, 7s 7d to 9s 4d; pork, 6s 3d to 7s 3d; sows, 5s to 5s 6d. Fat cattle fair trade; stores slow. Fat and store sheep fair trade. Fat and store pigs good demand. Milch cows short supply; good demand for best; prices, £14 to £23.

FOREIGN CATTLE.

Deptford, Monday.—No beasts on offer here to-day. Sheep numbered 910 from the United States, which were held back on Saturday last. Trade was of a slow but fairly steady nature, all on offer finding buyers. Best pens of wethers were quoted at 4s per 8lb, offal given in; ewes, 3s 8d to 3s 10d. On Saturday the supply consisted of 1,490 beasts and 1,682 sheep, both from the United States. For the former trade was firmer, both in regard to tone and value, and for the latter rather slow at following quotations per 8lb. offal given in:—Best quality beasts, 4s 8d; seconds, 4s 4d; best pens of sheep, 3s 10d. The following were the numbers on offer on the corresponding day last year, with the current top rates:—Beasts, 310, 4s 4d to 4s 5d, to dress about 720lb. No sheep on the market.

Liverpool, Monday.—There were a few more cattle in market to-day; demand better, and last week's prices fully maintained. Sheep shown in larger numbers; trade slow; prices for best Scotch a shade higher; others unaltered. Beef, 6½d to 5½d per lb; mutton, 8d to 5d per lb. At market—1,353 cattle and 4,036 sheep.

London, Monday.—Linseed Cake.—English-made is again dearer. American and Russian tend upwards as stocks are getting depleted. Decorticated cake and meal firm, unchanged. Undecorticated in good supply and prices a trifle lower. Linseed in the early part of the week still further advanced, but has since relapsed.

English Linseed Cake	8 5 0	to 8 10 0	ex mill.
American Calcutta Linseed Cake	7 17 6	,, 0 0 0	ex quay

Calcutta Linseed in bags, per 4 0 lbs	2 15 0	to	do.

ROBERT AND JOHN HEWETSON.

PROVISIONS.

London, Monday.—The arrivals from Ireland last week were 1,918 bales bacon, and from foreign ports 8 547 bales bacon. There was a slightly better demand for bacon last week, though not sufficient to clear up the old stocks. Best Irish met a readier sale, and fat Canadian bacon, from 40s to 44s, was more freely taken up; prices ranged for Irish from 46s to 54s up to 61s; Danish, 44s to 53s up to 57s; Canadian, 40s to 46s up to 52s to 54s. The butter market was generally steadier, and prices showed but little alteration. Lard was quiet and unchanged.

LIVE STOCK AND MEAT TRADE REVIEW.

(WRITTEN SPECIALLY FOR THE "MARK LANE EXPRESS.")

Trade in London.

Trade for fat beasts at Islington, with lighter supplies of prime quality, was slightly firmer in tone, but no advance in value can be noted. The finish on the chief market day of the week proved dull and heavy, without a clearance being made for butchering cows and bulls. Trade on both market days was somewhat steadier, not that there was any increase in the demand, but solely to the fact that the number on offer was so much smaller. The following were the decreases from the respective districts:—Scotland, 41; Ireland, 25; Norfolk, 94; Midland and Home Counties, 50. So far as beasts were concerned at Deptford, the trade was confined to Saturday. Here trade ruled rather slowly, last week's rates governing all transactions. The total number on offer at both markets was 2,900; previous week, 5,140, consisting of 1,410 British—decrease 120; and 1,490 from the United States—foreign decrease, 2,120. The following were the top rates obtained per 8 lbs., sinking the offal:—90 stone Polled Aberdeens, 4s. 9d.; 90 stone Polled Norfolks, 4s. 8d.; 100 stone Shorthorn ditto, 4s. 6d. to 4s. 7d.; 100 stone Lincolns, 4s. 6d.; 110 stone ditto, 4s. 4d.; 95 stone Irish, 4s. 3d. to 4s. 4d.; 90 stone States, 4s. 6d. to 4s. 7d.; 90 stone fat cows, 4s.; 100 stone fat bulls, 3s. 8d. At the Islington Cattle Market, trade for wethers, with a fairly moderate supply, was firm and steady at last week's quotations, there being more demand for ewes, especially in the early part of the week, owing to the absence of any at Deptford, trade at that market being confined to Saturday. The total number penned was 11,068, consisting of 8,560 British—increase, 140; 2,508 foreign (decrease 4,337), these latter comprising shipments from the United States. Best pens made per 8 lbs. as follows (sinking the offal):—7½ to 8 stone Downs, 5s. 6d.; 8 stone Scotch, 5s. 6d.; 9 stone Downs, 5s. 4d.; 10 stone ditto, 5s. to 5s. 2d.; 10 stone half-breds, 4s. 10d.; 12 stone Lincolns, 4s. 8d.; 10 stone ewes, 4s. 2d.; 11 stone Hampshires, 5s. 2d.; 5 stone fat lambs, 7s. 4d.; 6 stone half-bred ditto, 6s. 10d. The calf trade, with 50 on offer, was quite nominal. Pigs numbered 85, and met with forced sales, best small breeds being quoted at 4s. 6d. per 8lbs.

Trade in the West.

The sharp snap of really wintry weather, accompanied as it was by a considerable fall in some districts, will undoubtedly give a check to the trade in certain classes of store things, should the weather continue for long as cold as it was on Thursday, the first to feel the effects of the change being barreners, which up to the present have been meeting with a highly satisfactory sale, the abundance of keep everywhere sending prices up very materially, which will be well understood when we mention that all the bettermost grades of bullocks have been readily caught up, as much of from £24 to £30 per pair and over, almost the price of the ordinary runs of fat heifers, unless above the usual weights. Of course this has tended very materially to strengthen the tone of the beef trade, and to keep prices to the very satisfactory level that has now ruled for some time past. Milch beasts will hardly be affected to the extent of barreners, though we may see a falling off in the demand for this class of stock as well should we experience anything like a rigorous winter. Just now good heifers and calves are selling very well from £16 10s. to £20, which we may quote as the general run for anything like reliable milchers. That sheep are badly wanted in many districts no one will attempt to deny, and to this must be ascribed the satisfactory price realised for all useful kinds of store sheep, which is a distinctly encouraging feature, seeing the acute depression which has characterised the mutton trade now for some time past, the general run of which is from 6d. to 7d. per lb. Fat bullocks continue to maintain a very healthy tone as regards both demand and price, all the more useful qualities of steers and heifers selling at from 11s. to 11s. 6d. per score, and cows 10s. to 10s. 6d. Of course, beef can be bought for less money, but this refers only to contract bullocks and similar grades. Fat calves rule steady at from 7d. to 7½d. per lb., a price that is only exceeded in special cases; the more ordinary runs of veal selling from 6d. to 6½d. Fat pigs are an unusually buoyant trade, porkers especially, which make 10s. 6d. to 11s. per score, and baconers 10s. to 10s. 3d. The heavier class of pigs—coarse sows—have suffered a slight check, and prices within the last few days have declined 3d. to 6d. per quarter. But this is the only class affected. Taken all round, the stock markets in this part of the country are in a fairly healthy state, and, as far as we can judge at present—barring anything exceptional in the way of the weather—there is nothing likely to seriously affect the business in the coming spring, either in regard to demand or, what is still of greater importance, price either.

Trade in Ireland.

A slight increase in the number of cattle, and a pretty heavy decrease in sheep did not seem to influence last Thursday's Dublin market for the better, as business was very dull; neither the attendance of north of Ireland buyers nor of local butchers was as large as usual, and those present were very cautious in their transactions. Choice qualities of beef and mutton were not plentiful, and for really well finished last day's prices were just maintained, but for all other sorts values were decidedly easier, ordinary descriptions of cattle being down perhaps 10s. and sheep 2s. per head. The inquiry for really first-class bullocks was keen and made full values, despite strenuous efforts made by shippers to effect a reduction; for coarse cattle concessions had to be made, and even then a large number had to be left over unsold. Prime ox and heifer beef made from 52s. 6d. to 55s. per cwt., and extra good lots 56s. to 59s.; good seconds, 46s. 6d. to 52s., and inferior 42s. 6d. to 45s. Really nice wethers and ewes suitable for the Dublin trade were picked up early in the day at previous rates, but after that little business was done, the north of Ireland and Lancashire and Midland buyers being very slack in their transactions. There appears to be a good deal of difference of opinion with regard to the value of home trade mutton, butchers contending that sheep are killing very badly, and that wethers for which they are paying 7d. per lb. are really costing them from 7½d. to 7½d. The currencies were:—For prime wether mutton, 6½d. to 7½d. per lb; prime ewes, 5½d to 6½d.; inferior, 4½d. to 5d. Small, middling hoggets, 26s. to 32s.; and heavy do., from 42s. to 50s. each. There were only a few lambs on the market, but for private delivery fat house lambs were offering at 40s. each. Very little veal, and the few choice calves made fancy prices, fully 9d. per lb. being paid for them. Rough calves very irregular. Milch cows in moderate supply, and choice springers being scarce, £23 was paid for good animals. In the pig market supplies were large, heavy consignments having been sent up from country fairs. There was a good attendance of English and local buyers, but business was decidedly flat, and values all round may be written down at least 2s. per cwt. The store stock markets throughout the country are still in an unsettled state. The unusually fine weather during the first three weeks of the year made some stir in young cattle, but the severe ending up January stopped all speculation, as all sorts of forage are dear. There is some demand for forward aged bullocks and good yearlings, but prices are low. Beef in the southern markets makes from 54s. to 56s. for best, while cattle of coarse quality do not make more than 40s. per cwt. Well-finished sheep are in demand, and choice light wethers in Cork market are fetching up to 7½d. and 8d. per lb. In the same market from 45s. to 50s. each is given for fat lambs.

LONDON.

Islington, Thursday.—Good supplies of beasts, and, as usual on Thursday, the bulk comprised fat bulls and rough cattle. The demand was of a generally quiet character, but prices marked little or no change. Fat bulls, 3s 4d to 3s 8d. Fair supplies of sheep were penned, but met with slow request, only a limited business being passed at about late rates. 7½ to 8-stone Down wethers, 5s 2d to 5s 4d; 9-stone ditto, 5s to 5s 2d; 10-stone half-breds, 4s 10d; 10-stone Down ewes, 4s to 4s 2d; 11-stone half-bred ditto, 3s 10d to 4s. Pigs were unchanged; neat, small porkers, 4s 8d to 4s 10d. Calves ruled dearer, the best on offer making 5s 8d per 8lb. to cook the offal.

COUNTRY.

Ashford, Tuesday.—Trade generally slow and dragging, though mutton was scarce. Best steers and heifers, 11s to 12s. Small veal, down and half-bred wethers and maids, 4s 10d to 5s per 8lb. Kent wethers, 4s 4d to 4s 6d. Veal, 4s d8 to 5s 4d. Roasting pigs, 10s 6d to 11s.

Basingstoke, Wednesday.—At Ravnbird and Sons' saleyard there was a fair attendance of buyers to meet a supply consisting of 41 fat beasts, 53 calves, 431 fat sheep, 282 pigs, and 44 head of dairy and store cattle, for which the following prices were realised:—Prime Devon steers were sold up to £21 10s, shorthorn heifers £18 15s, a good Kerry cow £15 5s, and maiden heifer £17 15s, young Welsh steers £16, bulls up to £17. Prime quality fat sheep and lambs realised from 44s to 53s 6d; twelve months old ditto, 35s to 43s 6d; fat ewes from 33s to 47s; rams, 38s to 45s; fat calves, £5 5s; smaller, 15s to 50s; fat hogs, 60s to £5 6s; porkers, 48s to 62s 6d; smaller, 28s to 44s; store pigs, 14s 6d to 25s 6d; dairy cows, up to £18 5s. The main part of the supply of fat beasts were second class, for which the trade was slow, and lower prices had to be taken to effect sales. The few prime quality ones on offer were cleared at late rates. Fat sheep were penned in average numbers. Trade ruled slow throughout. For the very best quality young sheep and ewes of good quality recent values were maintained, but several pens of half-fat tegs left the ring unsold, vendors' ideas of value not being realised. A short entry of dairy cattle and prices ruled high, with a good demand for all best quality milchers. Store cattle continue a slow business. Fat calves are scarce, and realise more money. Fat hogs and porkers met a better trade at an advance. Store pigs continue very dear. Ruling values:—Prime Devon beasts, 6¾d to 7½d; ditto shorthorn, 5½d to 6½d; bulls, cows, and inferior beasts, 4½d to 5½d per lb; best quality sheep, 7d to 8d; second ditto, 6d to 7d; old ewes, rams, and inferior, 5d to 6d per lb; fat calves, 6d to 8d per lb; fat hogs, up to 10s 6d; porkers, 11s 6d per score. The monthly sale of hay, straw, and feed consisted of 9 ricks of hay and 2 of straw in the neighbourhoods of Winchfield and Basingstoke. The lots that changed hands realised for ryegrass and mixture 60s to 65s; clover, 75s to 80s in the place; oat straw, 37s. Several lots were held beyond buyers' views.

Braintree, Wednesday.—Messrs. Balls report trade for beef fairly good, for mutton as last week, and for pork very good. Average prices:—Beef, 4s 8d to 5s 2d; mutton, 4s 8d to 5s 4d per stone of 8lbs.; pork, 11s per score. Numbers penned:—Beasts, 53; fat sheep, 120; hogs, 65; Londoners and store pigs 360; store cattle and milking cows, 23; calves 16. There were many buyers of cows and heifers, and an enquiry for hoggets.

Bristol, Thursday.—Fat cattle in good supply. Steady trade, best qualities making 60s to 62s per cwt.; secondary animals, 56s to 58s. Short supply of sheep; best light wethers realised 7¾d per lb.; heavy wethers, 7½d. Ewes, 5½d to 6d.

Bury, Wednesday.—Fat beasts met a sharp trade, at more money, the supply being insufficient for the demand, several buyers from distant counties attending. Several lots of store beasts sold well, considering the shortness of feed. Ten good polled steers made £11 5s per head. Some well-bred yearlings fetched from £10 10s to £8 8s per head. Other lots fetched from £9 5s per head, downwards. There was an improved trade for fat sheep of all descriptions. Shearlings went up to 64s; hoggets up to 55s 6d per head. Very short supply of fat ewes, which were dearer. Hardly any store hoggets penned. About 200 black-faced ewes in lamb sold fairly well, prices ranging from 47s 6d to 43s per head. Shorter supply of pigs. Sharp trade for all heavy weights. London jointers also fetched about late rates.

Calne Friday.—Present prices for prime pigs, in lots of not less than 10, on rail within 100 miles of Calne.

Prime Stores.	Thickness of fat in any part of the Back.	Price per Sc. s.	d.
6 sc. 10 lbs. to 9 sc. 10 lbs.	2½ in. and under ...	9	6
Under 10 sc.	Not exceeding 2¾ in. ...	9	0
Under 11 sc. 10 lb. ...	Not exceeding 2¾ in....	8	6
Under 12 sc.	Not exceeding 3 in. ...		

—C. & T. Harris & Co., Ld.

Cambridge, Monday.—Small show store beast; trade slow. Fat beast fair show; trade better. Fat sheep good number to hand; prices better. Stores only a few lots to hand, and all sold. Fat pigs a good number shown, and trade better. Stores not so many to hand, and a fair trade all round. Hay and roots short supply. Straw good supply, and fair trade. Prices:—Beef, 7s 3d to 8s 3d; mutton, 4s to 5s 4d; pork, 6s to 7s. Beasts, 279; sheep, 579; pigs, 303; horses, 1.

Canterbury, Saturday.—Larger offering of sheep, but demand not brisk. Store tegs, 24s 6d to 30s; large tegs, from 31s to 34s per head.

Carlisle, Saturday.—Owing to the severity of the weather, there are no indications yet of an improvement in the Irish store cattle trade. The supply of heifers and stripping cows was again small, and there being few buyers present, trade was quiet. The smallest heifers were quoted at £7; medium sorts, £9 10s to £12 10s; stripping cows, £9 10s each.

Dorchester, Wednesday.—The market generally has taken a slightly firmer turn, despite the fact of supplies of nearly all kinds coming very freely to hand, both at Messrs. Duke's and Mr. Sampson's sale, the most notable exception to this being the depressed state of the mutton trade, which continues disappointing in the extreme, whether in respect to the best or the more ordinary runs, which in very rare cases now can be quoted over 7½d per lb., the great bulk of the fat sheep now on the market selling from 6d to 7d. Lamb is in better demand at from 34s to 40s each (or 9d per lb. for the best and 8½d for ordinary lots). Fat beasts are a good, steady trade at very firm rates—10s 6d for good useful qualities, and 9s 6d to 10s for cows. Veal follows beef as regards the tone, and we may quote best runs of calves from 6½d to 7½d; rearers also sell well at widely-varying prices up to 40s and over. Pigs also sell well, especially useful weights in both porkers and baconers, the former being worth 10s to 10s 6d and bacon pigs 9s to 9s 6d; coarse heavy pigs not so saleable at 7s to 8s.

Dublin, Thursday.—Numbers in market: Beasts, 2,705—increase, 40; sheep, 4,679—decrease, 365; calves, 30—decrease, 16. Demand for cattle not so good as recently experienced. Best qualities with difficulty made last week's rates; rough and inferior descriptions harder to move, with prices in favour of buyers. Sheep in excess of requirements; choicest descriptions only making late rates. Many rough and inferior lots remaining unsold. Cattle, live-weight, 27s to 34s per cwt; mutton, dead-weight, 6d to 7d per lb; extreme, 7½d per lb.—GANLY, SONS AND CO.

Faversham, Tuesday.—Entries: Sheep, 462; bullocks, 38; bull, 1; calves, 5; pigs, 116; wether mutton, 5s to 5s 4d; barren, 3s to 3s 6d; veal, 5s to 5s 6d per stone; beef, 10s 6d to 12s; pork, 10s to 11s per score.

Hereford, Wednesday.—Bullocks and cows, 661; calves, 82; sheep and lambs, 808; pigs (fat and sows), 37; sucking pigs, 22; pigs (stores, not more than ten), 279; pigs (stores, more than ten), 122. Prices:—Best beef, 6d to 7d per lb; wether sheep, 6½d to 8d per lb; ewes, 5½d to 6d per lb; veal, 7½d per lb; lamb, 9d per lb; pork, 5½d to 6½ per lb; bacon, 4d to 5d per lb.

Ipswich, Tuesday.—Messrs. Robert Bond and Sons report the supply of fat cattle showed but little variation, and consisted mostly of small, neat qualities. Trade was brisk throughout, and prices ruled against buyers. Purchasers were in strong force, including additional representatives from the Midlands. Owing to the fall in values last week, fat sheep were forwarded in much smaller numbers, and met an improved demand at decidedly better prices; Suffolk hoggets to 57s, half-breds to 50s. A good entry of calves; the best for weaning sold well from 67s 6d to 40s; secondary sorts dull; fat calves, 72s 6d to 60. A short supply of fat swine, and a large attendance of buyers. Biddings were brisk, and the setback last week was fully recovered. Store pigs dearer. A moderate entry of grazing cattle, which consisted mostly of yearlings and calves; buyers were very cautious, and a slow trade resulted. Several cows and heifers were offered, and realised rather more money, a good number of heifers being purchased for Warwickshire. Cows made from £17 to £10 10s. Numbers at sales and market:—Beasts 533, calves 49, sheep 667, swine 1,328, horses 10.

Leicester, Wednesday.—Very heavy consignments of Norfolk and Lincoln store-fed bullocks to-day, and the bulk of the stock came to hand in very good condition. Buyers were well represented, but trade ruled slower, and prices declined 10s per head. Choice bullocks, 6¼d to 6¾d; secondary descriptions 6d; cows, 5d to 5¾d, and heifers, 6d to 6¼d per lb. Sheep were a large supply, and choice qualities changed hands more freely at advanced prices, the best lots making 7¼d to 8d; large sheep, 6¾d to 7d; ewes, 5¾d to 6d; calves steady at 7d to 7¼d per lb.

Newport (Mon.), Wednesday.—There was an average supply of cattle, and prices were fully maintained, but the

supply of sheep was somewhat limited. Good attendance of buyers, and brisk trade all round at the following quotations:—Beef, best, 6½d per lb; secondary quality, 6d to 6½d per lb; cows, 5½d to 6d per lb: mutton, best wether, 7½d to 7¾d per lb; ewes, 6d to 6½d per lb; veal, 7d to 8d per lb; pigs, porkers, 10s 6d to 11s per score; baconers, 9s to 9s 6d per score.

Norwich, Saturday.—The supply of store cattle on offer here to-day was small; the demand was inactive, and trade was dull at about former terms. Fat beasts, which were in average supply, made fully late rates, viz., 7s 6d to 8s per 14lb. Store sheep were not offered very freely, but trade continued dull; keeping hoggets were quoted at 25s to 35s per head. Fat sheep, which were in moderate supply, made 7s 6d to 8s and 8s 3d per 14lb.

Romford, Wednesday.—Average supply of fat beasts; trade a little better. Best animals, 4s 6d to 4s 8d; middlings, 4s to 4s 2d per stone. Calves in very short supply; trade a little better, at 5s 4d to 5s 6d per stone. Sheep in short supply; trade a little better. Best sheep, 5s 4d to 5s 6d; middlings, 5s to 5s 2d per stone. Very few store beasts; slow demand. Market still closed for pigs.

Rye, Wednesday.—Number of entries: Sheep and lambs, 550; fat beasts, 20; calves, 2; heifers and steers, 4s 4d to 4s 6d; cows, 3s 6d to 4s; wethers and maids, 4s 6d to 5s 4d; barrens, 3s 8d to 4s; calves, 5s; pigs, 3s 6d to 4s.

Salford, Tuesday.—There was a smaller supply of cattle, and a better trade at last week's full prices. The supply of sheep was also smaller. Trade ruled better, and though prices were not quotably higher the tendency was against the buyer. About the same number of calves in market, and a good demand for best quality at late rates. Cattle, 4½d to 6½d; sheep, 6d to 8½d; calves, 5d to 8d per lb. At market:—Cattle 2,765, sheep 8,354, calves 167.

Sheffield, Tuesday.—Small show of milch beasts, but supply equal to demand. Best lots, £17 to £20; secondary, £13 to £16.

Shrewsbury, Tuesday.—Fairly good trade all round, with small supplies of sheep and pigs. Beef and pigs of all kinds higher in price. Quotations:—Beef 5½d to 7d, mutton 6½d to 8½d, and veal 6d to 8d per lb; porket pigs 10s to 11s, and bacons 9s to 10s per score; cows, with calves, up to £21 10s; hay up to £5 5s, and clover up to £4 15s per ton. Number offered:—862 cattle; 44 cows, with calves; 300 sheep; 74 calves; 66 fat, 165 porket, and 292 store pigs. Swedes made about 19s per ton.—B. R. CROXTON.

Spalding, Tuesday.—A short supply of fat beasts; best quality made to 8s per stone; cow beef 7s 6d. Stores sold fairly well at £10 to £17 each. Cows were in demand at good prices. In the sheep market there was a small supply, and trade rather better; mutton 7d; fat hogs to 8d per lb.

Thame, Tuesday.—There was a small supply of stock at market, but the attendance of buyers was much larger than usual, several fresh faces being noticeable, and trade all round showed a marked improvement, and a clearance effected. Beef was in demand, and created a keen competition, best quality making over 5s per stone, and veal 5s to 6s per stone. Mr. Bond's sale comprised 62 fat beast, 82 fat sheep, 45 tat and weaning calves, 137 fat hogs and stores, and 4 horses. Fat bullocks made £16 to £23, fat heifers £11 to £21, fat wethers, 41s to 52s, fat ewes 35s to 45s 6d, fat tegs 33s to 48s 6d, fat calves £3 to £5 6s, cow calves 24s to 52s, bull calves 18s to 46s, fat hogs 10s per score. Stores a better trade.

Wakefield. Wednesday.—Fewer beasts and more sheep. In the beef department trade was better; best sorts made 6¾d: other animals 5d to 6½d. A slow trade for sheep; young animals 7½d and 7¾d; others, 5d to 7½d. Number of beasts, 1,230; sheep, 3,319.

Wolverhampton, Wednesday.—A fair supply of beasts; moderate trade. Good supply of sheep; slow trade. Small supply of calves; good demand. Beef, 5d to 6½d per lb, mutton 6½d to 8½d per lb; veal, 6½d to 8d per lb; pigs, bacon, 9s 6d per score; porkets, 10s 6d to 11s per score; sows, 7s 6d to 8s per score.

Worksop, Wednesday.—Good show of stock; fair attendance, and good trade. Best quality beef made 7s 3d to 7s 9d per stone; secondary qualities, 6s 6d to 7s 6d per stone. Best wether mutton, 6½d to 7½d; ewes and other sorts, 5d to 6d per lb.

FOREIGN.

Yorkhill, Monday.—At the usual weekly sale of United States and Canadian cattle held to-day, there were in the lairages 688 beasts of the average quality, whilst there was the usual attendance of buyers. Small, neat, well-fed bullocks secured the best inquiry, and sold dear. Secondary and heavier were also in demand, but they scarcely realised the previous Monday's prices, although a clearance was affected. Bulls were in demand and made satisfactory prices. The deadweight quotations were as follows:—States bullocks, best quality, medium weight, 58s, and for really choice up to 60s per cwt; heavy prime, to 56s; secondary and heavier animals, 54s; bulls, best class, to 48s, and in one or two instances they made up to 50s per cwt; secondary and heavier, down to 46s. Canadian bullocks, best class, to 56s per cwt, and for really choice up to 58s; secondary and heavier, 53s to 54s; bulls, 44s to 48s, according to quality and finish.

Yorkhill, Monday.—A sale of United States and Canadian sheep was held in the morning, at which 1,070 animals were on offer, but all were not sold. Wedders formed the greater part of the consignments, but there were also a number of ewes included. All the sheep were presented in good condition, and were up to the usual standard of quality. There was a good attendance of customers, and a fair trade was experienced for all classes. Wedders and shearlings secured the best demand, and made satisfactory prices. The deadweight quotations may be given as follow:—States wedders (a large number shearlings) realised 6½d per lb for handy sorts; heavier, to 6d; Canadian young sheep, best class, to 7d; secondary, 6½d; ewes, best class, to 5d; secondary and heavier, down to 4½d.

Yorkhill, Tuesday.—To-day just over 350 sheep, held over from Monday's sale, were offered and disposed of at an early hour, the deadweight quotation being as follows:—Shearlings, best sorts, to 6½d per lb; secondary and heavier, 6d; wedders, best class, to 6d; and secondary and heavier, to 5½d. A good clearance was affected at an early hour.

BUTTER.

Tuesday.—Bedale: In rolls of 24oz, 1s 10d to 2s per roll. Gainsborough: 1s 3d per lb. Settle: 1s 2d to 1s 3d per lb. Stone: 1s 2d to 1s 3d per lb. Leeds: York lump, 14s 6d to 15s per stone; do long rolls, 1½lb, 1s 8d to 1s 11d per roll; fresh, in 1lb prints, 1s 2d to 1s 3d per lb; Danish, 109s to 114s per 112lb; Irish creameries, 98s to 104s; Colonial, 100s to 106s.

Wednesday.—Barnsley: 1s 3d to 1s 4d per lb. Boston: 1s 1d to 1s 2d (wholesale), 1s 2d and 1s 3d per lb (retail). Colne: 1s 2½d per lb. Keighley: Wholesale, 1s 2d; retail, 1s 3d. Kirbymoorside: 11d to 1s 1d per lb; 12s to 13s per stone. Knaresborough: Wholesale, 1s 6d to 1s 8d; do. retail, 1s 6d to 1s 10d per roll of 24oz. Louth: Wholesale, 1s per lb. Market Weighton: 1s per lb. Northallerton: 1s 11d to 2s 2d per roll of 24oz. Stockton: 1s 3d to 1s 5d per lb. Worksop: 1s 2d to 1s 3d per lb.

Wednesday.—Hereford: 1s 3d to 1s 4d per lb. Market Drayton: Best, 1s 2d to 1s 3d per lb; seconds, 1s 1d to 1s 2d per lb.

Thursday.—Brigg: 1s to 1s 2d per lb. Driffield: 1s per lb. Penistone: 1s 2d per lb. Ripon: 1s 11d to 2s 2d per single roll of 24oz. Scarborough: 1s 4d per lb. Wellington: 1s 3d to 1s 5d per lb. Wetherby: 1s 2d to 1s 3d per lb.

Friday.—Easingwold: 1s 2d to 1s 3d per lb. Helmsley: 1s 2d per lb. Leyburn: In rolls of 24oz, 1s 10d to 1s 11d per roll. Lincoln: 1s 1d to 1s 2d per lb. Otley: 1s 7d to 1s 9d per roll of 24oz. Leeds: York lump, 15s to 15s 6d per stone: do, long rolls 1½lb, 1s 10d to 2s; fresh in 1lb prints, 1s 3d to 1s 4d per lb. Danish: 110s to 116s per 112lb. Irish creameries: 98s to 104s. Colonial: 100s to 106s. Derby: 1s 3d to 1s 4d per lb.

Saturday.—Appleby: 1s 1d to 1s 4d per lb. Berwick: 10d to 1s per lb. Carlisle: 1s 4d to 1s 5d per lb. Doncaster: 1s 1d to 1s 2d per lb. Grantham: 1s 1d to 1s 3d per lb. Howden: 1s 2d per lb. Lancaster: 1s 3d to 1s 4d per lb. Malton: 1s 2d per lb. Pontefract: 1s 3d to 1s 4d per lb. Retford: 1s 3d to 1s 4d per lb. Richmond: 1s 3d to 1s 4d per lb. Skipton: 1s 2d to 1s 3d per lb. Stokesley: 1s 2d to 1s 3d per lb. Whitby: 1s 2d per lb. York: 1s 2d to 1s 4d per lb.

EGGS.

Tuesday.—Bedale: 9 or 10 for 1s. Gainsborough: 10 for 1s. Settle: 11 or 12 for 1s. Stone: 11 to 12 per 1s. Leeds: Yorkshire, 13s to 14s per 120; Irish, 10s to 13s; Danish, 8s 6d to 10s; Austrian blues, 7s 6d to 8s; do reds, 6s 6d to 7s.

Wednesday.—Hereford: 9 or 10 per 1s, (wholesale) 10 to 12 per 1s. Market Drayton: 10 to 11 for 1s. Barnsley: 8 for 1s. Boston: 12 for 1s. Colne: 2s 7d per score. Keighley: 10 for 1s. Kirbymoorside: 11 or 12 for 1s. Knaresborough: 9 or 10 for 1s. Louth: 14 for 1s. Market Weighton: 12 for 1s. Northallerton: 8 or 9 for 1s. Stockton: 1s 3d to 1s 5d per lb. Worksop: 1s 8d to 1s 9d per score.

Thursday.—Brigg: 11 or 12 for 1s. Driffield: 11 or 12 for 1s. Penistone: 8 for 1s. Ripon: 9 to 12 for 1s. Scarborough: 8 or 9 for 1s. Wellington: 11 to 12 for 1s. Wetherby: 9 to 10 for 1s.

Friday.—Leeds: Yorkshire, 15s to 16s per 120; Irish, 10s to 13s; Danish, 8s 6d to 10s; Austrian blues, 7s 6d to 8s; do reds, 6s 6d to 7s. Easingwold: 12 to 13 for 1s. Leyburn: 12 for 1s. Lincoln: 10 or 11 for 1s. Otley: 10 to 12 for 1s. Derby: 10 for 1s.

Saturday.—Appleby: 10 to 11 for 1s. Berwick: 1s 2d per dozen. Carlisle: 8 or 9 for 1s. Doncaster: 10 or 11 for 1s. Grantham: 10 to 12 for 1s. Howden: 11 for 1s. Lancaster: 8 or 9 for 1s. Malton: 10 or 11 for 1s. Pontefract: 9 for 1s. Retford: 2s to 2s 3d per score. Richmond: 10 for 1s. Skpton: 9 or 10 for 1s. Stokesley: 9 or 10 for 1s. Whitby: 10 for 1s. York: 8 or 9 for 1s.

COLONIAL DAIRY PRODUCE.

London, Friday. — The demand for Australian and New Zealand butter is fully equal to the supply, and prices show an advance of about 2s per cwt. for "choicest" brands. There is a growing demand for Colonial butter at 90s to 96s, but arrivals of this quality are not large, and are consequently soon sold. In fact, the quality suitable for a shilling retail is diminishing weekly, and a keener competition for any pure clean-flavoured butter selling from 92s to 98s is being experienced every day. The Danish official quotation has been raised this week by two kroner, and now stands at 94 kroner, against 103 kroner at this date last year. The low prices at which Danish butter has been offering of late has brought an increased demand; but buyers have not yet realised that prices must make an advance in the near future. The rise in the official quotation yesterday will probably bring this home to many. The demand for Canadian cheese this week has been more for cheese a little under top value than for strictly "choicest" quality. Prices on the spot, however, remain unchanged at 51s to 52s for "choicest," and 47s to 50s for "finest." Quotations for c.i.f. transactions are a little lower on the week, but this is looked upon as temporary, the position generally being regarded as sound. New Zealand cheese is meeting a good demand at 50s to 51s for strictly "choicest," with a few shillings less for "finest."—W. WEDDELL AND CO.

HAY AND STRAW.

Manchester, Wednesday.—Hay, 6¾d to 7¾d; clover, 7½d to 8½d; straw (oat), 6½d per stone.

Whitechapel, Saturday.—Supplies good, but quiet demand and business slow; prices steady. Best clover, 95s to 110s; inferior, 80s to 90s; specially-picked hay, 115s; good, 108s; inferior, 80s to 90s; mixture and sainfoin, 90s to 100s; straw, 28s to 40s per load.

CHEESE.

Newport, Wednesday.—A fair supply, and good attendance. Caerphillies, 65s to 68s; fancy dairies, 70s to 72s; truckles, 60s to 68s; Derbies, 65s to 66s; Cheddars, 60s to 65s.

Glasgow, Wednesday.—The arrivals of home cheese in the Glasgow market were larger this week, but the demand was still dull. What is wanted is a cheap cheese, but that is difficult to get. Dunlops are more in demand than Cheddars. The quotations for Cheddars and Dunlops were from 58s per cwt. New Zealand cheese are not much in demand. Canadians are about over for the season.

SEEDS.

London, Monday.—Messrs. John Shaw and Sons, seed merchants, of Great Maze Pond, Borough, London, S.E., write that there is now a fair seasonable business passing in farm seeds generally. The continued and unprecedented advance in white clover seed constitutes the most interesting feature of the movement. Extreme scarcity of fine seed the world over forms the basis of this remarkable speculative movement, under which values have now reached a point not touched for many years past. Secondary qualities of red seed are meanwhile dull and difficult of sale, but for alsyke and trefoil there is a steady inquiry on former terms. Perennial and Italian ryegrasses realise late rates. The demand for spring tares improves, and at figures favouring holders. Winter vetches are still wanted. As regards canaryseed, although there are numerous and abundant statistical reasons for its getting dearer, this wayward article refuses to advance. White millet of excellent quality is now unusually cheap. Blue peas and haricot beans still move off slowly.

FEEDING STUFFS.

London, Thursday.—Linseed.—Continued belief in a prospective shortage of the world's supplies, and increased Continental demand, have caused prices to advance considerably. Spot Calcutta to London, 55s; passage 55s to 54s; January, 53s 6d; March, 51s 3d; April-June, 49s 9d to 50s. La Plata December-January, 49s 6d; January-February, 49s 6d. Hull is also dearer; La Plata shipping or shipped, 51s to 50s; December-January, 49s 6d; January-February 49s 6d. To the Continent, Bombay February-March, 53s; March-May, 52s. Calcutta on passage, 54s 9d; March-April, 50s 3d; April-June, 50s. La Plata December-January, 49s 6d; January-February, 49s 6d. Linseed Oil has been very firm, and a smart advance for forward positions has taken place. We quote spot in pipes £29 10s; barrels, £29 15s; February-April, £29 5s; May-August, £29 5s. Hull spot naked, £28 10s; February-April, £28; May-August, £28. Linseed Cakes quiet. We to-day quote London made £7 15s to £8 ex mill; American Western £7 5s to £7 7s 6d; Russian, £7 10s to £7 12s 6d. Cotton cakes quiet; London made £4 10s to £4 12s 6d. Rapeseed meets with more enquiry, and prices are rather dearer. To London we quote Yellow Cawnpore January-February, 41s 6d; Brown Cawnpore, 38s 9d. To the Continent we quote Yelow Guzerat January-February 42s 6d; Yelow Cawnpore, January-February, 41s 6d; Brown Cawnpore, January-February, 38s 9d; Brown Calcutta, 35s 6d; Ferozepore, January-February, 38s 3d; Jamba, March-April, to Hull 30s 3d. Cottonseed has been quiet, and prices are rather inclined to be easier. Spot London, £6 7s 6d; afloat, £6 8s 6d; January, £6 8s 9d; February-March, £6 8s 9d; April, £6 11s 3d; Hull, spot and near, £6 5s; January, £6 6s 3d; February-March, £6 8s 9d. Cargoes, February £6 11s 3d; March, £6 12s 6d; April, £6 13s 9d. Bombay to Hull February-March importers are holding for £4 12s 6d, but resellers are offering at £4 11s 3d.—THE PRODUCE BROKERS COMPANY, LIMITED.

WATERLOO ROUND FEEDING CAKES, £6 12s 6d PER TON. WATERLOO ROUND 97 PER CENT. PURE LINSEED CAKES; £9 10s 0d PER TON; WATERLOO ANGLO SHAPE 97 PER CENT. PURE LINSEED CAKES, £9 7s 6d PER TON; WATERLOO 97 PER CENT. PURE EGYPTIAN COTTONSEED CAKES, £5 0s 0d PER TON. ALL F.O.R. HULL.

MOLASSINE FEEDING MEAL, packed in bags, of 1¼cwt, each. Price per cwt., 7s. 6d. Price per ton, £6 5s., on rail at works, Silvertown, Essex, and F.O.R. Liverpool. A sample lot of 6cwt., in 4 bags of 1½cwt. each, delivered free to any station in England on receipt of remittance for £2 11s 0d

HOPS.

Canterbury, Saturday.—A healthy demand and a fair amount of business. Best growths up to 66s per cwt., but choice pockets occasionally range up to 80s.

Worcester, Saturday.—Trade has been quieter on our market this week, but a few good lots have been sold at the better prices ruling just now. Good qualities are scarcer than ever, and when offered sell readily, but any inferior sorts are difficult to sell.—PIERCY AND CO.

POULTRY AND PROVISIONS.

Smithfield, Saturday.—Good supplies, and trade steadier. Fowls:—Yorkshire, 2s 9d to 3s 6d; Essex, 2s 6d to 3s 3d; Boston, 2s 6d to 3s; Surrey, 3s 6d to 4s 6d; Sussex, 3s 3d to 3s 9d; Welsh, 2s to 2s 6d; Irish, 1s 9d to 2s 3d; turkeys (cocks), 6s to 8s; (hens), 4s to 6s; geese, 5s 6d to 7s; country ducks, 2s 9d to 3s 6d; Irish, 1s 6d to 2s; pigeons, 9d to 1s 1d; quail, 10d to 1s 3d; wild rabbits, 9d to 11d; tame, 10d to 1s 3d each; Australian, 7s 6d to 8s 6d per dozen; pheasants, 4s 6d to 5s 6d; young partridges, 3s to 3s 6d; old, 1s 6d to 1s 8d per brace; hares, 3s to 3s 3d; leverets, 2s to 2s 6d; wild ducks, 1s 9d; pintail, 1s 3d; widgeon, 1s; teal, 10d to 1s; snipe, 8d to 10d; golden plover, 1s to 1s 2d; black, 5d to 7d; Russian capercailzie (cock), 2s 6d to 2s 9d; (hens), 1s 9d; blackgame, 1s to 1s 2d; ptarmigan, 9d to 11d; partridges, 1s to 1s 3d each.

Contagious Diseases of Animals.

Summary of Returns issued by the Board of Agriculture for the week ending January 28, 1902:—

| | | |

STOCK AND SHOW NOTES.

By Herdsman.

The Shire horses to be disposed of to-morrow (Tuesday) by order of H.M. the King include many winners, while several are entered for the forthcoming London Show. Most of the animals are in fit condition for showyard training, being healthy and robust, partly owing to their having been grown and wintered on the Wolferton Marshes in full exposure to the storms and winds of the Wash. The King's connection and interest in Shire horse breeding has been of great advantage to the breed, some notable sires having emanated from the Wolferton stud. As an exhibitor, and still more as a breeder of the very best Shires, His Majesty has been most successful, and in the forthcoming sale are animals nearly related to those champion winners, Gloaming and Victor's Queen, which were bred at Sandringham. Nine animals are by Harold, and all in the sale have Lincolnshire Lad or What's Wanted blood, except the promising yearling colt by Desford Vulcan Chief. Many are winners, several are entered for the London Show, and others are likely animals for showyard training. A few very good young stallions and three promising yearling colts are in the sale. Amongst the former is Benedick, splendid and worthy son of his great sire, Prince Harold.

The Warwickshire Agricultural Society's Show will be held this year at Warwick on August 27th and 28th, entries closing on August 2nd with the secretary, Mr. H. Moore, Warwick.

At the request of the Local Committee, the Essex Agricultural Society have altered the date of this year's show at Romford from June 18th and 19th to June 19th and 20th (Thursday and Friday). The date up to which entries may be received remains unaltered.

Foot and mouth disease in France has decreased during the last month of the year 1901. The "Journal d' Agriculture Pratique" says that during November there have been 1,487 establishments infected in 117 communes, against 2,333 and 966 communes in October, and 3,206 establishments and 1,023 communes in September. In regard to the Barcelli method of cure, Professor Nocurd is of opinion that this treatment, proposed by the Italian Minister of Agriculture, is not efficacious. It seems that it is not only inefficacious, but of a dangerous nature. German veterinaries have tried the remedy, and have met with a negative success, the mortality being greater with treated animals than if the disease followed its own course without treatment. The Italians have lost confidence in the Barcelli method, but Mons. Barcelli states that there have been numerous cures, and anyone is free to use it

Some time since the Polo Pony Society decided to issue an annual supplement to the Polo Pony Stud Book, the entries to consist of young ponies, either colts or fillies, foals, yearlings, and two and three year olds, without any limit to their height, provided they are (a) by a sire and out of a dam registered in the Polo Pony Stud Book, or (b) by a thoroughbred or Arab sire, out of a dam registered in the Stud Book, or (c) by a sire registered in the Stud Book out of a thoroughbred or Arab dam, (d) or if they have been awarded honours in polo pony classes at the associated shows. The first of these supplements, which is issued in connection with volume seven of the Stud Book, has now been published, and contains eighty-three entries, thirty-three being colts and fifty fillies. These ponies can be annually re-entered in subsequent issues of the Supplement till, on reaching their fourth year, they will, if holding the Hurlingham certificate, or the certificate of a qualified veterinary surgeon, that they do not exceed 14-2, be accepted for the Stud Book proper, and receive their registered number.

In the course of the preface to the Supplement it is stated that public interest has been largely evinced in the new departure, and the Council gratefully acknowledge the valued suggestions which have been offered them. The institution of the Supplement, it is pointed out, was to grapple with the height question, as specially affecting the young produce of registered parents, and to remove an anomaly subversive of the Society's objects. They are confident that the Supplement presents the best way of recording the pedigree, height, and performances of the young ponies, pending their reaching four years old, when the conditions of height and pedigree, and of height and inspection, may be reasonably applied.

The Supplement also contains a number of other items besides entries, which will prove of interest to polo pony breeders, such as the list of awards at the 1901 London show, and at provincial shows during the same year; a report of the last annual meeting, list of members, &c.; whilst as a frontispiece is given a portrait of "Summer Lightning," winner of the gold challenge cup, at the Society's show at Islington last year.

I learn that Mr. Sanders Spencer, of Holywell Manor, near St. Ives, Hunts., has recently shipped a very nice middle white board by Messrs. Scrutton, Sons, and Co.'s s.s. "Tavan" from London for Mr. Wm. Davies, of Rosean, Dominica. A Houdan cockerel from Messrs. Abbott's yard was shipped by the same steamer.

The ninth volume of the Hunters' Improvement Society's Herd-book, containing record of mares 2,245 to 2,653 and mares 21 and 22, has just come to hand. A decrease of entries received is to be noticed, as compared with the number received for the last volume. This, however, is doubtless owing to the more stringent regulations and requirements in force for animals entered in this stud book. Following the principle adopted in the two previous volumes, the new entries have been analysed to discover the authenticated number of crosses of thoroughbred blood contained therein. The separate section for Irish horses has been retained, the entries numbering 119 in that section. In the preface to the present volume it is stated that important proposals in respect of the next volume will be presented to the members of the Society in March, providing for the automatic registration of entire colts and fillies by qualified parents, and these will appear in the book under its new title of "Hunter Stud Book." This will entail an entire revision of the existing rules, and it has been deemed desirable, therefore, to retain for this ninth volume of the series the old title of "Record of Hunter Mares and Sires."

The Kintyre Agriculture Society has fixed Friday, June 6th, as the date of this year's show at Campbeltown, the entries to close on May 23rd with the secretary, Mr. G. Erskine Inglis, Estates Office, Campbeltown, Argyllshire.

The annual horse show at Woodbridge, which, by the way, is noted for its displays of the Suffolk breed, will be held on Easter Monday, March 31st. Entries will close on March 22nd, and forms, together with prize schedules, can be had post free on application to the secretary, Mr. G. Shipman, Woodbridge, Suffolk.

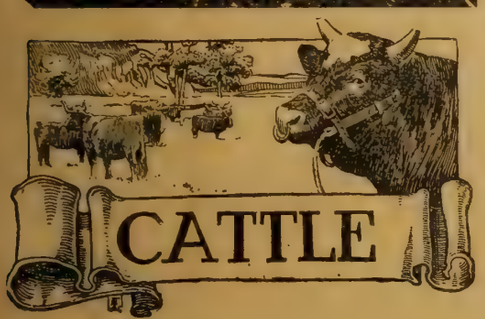
In 1881 good animals, chiefly of one of the best branches of the old Bates' Blanche tribe, were bought at the Duke of Manchester's sale at Kimbolton. Valuable purchases of Booth blood followed from the late Mr. Heinemann's herd in Kent. When the old Hartforth herd, so long bred by the Cradock family in Yorkshire, was dispersed, a number of the best cows and heifers were selected, and from these some really beautiful and good milking animals have been bred. Later selections were made from the Duke of Northumberland's herd at Alnwick, from Lord Lovat's at Beauly, Inverness-shire, and Sir A. H. Grant's in Aberdeenshire. These also comprised choice families, several being of the fashionable Cruickshank's, Broadhooks, from which the famous Champion bull New Year's Gift and many of the recent Beauly prize bulls have been bred.

The pen of Middle White Pigs shown above is that which won the £10 silver cup for the best pen of any Middle White breed at last year's Smithfield Show, as well as a first prize in the class for two pigs of any Middle White breed not exceeding nine months old. These pigs were bred by Mr. J. Saunders, Sutton, Cranborne, Dorset, and exhibited at the show mentioned by Mr. George Hayter, of Woodlands Farm, Wimborne. On December 1 last they were 8 months 3 weeks and 5 days old, and weighed 7 cwt. 0 qrs. 8 lb.

Butter Dealer Fined £20.—A Bolton egg and butter dealer, named John Regan, was charged at the local police court on Monday with selling butter not of the nature and quality demanded by the purchaser. It was stated that the butter when analysed was found to contain 93 per cent. of fat foreign to butter. For the defence it was stated that the shop was not lighted, and defendant served the inspector's assistant with margarine instead of butter. The Bench thought it was a very serious case, and to mark their sense of the seriousness of the case they would inflict the substantial fine of £20 and costs or one month

SPENCER'S

COD LIVER OIL FOR CATTLE.



Calf Brand.

The Best and Cheapest article for rearing Calves, being a natural substitute for Cream. Equally good for all other stock—a medicine and food combined. Far better and cheaper than Feeding Meals.

Write for booklet giving full particulars to the Manufacturers:—

ISAAC SPENCER & CO.,

Our Colonies and the Army Meat Supply.

It was stated on Monday that Mr. See, the Premier of New South Wales, had cabled to the Imperial Government protesting against the contracts reported to have been placed in Argentina for the supply of meat and other produce for the British forces in South Africa. The Premier at the same time declared the statement that Australia was unable to furnish adequate supplies to be wholly unfounded, and intimated that the New South Wales Government considered such action on the part of the Imperial Government to be in unfavourable contrast with expressions of Imperial solidarity. Mr. See added that the acts of the British Colonies justified preference being given to them.

Mr. Seddon, the New Zealand Premier, made a strong speech on the subject on January 25th, and said that the action of the War Office in agreeing to take a portion of the meat supplies for the British troops in South Africa from Argentina, showed an indifference to the Colonies that was reprehensible, and declared that the ground given, namely, that, owing to the droughts, Australia could not supply the meat required, was untrue. Mr. Seddon asserted that it was unnecessary to purchase from Argentina, pointing out that New Zealand and Australia could supply the requirements of the War Office for South Africa thrice over, which a reference to the amount of frozen meat supplied to Great Britain would prove. Both Colonies had more meat than customers for it, and looked to Africa to take the surplus. The Colonies were doing all in their power to build up and strengthen the Empire, but the task was made hard when the trade was given to foreigners to the detriment of those who had made sacrifices and were prepared to do still more. A course had been taken, bringing a keen competitor into the field, and helping him, not only as regards meat, but other products also. The producers and people of Australia felt that such actions were unfriendly. They caused irritation, which should be avoided. Some one had blundered, and the error should be retrieved as a matter of abstract justice, and he (Mr. Seddon) had every confidence it would.

The subject was mentioned in the House of Commons on Monday, Major Seeley asking the Financial Secretary to the War Office whether there was any truth in the report that the contract for the supply of meat to the troops in South Africa had been given to a firm who will give preference to Argentine meat over that supplied by the various Colonies?

Lord Stanley, in reply, said there was no truth in the report that there had been a preference given to supplies of meat from Argentina over those of our Colonies for the troops in South Africa. The contract for meat supply by the Cold Storage Company will expire on March 31, and as their new tender for the new contract was at a higher figure than that of another firm, the contract now goes to new hands. But the firm to whom the contract has been given has large interests of its own in Australia, and the representative of the firm has given an undertaking, in writing, that, as far as possible, all meat supplied, both live and dead, shall be secured from our various Colonies.

On Tuesday Sir Edward Strachey asked the Secretary for War whether in the new contract for the supply of meat to the troops in South Africa the stipulation that the meat should be obtained as far as possible in Australia and New Zealand was dependent on the price, and whether the stipulation prevented the supply of meat from the United Kingdom or Canada?

Lord Stanley said that the contracts provided for the supply at one price of fresh meat and at another price of frozen meat. There was nothing in the contract which prevented the supply from the United Kingdom or from Canada.

To-day (Monday) Lord Carrington will ask the Under Secretary of State for War what portion of the meat supplies for the British troops in South Africa has been procured from Argentina; on what authority was the statement made that Australia and New Zealand were unable to furnish adequate supplies of meat for this purpose; and whether the contracts from the Argentine cannot be cancelled in view of the protests of the Premiers of New South Wales and New Zealand.

The High Price of Meat.

For some time past London butchers have felt that the time had arrived for the relaxation of the regulation of the Board of Agriculture forbidding the importation of cattle from the Argentine, and, as will be seen from the reports under "In Parliament," the matter was brought into the House of Commons on Thursday, when Mr. Hanbury said he could not yet undertake to remove the prohibition. On the subject, Mr. Deputy Malthouse, Chairman of the Cattle Markets' Committee of the Corporation, writes to the "Daily Telegraph" as follows:—

"After fifty years' experience of the meat trade I can say that I have never known it in so serious a condition. This week there is not a single bullock in Deptford Foreign Cattle Market, and it is certain that supplies from Canada and America are diminishing, and will continue to diminish. The profit is not sufficiently large to induce them to export their beasts to us, in addition to which their own people are consuming a much larger proportion of the supply than formerly. The price of meat has gone up 8d. a stone of 8 lb. since the prohibition order came into force. Of course, all connected with this traffic in imported cattle, whether on the ships, in the ports, and in the markets, have suffered considerably; but it has caused more trouble than this. For the edible offal, the heart, pluck, etc., forms a large proportion of the food of the poor, and the supply has naturally been very scanty of late.

"In the interests of all concerned, the importation of cattle from the Argentine should be permitted again without delay. It was prohibited justly enough in consequence of an outbreak of foot-and-mouth disease in that country; but the ailment has now been completely stamped out. Indeed, so effective have the remedial measures proved that a reward has been offered to anyone who will produce a beast suffering from the disease; but no one has claimed it. I think that the President of the Board of Agriculture needs only to be satisfied on this point to release the cattle.

It might be thought that one or other of our Colonies may be able to supply the deficiency; but Australia and New Zealand export only frozen meat, which is by no means to everyone's liking, and which provides none of the cheap food for the poor. . . . . The resumption of the importation of the cattle would not only reduce the high price of meat and supply edible offal for the poverty-stricken, but it would also benefit the breeders of pedigree stock in this country, for one of their chief customers would again begin to buy their animals."

Sale of Shorthorns at Killhow near Wigton.

The entire herd of Shorthorns bred by the Hon. H. J. Scott was sold by Mr. W. Hope, of Wigton, on the 23rd inst. The herd consisted principally of Booth blood, there being representatives of Lord Polwarth's famous Wave family, also of the Laurestina, Fame, and other good tribes. There was a good attendance, and the bidding was brisk, several of the best specimens making capital prices. A grand red yearling heifer, Japonica, was bought at 50gs., the highest price of the day, to join Mr. Ecroyd's well-known herd at Armathwaite; her dam Juniper goes to Alnwick at 41gs., while Royal Maiden III. was purchased by Sir Wilfrid Lawson at the same figure. Jasmine, a promising red two-year-old, was bought by Mr. Charlton at 44gs., the same gentleman taking Resolution, the roan three-year-old bull in service, at 30gs.

The following were the buyers and prices:—

COWS AND HEIFERS.

	Gs.
Hawksdale Rose, red, c Nov. 6th, 1891, s Aldersceugh 60252 ..... Mr. Saul	17

HORSES.

The Purchase of Army Remounts in Austria and Hungary: Committee's Report.

The report of the committee appointed to examine certain allegations as to bribes given to British officers in relation to the purchase of horses in Austro-Hungary was issued on Thursday as a Blue-book.

The committee state that, having examined a number of witnesses and considered the documentary statements laid before them, they believe that there is no justification for any charge of bribery or corrupt dealing against any British officers employed in connection with the purchases in question, whatever errors of judgment may have been committed. The committee believe that the officers concerned were solely actuated by the desire to do their best for the public service. In the course of his evidence Sir Blundell Maple distinctly disclaimed any intention of making a charge against British officers. His only motive was, he said, to draw attention to certain allegations as to the excessive price at which the Hungarian horses were contracted for, and as to the quality of those accepted for the service, and to demand an inquiry. While fully accepting Sir Blundell Maple's explanation, and recognising that he was actuated by a desire to serve the public interest, the committee feel bound to express their deep regret that on such grounds he should have committed himself to public statements which, whatever their intention, were universally understood to be direct attacks on the honour and integrity of British officers.

In dealing with the subject of the Imperial Yeomanry purchases, the committee state that it appears that discretion as to the method of obtaining Hungarian cobs—and as to their choice of a contractor—was left by the Imperial Yeomanry committee entirely in the hands of Colonel St. Quintin, their remount officer. The committee are satisfied that Colonel St. Quintin, who had come forward reluctantly, and only at the request of the Imperial Yeomanry committee to undertake this work, had as his only object the fulfilment of the duty assigned to him. They realised the difficulty of his position owing to the urgency of the demands which confronted him. At the same time, they regretted that before the first contract he did not take more steps to ascertain (a) what would be a reasonable price to pay, and (b) the position and capacity of the contractors to undertake a large contract of this kind without resort to middlemen. They state they must point out that had the first contract been made on the same terms as the second a saving of nearly £12,000 would have resulted. As regards the quality of the horses, the evidence, state the committee, was very conflicting. They had been unable, except in one instance, to obtain dates or details of any particular instances in which carelessness in passing horses was alleged to have taken place, and many of the statements laid before them were based on hearsay alone.

The committee find that a Mr. Lewison secured a contract for 1,500 horses free on board at Fiume at £33 16s. 8d. Mr. Lewison made the contract over to Mr. Hauser, an Austrian breeder, at £22 a piece, which left Mr. Lewison with an enormous balance of profit. A second contract was made with Mr. Lewison at £26. The cobs did not cost Hauser more than £8 to £12 or £12 to £17 free on board at Fiume. The mounted infantry cobs were purchased from Mr Hauser at £20, which shows a profit of £3 to £7 a cob. Cavalry and artillery horses were purchased for £30 and £35 respectively, and satisfactory horses were obtained.

The committee, in their general observations, express the opinion that, given a condition of great and unforeseen emergency, there is no ground for very serious criticism as to the steps taken to meet the urgent demands. Commenting on the case of the Government Remount Department, the committee state that they feel bound to express the surprise with which they learnt that, before the decision to purchase for the Government in Hungary was actually come to in April, 1900, no steps had apparently been taken since 1884 to ascertain the best sources of supply in that country, the best methods of tapping those sources, or the most reliable people to employ. It is, adds the report, certainly unfortunate that after the outbreak of the war no such preliminary arrangements were made as to avoid hurried and ill-considered measures at the last moment. Even in times of peace it should obviously be the business of the Remount Department to study systematically the possibilities afforded by the different countries as sources of horse supply in time of war, and the best means of making use of those possibilities in the event of an emergency rising. They consider that in future the Remount Department should be held responsible for obtaining such information, and for keeping it up to date by systematic reference to the military attachés and such other sources as may be available.

A Yorkshire Blacksmiths' Union: Extraordinary Methods.

"You must not fasten a horse's loose shoes, nor replace any that have been knocked off by contact with tram lines or other street obstacle, unless such shoes have been originally supplied by a member of the Yorkshire County Shoeing Smiths' Association (Limited)."

Such is the effect of one of the commandments of the big Yorkshire shoeing smiths' combine, which came into existence about two years ago. In Bradford, Huddersfield, and Halifax nearly every master blacksmith belongs to it. Of the ninety blacksmiths in Leeds, nineteen are members of this new sledge-hammer association. Their trade mark is an anvil, and on no consideration whatever will one of these associated blacksmiths fasten a loose shoe unless it bears the authorised stamp.

A Keighley gentleman gives an example.

"On Wednesday," he says, "our carter, passing through Bradford, found that one of his horse's shoes was loose. He called upon three different shoeing smiths, each of whom positively refused to fasten it, the reason given being that the horse had not originally been shod by one of the Yorkshire County Shoeing Smiths' Association."

"It is quite time," he adds, "that a counter association was formed by owners of horses to combat such shabby dealings."

The line of defence taken by the organised smiths is curious. Interviewed in Leeds on Thursday, one of them, who shoes over fifty horses a week, explained the aims and policy of their limited company.

"It is really an association to benefit the horses and the horse owners," he said. "We have a lot of men who scamp their work and charge low prices, and we want to try and raise the status and efficiency of our calling. In Bradford they are practically all in the association, and they go in strongly for technical education. In Leeds the smiths seem so frightened of each other getting a little more work that the organisation has not made the progress it ought to do."

"What guarantee do you give the public that the work done by members of the combine is any more efficient than the work done by non-members? Has a smith to pass some test before being admitted to membership?" asked the inquiring reporter.

"No, we have no test so far, but we hope to have before long. Everything must have a beginning," replied the organised smith.

"What is meant by a registered smith?"—"A smith who has passed the examination set by the Farriers' Company, London."

"Are all your members registered?"—"No, not yet; but we want them to become so. We want to get a better price for our work, so that we can afford to get technically educated."

"Would you refuse to shoe a horse that had not been previously shod by a member of the combine?"—"No, I should not refuse to shoe it. But I should decline, and have declined, to fasten a shoe that has been put on by a non-member."

"You would permit a horse to run a grave risk of laming itself in the hope of making its owner regret that he had not originally patronised a company smith?"—"We can only bring pressure to bear on the horse owners in this way."

"And you imagine the public will appreciate your method of raising the price of your work?"—"The object of our association is not to extort money from the public. It is to improve the character of our work, and thereby benefit both horses and horse owners. We want to get all blacksmiths to come into the association, and be more sociable, and not so pig-headed."

Further, our informant states that in Bradford 5s. was obtained for fully shoeing a horse, and in Huddersfield 5s. 6d., while in Leeds contracts fell as low as 3s. 6½d. As explained, the association is not very vigorous in Leeds.

A non-union Leeds smith—a qualified veterinary surgeon—who shoes over a hundred horses a week, interviewed on the same day, severely criticised the policy of the combine.

"If I were a horse owner," he said, "and a smith refused to fasten a loose shoe on my horse because it had not the anvil stamp on it, I should immediately call in a policeman and endeavour to compel compliance with my request. If the blacksmith still refused, at his own charge, to fasten the loose shoe I should hold him responsible in a court of law for any damage or loss that might ensue to myself or my horse. The society contend they have a right to refuse to fasten a shoe. I should like to have the point tested. It's a scandalous shame that dumb animals should be made to suffer in this way."

With the aim of the Yorkshire County Shoeing Smiths' Association (Limited) to educate their members, and obtain better workmanship and better pay, the public will heartily sympathise; but their attempt to foster their organisation by declining to minister to the extreme needs of dumb animals will excite some surprise and some remarks.—*Yorkshire Evening Post.*

SHOWS.

The Permanent Royal Showyard.

Assistance from the City.

On Tuesday the Lord Mayor, Sir Joseph C. Dimsdale, Kt., M.P., and the Lady Mayoress gave a luncheon at the Mansion House prior to a conference between Prince Christian, the president, and a deputation of the council of the Royal Agricultural Society of England and the masters of the principal City Guilds, with reference to the society's project for permanently establishing their exhibitions in London. Prince Christian was attended by Colonel George Grant Gordon, C.V.B., C.B. Among those present were the Earl of Derby, Earl Spencer, Viscount Baring, Mr. Victor Cavendish, M.P., Sir Walter Gilbey, Mr. Percy Crutchley, Mr. F. S. W. Cornwallis, Sir Ernest Clarke, Mr. Alderman and Sheriff and Mrs. Bell, Mr. Sheriff and Mrs. Horace Marshall, the Master of the Grocers' Company, the Prime Warden of the Goldsmiths' Company, Sir John Watney, the Masters of the Drapers', Skinners', Merchant Taylors', Tallow Chandlers', Armourers and Braziers', Saddlers', Leathersellers', Vintners', Haberdashers', Ironmongers', Cutlers', and Carpenters' Companies, and representatives of the Guilds of Mercers and Salters.

After luncheon, the Lord Mayor said that when Prince Christian asked his advice with reference to interesting the City in the society's new project for establishing a permanent showyard in the metropolis, it occurred to him that it would be a great advantage if the society could have an informal conference with representatives of the leading Guilds. Agriculture was one of our most important industries, and the past history of the Royal Agricultural Society entitled any appeal which it made to the City to attentive consideration. The scheme had been well thought out, and was, in his judgment, deserving of the support of the citizens of London.

Prince Christian, after thanking the Lord Mayor for convening the conference, said that, for various reasons beyond the Royal Agricultural Society's control, it had been found impossible to continue after this year the system of migratory shows, and from 1903 the society's annual exhibition would be held on a permanent location in London. An excellent site had been selected on land lying between Willesden and Ealing. The purchase of the site (100 acres) had involved an outlay of £30,000, and the society had been obliged to make an appeal for funds to enable it to make that purchase. His Majesty the King had contributed 250 guineas, and graciously expressed his interest and satisfaction in the decision of the council, and his hope that the money required would soon be forthcoming. They had received promises of support of a sufficient amount to warrant them in effecting the purchase of the land, but they were confronted with the problem of finding funds for the preparation of the ground to adapt it for the purposes of the society and equipping it with the necessary appliances and buildings of a permanent showyard. Many of the City Guilds owned land, and their trades were more or less closely associated with agricultural operations. The society felt that now that they had decided to make the headquarters of their annual exhibitions in London it would be very valuable to them to have the sympathy and support of the great Guilds representing the industry and commerce of the metropolis, and if the Companies should feel able to make them pecuniary grants it would help them much in the responsible task that lay before them. In any case they felt assured of their sympathetic consideration of the claims which the Royal Agricultural Society, as the representative of the great farming interest in this country, had upon the city which it had now decided to make its permanent home. He sincerely thanked the Lord Mayor—a brother grocer—for his kindness in interesting himself in the society's welfare and his generous hospitality that day.

Earl Spencer cordially endorsed all that Prince Christian had said. Excellent as had been the methods of the Royal Agricultural Society in the past, latter-day exigencies had necessitated an alteration in the old system of migratory shows. A permanent showyard in London would not only enable the society to make the annual shows more comprehensive and representative, but it would attract to the metropolis crowds of visitors from the provinces, the Colonies, and the Continent, all eager to witness the latest developments and improvements in agricultural industry, without involving the drain which migratory shows imposed on the society's resources.

The Earl of Derby said the decision of the society to have a permanent showyard in London, and to abandon their annual visits to the provinces, was not so serious a change as at first sight it might appear. Locomotion nowadays brought the provinces within easy and comfortable range of the metropolis, and a permanent site meant greater accommodation and increased facili-

ties for showing their live and dead stock, their agricultural machinery, and other agricultural exhibits. As time went on, it had been found more and more difficult to find convenient showyards in the immediate vicinity of the great provincial cities, and large sums were annually spent in temporary roads, in laying down a water supply, and in other ways, which were useless when the show closed. With a permanent showyard, all these expensive drawbacks would disappear, and country people would enjoy an annual visit to London to the society's new exhibition.

Sir Walter Gilbey also spoke, and on the part of the Guilds, Mr. Harrison, Master of the Grocers' Company, and Mr. Ernest Gardner, M.P., Master of the Drapers' Company—the latter himself a farmer of 2,000 acres—assured his Royal Highness and the council that the scheme which they had laid before them that day should have their serious, earnest, and most sympathetic consideration.

Prince Christian having tendered the thanks of the assembled guests to the Lord Mayor, the proceedings terminated.

Judges for the Highland Show.

Below we give a list of the gentlemen who have been nominated, and have agreed to act, as judges in the various departments of the Highland and Agricultural Society's show, to be held at Aberdeen in July. The directors reserve the right to make such alterations on the list as may be necessary or desirable.

Cattle: Shorthorns—William Tait, Prince Consort's Shaw Farm, Windsor; Robert Bruce, Royal Dublin Society, Leinster House, Dublin. Aberdeen-Angus—Samuel Davidson, Beech Hill, Inverness; Alexander Strachan, Wester Fowlis, Alford, Aberdeenshire. Galloway—William Stroyan, Culcaigrie, Tywnholm. Highland—Hugh Macdiarmid, Island House, Tiree, Argyllshire. Ayrshire—Thomas C. Lindsay, Aitkenbrae, Monkton. Fat Cattle—William Wallace, Chapel of Seggat, Auchterless, Turriff.

Horses: Draught Stallions, Colts, and Geldings—James Murdoch, Garteraig, Shettleston; George Cocker, Hill of Petty, Fyvie. Draught Mares and Fillies—George Bean, West Ballochy, Montrose; Alexander Burr, Tulloford, Old Meldrum. Hunters—Charles J. Cunningham, of Wooden, Kelso. Hackneys—Fred Wrench, Killacoona, Ballybrack, Dublin.

Ponies: John M. Martin, 5, Drummond Place, Edinburgh. Highland Ponies—Lord Arthur Cecil, Orchard Mains, Tonbridge, Kent. Highland Pony Stallions (competing for Lord Tweedmouth's prize)—Sir John Gilmour of Montrave, Bart., Leven. Shetland Ponies—Gilbert Anderson, Hillswick, Lerwick.

Sheep: Blackfaced—Duncan Macdiarmid, Camusericht, Rannoch Station; James Allan, Balnacoole, Shiskine, Arran. Cheviot—Donald Innes, Sandside, Thurso. Border Leicester—J. Jeffrey, Deuchrie, Prestonkirk; James Whyte, Hayston, Glamis. Half-bred—William Ballantyne, Wormiston, Eddleston. Shropshire, Oxford Down, and Suffolk—Alfred Mansell, College Hill, Shrewsbury. Fat Sheep—James White, New Market, Aberdeen.

Swine: James Rodger, Keir Mains, Dunblane.

Poultry: James Huntly, Cockburn Lodge, The Hirsel, Coldstream (classes 1 to 50 inclusive, and classes 67 to 82 inclusive); George Dick, St. Helen Street, Forfar (classes 51 to 66 inclusive).

Dairy Produce: Professor R. J. Drummond, Dairy School, Kilmarnock.

Wool: Alexander M'Naughton, manufacturer, Pitlochry; James D. Haggart, Breadalbane Mills, Aberfeldy.

THE HIGHLAND STEER, ERROL CANDIDATE 2ND, which forms the subject of the above illustration, was exhibited at the Smithfield Club Show last year by Sir W. Ogilvy Dalgleish, Bart., Errol Park, Errol, N.B., and won the first prize in the class for Highland Steers not exceeding three years old, and the £20 silver cup for the best animal of the Highland breed. Errol Candidate 2nd was bred by Mr. J. S. Blair, Melfort, Kilmelford, its sire being Iasgair 905, dam, Shuna of Melfort, 3,505, by Orag, 1,390. At the time of exhibition Errol Candidate 2nd was a little over 2 years and 10 months old, and weighed 14 cwt. 0 qrs. 20 lb.

SOCIETIES.

Ayrshire.

The report of the directors presented at the annual meeting of the Ayrshire Agricultural Association, held on Tuesday, stated that the affairs of the association continue to prosper; 102 new annual members were added to the roll in the course of the year, and in addition seven gentlemen sought admission as life members. The April show yielded a profit of £61 18s. 10d., after debiting it with £50 for use of showground; that was a decrease of £53 as compared with previous year. The debit balance against the October show was £97 12s. 9d., as compared with £93 in previous year. The annual subscriptions amounted to £399 19s., a decrease of about £13. The expenses of management amounted to £254, as compared with £225 in the previous year. The capital expenditure on the showground had been increased during the year by £248. The association's assets, after allowing for what was considered a fair sum in the way of depreciation on the cost of the several showground erections, exceeded liabilities by £3,276. On the whole transactions, excluding capital transactions, the profit for the year was £143 8s. 4d.

In addition to the cups and special prizes usually given for competition at the forthcoming April show, the following cups and special prizes have been offered for competition and accepted:—By the Ayrshire Cattle Herd Book Society, two champion cups, value £50 and £25 respectively, for each of the best male and female of the Ayrshire breed entered with a number in the Herd Book; by the Ayrshire bacon curers, for the best pen of pigs, four in number, to yield bacon most suitable for provision trade purposes, the bonafide property of the exhibitor and fed by him for at least three months prior to the show; competition limited to Ayr, Renfrew, Wigtown, Kirkcudbright, and Dumfries—first prize, £5; second prize, £3; third prize, £2.

The chairman, Mr. R. A. Oswald, of Auchencruive, moving the adoption of the report, pointed out that the association's assets, after what was considered a fair sum in the way of depreciation on the cost of the several showground erections, exceeded the liabilities by £3,276, and that on the whole transactions, excluding capital transactions, the profit for the year was £143 odd. He thought that showed a very satisfactory state of matters.

The report was adopted, and it was agreed that a subscription of £5 be paid to the Royal Scottish Agricultural Benevolent Institution.

On the motion of the chairman, the Right Hon. the Earl of Glasgow, K.C.M.G., was re-elected president; and, on the motion of Mr. J. B. Fergusson, of Balgarth, the Marquis of Ailsa and Mr. C. G. Shaw, Ayr, were elected vice-presidents, in room of those retiring.

The dates of the shows were fixed as follows:—Ayr Show, 29th and 30th April; Kilmarnock Show, 24th October. A grant of £100 was voted to the October show.

A discussion took place on the question of the system of judging at the Ayr Show. The chairman stated that the question had been before the directors several times, and they had been so evenly divided that they determined to take the decision of the general meeting as to whether there should be one, two, or three judges.

After some discussion, a vote was taken by show of hands, with the following result:—Three judges, 41; one judge, 28; two judges, 5.

Bath and West of England.

A council meeting of the Bath and West and Southern Counties Society was held at the G.W.R. Board Room, Bristol, on Tuesday. A letter from the President (the Earl of Morley), regretting that, as he had to be in the House of Lords for a Committee of Privileges, he was unable to be present, having been read, the Marquis of Bath was voted to the chair.

Sir John Cotterell, Garnons, Hereford, was elected a life member, and fifteen ordinary members were elected.

Mr. C. R. Collins, as chairman of Finance, presented the summary of the accounts for the past year and the annual statement of assets and liabilities, and moved their adoption, which was seconded by Colonel Best and agreed to.

1903 Meeting.

The Marquis of Bath, as chairman of the Special Committee, reported receipt of a communication from the Lord Mayor of Bristol conveying, on behalf of the citizens, a very cordial invitation to the society to hold its annual meeting in 1903 in that city, and expressing a belief that, should the invitation be accepted, the result, having regard to the growth of the city, would prove even more gratifying than that of the previous meetings of the society held in Bristol.

The Marquis, in moving that the invitation be accepted, remarked that the most successful exhibitions, from a financial point of view, that the society had ever held had been those at Bristol.

Sir C. T. D. Acland seconded the proposition, which was unanimously agreed to.

Experiments.

Sir C. T. D. Acland, as chairman of the Experiments Committee, presented a report which stated that experiments for the improvement of permanent pastures were being carried out upon sites in the counties of Devon, Dorset, Somerset, and Sussex, and the committee asked the council to make a grant of £150 in aid thereof. Detailed particulars of these experiments would appear in the forthcoming volume of the society's Journal. The committee also reported that they were conducting, in conjunction with the Board of Agriculture, an experiment having for its object to show the influence of manures upon the production of mutton. In moving the adoption of the report, Sir C. T. D. Acland expressed a hope that, when it was in a position to do so, the society would undertake an experimental inquiry with a view to improving the milling value of English wheat. The adoption of the report was seconded by Mr. Collins and agreed to.

Analyses.

A report from the society's consulting chemist (Dr. J. A. Voelcker, M.A., F.I.C., etc.) with respect to the samples submitted to him for analysis by members of the society, was read, the following reference to decorticated cotton cake being included in it:—

"A note on decorticated cotton cake is desirable in view of the frequent instances that I have recently met with of a deterioration in the manufacture of this valuable feeding material. It is becoming more and more the practice to have an excess of husk in the cake or even to grind up and re-mix the removed husk with the decorticated (or husk-removed) meal. This is shown in an excess of fibre in the cake, and lowering of nitrogen and oil, the quality of the cake being thereby deteriorated. A genuine decorticated cotton cake should not have more than 3 to 4 per cent. of woody fibre and about 7 per cent. of nitrogen."

On the motion of Mr. Allen, seconded by Col. Skrine, the report was approved and ordered to be printed in the society's Journal.

Plants and Seeds.

A report from the society's consulting botanist (Mr. W. Carruthers, F.R.S.), with respect to the plants and seeds submitted to him for examination by members of the society, was read. Among other matters referred to in it was the following: "A weed which was overrunning a pasture field, and which has been observed as very abundant in the South of England, was determined to be a hawkweed, a species of crepis. Its spreading leaves, close on the ground, prevent other plants getting possession of the soil, or even holding possession when they have got it. It is rejected by Stock, and as it flowers and fruits freely it multi-

PRESS OPINIONS.

"Contains some very well written, interesting articles, together with a host of facts and figures relating to the farm and markets."—**London Corn Circular.**

"Gives astonishing value for the price, sixpence. There are a great many special articles by eminent authorities, and an abundance of illustrations."—**Sussex Daily News.**

"Reflects the greatest credit. The almanac is excellently turned out, and is full of most useful information for agriculturists. In addition to many important tables, a number of capital articles on stockbreeding, &c., are given. The illustrations of prize-taking stock, &c., are very good."—**Irish Field.**

"In addition to the fat stock illustrations, there is a large number of others of cattle, horses, sheep, pigs, and miscellaneous farm scenes, which together with the reading matter, make up a book of great interest to all associated with the farm."—**Eastern Morning News.**

"The literary contents of the number are of an appropriate and interesting description."—**Field.**

"'Tuberculosis in Animals,' 'Sheep Breeding as affected by the price of Wool,' 'Weeds,' and 'Fruit,' are a few of the numerous articles on various features of agriculture contributed by experts in their subject."—**Yorkshire Observer.**

"Is up-to-date in every detail."—**Lincoln, Rutland, and Stamford Mercury.**

"Is well-known to agriculturists for the variety and usefulness of its information. It need only be said that the issue before us for 1902 does not in any respect fall short of its predecessors."—**Surrey Advertiser.**

"In addition to the good supply of agricultural article-, it has many pages of tabular matter of constant value for reference by landlord and tenant."—**Yorkshire Post.**

"A large number of illustrations, principally reproductions from photographs, find a place in the almanac."—**Westminster Gazette.**

"A mass of information of the greatest use to farmers and breeders, much of which should also be of service to the same classes in South America and the colonies, to whom we can strongly recommend it."—**South American Journal.**

"Is to the fore again as a complete record of the past year, with illustrations and particulars of prize-winning animals at all the great fat-stock shows, and features to which an increasing number of agriculturists look forward to every year, and have learned to appreciate very highly."—**Estates Gazette.**

"Contains many articles of special interest to all concerned in agriculture."—**West Sussex Gazette.**

"The Agriculturist's favourite."—**Kent Messenger.**

"For sixpence the farmer may have an encyclopædia of agriculture beautifully illustrated, the compilation of the most practical men in the country."—**Cromer Post.**

"Taken as a whole may be said to be invaluable to farmers."—**Bristol Mercury.**

"'Lobbyist' advocates an Agricultural Party in Parliament and sets forth the outlines of the programme. As to the necessity of such a party he says: 'If it is not called into existence the rural parliamentary interest will confront the growingly extravagant and disciplined demands of the towns—demands which are often brutally avowed to be anti-rural, unorganised, and divided. Suspicion will permeate its councils and weakness be the badge of its ranks.'"—**Hereford Mercury.**

"The statistics, which form an important part of the work, are thus enabled to be made more complete, whilst the addition of about a dozen illustrations—reproduced from the life-like photographs—of the great prize winners at the Smithfield, Birmingham, Norwich, etc., fat stock shows, is a very important one, and will sure to be appreciated."—**Gloucester Journal.**

"A useful agricultural almanac."—**Surrey Times.**

"Although issued somewhat later than usual, in order to make it a complete record of the past year, and to include illustrations and particulars of some of the principal prize-winning animals at our great fat-stock shows."—**Reading Mercury.**

"'Lobbyist' advocates an Agricultural Party in Parliament, and sets forth the outlines of a programme."—**Lincolnshire Gazette.**

"Appears somewhat later than usual, the compilers having delayed its publication in order that it might be a complete agricultural record for the year.—**Lowestoft Standard.**

"The list of societies has been made even more complete than last year, whilst the various tables and statistics which have been so much appreciated in previous years have been added to and brought up to date."—**Sheffield Weekly News.**

"To enumerate all the articles would be too great a task, but mention may be made of that dealing with 'Weeds,' by Mr. S. Eames; 'The Harvest of Fruit,' by Mr. J. H. Hollingworth; 'The Census'; 'Town and Country Life.'"—**Grantham Journal.**

"Fully maintains the best traditions of the compilation. In addition to a comprehensive list of facts and figures relating to agricultural practice, it contains an interesting series of articles of definite value to those concerned with questions concerning land cultivation and stockbreeding, and has also a number of contributions which deal in a highly descriptive manner with the ordinary incidents of farm life."—**Manchester Courier.**

"There is a strong list of contributors, and the pictures of varied interest, and will appeal to all lovers of country life."—**Agricultural World.**

"Is probably the most up-to-date and practical periodical of its kind."—**Irish Farming World.**

"The volume consists of 250 pages, and is altogether more than up to its former high standard of merit, while the price remains as formerly."—**Ayr Advertiser.**

"The volume consists of about 250 pages, and is nicely bound in a coloured wrapper, on the front of which appear, in a most artistic frame, portraits of his Majesty the King and his Royal Highness the Prince of Wales."—**Watford Observer.**

"The volume is still sold at the very low price of sixpence, or by post, ninepence."—**Westmoreland Gazette.**

"Tuberculosis has received much attention during the past year, and is still continuing to do so, therefore the article by M. R. C. V. S., entitled, 'Tuberculosis in Animals on the Farm,' is very opportune and will be read with interest."—**Tonbridge Telegraph.**

"Very neatly got up is the current issue of the MARK LANE EXPRESS ALMANAC, its cover adorned with the portraits of His Majesty the King and the Prince of Wales."—**Farm and Home.**

Order at once of any Railway Bookstall, Bookseller, Newsagent, or from the Publisher.

PRICE SIXPENCE (by post, 9d.).

1, ESSEX STREET, STRAND, LONDON, W.C.

plies rapidly. It should be prevented from seeding by being cut down when in flower. In some places where it is very abundant it would be better to break up the pasture, to take one or two years of roots off the field with the view of thoroughly cleaning it, and then lay it down with suitable seeds."

On the motion of Mr. Gibbons, seconded by Mr. Knollys, the report was approved.

Plymouth Meeting.

The Secretary reported that the prize list for the Plymouth Exsibition, to be held on May 27 to 31 inclusive, had been issued, and that the forms relating to the machinery, implement, art manufactures, and other departments of the forthcoming show were also being issued.

County Cork.

The annual general meeting of the County of Cork Agricultural Society was held on Saturday, the 25th, at Cork, Mr. William Roberts in the chair. The annual report for the year 1901 was read by the secretary (Mr. E. Corrigan). The balance-sheet showed that a net profit of £124 19s. 3d. was left on the year's work. The report was adopted by the meeting.

The next business was the election of the president for the ensuing year, and on the proposal of Sir G. Colthurst, Mr. W. Roberts was unanimously re-elected president for 1902. Nine members were elected to fill vacancies on the general committee.

Mr. Barton moved, and Mr. Fitzgerald seconded, a proposal to hold a root and vegetable show in November, 1902. Ater some debate, the motion was rejected by 20 votes to 18, and the meeting terminated.

Edinburgh.

The annual general meeting of the Edinburgh Agricultural Association was held on Wednesday, Sir John Usher presiding. In the course of their annual report the directors stated that the eighteenth annual show was, for the first time in the history of the association, held outside the city. The site was the Hawkhill Recreation Grounds, and the show proved a financial success. The grounds were thronged with people, and the anticipation of the directors that Leith would respond to the new departure was quite realised. The drawings amounted to £294 17s. 5d., as compared with £230 0s. 8d. on the first day of the show of 1900. The funds on hand at the close of the year were £1,481 4s. 7d., against £1,416 14s. 7d. at the close of the books in 1900, thus showing an increase for the year of £64 10s. The number of members on the roll was 600, and the directors had again to impress upon the members the desirableness of increasing the number. The amount received in annual subscriptions was only £120 10s., which might easily be doubled if an effort was made in this direction. The directors tendered their best thanks to all the subscribers to the prize fund, which amounted to £456; also to the donors of challenge cups, special prizes, medals, etc.

Sir John Usher, in moving the adoption of the report, said after their vicissitudes it was gratifying to find their funds were now in a very satisfactory position. They had £1,481 at their credit, an increase fo £64 10s. Subscriptions had increased considerably, and the premiums had risen from £453 in 1891 to £696 last year. Referring to the difficulty of securing a site for the show, he said he must take some blame upon himself for their being put out of Warrender Park, which was, no doubt, the best possible site. He found that for the institute which he promised to build for the teaching of public health in connection with Edinburgh University, no better site could be had than Warrender Park. That was the reason the Agricultural Association had been put out of it. Last year the show was held at Hawkhill Grounds, which had proved fairly suitable. Mr. William Duncan, Newpark, seconded the motion, which was agreed to.

On the motion of Sir James Gibson Craig, it was agreed to hold the next show at Hawkhill Grounds on Wednesday, June 11th. The secretary intimated that donations amounting to £253 18s. 6d. had been received towards the prize fund.

Essex.

The council of the Essex Agricultural Society met at the Liverpool Street Hotel on Monday. Mr. T. Usborne presided, and said that one of the first things they ought to think of was the very great loss the county had sustained by the death of Lord Rookwood. They had all known him for many years as a most active county man. He did not think there was anybody could be said to have done more for the county, and done it successfully, than the late Lord Rookwood.

Mr. E. K. Norman wrote regretting his inability to attend, and stating that as meetings of the council were generally held on a Monday, and as that was the Thorpe Bench day, he wished to resign his seat on the council. The resignation was accepted. Col E. Tufnell, M.P., was elected a vice-president of the society.

The secretary (Mr. F. W. Taylor) reported that the dates fixed for the show to be held at Romford (Wednesday and Thursday, June 18th and 19th) clashed with the dates of the Norfolk Show, and also that a petition had been received from Romford asking that the show should be held on the Thursday and Friday, as Wednesday was market day at Romford.

Mr. H. Hollebone said it was generally considered that Wednesday would be an inconvenient day to hold the show at Romford.

The alteration in the days was agreed to, and the show will therefore be held on Thursday and Friday, June 19th and 20th.

Col. M. Lockwood, M.P., the president, who entered the room at this stage of the proceedings, took the chair for the rest of the meeting. The Ground Committee reported they had viewed Marshall's Park Farm, Romford, and considered it a very desirable site for the show, and recommended that the show be held there. They also recommended that the tenders of Messrs. Rands and Jeckell, Ipswich, for the canvas, and Messrs. Tyrell, Halstead, for the shedding be accepted. The report was adopted.

On the recommendation of a sub-committee, some alterations were made with regard to veterinary inspection of certain horse classes, with a view to making the judging more expeditious.

The President announced he would give £80 to the prize fund, and more if necessary. The secretary reported that Sir Walter Gilbey had offered to give £50 to the prize fund; Messrs. Ind, Coope and Co., a 25-guinea silver cup; Messrs. Hill and Co., bankers, Romford, a similar cup; Mr. Geo. Cortauld, Halstead, £20: Mr. Usborne, the same as last year; Lord Rothschild, £10; Earl of Onslow five guineas; Mr. C. E. Ridley (on behalf of the three Essex Hunts) offered a special prize of £20 as a champion prize in the hunters' classes; Mr. J. H. Horton, £10; Sir Fowell Buxton, £5; Col. W. N. Tufnell, £10; Mr. J. M. Balls, special prize for sheep; Suffolk Sheep Society, £10; and there were also offers of medals and prizes from various societies. It was also stated that Mr. W. Nocton, of Langham Hall, would give the same prizes as he did last year.

It was decided to grant £800 from the society's funds towards the prize list. The schedule of prizes for the show was then arranged.

Warwickshire.

The annual meeting of the members of the Warwickshire Agricultural Society was held at Warwick on the 25th ult., Mr. Broughton Dugdale in the chair.

In the annual report the Council thanked the local committee and inhabitants of Solihull for their cordial welcome to the society on their second visit to the place. The cash prizes at the show amounted to £1,082, and out of a total of £982 awarded to stock, dairy produce, and implements the sum of £674 was taken by tenant farmers resident in the county. The members and subscribers for the year were 536, against 508 in 1900, and the amount received by subscriptions and entrance fees was £1,019, against £1,014. The accounts showed the surplus assets to be £579, and that there had been a loss on the year's working of £107.

The president moved the adoption of the report, which was approved of.

The Earl of Warwick headed a deputation representing Warwick Town Council, which invited the society to hold its next show at Warwick. A strong local committee had been formed, with Mr. J. H. Margetts as hon. secretary, and a good local prize fund would be raised. The only site available for the show was the Race Common.

On the motion of the president, the invitation of Warwick was cordially accepted, and the date of the show was fixed for August 27 and 28.

The Earl of Warwick was elected president for the year, and a vote of thanks was passed to the retiring president, Mr. J. B. Dugdale, who was elected as vice-president.

Wensleydale Blue-Faced Sheep Breeders.

The annual general meeting of the Incorporated Wensleydale Blue-faced Sheep Breeders' Association and Flock Book Society took place on Tuesday at Hawes, Mr. Punchard presiding. The statement of accounts revealed a balance in hand of £83 13s. 11d., being a gain on the year's working of £16 8s. 2d. In this account a sum of £8, arrears of subscriptions, was not included.

The statement having been approved, Lord Henry Bentinck was re-elected president of the society, with a cordial vote of thanks for his past services. The Chairman said he was quite sure his lordship would appreciate the compliment, and would be glad to help forward the objects of the association.

A question having been raised as to attendances at council meetings, it was resolved that a record should be kept, and that in future non-attendance should be a disqualification for re-election. The cost of attending the two meetings at Hawes and two at Hellifield, it was stated, amounted to about £3.

The question of ear-marking all sheep entered in the Flock Book was brought forward by Mr. Jackson. It had, he intimated, been already pretty well thrashed out at the council meeting. He admitted that their purposes were served by existing arrangements, but pointed out that if a foreign demand sprang up then the foreigners would not have the means of identifying the sheep that they required, unless the society adopted an ear-marking system. The plan had, he believed, been tried by the other Flock Book Society, but had not, perhaps, been the success anticipated. For that reason he hoped before anything was decided members would be unanimous.

In reply to the chairman, Mr. Jackson said he did not advocate any particular method of marking. That could be settled by a committee. He understood that in the Lincoln Flock Book every name had its number, and that number was marked on the sheep. The Suffolks, too, he believed, were treated in similar fashion. The marking, he thought, was permanent; it was done on the tatooing principle.

The Chairman felt that the matter ought to be referred to a small committee. Their object, of course, was to secure the foreign buyer, and give him confidence. In the course of further discussion, co-operation with the other Wensleydale Society was suggested, and the Chairman observed that those to whom he had spoken said they could not amalgamate because the types were different. Ultimately, Messrs. Jackson, Thompson, and J. Willis, together with the chairman and hon. secretary, were appointed a committee to ascertain what was done by other societies, and to report to the general meeting.

On the subject of the forthcoming Royal Agricultural Show at Carlisle, the chairman stated that he had endeavoured to get the local committee to offer additional prizes for Wensleydale sheep, but had not been successful, as the feeling was that the black-faced Herdwicks, and other breeds would also have to be considered. Moreover, the other Wensleydale Society did not seem disposed to join in giving prizes, and so the matter had fallen through.

Suggestions regarding the next ram sale were afterwards discussed. The most important was the proposal to have a class for reserves at twenty guineas. This, the Chairman said, he thought would help to improve the show by bringing before intending purchasers some of the best sheep in the district. The exhibitor would pay commission as well as entrance fee, whether the animal was sold or not, but it would be an advertisement for him.

In answer to questions, the secretary said a ram might be reserved at less than twenty guineas if the exhibitor liked. Mr. Thompson thought the prize money should go to the exhibitor whether the ram was sold or unsold, and on his motion the meeting passed a resolution embodying that opinion.

Wensleydale Sheep Breeders.

The Wensleydale Sheep Breeders' Association's annual meeting was held at Bedale Town Hall on Tuesday, Mr. J. O. Trotter being voted to the chair, in the absence of the president.

The hon. secretary, Mr. T. Firbank King, read the report, which stated that the Hon. S. Cunliffe Lister had consented to act as president for the ensuing year. The position now attained by the breed for their characteristics of fine wool, good mutton, and a constitution that enabled them to go anywhere and serve ewes at any altitude up to 1,800 feet above sea-level was gradually but surely bringing them to the front. During the last season the wool from no other breed of long-woolled sheep could realise the same price as Wensleydale wool did, and the reports of the wool markets at present show that this still held good. Much success had attended the importation of Wensleydale sheep into Ireland.

The Chairman moved the adoption of the report and balance-sheet, the latter showing a balance of £83 10s. 4d. Mr. T. Styan seconded the motion, which was carried.

Mr. J. Trotter proposed a vote of thanks to Mr. MacLaren (president), remarking that everyone regretted his leaving the district. Mr. T. Thompson seconded the motion, and it was carried with acclamation.

The election of the Hon. S. Cunliffe Lister as president was carried unanimously. The vice-presidents were re-elected, with the addition of Mr. Rd. Booth in the place of Sir Powlett Milbank, whilst Alderman T. Firbank King was re-elected hon. secretary and treasurer.

By Hordeum.

Prospects of the Session.

Now that Parliament is in full swing and settling down to work, it is time to see if the Session gives promise of accomplishing anything for the advantage of barley-growers. So far as we have gone, the indications are distinctly unfavourable. The only thing concerning which there can be any certainty is the necessity for raising further funds, but even in this item there is much scope left for the imagination. We do not know, and are not permitted to guess, how it is to be done.

All taxation can be broadly divided into three classes: one which hurts barley-growers, another which does them good, and the third, which is quite neutral.

There is abundant indication that taxes can be raised in a variety of ways with little direct influence upon barley-growing, but when we get to the

Indirect Influences

the wisest amongst us cannot determine their true working.

The most direct connection between taxation and barley-growing is the beer duty. This objectionable impost exerts a dual influence. It is hard to say which is the worse. Increase of duty means inevitably undue favour to cheaper and nastier materials used by brewers in place of good barley-malt, and restricted ability to buy on the part of consumers. Now, are we likely to see any further increase in the amount of so-called beer duty?

It is well known to a variety of people that the beer duty is not a duty upon beer at all—it is merely a tax upon the materials actually used by the brewer. This being so, will the Chancellor of the Exchequer see fit to assess the duty differently? Why not make it a duty upon beer at so much per barrel, regardless of the original gravity of the beer prior to fermentation?

A fair and properly-proportioned duty would perhaps be

Six Shilings Per Barrel.

This is really as much as beer ought to contribute to the State Chest. The remission of the 1s. 6d. per barrel would be a boon to all respectable brewers, and, standing at 6s. per 36 gallons, the yield to Revenue should be £12,000,000. This amount, under these conditions, would prove to be progressive in a way not yet known.

It will be remembered that two years ago an additional tax of 1s. per barrel was placed upon beer. As it was assumed that 36,000,000 barrels of beer paid duty, it seemed probable to get in an additional amount of duty of £1,800,000; but the Chief Officers of Excise knew better, and so they expected less. But they did not anticipate that brewers would dilute to the extent they did in reality, and it is a surprise to them that the beer duty has grown only very slightly, notwithstanding a much larger consumption of beer.

This is easily accounted for when brewers have a free hand for

Unlimited Dilution.

If out of a given quantity of materials they elect to brew 50 million barrels of beer instead of the 40 millions actually brewed, or the 36 millions assumed to be brewed and charged for, there is nothing to prevent them. They may do so next year, and they have a treble incentive. There is a great saving in the actual quantity of material used, a still greater saving in the cost of such material, and a direct diminution of duty. Now, if every barrel of beer paid a uniform rate of duty regardless of strength, the most powerful of these incentives would disappear.

The advantage of the plan does not stop here. At present a good deal of trouble is given to Excise officers, who have to watch brewers with the utmost vigilance, and honest officials will tell you with sadness that they are often beaten and baffled; but if every cask that left a brewery carried its stamp, there would be very little room left for cheating.

Beer Barrel Stamps

are no novelty or new-fangled idea. They have been used for many years in the United States with the greatest satisfaction to all concerned, and if adopted in this country they would materially benefit the Revenue and protect consumers, with the consequent benefit to those who supply the raw material for beer, be it malt, sugar, or glucose. Probably in the direct action of taxation we shall get our only benefit from the legislation of the Session. There are sundry measures proposed, but it is highly probable that none of them will become law.

The Pure Beer Bill will be re-introduced in possibly some modified form, but it is needless to discuss it until it is drafted, and even then it will be only an academic discussion. There is no chance of any such measure being placed upon the Statute-book this Session. The one great opening that offered last year was lost, and opportunities once lost seldom return.

HOPS.

Home Notes.

The Borough.

During the past fortnight much activity has marked the proceedings of our traders. Merchants have sold pretty freely to brewers, and further inquiries have come forward, which have induced the representatives of our large firms to again inspect the samples of the available parcels. Factors are therefore encouraged to be firm in their quotations, and are seeking to protect the interests of their clients, with the general result that values of hops possessing colour and quality have advanced quite 10s. from the point they stood at before Christmas. In view of this movement some lots have been taken off the market, holders confidently expecting better prices as the spring opens up. There is wisdom in such a course, although it is difficult, and almost impossible, to forecast the probabilities, when we remember that the market continues to feel the pressure of large quantities of inferior sorts, which are only saleable at ridiculous figures. Nevertheless, many of these low-quality lots have changed hands, and under any circumstances they must be profitable bargains to brewers, while they are the causes of many lamentations by growers. How universally it is now confessed that so many of us made serious blunders in picking these unserviceable hops! Had no more than about 400,000 cwts. been put upon the market, what different accounts would have been found in the books of bankers in the hop-growing districts. It is too late to apply a remedy this season. We can only "learn wisdom from the past," and "wisely improve the future." We can control our own course of action; we can "grub" and reduce the acreage, or we can adopt other means whereby the output can be limited. This is the only true wisdom as applicable to this matter, and I sincerely trust that the sense of self-preservation widespread through the country, and that the powerful weapon which "cold storage" has placed in the hands of brewers, will be effectively blunted by our determination to defend ourselves, and by our effective use of the shield which is within our reach.

Our position is fortunately strengthened by the

Exportation of American Hops.

Some considerable quantities of these growths have been recently re-shipped, and the scarcity of good hops is being increasingly realised on the other side of the Atlantic. These movements confirm my oft-repeated statements that during the whole of this season foreign competition has not affected our market. The depression is due entirely to ourselves, and the axiom that the value of English hops depends upon the quantity and quality of the English crop was never more exactly demonstrated than during our recent and most unfortunate experience.

Borough Traders

are feeling the pressure of the times, for it must never be forgotten that the absence of profit to growers means that factors and merchants suffer in proportion. Low prices, caused by excessive crops, are disadvantageous to all concerned, in whatever section of the industry they may be engaged. I regret to say that a proof of the truth of this statement is found in the difficulties of one of our factors, who has this week issued circulars to his creditors, calling a meeting for the consideration of his financial position.

Foreign Notes.

Nuremberg.

Business on the hop market is steadily becoming more active, the transactions of each week advancing rapidly, while the arrivals are falling off. Consequently, stocks have been materially reduced and values proportionately augmented. The present firmness of prices promises to be more pronounced as the season progresses, and holders, instead of pressing sales, are daily becoming more conservative. The outlook is distinctly favourable to sellers, and I am prepared to see substantial improvement in prices at an early date.

Munich.

The average quotations for hops in this great brewery centre are as follows: Hallertons (choice), 152s. 6d.; Spalts, 150s.; Saaz, 170s.; and other kinds in proportion. The sales for the week ending January 24th were nearly 15,000 kilos, while the new supplies did not reach 500 kilos. Stocks are therefore much lowered, and at the date named barley exceeded 100,000 kilos, this being the smallest figure that has been recorded since the commencement of this season's trade.

German Increase of Import Duties.

It appears, from the reply of Herr Thielmann, Secretary to the Treasury, to a question concerning certain payments to a section of the army, that the proposed increase of import duties upon hops will be legalised. The trade in this produce between Austria and Germany will probably be affected to an important extent. Belgium exports will also be checked, and it is difficult to forecast the ultimate results, which may be felt throughout the beer-drinking countries of the world.

America.

Though the reports from the Pacific Coast indicate increased strength, as the consequence of more active business, the situation in New York shows very little actual improvement. Stocks in growers' hands appear to be reduced below the average at this season, therefore the future of the trade is practically controlled by the dealers and the brewers. The latter, having full knowledge of the scarcity of hops, are husbanding their resources, and are buying with the utmost caution, but the time is not far distant when their necessities will compel them to replenish their stock and provide for their summer requirements. When this inevitable movement commences dealers will reap large profits, therefore they are content to wait, and have no present anxiety for trading.

In Montgomery and Madison, Cos. (New York State) there is a growing feeling of dissatisfaction amongst growers. Several of them have sold their poles and plowed their hop yards. Very little new ground has been planted, and it is calculated that the general balance of acreage reduction will be at least 10 per cent.

Belgium.

Although the speculative business in hops on the Brussels Bourse is somewhat quiet, recent current values are well upheld. But in the country districts increased firmness prevails. Buyers are offering 43 to 43½ francs, but holders demand solidly 44 to 45 francs. The brewery consumption being somewhat restricted, it is probable that for a time no change in either direction will at present take place in values. But the general tendency is in favour of higher prices, as soon as brewers' stocks are decreased.

National Association of English Hop Growers.

Council Meeting.

A meeting of the council was held on Monday last at the Hop Exchange, when Colonel Brookfield, M.P., presided, being supported by Laurence Hardy, Esq., M.P., Mr. E. Albert White (hon. treasurer), Mr. James Chalcrofts, Mr. F. P. Thirkell, Mr. Sauter, and other planters. Apologies for absence were received from A. Baldwin, Esq., M.P., Captain Howard, M.P., Lieut.-Col. Cheesman, Mr. Herbert Leney, Mr. George Neve, Mr. J. Chapman, and Mr. G. Arnold.

The minutes of the last meeting having been read, the secretary reported that the subscriptions received in 1901 showed a substantial increase upon the previous year, and that the association was evidently becoming more fully recognised as the central and most reliable source of information, both by the general body of growers and the trade. He was frequently consulted as to the sale of hops and for the private settlement of disputes in conection therewith. He was always at the disposal of members in these matters, and gave his services gratuitously.

Mr. Thirkell regretted that the combination of growers was not more extensive, as it was only by such agreement that they could gain control of the market. Recently there had been practically no market for hops, and he believed that result had been brought about by the united action of factors and merchants, who, it appeared to him, worked for the benefit of that wealthy class, the brewers. His Majesty's subjects had suffered from the desire of brewers to increase

All official reports and notices of the National Association of English Hop Growers will be printed in the MARK LANE EXPRESS, *which will also contain all current information likely to be of interes and benefit to the member of the society.*

their wealth by the use of cheap and harmful materials, therefore it was necessary that the representatives of the hop industry in the House of Commons should press upon the attention of the Government the passing of a Pure Beer Bill, which could only be secured by the sole use of barley-malt and hops. With regard to the disposal of their produce, he wished growers to agree to withdraw their hops from the Borough, and to sell them by auction in the localities in which they were grown. Brewers would then be compelled to seek for them, and planters would realise better prices. He advocated reduction of the English acreage, and trusted the good work already done by the association might be further extended by the more generous support of the growers.

The president, while admitting that more general and more practical recognition of the value of the association was urgently required, and that good results would thereby accrue to the hop-growing industry, thought that small growers found the present Borough system of trading the most convenient to them, and he feared it would be almost impossible to raise the large capital essential to any attempt to displace the old established customs by any other methods.

Mr. Laurance Hardy concurred in the president's remarks, and was of opinion that Mr. Thirkell's suggestions were hardly practicable.

The secretary presented some evidence of the comparatively unimportant influence exercised by foreign imports upon the English market, it being specially notable during the current season when Californian hops were selling at 80s. to 90s., being nearly three times as valuable as the average English produce. He also directed the attention of the council to the rapidly increasing importance of "cold storage," that must be faced by English growers, as it introduced an entirely novel element into their future prospects, which would be permanently affected in proportion to the enlargement of the cold storage capacity.

After some remarks by other members of the council, the desirability of a reduction of the output of English hops was accepted, but no formal resolution was adopted.

Letters were read from Mr. Herbert Leney, West Farleigh; Mr. S. W. Moore, Oneida, New York State; and Messrs. Pincus and Son, Tacoma, Washington, expressing their views on the situation, and favouring organised reduction of acreage, both in England and America.

Upon consideration of the circular recently issued by the Borough Factors, the council were of opinion that the imposition of the increased charge of 4d. per pocket for warehouse expenses was most inopportune and uncalled for in the present depressed condition of the industry, and that the readjustment of the scale of commissions would be arranged more satisfactorily if it were based on a regular percentage upon the actual amount of the sales. As the matter was, however, too important to be hastily decided upon, the secretary was instructed to bring it before the next council meeting for more complete discussion.

In response to a request for information concerning the Beer Bill to be introduced in the current Session, the president said it was being seriously and carefully considered by its promoters, but that it was not yet finally drafted. Profiting by their experience last year, the framers of the Bill would endeavour to make it both concise and comprehensive, and hop-growers might be satisfied that their interests would be guarded by the prohibition of the use of hop substitutes, and of other preservatives by which hops were displaced or supplemented. Personally, he would give special attention to those points.

The secretary was instructed to write to the Chancellor of the Exchequer, suggesting that an import duty on foreign hops was most desirable, and requesting him to consider the claims of the English industry in case he should require to raise revenue by taxing imports at the port of entry.

After a vote of thanks to Colonel Brookfield, the proceedings terminated.

Herefordshire Horse Show.

At the annual meeting of the Herefordshire Horse Show Society, held at Hereford on Wednesday, Mr. R. O. Backhouse presiding, Lord Chesterfield was elected president for the ensuing year.

It was decided to follow the course pursued last year by holding a one-day show instead of two, the heavy expense of boarding and shedding being saved by the kindness of the Mayor and Corporation lending the horse market and a meadow opposite.

The annual report drew attention to the marked improvement in the financial position of the society. The receipts for the year amounted to £866, and the outgoings to £649, leaving a surplus of £217. If the show in the present year yielded as good results the society would be almost entirely out of debt by the end of the year. It was recommended that the show be again held on August Bank Holiday.

A Successful Milk Producers' Association.

The report presented at the third annual meeting of the Cheshire Milk Producers' Association shows that the association is making progress in every respect. The number of members last year was 859, the number this year being 930, or an increase of 71. To this must be added the East Cheshire and North Derbyshire branch, which numbers about 100, making a grand total of 1,030. The income from subscriptions during the year is £339 14s. 6d., a slight increase over the previous year; this, with the balance in hand, and the amount of £90 13s. 8d. collected for members, making a total income of £681 7s. 3d. The expenditure is £342 11s. 8d.

The actural balance in hand after providing for all liabilities being £198 11s. 5d. £90 13s. 8d. was collected from defaulting traders, and passed through the association's books to the members interested; in addition to this £36 3s. 7d. was collected and paid direct, without passing through the association's books, making a total of £126 17s. 3d. It should be pointed out that no commission is charged for collecting. A number of inquiries have been made with reference to the stability of traders which have been extremely useful to members. These inquiries are preserved, so that any time in the future reference can be made to them, and thus, gradually, the men who have been for years defrauding farmers will, it is hoped, be driven out of the milk trade.

The report further stated that steps had been taken with regard to maintaining at a fair rate the price of milk, and the council were satisfied that, although all that was hoped for was not obtained, much good had resulted. As a consequence many farmers obtained a better price, and it was hoped, with a more perfect organisation, better results might be achieved in the future. Some success had attended the efforts of the council to obtain improvements in transit. Better accommodation had been given for the unloading of milk at several stations, and improvements were under consideration in other cases. More suitable trains had been provided, and claims had been settled on a more liberal basis. It was, the council believed, more than probable that the near future would see a fresh development in the form of motor lurries, which, if successful, would be of great service in the conveyance of milk, at any rate for short distances.

Colonel Cotton-Jodrell presided at the meeting and, in moving the adoption of the report, said the fact that the association had obtained better terms in the matter of transit showed that railway companies were beginning to see that the association were in earnest, and that they meant to do everything possible to promote regularity, punctuality, and proper accommodation at stations and sidings so far as it conduced to the better despatch of milk. In the formation of a new milk standard the association had taken an important part. In cases where farmers and others were summoned for supplying either adulterated or suspicious milk, the council had investigated the cases thoroughly, and had taken up those in which they felt that the farmer ought to be supported in justice to himself on the ground that he had a good case. The supply of pure and wholesome milk, he took it, was the essence of their existence.

Another important duty which the association had was that of protecting their members against harassing and bullying attempts on the part of large corporations by reason of their bye-laws, or by the over-zeal of some official, to hamper the trade of the farmer. The association had come to feel more and more that it should be the duty of some body such as the Central Chamber of Agriculture, or the Central Association of Dairy Farmers, or members of Parliament who chose to take up the work, to watch the introduction of bills dealing with the powers of corporations, and see that before such bills became law provision should be introduced into them giving due security to the tenant-farmers. He was glad to announce that the Government had, through the medium in the first instance of the Local Government Board, given power to insert a clause in corporation bills in the future providing for appeal against decisions in case of butter and milk supply to the Board of Agriculture. That was an important point gained. It had been suggested that similar powers should be given to the Board of Agriculture with regard to corporations where Acts dealing with these matters are already in operation.

Water in Butter: Departmental Committee's Recommendation.

The Departmental Committee appointed by the Board of Agriculture to inquire into and report upon the desirability of regulations for butter have presented an interim report recommending the adoption of a limit of 16 per cent. for the proportion of water in butter. This limit is to be fixed by a regulation under Section 4 of the Sale of Food and Drugs Act, 1899, the assumption being that butter containing a larger percentage of water than 16 per cent. will escape the operation of this limit provided that a sufficient disclosure is made to the purchaser.

At their first meeting, held on July 5th, 1901, the committee unanimously decided to give precedence to the part of the inquiry relating to the proportion of water in butter, on the ground that a considerable period would be necessary for collecting the evidence relating to the genuineness of butter so fat as this depended upon its other constituents, while the facts bearing upon the proportion of water were much more easily obtainable.

After they had arrived at this conclusion, the first question which the committee had to determine was whether any limit whatever to the proportion of water was required, or whether the public taste—the actual operation of the law of supply and demand—would regulate the matter without the interference of legislative or administrative action. In this matter the committee were in no doubt. The weight of evidence, in their opinion, was overwhelmingly in favour of some official regulation.

The committee consists of Mr. Horace Plunkett, Vice-President of the Department of Agriculture for Ireland (chairman); Sir Charles Cameron, Medical Officer of Health and Public Analyst for Dublin; Professor Thorpe, Principal Chemist of the Government Laboratories; Major Craigie, Assistant Secretary of the Board of Agriculture; Mr. R. A. Anderson, Secretary of the Irish Agricultural Organisation Society; Mr. Christopher Dunn, Chairman of the Trustees of the Cork Butter Market; Professor Millar Thompson, President of the Institute of Chemistry; Mr. Kearley, M.P., Mr. George Gibbons, Mr. John Gilchrist, and Mr. Patrick Hickey.

Agrarian Outrages in Ireland.—According to an official return recently placed upon the table of the House of Commons, during the quarter ended 31st December last the number of agrarian outrages in Ireland did not exceed 47, of which 26 consisted of sending threatening letters or notices.

The Largest Manufacturer of Incubators in the World.

Some French Methods of Poultry-Keeping.*

(Copyright.)

By Mr. T. R. Robinson, F.S.I.

It gives me great pleasure to address this meeting, and to assure you that the Utility Poultry Club is doing very useful work at a minimum of expense. Perhaps you will allow me to preface my remarks in the same way as the clergyman who said, "Don't do as I do, do as I say." I neither want you to do as I do, nor to do as I say, but if in what I am giving you there are any hints which will be of service to you take and modify them according to your own circumstances. The question is often asked, why the French are so successful in poultry-keeping? The answer is because they will take infinite trouble, far more than we do. English people would not take the time or the trouble that the French are quite content to take. One must not, however, blame Englishmen for not caring to work for fourteen or sixteen hours a day.

Now, let us consider French methods. First, the man who keeps but very few birds. The birds nearly always live in the cowhouse or in the stables, or somewhere where there is animal warmth. The hen-roost is sometimes over the brick bread-oven, and the warmth is considered very conducive to the egg supply. They run out in his little plot, they are fed once a day, the children gather the eggs once or twice a day, and all the fowls bring in is practically profit; the man knows nothing and does not concern himself about the cost of keeping them. Now, as to the Jambais practice, near Houdan, and the surrounding neighbourhood. This may be said to be the centre of the poultry-raising district, and is the home of the Faverolles, although it is only a few miles from Houdan. Like nearly all English commercial poultry-keepers, they go for cross-bred fowl. In old French books you will find nothing at all about Faverolles. Monsieur R., who is one of the best authorities on poultry in France, will not admit that the Faverolles are a pure breed.

Where a man only has a very little ground, and wants to keep his one, two, or five hundred, or one thousand chickens, as I have seen on a farm of very small dimensions, he uses incubators. They adopt the artificial system more than we do, and, although you know we have some excellent machines here, yet I have hatched hundreds and hundreds of chickens from French machines without regulators, and proved that it is quite an error to say that you must have an even temperature, a certain quantity of moisture, etc. I have hatched eggs at 38deg., 40deg., and 42deg. Centigrade, and even higher, and also fresh eggs, and eggs that have been some weeks old. If you ask me, I should say begin at 38deg. and finish off at 42deg., and don't trouble much about moisture for the first fourteen days, but then give them as much as experience and egg-testing teaches you. It is a very good plan to saturate the eggs with damp steam on the nineteenth or twentieth day. It is sometimes wise to put the eggs in a bowl and swim them on the twentieth day, but in most cases give them plenty of moisture the last few days. In England we keep them in the dark, send the heat down from above, and so on; but if you look, say, at American incubators, you will find that you can hatch eggs in the light, with no moisture, and no hot-water tank, but hot air, and still hatch very successfully. People who lay down hard and fast rules are really talking without their book, and are generally those who do not know what can be done.

Testing Eggs.

A word of advice about testing eggs. Suppose you have then under a hen, have a nest on the ground run in front, set the hen in the evening, and let her come on and off when she likes, if you wish to have the minimum amount of trouble; but if you set out of doors in the winter, do not test, because you will chill the eggs, and will do more harm than good. With an incubator, on the fifth day, place a blanket ready, take your eggs one by one by the lower part, and hold them up to the light, and you will see, if fertile, a little black mark, which is the life-germ started. A perfectly clear egg is no good. Put it on one side. Then replace the good eggs, and on the fifteenth day you will find some show a large air space, and the rest of the egg a black mass—these are good. Some, again, will show a wavy line, and black and white patches; if you rattle them they will be found rotten.

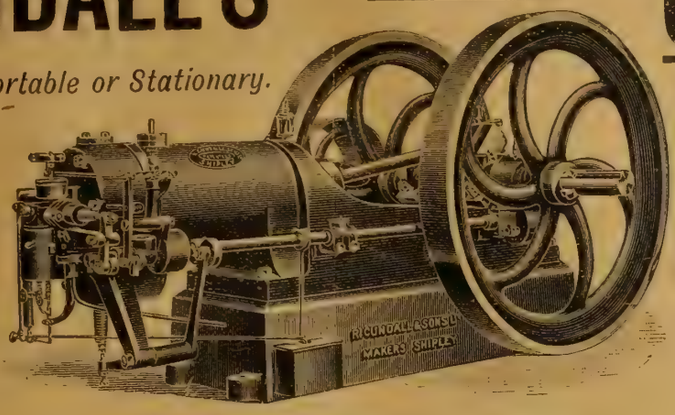
Yesterday I heard a question asked as to whether the chicken turns in the egg or not, but that I will leave for someone else to decide, and will now get on with the work of actually hatching on the last day. If they hatch themselves, so much the better; but if not, then take the egg and, if chipped, give it a little, very gentle roll round between the hands to assist it, and if some time after you have to assist more, get your thumb at the back of the chicken's head, and free the head; then put it back into the incubator, and if it does not do the rest for itself you will find this chicken not worth rearing. A certain proportion of those you help in this way may do well, but do not attempt to pull them out of the shell.

The next point is the French system of rearing. Get them out in a large drying box. Presuming you have hatched 100 chickens, leave them there for a day and a half, and after they have had their first feed, put them into the foster-mother as soon as you can. The French ones I have used most are fixtures, but here we have movable ones and movable coops. The man who has only a limited ground must have a permanent fixed foster-mother, and he heats it from below. Over the top the Frenchman has a feather bed, and the chickens are lying on straw between the hot water (the water is heated by a charcoal briquet) and the feather bed. If they are at all too warm they go a little to the right or the left from under the bed. On the straw are placed for the first day the feeding troughs, for the French make a great point of never letting the chickens get wet. (Here the lecturer showed three models of feeding sticks, and pointed out which he considered the best, explaining that the crops of the chickens fit into the little curve made for the food, so protecting them from getting wet, and that they soon pick the trough perfectly clean.) The first meal is made of one-third barley meal, one-third oatmeal, or if you like oatmeal only; mixed with milk or whey, it is made into a real paste and plastered on to the feeding sticks with wooden hands. For feeding it is best to have a table with a hollow in it, and you can put your milk in first, and then your food, and mix it up with your hands or a wooden spoon. Do not feed too much at a time, and as soon as the chickens have cleared it up put on more. Feed your chickens just as often as they will eat. I have known French children run up and feed them every hour in the day, but never by artificial light. These foster-mothers are attached to sheds, and the shed is lined with straw, so that however rough the weather may be they will have somewhere dry to run out. They are always driven back at night, and the door is closed till the following morning. This is a very important point, as a protection against vermin—a single rat will clear off scores of chickens. It is also very important when they are quite young to show them how to take care of themselves. Have a little wire cage in front and drive them out, even if there is only half an hour's sunshine, as it is essential they should be in the open air when possible.

You can look after a very large number by this system almost as easily as a few, and 1,500 are no more trouble than 50 hencoops, that require constant moving.

Feeding the Chicks.

After the first three weeks, instead of the patté mixture, low troughs are used, with a rail at the top to keep the birds out, and alternately boiled buck-wheat and thick paste are given. They are still fed four or five times a day until they are three months old. Besides this they always have a little grit, and after the first three weeks they have a little meat and greenstuff. In winter they are kept off the grass entirely, because it is wet. At three months old they can usually be separated, the cockerels and pullets, and in summer, at five to six weeks old; no artificial heat is given whatever. They are shut out of the foster-mother and put into the house attached; they are never allowed to roost, but sleep on the straw, and over their backs is let down a frame some 8 ft. by 4 ft., with a loose blanket nailed underneath, which the chickens go under.



(To be continued.)

* A lecture delivered under the auspices of the Utility Poultry Club by Mr. T. R. Robinson, F.S.I.

"CUNDALL'S" PATENT OIL ENGINE.

THE Most Perfect Power for Threshing, Grinding, Chopping, Pulping, &c.

Portable or Stationary.

Contractors to His Majesty's Government.

THE CHEAPEST POWER FOR AGRICULTURISTS.

WHAT USERS THINK AND SAY:—

"I cannot speak too highly of your Oil Engines, and consider them far the best Engines for Farmers' use."

"You will be pleased to hear that the Oil Engine you supplied me with last May is giving every satisfaction, both as regards work done and cost of running, which latter bears no comparison to the cost of the steam engine which it replaced."

"I do think this is the cheapest and far the best Oil Engine in the market. I fixed on the 'Cundall,' not only as the steadiest running Engine, but also in having more control over it in altering speed and power."

"The 20 B.H.P. Oil Engine we bought from you about a year ago is working satisfactorily. We were fortunate in our decision in selecting your Engine."

Sack, Rick, Cloth, & Tent Manufacturers,

By Special Royal Warrant to HIS MAJESTY THE KING.

THE "SVEA" SEPARATOR

The "SVEA" Separator is the CHEAPEST because it is :—

THE SIMPLEST,
THE STRONGEST,
THE MOST DURABLE,
THE EASIEST TO TURN,
A PERFECT SKIMMER,
AND
HAS THE GREATEST CAPACITY.

Table of Sizes & Prices

No.	CAPACITY PER HOUR.	PRICE.
1	20 galls.	£9 10 0
2	33 ,,	11 10 0
3	55 ,,	17 0 0
4	75 ,,	23 0 0

The **"SVEA" Separator** being thoroughly up to date, embodies the following improvements :—

1.—**The Short Bowl Spindle** replacing the usual long one, which so soon gets damaged if not handled with great care.

2.—**The Patented Top Bearing** by means of which the bowl is supported at **both** top and bottom.

This is a special feature of the "SVEA," and is considered a great advantage as contributing to the smoother and easier running of the bowl, also preventing all accidents.

3.—**The Simplicity** of the skimming arrangement consisting of only a few rings or discs (in the small sizes 4) instead of the usual large number.

4.—**The Bowl is easy to take to pieces and clean.** This fact and the small number of the parts to clean will be much appreciated by every one used to Separators.

5.—**The Conical Lugs** on the inside of the Bowl Top make it **impossible for the Bowl to get out of balance** by reason of the threads becoming worn.

6.—**The easy and noiseless motion** effected by the use of Conical Gearing instead of the usual cylindrical one, thus permitting the

7.—**Reduction of friction and wear** obtained by the position of the worm wheel, at an angle of 45° to the worm, instead of the usual right-angled gearing.

8.—The **extraordinary strength** and good workmanship of the machine throughout.

The "SVEA" Separator is fitted with an automatic device regulating the inflow of the milk.
The "SVEA" Separator is sent on trial. Carriage paid. No extras.

London & County Banking Company Limited

Registered under "The Companies Acts." Established in 1836.

CAPITAL £8,000,000, IN 100,000 SHARES OF £80 EACH.

REPORT ADOPTED AT THE HALF-YEARLY ORDINARY GENERAL MEETING, THE 6TH FEBRUARY, 1902.

WILLIAM EGERTON HUBBARD, Esq., in the Chair.

The Directors, in submitting to the Shareholders the Balance-sheet for the half-year ending 31st December, last, have to report that, after paying interest to customers and all charges, making provision for bad and doubtful debts, and allowing £31,803 15s. for rebate on bills not due, the net profits amount to £291,905 17s. 5d. From this sum have been deducted £25,000 transferred to Premises Account, and £50,000 carried to Reserve Fund, leaving £216,905 17s. 5d., which, with £89,957 17s. 8d. balance brought forward from last account, leaves available the sum of £306,863 15s. 1d.

The Directors have declared a Dividend for the half-year of 10 per cent., together with a Bonus of One per cent., which will require £220,000, leaving the sum of £86,863 15s. 1d. to be carried to the Profit and Loss New Account. The present Dividend, added to that paid to 30th June, will make 22 per cent. for the year 1901.

The Directors with deep regret announce the retirement, on account of advanced age, of Edward Harbord Lushington, Esq., who, since 1869, had been a most valued member of the Board. To fill this vacancy the Directors have appointed Ernest Haliburton Cunard, Esq., of the firm of Messrs. W. and W. S. Cunard. This creates a vacancy in the Auditorship, which it is in the power of the meeting to fill up.

The Directors retiring by rotation are Ernest Haliburton Cunard, Esq., William Howard, Esq., and William McKewan, Esq., who, being eligible, offer themselves for re-election.

The Dividend and Bonus, £2 4s. per Share, free of Income-Tax, will be payable at the Head Office, or at any of the Branches, on or after Monday, 17th February.

H. DEAN, Head Office Manager.
RICHARD LEMON, Country Manager.
WM. HALL, Chief Accountant.

London and County Banking Company Limited,
20th January, 1902.

In accordance with the provisions of the Companies Act, 1900, we certify that all our requirements as Auditors have been complied with, and we report that we have examined the Balance-sheet and Profit and Loss Account, dated the 31st day of December 1901, have verified the Cash-Balance at the Bank of England, the Stocks there registered, and the other investments of the Bank. We have also examined the several Books and Vouchers and certified Returns showing the Cash-Balances, Bills, and other Accounts set forth, the whole of which are correctly stated; and in our opinion the said Balance-sheet and Profit and Loss Account are properly drawn up, so as to exhibit a true and correct view of the Company's affairs as shown by the books of the Company.

(Signed) HY. GRANT, THOS. HORWOOD, } Auditors.

THE "SVEA" SEPARATOR

The "SVEA" Separator is the CHEAPEST because it is:—

THE SIMPLEST,
THE STRONGEST,
THE MOST DURABLE,
THE EASIEST TO TURN,
A PERFECT SKIMMER,
AND
HAS THE GREATEST CAPACITY.

Table of Sizes & Prices

No.	CAPACITY PER HOUR.	PRICE.
1	20 galls.	£9 10 0
2	33 ,,	11 10 0
3	55 ,,	17 0 0
4	75 ,,	23 0 0

The **"SVEA" Separator** being thoroughly up to date, embodies the following improvements:—

1.—**The Short Bowl Spindle** replacing the usual long one, which so soon gets damaged if not handled with great care.

2.—**The Patented Top Bearing** by means of which the bowl is supported at **both** top and bottom.

This is a special feature of the "SVEA," and is considered a great advantage as contributing to the smoother and easier running of the bowl, also preventing all accidents.

3.—**The Simplicity** of the skimming arrangement consisting of only a few rings or discs (in the small sizes 4) instead of the usual large number.

4.—**The Bowl is easy to take to pieces and clean.** This fact and the small number of the parts to clean will be much appreciated by every one used to Separators.

5.—**The Conical Lugs** on the inside of the Bowl Top make it **impossible for the Bowl to get out of balance** by reason of the threads becoming worn.

6.—**The easy and noiseless motion** effected by the use of Conical Gearing instead of the usual cylindrical one, thus permitting the

7.—**Reduction of friction and wear** obtained by the position of the worm wheel, at an angle of 45° to the worm, instead of the usual right-angled gearing.

8.—The **extraordinary strength** and good workmanship of the machine throughout.

The "SVEA" Separator is fitted with an automatic device regulating the inflow of the milk.
The "SVEA" Separator is sent on trial. Carriage paid. No extras.

BIBBY'S

"CREAM EQUIVALENT" for CALVES.

An Ounce of Fact is worth a Ton of Theory.

A STRIKING FACT.

In our Spring number of "Bibby's Quarterly" we reproduced the photographs of two groups of Calves which are now being reared at the Hornby House Farm, Bedale, Yorks, by his Grace the Duke of Leeds.

One of the groups is being fed on New Milk and the other on Separated Milk and "Cream Equivalent."

We asked our readers to tell us which of these groups were fed on New Milk, and 707 Farmers, Farmers' wives, their sons and daughters competed for a small prize which we offered to those who guessed correctly.

445 selected the "Cream Equivalent"-fed Calves as having been fed on New Milk.

We think the above striking FACT speaks volumes for "Cream Equivalent."

The "Cream Equivalent" can be had at 15s. per cwt., carriage paid to nearest station.

DRUGGING HORSES.

An evil which perennially makes itself felt among farmers—especially on the wolds of Yorkshire and Lincolnshire—is the injudicious feeding and drugging of horses by farm servants. So strongly was the danger felt some years ago that an association was formed in Lincolnshire with the express object of preventing the unlawful administration to horses of poisonous or injurious drugs or compounds or wheat, and for prosecuting offenders. The evil is none the less real because it springs from ignorance rather than vice, having its inception in a laudable but mistaken emulation on the part of farm lads to turn out the best-looking team.

The law provides that if any servant shall, contrary to the orders of his master, take from his possession any corn, pulse, roots, or other food for the purpose of giving the same to any horse or other animal in the possession of his master, such servant shall be punishable by imprisonment with or without hard labour for three months, or to a fine of £5. This enactment is aimed at the practice indulged in by over-zealous waggoners of improperly taking wheat or other feeding stuffs from the granary to give it to their horses, often with very serious results.

But even more dangerous is the surreptitious administration of arsenic and other noxious drugs to horses for the purpose of smartening their appearance. Curiously enough, the law regards this offence as less serious than the other, presumably because it does not involve theft of the masters' corn, and the dangerous substance is usually procured by the servant at his own expense. The penalty is a fine of £5, or one month's imprisonment for a first offence, or three months' for any subsequent offence.

Experience has shown, however, that these provisions are insufficient to repress the evil, as, in spite of prosecutions and convictions from time to time, there are still numerous complaints of heavy losses sustained by farmers through the mysterious poisoning of valuable horses.

Punishment has failed to kill a widespread custom, born of ignorance, and the seeds of education and enlightenment, falling too often on barren ground, have failed to germinate.

We must therefore go to the root of the evil, and endeavour to accentuate the severity of its struggle for existence, remembering how oft the means to do evil deeds makes ill deeds done. This is the principle upon which are based the provisions of the Arsenic Act and the Pharmacy Acts regulating the sale of poisons in general. Except pursuant to a medical prescription, it is illegal to sell arsenic to the public unless it be coloured by mixing with soot or indigo, but the protection intended

to be afforded by this enactment is rendered practically migratory by a proviso that where the purchaser states that he requires the arsenic for some purpose unconnected with agriculture for which such admixture would render it unfit, he may obtain as much as ten pounds of uncoloured arsenic at one time.

All poisons scheduled under the Pharmacy Act (which practically include all the more dangerous drugs), whether sold by wholesale or retail, must be distinctly labelled with the name of the article, the word "Poison," and the name and address of the seller, and they may not be sold to a person unknown to him, unless introduced by a person known to him, and before delivery entry must be made in the poison book of full particulars as to the sale, including the name and address of the purchaser, the name and quantity of the article sold, and the purpose for which it is said to be required. These particulars must be signed by the purchaser, and by the person (if any) introducing him. Penalties are imposed on chemists selling poisons contrary to these regulations, but (except in the case of arsenic) there appears to be no penalty on a purchaser furnishing false particulars for the poison book.

In the latter respect the law might usefully be made more stringent, but if loyally observed the present provisions ought to be sufficient to make it extremely difficult for farm lads to get hold of drugs well known to be harmful to horses, and yet extensively administered to them. But that it is comparatively easy to get a supply is evident from the prevalence of the mischief. The law must either be habitually disregarded, or gross deception must be practised on the vendors of drugs.

The supply must be cut off. What are the channels through which it flows? The waggoners do not often get the stuff themselves. Either they have not the opportunity, or they dread detection, or they don't know the way to go about it. Carriers and pedlars are frequently commissioned to make the purchases. If these men know the purpose for which the drugs are required they are liable, as aiders and abetters, to the same term of imprisonment as the actual offenders. If they want to make themselves safe from prosecution they should get written instructions in each case, signed by the purchaser, stating the object for which the compound is required. This precaution would generally prevent a farm lad from getting drugs for an improper purpose, as his natural reluctance to sign his name would be intensified if he thought that by so doing he was making evidence against himself.

Let the agricultural clubs and chambers distribute leaflets broadcast in their districts, setting forth the law on the subject, informing servants of the danger of the practice, and the penalties attending it, urging on chemists a strict observance of the regulations for the sale of poisons, and giving a timely warning of the risk of aiding and abetting.

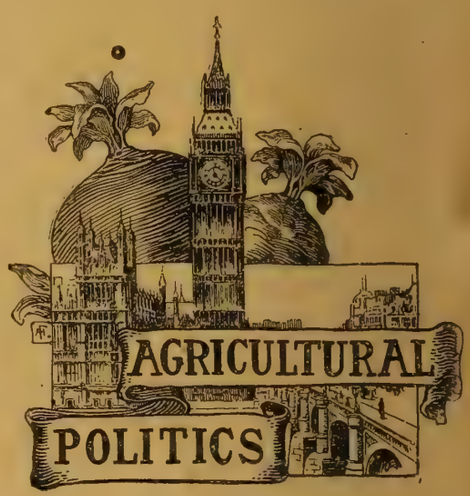
London and County Bank. — The half-yearly ordinary general meeting of the London and County Banking Company, Ltd., was held on Thursday, when the directors presented a most satisfactory report, which was adopted. After paying interest to customers and all charges, making provision for bad and doubtful debts, and allowing £31,803 15s. for rebate on bills not due, the net profits amounted to £291,905 17s. 5d. From this sum was deducted £25,000 transferred to premises account, and £50,000 carried to reserve fund, leaving £216,905 17s. 5d., which, with £89,957 17s. 8d. balance brought forward from last account, left available the sum of £306,863 15s. 1d. The directors declared a dividend for the half-year of 10 per cent., together with a bonus of 1 per cent., which required £220,000, leaving the sum of £86,863 15s. 1d. to be carried to the profit and loss new account. The present dividend, added to that paid to 30th June, makes 22 per cent. for the year 1901. The dividend and bonus, £2 4s. per share, free of income tax, will be payable at the head office, or at any of the branches, on or after Monday, 17th February.

By a Man of Mark Lane.

To-morrow (Tuesday) Sir Blundell Maple will ask the Secretary for War what was the amount of money paid by the War Office in 1899, 1900, and 1901 in connection with horses for the South African Campaign, and how many horses were requisitioned, and whether it is not a fact that firms who have been receiving money for many years in connection with the supply of these horses have not been called upon to produce horses for the purposes of the Campaign.

The receipts on account of Revenue from April 1, 1901, when there was a balance of £5,596,918, to February 1, 1902, were £107,097,175, against £96,153,186 in the corresponding period of the preceding financial year, which began with a balance of £3,517,047. The net expenditure was £164,679,208, against £153,282,048 to the same date in the previous year. The Treasury balances on February 1, 1902, amounted to £5,238,656, and at the same date in 1901 to £2,670,636.

Lord Tweedmouth has given notice that he will to-day (Monday) call attention to the Report of the Committee on Horse Purchase in Austria-Hungary; and to ask his Majesty's Government whether, in pursuance of the course adopted with respect to that inquiry, they will order inquiries to be held into the circumstances attendant on the purchase of horses in other parts of the world and in the United Kingdom for remounts for British troops in South Africa.



Mr. Alexander Macfu, an ex-president of the Montreal Corn Exchange, was, on Friday last, elected president of the Montreal Board of Trade, the most important position to which a Montreal business man can aspire, and, naturally enough, its attainment suggests the esteem and the confidence of his brother members, the collective representatives of the trade interests of the Dominion's commercial metropolis. The new president of the Montreal Board of Trade is "native born," and has for many years been identified with the grain exporting business, in which connection he is well known on this side the Atlantic. He succeeds Senator McKay. Mr. Macfu is a brother of Mr. K. No. Macfu, of 72 and 73, Gracechurch Street, London.

During the past week the Right Hon. R. W. Hanbury, M.P., President of the Board of Agriculture, has been confined to his room at Park Hotel, Preston, suffering from severe chill, contracted while travelling north on Tuesday evening. He was announced to attend a church bazaar in the afternoon, but a letter was read from him stating he was suffering from severe cold and bronchitis, and had been obliged to call in his medical adviser.

Sir Cuthbert Quilter, Bart., M.P., has paired until after the Easter Recess, and is going to Egypt for the benefit of his health.

A school manager, living in rather a large agricultural village, and who takes a considerable interest in rural life, has written to the 'Standard' a letter entitled "The Knowledge of Common Things." He says:—"It occurred to me the other day to question in school the 25 or 30 of the eldest children upon little matters of everyday life—79 in the school without the infants. Questioning the boys first, only three or four knew when wheat was sown—not one when barley. With the exception of one boy, none could give the names of any kinds of wheat or barley. Of bad weeds, only three or four could give names; the same of good grasses. Of the real reason why land was broken up after harvest and laid rough during the winter they had little knowledge, but to my surprise one boy knew what the subsoil was. Not one boy knew the difference between a savoy and a spring cabbage, but one girl did. A good many knew which was a horse's hock, but not one the stifle or fetlock. None could give me the names of different breeds of sheep, but they could of two or three cattle; only one boy knew the usual number of nails in a horse shoe. All could tell me the length of a chain, a pole, a mile, &c. A few could give me eight or nine names of forest trees.

"The girls had a very vague idea as to the weight of a quartern loaf, or how bread was made. The same about a cake. One had a slight idea of making beef tea; not one knew the heat at which water boils; only one knew the time to boil an egg; and not one knew what a poached egg was." The writer concludes by asking the pertinent question, "Why should not boys be instructed—not as permissive subjects—in all matters connected with the soil, plant life, works of husbandry, anatomy of animals, grafting, budding, pruning, and the like? They would like the subjects, and it would make them love their gardens, the fields, and the country generally, instead of hating it, as they, in most cases, do now."

By a Lobbyist.

The temper of the House of Commons is undeniably rising in connection with the scandal which has resulted from the method of supplying the army with horses. Fortunately, too, this temper is not so undisciplined as to dull the Parliamentary mind to the wisdom of, if possible, securing an assured supply within the Empire. However, the Parliamentary mind looks rather at present to the colonies than to the homeland as offering the necessary facilities for the establishment of horse-farms. "Why should not the War Office resort to Canada?" This is the true meaning of the questions which have been put to the Secretary for War in reference to the matter during the week. The interesting point which the Devonshire M.P. raised as to whether it would not be possible to utilise Dartmoor and Exmoor in connection with the necessity has not been revived. However, by-and-bye the wisdom of pursuing horse-culture at home will induce reflection. There is already a keen Parliamentary comprehension of the unwisdom of relying upon a foreign source of supply which may be closed to us when it is most necessary to resort to it; that is, when the country is in the throes of deadly war. The question has been raised in what we must all contess to be a very undesirable fashion; but it is well that it has been raised. The point now is—Has a new form of profitable farming been opened out to the British agriculturist?

The result of the East Down election has a great significance to the agrarian economist. It means the protrusion of the question of compulsory purchase into the field of practical politics. A constituency whose anti-Nationalist predilections are undeniable, which has been intractably Orange in the past, has shown itself prepared to forget all the prejudice and bitterness born of the Home Rule controversy in order to concentrate its energies upon the one question of land purchase. Say, if you will, that the land hunger in the north of Ireland has grown into a passion. This is true, but it is not sufficient to explain the result of this contest. The same land hunger possessed the farmers of the north

of Ireland when Mr. Parnell initiated his two great agrarian crusades, but it did not induce them to close their eyes to what they regarded as the mischievous dangers surrounding the Home Rule propaganda. They were still bitter Orangemen, still relentlessly anti-Nationalist, still unwilling to surrender their animosity towards anything that affected the policy enshrined in the Union. It is different now. A new force has thus been brought into politics, and the man who disregards it is not clear-eyed. The Nationalists and the anti-Nationalists of Ireland have revealed their readiness to unite over a common agrarian purpose; and Mr. George Wyndham will absolutely fail in his policy of breaking this alliance by means of a moderate proposal of relief.

Do I mean that the policy of compulsory purchase is likely to be adopted as a means of settling the Irish land question? I unhesitatingly do. Let me show the forces which are already in existence in favour of this policy. Apart from Orangemen of the type of Colonel Saunderson and Mr. Johnstone of Ballykilbeg, Irish politicians are unanimously in its favour. We may reckon in the near future upon a solid vote of ninety Irish M.P.'s in support of the proposal. Liberalism has adopted as a principle—I am not arguing as to its wisdom or unwisdom—that what Ireland demands Ireland must be conceded. It is certain that at the next election—all the political portents reveal this—the Liberal party will go back to the House of Commons greatly enlarged in numbers. No present Conservative will pretend to deny this. Then there are a number of Unionists, who, for the sake of getting rid of the eternal Irish question, would be, if not willing to actively support the principle, at least willing to abstain from actively opposing it. We shall probably see on this one question a force in existence after the next election similar to that which carried the second reading of Mr. Gladstone's Home Rule Bill. And do not be too certain that the House of Lords will be a barrier to the realisation of the ambition. The heroism which wrecked Mr. Gladstone's Home Rule Bill is not likely to be repeated.
